In considering the question of the future of the Ottoman Empire, we cannot omit mention of the idea of Pan-Islamism, which the present Sultan regards as an effective support in his struggle against the danger with which he is threatened from the Christian West. Quite recently our Austrian press took up this bogey, and some of our papers are disposed to rank "this imminent danger," as they call it, alongside of that not less fantastic bugaboo, the Yellow Peril. To explain the real meaning of Panislamism would require an article by itself, but I may say for the present that if the Sultan Abdul Hamid looks upon it as the sheet-anchor of the future, he will certainly find that he has made a mistake. Pan-Islamism may indeed be a spiritual bond of union, but it will hardly lend itself to political and worldly purposes. In fact, it has never been used as a common weapon against the Christian enemy of Islam.

To sum up, it may be said that from whatever point of view we regard this question of When will Turkey cease to exist?—the only pretty certain thing is that the Ottoman state in Europe, but only in Europe, may be near its end, and that with the death of the present ruler will come one of the most critical moments in its history. But the breakdown of European Turkey does not mean the end of the Empire, but only a return to the old cradle, the throwing out of the useless ballast of the encumbering possessions in Europe, when Turkey may still be a strong Power in Asia Minor.

The University, Pesth, Hungary.

"My Master"

BY LOUISE DUNHAM GOLDSBERRY

If some day in the city's clamor, some day when the sun was low,
When the surge of the toilers like waters was hurlying to and fro,
If One in the streets should pass me and his hand in the throng touch mine,
Would my heart know its Keeper's signet, the hand on my hand, divine?

If some night when the dusk was descending, the nebulous purples all starred,
A face in the adorant twilights passed me by with young visage marred,
Would I know it, and, speeding after, spent like stubble dissolved in the flame,
With lips to His feet on the pavement, cry out to the people His Name?

And I watch; I keep watch in the gateways, where the people of passion press.
His servant to wait upon Him, if prince or in beggar-dress,
And each face I scan as it passes, if perchance it my Master may be:
For I follow, I follow after, tho I hang at his side on the tree!

Washington, D. C.

Confessions of a Drone

BY JOSEPH MEDILL PATTERSON

[Mr. Patterson is a young man who has lately surprised his wealthy friends in Chicago by coming out publicly as a Socialist. He here explains his position.—EDITOR.]

THE INDEPENDENT has asked me for a short economic autobiography. I comply in the understanding that I am talking about myself, the type of the idle, rich young man, not myself the individual.

Were I the only one in the country who had such an easy time of it, then there need be no such thing as Socialism. But I am far from being the only one. There are thousands of others who produce no wealth and consume a great deal of it. There are thousands who produce no more than I, and who consume ten or twenty times as much. Be it remembered that wherever the first personal pronoun is used it is used to represent the type and not the individual.

I have an income of between ten and twenty thousand dollars a year. I spend all of it. I produce nothing—am doing no work. I (the type) can keep on doing this all my life unless the present social system is changed.

My income doesn't descend upon me like manna from heaven. It can be traced. Some of it comes from the profits of a daily newspaper; some of it comes from Chicago real estate; some from the profits made by the Pennsylvania and other railroads; some from the profits of the United States Steel Corporation; some from the profits of the American Tobacco Company.

As to Chicago real estate, I didn't put it there. Some of it I have never seen. It came into possession of my family some years ago, when it was cheaper. People came to Chicago to work, and in proportion as their numbers increased, the value of this real estate rose automatically. The people who came to Chicago to work caused the increase in value—but I get the benefit of it. There are people who are willing to work on this land. I am not willing to do so. Thus we arrange that they shall work there and pay me an annual tribute for my permission.

As to Pennsylvania, Tobacco and Steel stocks and bonds. I know nothing whatever about railroads, except how to read a time-table and to bless heaven for the eighteen-hour train. Yet I get an annual income from railroads. It isn't the capitalists who supply me with my income from railroads. I am one of them myself—and we couldn't all be so comfortable together by merely handing each other money back and forth. No, it must be the men who work the railroads or the travelers and shippers who contribute our incomes. Probably it is both. The men who run the trains are underpaid for the work they do, and those who ship or travel overpay for the service they get. We capitalists get the margin in between.

I have never been inside a steel mill; and I know about tobacco only as a consumer. Yet the makers and users of steel and tobacco send me on their little checks twice a year. I never have to dun them.

The big capitalist may wonder at my audacity in claiming fellowship with him when I confess to an income of well under twenty thousand dollars a year. Yet, after all, while among exclusively capitalist circles I am nothing much, still as compared with the average American I am pretty well off.

For instance, it takes to support me just about twenty times as much as it

takes to support an average workingman or farmer. And the funny thing about it is that these workingmen and farmers work hard all year round, while I don't work at all.

I have better food, better clothes and a better house than the workers who supply me with money to spend. I can travel oftener, to more interesting places, on faster trains and in more comfortable steamship cabins. I have horses to ride and drive, domestic servants to minister to my wants, the best physicians in case of sickness. If I am fond of books I can without much self-sacrifice create a respectable little library for myself. I do not live all year round in the smoky, nervous, crowded city. My child will never go to work in a cotton mill or a sweatshop.

In short, I lead a far more highly civilized life than the working people. I have offered me the choice of all the best things that man in his stay upon this earth has discovered, evolved or created. The working-people do not have this choice offered them. There is left for them the shoddy things of life — hard work and small reward. I have little or no work and the earth's best for reward.

The work of the working-people, and nothing else, produces the wealth, which by some hocus-pocus arrangement is transferred to me, leaving them bare. While they support me in splendid style, what do I do for them? Let the candid upholder of the present order answer, for I am not aware of doing anything for them.

Is it said that I supply a wage fund out of which their wages are paid? Nonsense. If every bond and stock certificate and every real estate abstract were burned today in a huge bonfire, the vacated titles to ownership falling naturally to the community, trains would pull out on schedule time tomorrow. The trainmen, despatchers, superintendents, locomotives, cars and tracks would be there. The *ci-devant* stock owner would find himself nothing but a nuisance if he went down to a freight-yard and began to meddle.

That my life is so much completer than the lives of the workers who support me has been excused on the ground that they are less "cultivated" and therefore less fitted to enjoy things which please me. But that seems a little like begging the question. Many of them are not as well educated, because they had to go to work as boys in the fields, the glass factories, the mines, the mills, while I was pursuing my leisurely, gentlemanly way thru boarding-school and university. I don't think it was entirely natural aptitude that marked me out for a university education, since I remember that frequently I had to pay money to tutors to drill into my head information of a remarkably simple character. I was fond of a good time — and that I had. Of course it took money, which was obligingly supplied, via my family, by the pressmen, the switchmen, the cigaret girls, the rolling-mill men, etc.

Having in this pleasant fashion achieved my education, I went to work in my father's business. I "started in at the bottom," as the saying goes. I became a reporter at $15 a week. If my father had been a broker I would have started in to sweep out the office at $3 a week. Most of my college friends who went into Wall Street seem to have done that. But I knew it was play-acting all the time, just as they did.

I was not living on a $15 a week basis and they were not living on a $3 a week basis. I wasn't afraid of losing my job just because it was a dull season and I was the greenest cub on the staff. I got my "allowance" in addition to the fifteen —and the allowance was by considerable the more substantial figure. The allowance came from the pressmen, switchmen, cigaret girls, the other reporters, etc., via my family.

It is just this "allowance" that makes all the difference. Suppose, instead of being an absolute idler, as at present, I go to work and earn from $2,000 to $4,000 a year. My allowance continues and brings me in just five times as much as I earn. At first blush I would not be called an idler, because my daily physical or mental activity would be manifest. Yet the allowance for which I do not work brings me in five times as much as the salary for which I do work. As regards the people who contribute that allowance I am an economic idler, even tho as regards some other business I am a worker. Indeed I might fill a dual ca-

pacity as worker and idler in the same business. As a reporter on a newspaper I was a worker; as a member of a stockholding family I was an idler.

Since our capitalists have not yet as a rule achieved the habit of ornamental idleness to the same extent as the effete aristocracies, they bitterly resent being called idlers. They point with pride to the fact that aside from their trips abroad and their week-ends in the country, they keep office hours religiously. But as to that portion of their incomes which is "allowance" they are, economically speaking, idlers. Let us concede that as to that portion of their incomes which is salary they are workers and earn their pay.

If a man produces $2,000 worth of wealth a year, and consumes $10,000 worth a year, he is overpaid. If he is overpaid, some must be underpaid.

Socialism urges the underpaid to unite and insist on receiving the full amount of the wealth they produce.

LAKE FOREST, ILL.

Our Grandmothers' Schools

BY SUSAN HAYES WARD.

NO history of the higher education of women in this country could be written without taking into account the labors and influence of the Rev. Joseph Emerson.

Mr. Emerson was a teacher almost by instinct. He was a Harvard graduate, for three years a tutor in the college; he was also a pastor, preacher, historical lecturer; but his notable work was the training of about a thousand young women teachers from various parts of New England in the school which he established first in Byfield (1818), then in Saugus (1821) and last in Withersfield, Conn. (1824). He maintained that it was the province of woman to become an educator of the human race, and seeing that "the education then within her reach was superficial, showy and worldly," he set himself to reform it, acting on the principle he inculcated continually, to "do the greatest good to the greatest number for the longest time." His desire was to train teachers who should fill the land with similar schools, for it was not until 1839 that Massachusetts opened its first normal school for the training of public school teachers. Mr. Emerson laid out a three years' course of study that should develop both mind and heart, the formation of character, mental and moral, being his first aim.

Among his earliest and most famous pupils were two in whom he took intense interest, Miss Z. P. Grant (Mrs. Banister) and the still more distinguished Mary Lyon. Both acknowledged with thankfulness their indebtedness to Mr. Emerson. He taught them to seek knowledge, not so much for the joy of it as for the good they could do by it. He trained his scholars to think, to refer every action to the principle of moral right. He led every conscientious girl of his school to feel a responsibility in serving her own generation according to the will of God, and he insisted that high mental culture and abilities for extensive usefulness might be gained by those of only respectable talent, if they were willing to pay the price.

These two teachers, already somewhat experienced when they came to him, and trained to greater enthusiasm and efficiency under his inspiration, worked together as teachers of girls for ten years —most of the time in Ipswich, Mass. Later they separated, and Mary Lyon planned and started for Judge Wheaton the seminary in Norton, Mass., that bears his name, and then founded her more widely known school of Mount Holyoke.

Miss Grant, with less originality, had more culture than Miss Lyon, and she paid more attention to the amenities of life. "Do you not know, child, that God

is more honored when you look well than when you do not?" With such a question she would startle a carelessly attired girl into scrupulous neatness. She was a wonderful teacher; wonderful in training noble character. "Is she doing as well as she can?" was her constant query as to her pupils, and her final sentence upon the incorrigible was: "You have not been doing as well as you can." We read that she taught the moral and Christian virtues—charity, benevolence, beneficence—systematically as she would teach geography, and she insisted that her seminary should be a training school for teachers. No one whom she thought fit for the calling could leave Ipswich without having been forced, under her influence, to consider seriously whether it were her duty to take up teaching as a lifework.

Bible lessons introduced as a regular part of the daily course of study gave opportunity to enforce moral and religious truth.

"The greatness, justice and love of God, the paramount claims of rectitude, the imperiousness of moral obligation, the blessedness of living for others, the misery of living for self," this, says Gail Hamilton, "was the essence" of her teaching. These were her daily lessons, enforced so irresistibly that her pupils craved above every other possible knowledge that wisdom whose beginning is the fear of the Lord.

Two packages of letters came into my hands a few years since; one written to my father by his younger sister in 1830, the other by my mother to her mother and brother in 1831, both from the Ipswich Seminary (known popularly as Miss Grant's school) while Miss Lyon was assistant principal. From these I glean descriptions and quotations to illustrate the best pedagogical methods of seventy-five years ago. The price of tuition is not stated, but board was $1.75 a week, not including the cost of fuel. It cost more to educate a girl than a boy, because at that time hardly any school for girls was endowed.

The monitor system was then in vogue. It gave the pupils practice in teaching and usually sent them to their books for more study. Besides the two principals there were ten or twelve teachers employed for two hundred or more pupils. Prayers and morning lectures by one of the principals and Bible lessons were attended daily by the whole school; and practice in reading, writing, spelling, composition and mental arithmetic was required daily of all scholars until proficiency was reached. Aside from these, but one study at a time was pursued by any pupil.

January 9th, 1830, Monday.—Went to the Seminary a quarter before nine. Miss Grant came in, wished the ladies a "good morning." They returned the compliment by rising. Miss G. then inquired how many of the young ladies attended meeting the day before, but omitted taking the texts and heads of discourses; made some general remarks, then led in prayer; short questions on the 22d chapter of Genesis. We are studying Genesis in course. She usually gives us from ten to fifteen verses to commit to memory when the lesson for the Sabbath is given out. . . . We were then requested to write the history of Shechem, or Sychar, Hebron and Padan Aram. In writing the history of a place we first tell what country it is in, in what part of that country its situation relative to some other place, in what parts of the Bible it is spoken of, what remarkable occurrences took place there, etc. After the Bible lesson, the class in geometry were requested to take their seats in the Chemical Room, and the others to arrange themselves in sections to attend to arithmetic. The monitors then took their seats before their several classes, which were of six or seven in number, and gave out a sum. When all had completed the work it was read by some member of the class, and if any one had it different she must tell her manner of procedure. If wrong, she must give attention to an explanation. . . .

Tuesday.—The subject of this morning's lecture was Fretfulness. We were first requested to define fretfulness, then to tell some of its causes and effects, then to point out some preventives. I will mention a few that were given: Watchfulness, reflecting that God is ever present and observes all our ways; that it is disobedience to God; that it is a trial and temptation to all around; that as it has its foundation in our own hearts it is peculiarly injurious to ourselves, and, lastly, it is unnecessary.

Other lectures, alluded to, discussed Bible topics, "The Present State of South America," "Benevolence" and the "Care of Health." Miss Grant prefaced suggestions that her pupils should attend the "Monthly Concert" with the inquiry:

What time do you think it is in China? What time in Ceylon? In the South of Africa? In Malta? In England? I suppose they are just coming from the Monthly Concert in China and will be going and returning all day in some part of the world.

In a lecture on school teaching the

question propounded was "How can ladies do good by keeping school?"

Maxims and rules respecting conduct and feeling were given out during these morning talks, and occasionally their repetition was called for. In response to such a call one morning some fifty were repeated. Among them were these:

"Always have a sacred regard to truth and honesty in word and actions."

"Practice self denial, self government."

"Do thyself no harm."

"Despair of nothing you would attain."

"What ought to be done can be done."

Another letter says:

On Friday Miss G. requested a number of the scholars to meet her at the academy on Saturday to mark compositions. She did not ask them because it would be much assistance to her, for she did not suppose that one mark in ten would be good for anything, but she thought it would be beneficial to them. She chose about ninety to mark compositions, and the others were to spend the forenoon in writing compositions as usual. Those who went to the academy would spend some time in correcting the errors of the compositions, and then ten or fifteen minutes were devoted to asking questions. At the close of the forenoon the young ladies noted that it had been a very profitable one. . . .

We read in sections; one section reads and the others point out the excellences and defects. . . .

I find on reviewing that I have learned but little. I fear you will be disappointed; but tho the addition to my small stock of knowledge has been trifling, I think I have learned how to study in some measure, which I am sure was something I knew nothing about when I came here.

The writer of the following extracts had just passed her sixteenth birthday. She was one of the two girls for whom the academy in South Berwick, Maine, first unbarred its doors, and she had studied there Latin and the higher branches then taught in such schools:

We have done hardly anything at studying as yet, and we are not to be classed till the middle of next quarter, so, as I have so long time before me, I shan't despair of getting into the senior class. For convenience sake the school is, at present, divided into sections under separate teachers. . . . In our section we have attended to nothing yet but arithmetic, writing descriptions and Bible lessons. In arithmetic our section, which consists of about thirty, is divided into monitorial sections; they have made me monitor of a very fine section containing about twelve.

The descriptions which we write are exercises which we have every day. Some subject is given out, say, for instance, a thunder storm, and the next day we are to read what we have written about a thunder storm; then we receive another subject for the following day. . . .

Today I had a lesson in calisthenics; that is, I spent an hour in a class with about forty others under Miss Nismyth's care, making curtesies. We made graceful work of it, you may be sure. . . .

Miss Grant spends about half the morning in the schoolroom, Miss Lyon is always there during school hours, and there are eight or ten other teachers who devote the whole day to us. . . .

All the regulations and rules have not as yet been proposed to us. The teachers are very strict with regard to all such rules as are adopted; but they manage us as a judicious husband manages his wife. They make us say for ourselves what we will do (which they see to it shall be just that which they wish), then give us the credit of governing ourselves, and after all that is contrived, why, to be sure, we have no excuse if we don't do just so and so.

School met at eight in the morning, was dismissed at twelve; dinner at a quarter past twelve; afternoon school hours from two to a quarter of five; tea at five. Evening study hours from seven to a quarter of nine, when, the record says, "All studies and writing must be put away and at quarter past we must, our lights being extinguished, be safe in bed."

I have commenced drawing a map of the Mississippi upon cloth; perhaps father observed one hanging in Miss G.'s room—precisely like that. Miss Grant requested me to undertake it at my leisure time out of school.

August 9th, 1831.—Our school contains about the same number that it did last term. . . . I have a fine class in algebra; the girls in it are so bright that it is really quite a pleasure to attend to them. Miss Grant gave me in the first place a much larger class than I have at present; it embraced all the first scholars in the school, and when I received their names I felt dismayed at the prospect before me. Luckily a new book was introduced into the school just at that time, and as one study only is at one time attended to here, it was concluded that it was better to pursue politics than mathematics, so I have joyfully relinquished part of my class and have entered with them upon the new study. The Political Class Book, by William Sullivan, of Boston, is the text book we use. We obtain all information from any other sources of knowledge that are within our reach. Our recitations are twice a day to Miss Grant; they are all about the law. We have had one lesson on Probate Courts. [Her father was a probate judge.] Last evening I called at Miss Grant's before dark, and she requested me to stop and study with her during the evening. I remained till after ten, comparing the constitutions of the different States in the Union, and passed a very pleasant evening. One other night I remained so late with her that when I returned every one had retired and Mr. Baker was fastening up the house.

September 3.—We have been examined in

several things already, and each scholar has been marked according to her proficiency. We do not know when or in what we are to be examined, but are liable at any time to be taken with half a dozen others to a separate room and questioned in some branch. All this is done in order that they may class us correctly. I hope this excitement will be over in a short time, it is so excessively fatiguing to the mind. . . .

Within a week or ten days I have been requested to prepare a set of questions for the whole of the Political Class Book; not common questions which may be easily answered from the book, but certain Whys and Wherefores and with regard to any incidental facts that may be brought in by the way. In short, they are to be made out of nothing, to be manufactured like the bricks in ancient Egypt, without straw. I hope that next summer the young ladies will be much benefited by them. . .

The young ladies in this house with me are remarkably pleasant and well informed, and I like them extremely. Miss Gould, I suppose, is rather the superior. She is about twenty years of age and daughter of a minister at South Hampton. Miss Murdock, her roommate, is from Boston; she is about my age. Miss Appleton, of about the same years, is from New York City. Miss Adams, from Charleston, who has previously attended school here, just nineteen; Miss Brown, younger than any of us, from Salem; Miss Stevens, from Portsmouth; Miss Hill and Miss Lord, from the same place.

Other names mentioned are "Miss Adeline Young from Lebanon, N. H., remarked for her beauty"; Miss Holliday from Mackinaw, Mich., and Miss Abby White from Putney, Vt., "a noble scholar." She also writes:

I have in my class two Misses Tappan, from New York, nieces to the John Tappan who wrote the letter to Dr. Ware, and in their good sense and shrewdness they quite take after their uncle. Their father is either Arthur or Lewis, I cannot say which. I was introduced to their mother last evening.

Perhaps it may be a satisfaction to father and mother to know the fact that I am placed among the Seniors and shall receive my diploma at the ensuing examination. The class contains only eleven. Eleven young ladies taken from among so many is a very small proportion. Many of the young ladies are (and begging Miss Grant's pardon, I think they have good reason to be) a little dissatisfied that it is not larger. Miss Grant explained later that her diplomas were recommendations to teach.

I felt very grateful for your kindness in offering to prepare for me a new dress for examination, tho I shall not need it. The Seniors dress in uniform, and as I am one it will be necessary for me to lay aside my black for that occasion and put on white. We went the same day we received our appointment to Miss G.'s room to settle about these preliminaries. The class voted that all should wear white, with broad lace tuckers and plain bobbinet under handkerchiefs trimmed with edging. Green forest belts with guard ribbons and gloves to match. My frock and neckerchiefs will answer, and Miss Grant has sent to Boston for our belts, gloves, etc., so you need have no trouble about it.

To obey the call of duty and to improve one's opportunities was what the Ipswich teaching inculcated, and perhaps one closing extract from the last letter to her mother this young girl wrote from school may show better than anything that has gone before the result of this character building:

I want very much the power of attending to present duties. I want to do good in the world, and I am continually forming plans for further usefulness, but I find that frequently, ... while forming these plans, not having my thoughts about me, I neglect most precious opportunities. I am aware this is a very great defect in my character, and I should be obliged to you if you will help me to correct it.

I would not deny that this training was serious, if not ascetic, and in its scales the soul weighed more than the body; but before we sneer at the old-fashioned "female seminary" let us recall the women of noble aim and unselfish life who exemplified its teaching. It may even be pertinent to ask which is the fairer sight, a seminary girl studying the constitutions of States under the eye of a cultured Christian woman, or a company of college girls smoking cigarets and playing "bridge" for money.

NEWARK, N. J.

Preparation

BY JOHN ELLIOT BOWMAN

THE stone from a shepherd's sling let slip
To sink in a giant's brain
Ne'er took its form in the shepherd's scrip;
In the torrent's unrelaxing grip
For ages it had lain.

CHELSEA, MASS.

Steerage Impositions

BY KELLOGG DURLAND

[Mr. Durland has just returned from a trip to Naples and back, where he went as a steerage passenger, to make some investigations with regard to immigration and kindred topics. We are glad to give some of his experiences and impressions to our readers.—EDITOR.]

"THE steerage pays the ship," one sometimes hears aboard the Mediterranean and Adriatic service boats. This, like most epigrams, probably points if it does not literally state a truth. The fact lies in this—between the steerage and saloon rates and the steerage and saloon service there is a striking disproportionment.

In connection with an investigation of the Italian immigration question, I was recently called upon to make a steerage passage to Naples and return. Going out I traveled in a Cunard ship, paying $30 for my passage. Returning, I took passage in a White Star liner, paying 180 lire, or approximately $36 for my ticket.

First--class passage in either ship could be obtained for $90, and sometimes it is possible to obtain first-class passage on Cunard steamers for $75. The difference in rate, therefore, was as two and a half to one or three to one. The difference in service, however, showed a discrepancy so startling that a conservative writer hesitates to estimate it.

I will not generalize nor theorize. I will state plain facts of my own personal experiences on both steamers. On the Cunard ship, the "Pannonia," somewhat more than 500 passengers ate in one common room, in which there were sixty occupied berths. For six days and six nights we had very rough weather. Many of the occupants of those berths were seasick. Sitting at table, some of the passengers could almost touch the berths where these seasick passengers were located. If perhaps one-third of the occupants of these berths in full view of the dining tables were seasick, the effect upon the other passengers may be readily pictured, not to make mention of the sight and smell of food upon those affected. On the westward bound trip, when the capacity of the ship is taxed, I am told that the number is increased from sixty to two hundred, sometimes.

If these steerage passengers were of a different social and educational status, no such condition as this would be imposed upon them. The steerage capacity of that ship is about 2,200. It can hardly be possible that the fare of those passengers who are forced to sleep in the dining rooms in full view of the entire ship, is necessary to the profitable running of the ship. If it is, there is something radically wrong with the ship's management. If ten beds, or one bed, were put up in the saloon dining room, and a seasick passenger put therein for just one meal, the patronage of the company would be jeopardized. But these steerage passengers are not English-speaking as a rule, nor lettered. They are ignorant peasant folk largely — Italians, Croatians, Dalmatians, Carpathians, Greeks and Syrians. They do not pay $90 for their passage, but they do pay $30 for their tickets, or $36 if they are coming to or going from an Adriatic port.

Ignorant though they are, poor as they are, uncouth perchance as they may appear, they do not enjoy this sort of thing any more than would saloon passengers. It is just as difficult for a Greek or Italian peasant woman to keep her food down in close proximity to the smells and sickening scenes of seasick passengers as for a well-bred lady whose punctilious daintiness is made possible largely

thru the cheap labor of the peasant woman or her husband.

In the saloon a hair on the butter might easily spoil the meal of a nice $90 passenger. I have picked two large, fat worms from one plate of macaroni on the White Star ship, been consoled by a fellow passenger, an Italian laborer, not to mind such things, and eaten the macaroni—because I had to. I do not mean to insinuate that all of the macaroni was wormy, but the incident, as I have stated it, is a fact, and on more than one occasion I have found small macaroni worms, and I have seen other things picked out of the food by my fellow passengers.

On the Cunard ship, then, passengers eat, sleep and are sick in the same room. On the White Star ship there was no dining room at all provided. The only sitting room or lounging room would not hold above 100, or, at the very utmost, 150 passengers on a ship carrying more than 2,000. On this ship there was no meal service whatever. At the feeding hours—they could scarcely be called meal times—a great bell sounds and the chosen leaders of messes—*capo di rancios*—of every six or eight passengers, line up in the passageway, leading off from which is the galley. Just over the galley threshold stand the stewards and galley cooks with huge tanks of food. As each mess leader steps up with an ordinary dishpan extended, one of the galley cooks drops into the pan the portion of the six or eight whom this mess leader represents. The man then rejoins his group wherever they may be and divides the food. The meal is eaten, as a rule, at the spot where this apportionment takes place, or each man may shift for himself. This means that the food is consumed from off a hatch, or in a corner on the floor, or on a deck, or in one's berth. A more unsatisfactory, and, in some particulars, a filthier scheme could scarcely be devised by human ingenuity. Unsatisfactory as that is to the passengers, it evidently suits the company. Otherwise they would improve upon it or substitute another scheme.

After these "meals," the clutter and refuse lies for a time in profusion over everything. The typical immigrant is still an untaught child. What he cannot eat or does not want he lets fall from his hands. He has not yet learned the desirability of tidiness, and there is absolutely nothing in the ship's system to encourage this instinct, if it perchance exists at all. He has not yet learned to throw his waste over the rail of the ship instead of dropping it to the deck. I realize that an ocean steamship company is not a reform school, a social settlement, nor a philanthropic agency, but when it is remembered that the first notion of American life is conceived by these immigrants from their treatment on the ship, it is obviously a matter of concern to America and Americans that the steamship companies introduce certain systems of service which suggest some degree of decency and civilization.

At the port of embarkation at Naples, I was given what is known as my "gear." Sometimes this gear is handed out to the passengers. In my case I found my gear on my bunk. This gear consists of a tin saucepan, a tin cup and a tin fork and spoon—no knife. At some meals large chunks of meat are doled out. It is evidently expected that these shall be speared with a fork and nibbled. The only other alternative that I could discover was to do as some of my fellow passengers did—wrestle to separate these chunks of meat into manageable sizes by holding them with their forks and hacking at the meat with jack knives or stilettoes.

When there are a few individuals left over from the regular assorted mess they go to the galleys with their individual pans. As it is necessary to make but a single trip for the food, it is often a difficult matter to get the food to one's bunk if that is the place one has chosen for consuming his food. At the first meal that I received on this ship, while I tried to balance a plate of soup in one hand and a dipper of wine in the other, a cob or biscuit was dropped into my soup, there being no other way of carrying it, and occasionally, when a large slice of goat's milk cheese would be given us with our meal, a cook or steward would balance the slice of cheese on the edge of my plate, which, at the first lurch of the ship, or sometimes at the first step I took, would slide into my soup and repose there until I got to my bunk.

Sometimes we hear the steerage pas-

sengers referred to in slighting and uncomplimentary words on the promenade deck. Most of us who have crossed the ocean in the saloon have heard such phrases now and again dropped by spick and span gentlemen and ladies to whom fine silver and white linen are a part of their day's necessities even on shipboard, just as much as the clothes on their backs or the boots on their feet. As a steerage passenger, I did not always conduct myself in a manner which would have become a proper dining room, but was that my fault? How can steerage passengers, or how can any human being remember that he is a human being when he must first pick the worms from his food, haggle his meat with a jack knife, and eat in his stuffy, stinking bunk, or in the hot and fetid atmosphere of a compartment where 150 men sleep, or in juxtaposition to a seasick man?

Nor does the imposition end with this rough form of feeding. Having eaten—(bountifully perchance, for there is always enough of such as it is. I don't think I ever succeeded in eating all of the meat or all of the macaroni that was given me)—each passenger must wash his own dishes; at least, so I found it on my White Star ship. The provisions made for this by the company would interest a New England housewife. There is a large and ample supply of raw, cold sea water which is obtained in unlimited quantities by simply turning a faucet. There are two small metal tubs in one section of the ship about three-quarters the size of an ordinary wash tub, where men may rinse out their dishes. These tanks sometimes, not always, have warm water. But they are so small, and the crowds surge so about them, that I never could force my dishes into them, so had to be content to let the salt water run over them from the faucet, and then when I could get to it I either scraped my dishes with my finger nails or a bit of paper, which I sometimes tore from a bundle. Towels, dish cloths or drying cloths were, of course, not provided. The Cunard Company washes the dishes of passengers, as it provides dining tables or dining halls, and serves the meals properly, and I must frankly own that my dishes were always very much cleaner when done by the Cunard Steamship Company than when on the White Star boat I had to do my own washing.

As to the food itself, I would lodge no complaint. On the whole, in spite of an occasional worm, the macaroni was all right. It was very monotonous fare, to be sure, but still it was properly cooked, and on the Cunard ship there was a variety and a tastiness which the steerage cook frequently attained thru varieties of sauces which made the eating tolerable.

The Italian Government insists that a *commissario* accompany each ship sailing from an Italian port carrying passengers. This *commissario* comes to the steerage galley just before each meal and samples the food. If he does not like it, it is all thrown overboard. This insures that the food is cooked. There is a good deal of farce connected with this ceremony, however, for my chief complaint is not against the food so much as against the service. When the *commissario* appears, a clean white napkin is spread over an end of a galley table, and the food is served to him on proper china, and his wine not in a battered tin dipper, but in an ordinary glass. Of course the food is not poison; it is simply rough and cheap. Macaroni every day for twelve or fourteen days does not appeal to one unaccustomed to that diet. Yet it is unnecessary one should starve.

The point is why should the steamship companies charge $30 or $36 dollars for this sort of fare and service when for two or three times that amount one can travel so comfortably in the class known as the saloon. Here, for example, is a fair comparison between a Sunday dinner in the steerage and a Sunday dinner in the saloon. These bills are taken as they came—both the same day on the same ship—a Cunard ship.

THIRD-CLASS BILL OF FARE.

DINNER.

Vegetable Soup.
Beef, Pork and Sauerkraut Gulash.
Beef and Macaroni Stew.
Jacket Potatoes.
Stewed Prunes. Figs.
Fresh Bread. Biscuit. Wine.

It should be noted that all of the passengers did not receive both gulash and stew. The former was for the Hun-

garian and Slavish section of the ship, the latter for the Italians. What the dinner amounted to was a bowl of soup, a plate of stew with boiled potatoes, stewed prunes served in a tin saucepan, one for about every five or six passengers, and two or three tiny figs doled out by hand by the stewards. The usual crude, red wine, about one-third water, with a cob, or what in America would be called a bun, made up this Sunday feast. With this compare the saloon dinner, bearing in mind that the saloon passengers paid, or at least some of them, not more than three times steerage fare.

SALOON DINNER.

Hors d'Oeuvres, variés.
Pot au Feu. Mulligatawney.
Fillet of Flounder, Shrimp Sauce, Lobster à la Newburgh.
Turtle Steaks, Montpelier. Salmi of Game.
Sirloin of Beef. Potato Croquettes.
Lamb, Mint Sauce. Round of Corned Beef, Vegetables.
Boiled Chicken, Bechamel Sauce.
Boiled Purèe à la Julienne Potatoes.
Boiled Rice.
Baked Tomatoes. Fried Egg Plant.
Roast Capon, Bread Sauce.
Cold Roast Beef. Boiled Ham.
Roast Turkey.
Salad.
Cabinet Pudding.
Almond Macaroons. Gateau à la Richmond.
Wine Jelly. Peaches à la Condé.
French Ice Cream—Wafers.
Canapes à la Windsor.
Cheese. Dessert. Coffee.

It is perfectly apparent that the cost and worth of the latter is considerably greater than three times that of the former. If, therefore, the saloon rate is a fair and just one, then the steerage rate at one-third the saloon rate is grossly out of proportion, unfair and unjust —in the light of food received and service rendered the one class in proportion to the other. If the service rendered to saloon passengers is so complete and so good that there is only a narrow margin of profit, the inference is that this margin is increased by the wider margin in the steerage service. On the other hand, if the steerage rate is a fair one, then the saloon rate is so low that the service must be maintained at a loss, so that viewed from whatever side, there is a flagrant mal-adjustment.

The meals on the Cunarder were always of the simplest—stews, macaroni and "salads" mostly. It should be emphasized that the Cunard fare was distinctly better in quality and variety than the White Star ship, or at least it was according to my taste.

Food on shipboard is probably at a higher market value than on land, but I am perfectly sure that in New York in the month of my trip to Naples it would have been possible to supply some of the meals that we received for 4 or 5 cents per head. To be absolutely safe, to give the company the benefit of the most remote shadow of doubt, we may double that amount, make liberal allowances in the striking of our average, and assume that the cost is 10 cents per meal per head. There were about forty meals served. The aggregate cost of all the meals, then, service not included, would perhaps reach $4. It must be emphasized again that the complaint is not against the quality nor the quantity of the food. It is against what appears to be an unfair scale of charges and against certain conditions which are not compatible with our present day civilization.

Further, at Ellis Island, I found the dining room service very much better than on either the Cunard or White Star ship; I found the food better; and there was plenty of it. It was well served, the stewards were courteous, and when I was held in the detention room simply as an ordinary immigrant, I did what any immigrant might do—asked for second helpings, and always received them without question. And yet I am informed that the amount allowed for this food is about 24 cents a day.

To carry the comparison between the steerage and saloon conditions further, let us consider the sleeping arrangements. A saloon stateroom ordinarily accommodates four persons. There are clean sheets and white blankets and tidy spreads on the beds. Clean white towels are furnished. There are washing facilities in every room. Ordinarily none of these things are looked upon as luxuries hopelessly out of the reach of even the poor. In the room where I slept in the steerage, going over, there were about 150 passengers. There were compartments on the ship with accommodations for many more than this number. The bunks were in double tiers of iron pip-

ing with simple iron springs. Returning, strips of sheet iron or some metal took the place of springs. The mattresses were burlap bags of straw—on the Cunard line, covered with a simple tick; on the White Star ship, uncovered. On both boats the pillows were the same—a life preserver placed under one end of the mattress, to give it a slight elevation. For covering, passengers on both boats were given one thin blanket. We all slept in our clothes as a matter of course. The atmosphere in these compartments, after a few days, becomes excessively close and fetid. One Italian workingman told me that he slept in his bunk but one night out of thirteen—preferring to sleep on the deck the other twelve nights.

The washing facilities on both boats were unpleasant. On the Cunard boat the washing facilities were inadequate. There were five lavatories for men and two for women. In the large lavatories were twelve basins; in the smaller ones seven. The lavatories themselves were exceedingly small and cramped, with the result that these places were simply packed, jammed to the doors, an hour before breakfast. I stood my turn sometimes in a row three or four back of the basins and nearly suffocated before I got out of the close room. Many regularly did not pretend to wash at all until after breakfast. Indeed, the rush immediately before breakfast made any other arrangement impossible. These seven lavatories were for the use of 2,200 steerage passengers. Sometimes, and, indeed, on the return trip regularly, the men near me, and I, filled a wine bottle with water each night and in the morning we poured this water over each other's hands, and thus made our assisted toilets.

The saloon passengers have the advantage of a library, a smoking room, ample decks and lounging places. In times of storm, when the passengers are ordered within or below, the steerage has nowhere to go save to their berths or to the tiny, hopelessly inadequate lounging room of the White Star ship, or to the dining room of the Cunard; so that the atmosphere, wherever these passengers are herded, soon becomes sickening. At every point the comparison between the saloon and the steerage shows a difference of many degrees.

The attitude of some of the ship's officers, again, is characterized by ill temper and caddishness. Here, however, I would hasten to add that I do not believe for an instant that either of these companies would approve or permit to go unpassed any act of discourteous treatment on the part of their officers, tho, as a matter of fact, the last English officer on the Cunard ship frequently went out of his way to make himself obnoxious to steerage passengers, and on the White Star ship I saw one of the senior officers snatch up a bundle which an immigrant had dropped upon a coil of rope and hurl it at the head of the owner, accompanying it with a volley of oaths, simply because the immigrant, entirely ignorant, had unsuspectingly placed the bundle on a coil of rope which happened to be needed by the officer for immediate use. To have removed the bundle or kicked it aside would have been justifiable, but this officer would not have cursed a saloon passenger. For even this offense he certainly would not have thrown his luggage at his head. But this, I am convinced, is an attitude of which the companies themselves would heartily disapprove, and at the same time it must be considered that these outbreaks of temper and exhibitions of caddishness on the part of individual officers are a part of the steerage imposition which the majority of steerage passengers accept as a matter of course, and when abused slink away like whipped dogs.

It is because the steamship companies represent business enterprises that it is the duty of the American people to take up matters like these. As business concerns the steamship companies owe allegiance, first to their owners and stockholders, afterward to their saloon passengers; then to their second class passengers, and finally to the steerage. Therefore, the Government must needs watch, regulate and ameliorate conditions for the comfort, health and safety of the travelers who are steamship steerage patrons.

The Italian and Hungarian Governments have looked into certain questions and have imposed certain regulations

upon the steamships and have provided officers and commissioners to accompany vessels carrying their citizens or other people to their countries. As a consequence of this, the food on the Mediterranean and Adriatic boats comes up to a certain standard. If the American Government would take up the service the benefit which would accrue to thousands of immigrants annually would be great.

The living conditions on the whole aboard these ships have not been properly investigated, or at least taken up. The commissioners and officers representing the Italian and Hungarian Governments cannot do more than inspect the general cleanliness of the ship. It remains for our Government to do something here. Steerage conditions are vastly better today than they were a few years ago. Yet much remains to be done to promote better sanitary and more comfortable conditions on all of the vessels engaged in the immigrant carrying trade. If human beings are to be subjected to treatment and conditions proper for cattle, then they should be taken at freight or live stock rates; or, on the other hand, if they are to be called passengers and charged a substantial passenger rate, then they should have the consideration of such, and it is clearly the duty of American citizens to ask their Government to consider these matters, for these people will, many of them, some day be American citizens.

New York City.

A Southern Observatory.

BY GRACE AGNES THOMPSON.

A PLAN, possessing novel and original features, for the creation of an international observatory that shall occupy the best location and possess the largest telescope in the world is proposed by Prof. Edward C. Pickering, Director of the Harvard College Observatory. It is the result of long study and consideration on the part of Professor Pickering of the needs of astronomers, and if put into execution it will promote the advancement of astronomy in a way and with a rapidity that has never before been possible.

The details of this plan were discussed publicly for the first time in a paper that was read by Professor Pickering before the American Philosophical Society at the recent Franklin Bi-Centenary, at Philadelphia.

If we take a map of the world and mark on it the sites of the more important observatories, we shall find that six-sevenths of them all are situated between latitudes 35 degrees and 60 degrees, or the latitudes of Spain and Scotland. In these latitudes the stars of the southern hemisphere cannot be observed at all. We shall also find that nine-tenths of the observatories lie within the cloudy regions of the earth. There are three extensive clear regions on the earth—the first and largest, in North Africa, has no observatory; the second, in South Africa, has only one observatory, at Capetown, in the cloudiest part of this region; the third is within the interior of Australia, and there is no observatory on this continent, except at Melbourne and Sydney, on the coast.

Moreover, with only two or three exceptions, the more important observatories are situated on low elevations near large cities, capitals of countries, or large universities. Now, these are centers of civilization, since the climate is temperate, and frequent rains promote agriculture, inland navigation and the support of large populations. The very conditions that have rendered man's progress successful are those most unfavorable to good astronomical work. Besides this, smoke, electric lights and jars, all fatal to the most careful study of the stars, accompany the growth of large cities.

At the same time, all observatories that now exist or that ever have existed may be classified as belonging to one of three classes, each of which has its own special kind of work. Most of the larg-

est and most widely known observatories are departments of great universities; an effort is usually made at these observatories to extend the science of astronomy by special investigations rather than by long continued routine observation, the intention being to combine instructive routine with research. Nearly all other large observatories are maintained by governments of countries, and are occupied with continuous observations, such as are needed to strengthen our knowledge of the fundamental parts of astronomy—the computation of time and latitudes, and meteorological observations. The third class includes all other observatories, the great majority, most of them small and often hardly known to the public; these are maintained entirely by private fortunes or by scientific societies. They are engaged in various lines of astronomical work, but, as is obvious, many of them, tho directed by competent and skillful astronomers, are so restricted by lack of large telescopes and other equipment, that their work must always partake more of the nature of personal culture and information than of real advancement to the science of astronomy.

Comparatively few observatories have an equipment that will enable them to undertake pioneer work in astronomy of any very difficult character. Given a suitable equipment in instruments, they are almost sure to be handicapped seriously by location. Only one, the Harvard College Observatory, has the advantage of both a northern and a southern station; and it is to this fact more even than to an unusually fine equipment —passing over, of course, the remarkable skill and scientific knowledge of its director and chief assistants—is due the wonderful photographic attainments of this institution. Two well-equipped and disciplined stations, at Cambridge, Mass., and at Arequipa, Peru—the latter at least situated in a comparatively clear region and at a high altitude—working together systematically, regularly and continuously for many years, have caused Harvard Observatory to stand out in very distinct relief against the astronomical history of the world,. and have rendered possible the stupendous routine investigations, involving years of arduous labor, that have been carried out so successfully there. The vast library of nearly two hundred thousand photographic plates, giving the consecutive history of every part of the sky, from pole to pole, for the past twenty years, speaks eloquently of the value of such arrangements. Still, even this institution is continually seeking to broaden itself out. It is the dominant spirit of the twentieth century, and twentieth century science is making big strides of advancement. Each science feels the inspiration and demands the necessary aid. Can we expect astronomy to keep silence?

With conditions in the astronomical world such as have been shown, however, it is obvious that further achievements in the science must be rather slow. For, on the one hand, as Professor Pickering says, "So careful a study has been made of astronomy during the last half century that it is not easy to secure a real advance"; on the other hand, for various reasons, the resources that would make it possible to advance their work to a higher plane are beyond the reach of most observatories. The plan suggested by Professor Pickering provides generously for this.

An international observatory, whose work shall be planned by an international committee of astronomers, and to meet the needs of all observers thruout the world, is proposed. The best location, the best form of instrument, the best method of administration, the best arrangements for the discussion of results, are all to be faithfully considered and decided upon at the outset. "We must learn from the success attained in industrial enterprises, and spare no pains to secure the best possible conditions in every respect, however trivial," the author of the plan further states.

The location that would be chosen, therefore, would probably be near Bloemfontein in the Orange Free State in South Africa, where comparative dearth of rain and a high elevation would secure immunity from dust and haze, which prove such serious obstacles to good astronomical observations. It is also in the Southern Hemisphere where many very interesting celestial objects may be studied that are never visible in

a northern situation. The telescope suggested is a reflecting telescope of the unprecedented aperture of seven full feet diameter. One likes to picture what this mighty machine would be. One must imagine first a great tube of angle iron, covered with heavy canvas, forty-five feet long and a little more than seven feet square, with a cell composed of steel plate at one end to support the big mirror. No ordinary solid metal tube would do for this telescope. It would be altogether too heavy. The mirror itself would weigh considerably more than a ton, and any great additional weight would require an exceedingly ponderous foundation. But in a mounting such as that used for the five-foot common telescope at the Cambridge station of the Harvard Observatory—the largest telescope in the world at present — the weight is very much relieved. The picture then would include a big tank—an excavation with walls of solid concrete—filled with water, which would be in no danger of freezing in that latitude, and in which would be floated the great hollow steel cylinder or polar axis that would support the tube above. The latter would be bolted to the polar axis by means of a stout iron fork attached to the upper end of the polar axis, which would allow it to swing freely in any desired direction, while the polar axis, buoyed up by the water and turning freely on pivots at either end, would add yet other motions to the telescope and make it possible to direct the tube toward any part of the sky. Electric power, which has been employed so successfully at Harvard Observatory, would be used to control and manipulate the telescope. Electric motor power would be used for motions in right ascension and declination and a motor clock for following the apparent motion of the star.

A reflecting telescope is chosen rather than a refracting instrument, for several reasons. The most important are the great difference in price, a reflector costing only about one-tenth as much as a refractor, and the absence of chromatic aberration. Moreover, the limit of size of refractors is already nearly reached, and in large instruments the engineering difficulties are very serious.

This mighty instrument, with suitable buildings for an observing station, the salaries of the three or four assistants required to keep it at work, and all other expenses would be only a few hundred thousand dollars. The great observatories of the world have each a plant costing $200,000 to $300,000 and an annual income of about $50,000. Capitalized, this would represent about a million and a half. For one-third of this sum, or half a million dollars, the plan here proposed could be carried out with results which, it is believed, would advance astronomy in almost every department. The expense could be reduced by $100,000, or to $400,000, by giving the telescope to Harvard, which would then assume the cost of administration. The principal item, $250,000, would be required to provide a permanent annual income of $10,000. This would permit the telescope to be kept at work thruout every clear night, and in the proposed location almost every night would be clear. The remaining $150,000 would be spent on the telescope, and this estimate is based on the cost of the twenty-four-inch reflector recently built for Harvard.

The special novelty of the plan is the method of discussing the results. Not some one individual or single institution would be benefited, but the astronomers of the whole world. From the great size, as well as from the exceptional location of this instrument, it ought to give more remarkable results than those previously obtained in any department of astronomy. The use of the telescope visually in various departments has, of course been considered, but the principal work would be photographic, and the results in this line would be far greater than could possibly be discussed by any one individual or institution. Therefore, it is proposed that an international committee shall prepare a plan of work, and that copies of the photographs be given to any one who could advantageously use them. Astronomers could doubtless be found in all parts of the world who would discuss these photographs, and thus be furnished, without charge, with material of the highest grade, which could otherwise be obtained only at an expenditure of many thousands of dollars. So far as possible they would be aided also by subsidies for paying sal-

aries of assistants, for publication, etc. It is interesting to note the variety of important information that the telescope would furnish. Its aid would be invaluable in determining the positions, brightness and spectra of faint stars, especially of novæ and variables, in depicting clusters and nebulæ, in studying the distribution of faint stars, in discovering and following faint satellites and asteroids, in measuring parallaxes and proper motions, in general in studying all the properties of stars beyond the reach of smaller instruments. In visual work very high powers could be employed without the difficulties usually encountered from diffraction where a very small emergent pencil is used. Owing also to the great light-gathering power of the telescope, it is probable that visual observations of the surfaces of the outer planets, especially of Uranus and Neptune, could be made to great advantage. Who can foretell what marvelous new facts might be established?

It is a remarkably practical and feasible plan, advanced at a time when just such a plan is most needed. Those who wish to see science advanced and have means to offer to its aid rightfully desire that their gift shall be applied profitably, and here they find not only an attractive method of helping, but one that is perhaps the most wide-reaching ever proposed. The donor would be guided in spending his money to the best advantage, not by a single astronomer, but by the astronomers of the world; while his name, which would always be attached to the telescope and its work, would thus be known for all time, and thruout the world rather than merely locally.

The building of an international observatory would be the only instance thus far in the history of the world where actual measures were taken to place the best possible aid to research of any kind within reach of *all*. Yet that is the only way to raise astronomy to the highest possible plane; for astronomy, it should be remembered, is not like other sciences. This greatest of all problems to the solving of which man has set his mind deals chiefly with that which is outside of and beyond and above this earth, and it requires costly instruments for its study, and demands constant devoted attention for its comprehension. It would be the application to science of the principle of brotherly co-operation that is dominating so many of our activities—the noblest and highest of all ways of working. Unconsciously two or three steps have already been taken in this direction. The Smithsonian Institution, for instance, and certain scientific societies are examples. But these include all fields of science and are only of benefit to a minority. An international observatory, on the other hand, would be the property, so to speak, of the whole world —an institution devoted entirely to one science, a Mecca of information to which every inquiring astronomer might freely go.

CAMBRIDGE, MASS.

Infinity

BY CHARLES ROBERTSON HARDY.

O LITTLE blue flower, looking up from the sod,
Thy feet in the earth, thy face to the sky,
Didst fall from the eye of a long-brooding God,
Thou tangible scrap of Infinity?

Out of Eternity didst thou condense
From palpitant star-dust, midst nebulous fire?
Into this borderland, 'twixt Spirit and Sense,
Wert thou projected to bid me aspire?

What is thy lesson, thy sermon, thy text?
What canst thou say in this fugitive hour?
What to a soul with doubt sore perplexed?
"The Infinite find in the heart of a flower!"

NEW YORK CITY.

Parliamentary and Interparliamentary Experiences

BY WILLIAM RANDAL CREMER

[Mr. Cremer is the originator of the Interparliamentary Union. He has received the Nobel Prize of $40,000 for the most effective work in the promotion of peace. He devoted this money to the cause of peace by giving it to the International Arbitration League, of which he is the founder. His services to the cause of international concord, and to the cause of the working people thruout Europe, induced M. Carnot, President of the French Republic, to bestow upon him the Cross of the Legion of Honor. These reminiscences come from Mr. Cremer thru an interview between him and Mr. Hayne Davis.—EDITOR.]

MY habit is to work, not to talk, and we are at this moment involved in the multitude of duties incidental to the adjournment of the House next week; and all the detail work which remains in the wake of the Fourteenth Interparliamentary Conference falls upon me. Then I must publish an issue of *The Arbitrator,* which has been the organ and weapon of our cause for twenty years. But for a certain debt of gratitude to THE INDEPENDENT, which I have been unable even to acknowledge heretofore, I would say it is impossible for me to comply with its request for Reminiscences of Parliamentary and Interparliamentary Life from a workingman's point of view. Aside from acknowledging our debt to THE INDEPENDENT for its able advocacy of the cause of arbitration, without which these recent propitious events could hardly have taken place, it is a pleasure to give some idea of the part which has been played by labor men and labor organizations in speeding this movement toward a successful issue.

Turning my face backward, I see standing out conspicuously the nine months' lockout of 1850. I was one of the labor leaders in that fierce conflict—one of the severest ever waged in England, and which involved at least half a million people, counting only the workmen directly involved and their families.

When it came to an end I felt compelled to find a solution for the labor problem. Organization and arbitration seemed to me to open the way to a solution. And I spent the next two decades organizing unions among British workmen and strengthening the sentiment for arbitration in industrial matters. Last year a memorial, which I had the honor of preparing, was sent to Washington, in advocacy of the Hay treaties of arbitration, bearing the signature of 7,432 elected leaders of British labor and industrial and provident associations, having a membership of nearly three million persons. Many things had to be done and endured before that document could cross the Atlantic.

A workingman had to get into the House of Commons; numberless meetings in favor of international arbitration had to be held on the Continent, as well as in England, the Interparliamentary Union had to be organized and developed into a powerful body, in the face of ridicule where assistance ought to have been received, to say nothing of the vast efforts involved in the creation of these labor and industrial organizations. Many men and many years of effort were taken up in this work. It was not a simple thing even to make a beginning by finding a seat in the House of Commons for a workingman.

The thought was strong in this country that there is no place in Parliament for a laborer. Then, too, no salary is attached to the office, which makes another very great difficulty.

But in 1868 several of us decided to stand for seats, and I was put up for the Borough of Warwick. One of my treasures is a clock, presented to me by the Workingmen's Liberal Association of Warwick, in memory of that campaign. It was not till 1885 that I entered the House, and I found eleven workingmen there when I took my seat for Haggerston, the district I now represent. We were called the "Twelve Apostles."

I had long regarded war with horror,

industrial war, international war, all kinds of war, except standing for principle against all opposition. I make it a rule to act according to principle, and I always call for a division of the House when a principle is involved.

Being opposed to the Boer war on principle, I voted every time against providing men and money to wage that dishonorable and infamous struggle. On one occasion only six other members of the House stood with me.

I was one of the few rabid anti-war members who succeeded in retaining his seat. A bright spot in my sky is this message which I received, after the election in 1900, from Sir William Harcourt:

"Your election is the one blue patch in a black sky."

Parliamentary life disillusions one in many respects.

I remember going once to John Bright, accompanied by several hopeful companions, with a progressive plan for the people's welfare. Mr. Bright was very sympathetic, but said: "I do not wish to dishearten you, but I think you will get nothing done along that line while Lord Palmerston is here." We found this to be true. But Palmerston disappeared in due time, and a nobler man was elevated to the Premiership—Gladstone.

Despite all the temporary successes of the unworthy which I have witnessed, and despite all my disappointments during these two decades of public life, I can see, in looking back and around me, that the men of principle win in the long run.

Here we have Campbell-Bannerman as Prime Minister, elevated because he has stood for principle during many dark years, like a lighthouse with its beacon always burning. Then there was Gladstone, always fighting for the right, and more successful than any other modern public man of our country. Then here is Chamberlain. He began so radical as to be almost a Socialist. Since I have known him he has been in every party. He was never poor, tho now he is very rich. Increase in wealth cannot explain his change of opinions, however. I can understand his course only on the supposition that he has been controlled by personal ambition. After treachery to Gladstone on home rule, and to other leaders and comrades on other questions, he seemed finally in sight of the ambition of his life, when his party went down in shameful defeat, and the man of principle became Premier.

Then we have fifty-six labor members of the House now, instead of not one, as the case stood in 1868.

There is great cause for encouragement in the contemplation of these things, aside from the marvelous success of our movement for international arbitration. I made international arbitration one of the planks of my platform in the unsuccessful effort for a seat in the House in the year 1868. So far as I know no candidate had previously advocated, and pledged himself to support, treaties of arbitration. As soon as I did win a seat I made good that pledge. THE INDEPENDENT has already given an account of the preparation of that memorial, to which I secured the signature of 233 of my associates in Parliament. How little I expected one of the great capitalists of the United States—Mr. Andrew Carnegie—and the rising labor leader—Mr. Samuel Gompers—to be my chief sympathizers upon arriving in Washington with this memorial, in October, 1887!

Mr. Carnegie not only arranged for the interview with Mr. Cleveland, but did our delegation many honors, among which was an excursion to Pittsburg in a private car as his guests. There were ten members of the House of Commons, one member of the House of Lords—Lord Kinnaird—and three representatives of the "Trades Union Congress" in the delegation. In presenting the delegates to Mr. Cleveland, Mr. Carnegie said in part:

> "Mr President: Your own extraordinary career proves how little one knows of the duties which may devolve upon him, but I am sure that I myself can never be called upon to perform a part which will more deeply enlist my sympathies than that which I have now the honor to undertake."

Mr. Cleveland received our memorial most courteously and sympathetically.

We were very grateful for this opportunity to lay the matter so near to our hearts before the Chief Executive of that country which we regarded as able to put arbitration into actual practice most fully

and quickly. And we were inspired with hope by Mr. Cleveland's words.

This interview was the prelude to what followed. The press and people of America acclaimed our mission, and we soon became known as "The Peace Commissioners." One or two discordant notes which made themselves heard only served to highten the harmony of this memorable visit to America. Encouraged on all sides, we returned to Europe, and the Interparliamentary Union grew out of the continuance of our efforts. But in retracing our footsteps of these early efforts I cannot leave America without going again to the home of Whittier. I told the Rev. R. B. Howard, secretary of the American Peace Society, that Mr. Whittier was a great inspiration to me, and he consented to take me to his home. My reception was very cordial. "You are just the man I wanted to see. I was afraid you had all gone without coming to see me," was the kindly word with which I was greeted. I replied that I could not think of leaving America without calling upon him to thank him personally for the great service he had rendered to the cause of peace and for the inspiration I had received from his writings. During the visit I asked him to write a line for me as a souvenir. He left the room and returned with a volume of his poems, on the flyleaf of which he had written the following words, saying, as he handed me the volume: "This line from Ossian has been running in my mind all the evening":

Taking Tea on the Terrace of the House of Commons.

William Randal Cremer, Founder of the Union. Delegate from Finland at Left.
Theodore E. Burton, Delegate from the United States, at Right.

> The battle ceased along the plains, for the bards had sung the songs of Peace.—*Ossian.*
>
> Let us hope that from henceforth the bards will only sing the songs of Peace, and that, as in the days of Ossian, the battle will cease.
>
> With hearty sympathy in the noble mission of my friend Cremer, I am glad to place my name in this volume.
>
> JOHN G. WHITTIER.

THE INDEPENDENT has kept its readers so fully informed of our Interparliamentary plans, particularly since the St. Louis session of 1904, that I must express my gratitude for this, and pass over these important events with only a few personal allusions. When we landed in New York the 1st of September, 1904, I must confess that I had not let my hopes rise high.

My mission to the United States in 1887 had encouraged me to continued effort, but it did not result in a treaty of arbitration between the United States and Great Britain. I had prepared another memorial in 1896, secured the signature of 354 members of Parliament and come to Washington in high hopes. Mr. Cleveland was again the occupant of the White House, and he threw himself into the negotiation of a treaty which, in my judgment, is superior to any other arbitration treaty which has thus far been drafted. But this treaty failed of ratification by the Senate. These experiences taught me to moderate my hopes of actual results, so far as the United States is concerned. Furthermore, I had some fear that our being invited to America

in 1904 was for political purposes. I did not know that Mr. Bartholdt intended to introduce a resolution calling for the convening of a second conference at The Hague, to discuss the questions raised at the first, but not acted upon; also the creation of a permanent deliberative body to supplement the Hague Court, and lastly, the granting of jurisdiction to that Court, thru treaties of arbitration. My doubts began to disappear when this resolution was passed at our St. Louis session. When President Roosevelt promised, on September 24th, 1904, to call a conference of the nations, in accordance with our resolution, my fears were all dissipated.

President Roosevelt not only made this promise, but he told us that even then the United States was entering upon negotiations for a treaty of arbitration *with all nations willing to take such a step*. Our visit to America was brought to an official end by a banquet at the Arlington Hotel that night. In this same room, seventeen years before, our little delegation of 1887 had broken bread in gratitude for the words of encouragement which Mr. Cleveland spoke in favor of *one* treaty of arbitration.

I saw around me more than 200 members of fourteen of the world's most important parliaments, representative of 2,000 members, strongly organized into a great and growing union, and daring to take a stand for these progressive plans. My hopes of many years seemed on the point of realization, on a scale grander than I had even dared to picture to myself, and yet upon the initiative of the United States, just as I had instinctively felt to be proper when I began the "concerted movement" that has resulted in these things.

And on September 24, 1904, I was overjoyed by the initiative which the United States was taking, in compliance with the request of the organization which sprang from that first concerted movement. And in this foretaste of our ultimate success I could not suppress a desire that our King should be associated with the President of the United States in taking these long steps forward. Without a moment for reflection, I expressed the belief that the success of this plan would be assured if President Roosevelt would associate with himself, in issuing the invitations to the proposed conference, Edward the Peacemaker. There were insuperable obstacles to the realization of that wish, in the form of a joint invitation by the two branches of the British people, but events have happily opened the way for the essential thing I desired. The Russo-Japanese War necessitated the postponement of the proposed conference until the year 1907. Meanwhile Mr. Bartholdt took another step forward by proposing, at our Brussels session (1905) several points as a proper basis on which to found a Permanent International Parliament, and the draft of a general treaty of arbitration, granting jurisdiction to the Hague Court over the questions included in it.

William Randal Cremer's Rooms, 11 Lincoln's Inn Fields, London. Location indicated by a cross.

Commissions were appointed to pass on these two propositions, and upon the filing of their reports it was decided to call a conference of our Union to meet at London July 23d, so as to have the Union approve these reports, for presentation to the second Hague Conference. Our friends had secured control of the British Government, and, in consequence, the Government was generous in its financial aid for this fourteenth conference of our union.

In opening the Conference the British Premier made a remarkable address, which contained several ideas, any one of which, Mr. Bryan declared, would have justified this assembling together of more than half a thousand national lawmakers. I wish to cite several of these ideas, which seem to me most important:

"You are entitled to express, with an authority attaching to no other assembly in the world, the conscience, the reason, and the sentiments of a large and not the least influential portion of the human race. In addressing you I feel that I am not so much speaking to representatives of divers states of Europe and America, as to the exponents of principles and hopes that are common to us all, and without which our life on earth would be a life without horizon or prospect.

"With the purpose of your mission . . His Majesty's Government desire unreservedly to associate themselves. . . Let me recall the words addressed to your Conference in 1900 by the distinguished man who is now President of the French Republic:

"'There is no resistance which will not disappear finally before the might of an idea, when that idea draws its power from the sacred source of fraternity.'"

The ideas we advocate are true, and do draw their power from the sacred source of fraternity; and the disappearance of resistance before their might is well illustrated by two interviews which I had with Lord Rosebery, after these words were spoken by M. Fallières, President of the French Senate. Lord Rosebery was in charge of the Foreign Office when I first called on him to aid us in our movement for a general treaty of arbitration with the United States. I remember well how coldly he received my suggestions and how strongly he argued against the principle of a general treaty. Among other objections he insisted that it is impossible to secure an impartial tribunal.

After the conference of our Union at Rome I found myself unable to rest in mind until I had drafted a resolution calling upon the British Government to enter into negotiations with the United States for the conclusion of a general treaty of arbitration. Upon my return to England and the House of Commons I introduced this resolution. Under our system of procedure it was two years before I could get this motion up for discussion. But finally I succeeded. It occupied the attention of the House during a whole evening. Gladstone made a magnificent address in favor of it, and it was adopted by a unanimous vote—a rare thing in the British House of Commons.

Before sailing for America with the second memorial in 1897, and with a copy of the resolution, I called upon Lord Rosebery to advise him of my mission and to ask his assistance. He had ascended from the Foreign Office to the Premiership, and I was astonished and delighted to find him very cordial to the idea of a general treaty of arbitration between Great Britain and the United States. I expressed my gratification, and then took the liberty of reminding his Lordship of our former interview, and of the arguments he then advanced against this idea. He replied that, as Prime Minister, he was bound to give effect to the resolution which had been unanimously approved by the House. I then asked him if I could say to Mr. Cleveland that he was ready to conclude a treaty. He replied "You can say that to Mr. Cleveland and to our Ambassador, Sir Julian Pauncefote"; and I did so. This reversal of the attitude of a man of such eminence in our politics is one of the interesting incidents in my Parliamentary experience; and it leads naturally to the condition which now confronts us. Our Union has declared for (1) converting the International Conference, called at its request, into a permanent institution; (2) granting jurisdiction to the Hague Court thru treaties of arbitration; (3) making national appropriations annually in aid of international arbitration; (4) national study of armaments preparatory to international discussion of this question, with a view to the reduction and arrest of war appropriations.

The present Premier of Great Britain, knowing that these ideas are on our program, and before he is asked to act in the matter, assures us that the Government of Great Britain desires unreservedly to associate itself with our purposes. It has already been decided by the British group of our Union to ask for an interview with him, in order that we may request him to take the necessary steps to give effect to the resolutions of the Union approved at the recent session.

The committee appointed to call upon him is composed of Lord Weardale, our president, Lord Welley, Rt. Hon. Sir John Brunner, Colonel Sir C. E. Howard Vincent, myself, all being members of the executive committee of our group. Other members may be added to this committee.

The other day, as I was passing thru the corridor of the Palace, of which the House of Commons is a part, Lord Overbury stopped me. It was he who seconded my motion for a treaty with the United States. He said: "How little we supposed that these things would come to pass in less than a decade when I seconded your motion." We had just attended the *dejeuner* in Westminster Hall, presided over by the Lord Chancellor, and attended by over 500 members of the World's Parliaments, who constituted our Union. This historic Fourteenth Conference, seeing all that has happened during the past decade—more than a quarter of a hundred general treaties of arbitration actually concluded, aside from these far-reaching plans for the immediate future — my mind goes back to the scene at Washington when we presented the first memorial to Mr. Cleveland. We can say to our Premier, as we said to Mr. Cleveland, the difficulties in the way of the practical application of our principles are not insurmountable if an earnest desire to overcome them exists. We are satisfied that this desire existed among the masses of the people in 1887.

We are satisfied that it exists now among those who have their hands on the helms of several governments.

Thus the way is opened for Edward the Peacemaker to associate himself with President Roosevelt, in causing the second Hague Conference to bring forth these fruits, which are foreshadowed in the resolutions of our Union, adopted at St. Louis in 1904 and at London in 1906.

The British people have done much during many centuries to establish, to strengthen and to extend the principle of Parliamentary representative government in human affairs. Giving effect to our resolutions, recently adopted, will continue these efforts, in an appropriate way, on a world-wide scale. It is as natural that the British Government should take the initiative in giving effect to the London resolutions as that the United States Government should take the initiative in effectuating the "Resolutions of St. Louis."

I know that the labor unions of Great Britain will be a unit for all these progressive steps toward law and order, in international affairs and decreased war appropriations in national affairs. I can speak with almost equal assurance for the labor organizations of France, with which I have had intimate relations during many years, not only as secretary of the International Workingmen's Association, of which Carl Marx was the inspirer and also the destroyer, but as an individual and as a representative of British organizations. I have confidence also in the attitude of the labor organizations in other Continental countries and in America.

The friends of international peace and justice have great cause for gratitude therefore and for hope, and we who labor for the cause in Europe acknowledge our debt to Mr. Cleveland, Mr. Carnegie, Mr. Gompers and others, at the outset of our movement, and to Mr. Bartholdt, Mr. Burton, Mr. Roosevelt, Mr. Bryan and others, during the later developments. They have united all parties, in politics and in industry, on our highest ideas, and given us new hope for their early and full realization.

LONDON, ENGLAND.

Literature

Foreman's Philippine Islands.

It would be more pleasant for the reviewer of Philippine books if he could commend every one of the treatises on those islands which appear so regularly at intervals of a few months. But conscience forbids in most cases. The latest Philippine treatise* is no exception. At this stage of our Philippine experience no one has any excuse for putting forth, in a bulky and expensive volume, such a jumble of facts and fancies, information and misinformation, as this new and enlarged edition of Mr. Foreman's work contains. The author's original treatise of 1890, appearing when there had been no work on the Philippines in English for some years, gained for him, in the hurly-burly of Philippine discussion in 1898, an altogether fictitious reputation. Hence his edition of 1899 enjoyed a large sale, and has been authority for many misstatements about Philippine history, especially the Filipino revolution. This edition has now been revised (tho but rarely changed), and eight new chapters on American occupation and government are appended. The originally bad arrangement, still uncorrected, is rendered worse by the addition of chapters involving considerable duplication of material, which an imperfect index does not greatly remedy. The illustrations are mostly conventional, and the accompanying map is a reproduction of an old and unusually poor Spanish map of the archipelago. The orthography is often wrong or freakishly perverse—*e. g.*, "Palaúan" for "Palawán" repeatedly confronts us.

Having had his Philippine experiences as the representative of English machinery for tropical agriculture, Mr. Foreman's chapters on sugar and other crops, and his observations as a traveler are, as we might expect, the best portions of all three of his editions—in fact, while by no means free from errors, these sections form the book to which this author should have confined himself. Enough is said as to Foreman as a Philippine ethnologist when it is noted that he makes out the basic blood of the Tagalogs to be Japanese.

Tho Foreman gives no bibliography, and rarely a bibliographical note, it is evident that he drew his data on Philippine history from a few chroniclers, especially the verbose Father Concepción. How far astray one may go who relies on one or two biased writers (especially when aided by his own national prejudices) is shown by Foreman's unfair, even churlish, treatment of Simón de Anda, who kept the British invaders confined to Manila in 1763-4. The author has practically added nothing to his fund of information on Spanish-Philippine history since he prepared his book of 1890; the bibliographical information since made available, and the Philippine historical series edited by Blair and Robertson, have not benefited him at all. Instead of a logical story of Philippine history, the author gathered, nearly a score of years ago, a mere hodge-podge of curious incidents and of facts sometimes pertinent and important, sometimes "interesting if true." He tells, for instance, of some of the conflicts between civil and ecclesiastical authorities and between ecclesiastics and religious corporations; but he pays no attention to the vital ecclesiastical questions underlying nearly all Philippine history — episcopal visitation of friar curacies and secularization of the parishes.

The chapters on the Filipino revolution against Spain have received some additions and a little revision in minor details. But Mr. Foreman is not a whit better informed about the events passing under his own eyes than about earlier Philippine history. His repetition of the story of a "treaty" at Biak-na-bató (tho he does in this new edition admit the suspicion of there being no such engagement on Spain's part, as there was not) is sufficient to characterize his real acquaintance with the period about which he pretends to inform us. He could not have retold this Biak-na-bató story, on Pedro Paterno's authority, had he read

* The Philippine Islands. *By John Foreman.* Pp. xxii, 668. Imported by Charles Scribner's Sons, New York. $6.00.

the many Spanish treatises published since 1898 (especially that of Primo de Rivera) or read the translations of the original Biak-na-bató documents made public in our own *Congressional Record.*

Similarly, in the new chapters on American occupation and government, Mr. Foreman's blissful ignorance of the mass of data made available in American official reports, in books and in journalistic form is at once apparent; two or three official documents and occasional periodicals seem to have satisfied him, and he has patched out his story of 1898-1905 by gossipy conversations had with Filipinos in Manila, Iloilo and Cebú. The omission of important events or data are frequently amazing. These eight chapters are the merest travesty upon the thorogoing review of American occupation of the Philippines to date, which at least our editors and publicists must feel the need of. Mr. Foreman has, however, greatly toned down, where he has not rectified altogether, the intemperate abuse and wild exaggerations of his contribution to the *Contemporary Review* of September, 1904, for which Bishop Brent called him to account.

Roscoe: Chemist, Teacher and Citizen

Not for a long time has there come from England an autobiography of more all-around interest than the *Life and Experiences of Sir Henry Roscoe.** Autobiographies and memoirs of English statesmen, diplomatists, clergymen and authors usually keep in one groove of English life—the particular groove in which the subject of the memoir happened to live. Sir Henry Roscoe's autobiography differs from these in that it brings us into touch with many sides of life, London and provincial, scientific, educational, industrial, municipal and parliamentary; and also in relation with some attractive phases of life in Continental Europe, in countries in which Sir Henry Roscoe sojourned either in his student days or when serving on the various royal commissions to which, after fame and distinction had come to him as a scientist and educationalist, he gave so much of his time and ability.

The autobiography is interesting from the start, because it reveals at once a most likeable personality, and because a delightful sense of humor characterizes it. Even when Sir Henry is describing his forbears, he brings us into association with his grandfather, William Roscoe, who was at one time Member of Parliament for Liverpool, and for the greater part of his life one of the most striking personalities in Provincial Liberalism in the days when Pitt and the Tories were dominant, and their opponents were made conscious that Toryism was the chief force in English political life.

Roscoe the elder, who was author of the lives of Lorenzo de Medici and Leo X., and a botanist of repute, was a Unitarian. He was in at the beginnings of English Unitarianism. His son, Judge Roscoe, of the Liverpool Court of Passage, was also a Unitarian; and consequently Henry Roscoe was educated at a Unitarian school, and from there he went to University College, London, an institution which had been founded in the days when tests still excluded English Free Churchmen from the universities of Oxford and Cambridge. His final preparation for the career to which he was to devote himself—that of teacher of chemistry—was at Heidelberg, where he was a pupil of Bunsen, and his whole career as a teacher was spent at Owens College, Manchester—now Victoria University—where, from 1857 until his retirement in entering the House of Commons in 1885, he was at the head of the department of chemistry.

As much to Sir Henry Roscoe as to any man who was ever connected with Owens College credit must be given for bringing that Lancashire university to its present day pre-eminence. How this was accomplished; what difficulties stood in the way; how a royal charter for the second university established in England later than the foundation of Oxford and Cambridge was ultimately obtained, is told with much charm and modesty. With it there is much that is new to all save experts in the history of education in England, concerning the influence of success in Manchester in bringing about

* The Life and Experiences of Sir Henry Roscoe, D. C. L., LL.D.; Written by Himself. New York: The Macmillan Co. Pp. xii, 420. $4.00.

the establishment of universities in Liverpool, Leeds, Birmingham, Sheffield, Nottingham and Cardiff. A knighthood was bestowed on Sir Henry Roscoe, on Gladstone's suggestion, in recognition of his services to science and to scientific and technical education. Of the scores of knighthoods that were bestowed during the late Queen's long reign, it is difficult to recall one that was more unostentatiously or more abundantly earned; and it will be the wish of every reader of Sir Henry Roscoe's *Life and Experiences* that he may live long to enjoy his royal and academic distinctions and the well-occupied leisure that is now his lot.

What will most surprise American readers of the autobiography is the vast amount of time that a man so busy as Sir Henry Roscoe always has been with his chemical research and his educational work and his writing, gave to unpaid civic service. It may perhaps be accounted for by the fact that in England unpaid public service is a tradition. It is more than a tradition. It is a pride and a duty. Roscoe did not lack family example and incentive. His grandfather was one of the most public-spirited men now on the roll of honor of the city of Liverpool, and Sir Henry Roscoe will find a similar place on the honor roll of Manchester.

A New Joan d'Arc*

THERE are two women, one of the fifteenth century, the other of the sixteenth, and as different as saint and sinner ever are, about whom other women have always had little to say, because, by the limitations of nature, they stand abashed before certain extreme exhibitions of virtue or vice in their own sex. But men invariably recognize and adore. Thus, Joan d'Arc and Mary Queen of Scots still call forth more chivalry in the thoughts of men and excite more valuable admiration in them than any other women of their times. All of them condone Mary Stuart's "honey-pot" frailties, and they all adore the Maid, chiefly because she had no such frailties. Maurice Hewlett wrote the last story of the Queen, and proved himself the best, most gallant literary squire a royal dame in distress ever had. And many remember Mark Twain's "Joan d'Arc," that stately story which for the time changed an American humorist into an adoring knight, who could find no words tall and brave and fair enough to describe the Warrior-Maid. It is one of the phenomena of our literary world—the solemn transformation in his style, the noble incoherence of his enthusiasm when some editor incites Mark Twain to write of her. Every reader can see him put on a helmet and ride by her side, fascinated by her innocence, glory and faith. And now Justin McCarthy has made her the heroine of his new novel—McCarthy! whom we all supposed was more inclined to run after dryads than saints. And that has happened to him which happens to every man attracted by the Maid. He has been lifted up, as a literary artist, out of pagan piety, and pretty glamour of words that have characterized his other books into a region of sterner spirituality and courage. This gives the story a gravity and power which his novels have always lacked in spite of their charm. Doubtless now thru this study and interpretation of the virgin battle-saint of France his mind will acquire a finer severity, his literary style more chastity and less color, just as Quiller-Couch's stories since his study of the Methodist Wesleys have caught and held the hymnal note inspired by religious emotion.

Near the beginning of the tale, however, when he introduces Joan beneath the famous Fairy Tree, Mr. McCarthy thus challenges those who may doubt his flamboyant use of literary pigment:

> "The girl was clad in some coarse stuff dyed a vivid red; for, like all creatures of honorable heart and high purpose, Joan loved bright colors as she loved and because she loved the sunlight and the flowers and the pageant of sunset and dawn."

But a little later, when he has seen her kneeling in the "white light" cast by her saints, when she has discarded her red gown for a boy's jerkin and hose, and rides unscathed thru a thousand perils to audience with the King at Chinon, McCarthy forgets his own rose-crowning imagination. His sen-

* THE FLOWER OF FRANCE. *By Justin Huntly McCarthy*. New York: Harper Bros. $1.50.

tences are stripped of every gew-gaw word, and he is as full of wonder and faith as that other friend, the noble Lahire, who is said to have stood, blinded by his own horror and grief, holding the cross before Joan's eyes as the fagots blazed about her feet in the market place at Rouen.

That which distinguishes the story from innumerable others of Joan d'Arc is the fact that the author permits simple wonder to take the place of commonplace explanations. Nothing in the history of her times accounted for her, nor for the deeds she wrought. She appeared to have touched human affairs strangely from above, yet was sweetly human herself. He bases the story upon the record of one Don Gregory, which he claims to find in the Abbey of Bonne Adventure, in Boitou, and which he complains omits many important historical details. Yet one familiar with French history will discover that the book contains a sufficiently wide vision over the events of the times to show the Maid as the central figure in them for a brief period. And as he describes her clad in white armor, riding at the head of seven thousand men to lift the siege of Orleans, his literary style becomes as simple, as august as a Roman litany. The last vestige of fanciful coloring has gone from it as fades the flagrant May blood from a man's cheek on the eve of battle. He holds the eyes of the reader fixed reverently, unquestioningly upon the Maid at her prayers, or leading her little host to unimaginable victories. We have got too much the hound's snuffing nose for spoiling our own dearest illusions these days, and it is good to find a writer now and then who does not encourage the mean practice.

From this point the story grows painful, overshadowed by the approaching doom of the Maid. And it is here that the author achieves the most difficult part of his task with notable success. After her imprisonment and during her trial at Rouen, Joan suffered great nervous and physical changes, which, confessed, would ordinarily tend to weaken or destroy the ideal produced of her by the invincible Warrior Maid, but Mr. McCarthy replaces her helmet with the martyr's crown in such a way as not to detract from the splendor of her original character. Rather, he adds with it that expression of defenseless terror and pathos to the Maid which commands sympathy as ardent as the admiration inspired by her courage in battle.

A Living Wage. By John A. Ryan, Professor of Ethics and Economics in the St. Paul Seminary. New York: The Macmillan Co. $1.00.

A main purpose of the author of this book was to demonstrate that the teachings of the Roman Catholic Church allow the "moral right" of every laborer to a "living wage." While few employers, even tho they be good Catholics, will raise wages after reading Mr. Ryan's exposition of "the intrinsic worth" of the workman and "the sacredness of those needs that are essential to the development of personality," yet the book has chapters of great value. Mr. Ryan's economics are stronger than his ethics; and economics fill four-fifths of his pages. His economics are the better for being penetrated with an ethical spirit. His estimate of the amount that constitutes a living wage in America today is based, with scientific care, upon schedules of family needs made by various investigators and upon wide-based statistics of the sizes of families. As nearly as is possible he may be said to have proven once for all that

> "First, anything *less* than $600 per year is *not* a living wage in any of the cities of the United States; second, this sum is *probably* a living wage in those cities of the Southern States in which fuel, clothing, food, and some other items of expenditure are cheaper than in the North; third, it is *possibly* a living wage in the moderately sized cities of the West, North and East; and fourth, in some of the largest cities of the last named regions it is certainly *not* a living wage."

How many of our wage-earners are underpaid, judging by this standard of what constitutes a living wage? "More than sixty per cent. of the male adults employed in urban occupations, or, probably seventy per cent. of those in all occupations." Truly a disquieting result. Let no reader take comfort from that word "probably"; for Mr. Ryan proves the sixty per cent. almost with the cogency of a proposition in Euclid. It may be admitted that the standard of life he sets is higher than was ever enjoyed by the proletariat among eighty millions of

people in any country in the world's history. He is a democratic theologian, and he assumes that every man who honestly works has a "right" to enough food to keep him and wife and three children in health, to decent and comfortable clothing, to bedrooms sufficient for separation of the sexes, and to a dollar a week for books, papers, amusements, holidays, liquor and tobacco — not for each of them, but for all together. Is that an exorbitant claim? Yet fully six out of ten of the population must put up with less and not on account of the "niggardliness of nature," the "want of means" or for any other reason beyond man's control. Far more than enough is produced to furnish this minimum. On whom, then, is the responsibility to make a change? At this point Mr. Ryan breaks down. He puts the whole burden on the employer of labor. Rent-receiver and coupon-cutter do not come under Mr. Ryan's admonitions, except for a mild injunction to be generous and to support trade unions and trade schools; but the employer is enjoined, in order to win heaven, to live simply, work hard and pay high wages. One employer, Mr. N. O. Nelson, of St. Louis, has long practised this gospel, and declares he has won heaven in this life; but the general efficiency of moral suasion alone, on which Mr. Ryan mainly relies, has failed under trial, oh! so often, that it must be re-enforced by the organization, economic and political, of the underpaid sixty per cent. It is too much to hope that the Coreys, the Schwabs and the Parrys will turn saints and renounce material luxury in order that their workmen may marry early and maintain comfortable homes. Their resistance to change may be weakened by the exhortation of their pastors and teachers, but the dynamic force of reform must be supplied by the wage-earners themselves.

The True Andrew Jackson. Cyrus T. Brady. Philadelphia: Lippincott Co. $2.

This new life, or, rather, sketch of the personality of Andrew Jackson, is as alive and interesting as the much older and more elaborate work of Parton. It is, in fact, a shining example of an interesting book devoid of any other literary merit. Shears in search of matter having human interest, and an editor in love with his hero, are the implements necessary to the production of such a work. A well-stocked scrap-book and a disregard of critical scholarship insure the presence of enough anecdotes and epigrammatic opinions to hold a reader's attention, even if the historical background is weak, and the forces which shaped the hero's life are but half understood. It is fortunate for Mr. Brady that the requirements of the series in which the book is published prevent the giving of sources of information, for nothing except the previous biographies and general histories have been used, and no critical estimate of them is evident. The author seems to admit having no opinions of his own by his lavish use of the opinions of others. He has not availed himself of the vast collection of Jackson letters and papers which the Library of Congress acquired three years ago and has since made every effort to bring to the attention even of such superficial historical workers as Mr. Brady. But, of course, he has not had time to delve and dig in the sources. If one will but look at the long list of books written by Mr. Brady during the last five years, one will realize how unjust it is to ask him to get acquainted with the subjects he writes about. The mere physical labor of writing so many books makes the task seem incredible, tho in these days of machinery there is apparently no limit to human productivity. Nevertheless, it would seem that a *true* biography —one which throws an aspersion upon all other biographies of the same hero— ought to be written only after the most thoro and accurate study of the theme.

How to Look at Pictures. By Robert Clermont Witt. New York: G. P. Putnam's Sons. $1.40.

This little treatise is intended for those who have no special knowledge of pictures and painting, but are interested in them. The men and women to be seen in any gallery slowly moving from picture to picture, their attention fixed upon a catalog, looking at famous paintings without seeing them, Mr. Witt considers among the most pathetic figures in the world, and for them he has prepared

some simple suggestions, endeavoring to answer a few of the questions arising for the spectator. He makes no claim to originality, nor does he enter the field of criticism, tho he points out that there is a sense in which we are all critics, for the point of view which is generally first expressed is that of personal like or dislike, and this contains something of the stuff of which criticism is made. If such expression be mere unreasoning prejudice it is valueless; but based upon experience, observation, comparison and study, it becomes the last word of art criticism, and the author, with his brief outlining of the development of the more important schools of painting and of such general classes as historical pictures, portraiture, landscape and genre, his caution against judging old pictures by modern standards, his discussion of drawing, color, light and shade (wherein technical terms are carefully explained), guides the reader toward intelligent observation and study. The book is illustrated with photographic reproductions in half-tone of thirty-six celebrated paintings, and the author makes such good use of these in emphasizing his teachings that one must regret the half-tone blocks are not better.

The Vine of Sibmah. By Andrew MacPhail. New York: The Macmillan Company. $1.50.

Here is a good historical novel, one of the best since "Hugh Wynne," by Dr. Mitchell. It is good because the author knows his Colonial material as few do and because he can tell a story. Accurate historians there are who have no gift of romance, and there are also "historical novelists" in plenty who are not very sure of their facts, and the man who unites erudition and imagination is worth a hearing. The heroine is a beautiful Quakeress, the hero a brave captain in Cromwell's disbanded army, and about the two central figures are grouped King's Men and Roundheads, Puritans and pirates, Quakers and Jesuits, Indians and soldiers as the scene shifts from old to New England. To save the reader a tiresome search for the title, *The Vine of Sibmah,* is found in Isaiah, 16:8; and in the text of a sermon preached by Mr. Increase Mayhew as the little fleet led by the "Covenant" started on its voyage to Salem: "O, Vine of Sibmah, thy plants are gone over the sea."

Wayside Talks. By Charles Wagner. New York: McClure, Phillips & Co. $1.

Every one knows Pastor Wagner, and almost any one would at once recognize the preacher of "the simple life" in any of these fifty anecdotes and bits of homely counsel, even if his name were not attached. The stories are only a few pages each, all of them founded on some incident of common observation, but many are of exquisite beauty, and all are distinguished by commonsense and by a healthful and hopeful attitude toward things in general. It cannot be said that Pastor Wagner has found a new sermon, for his doctrine is the same as he preached us at the first, but in these *Wayside Talks* he has run across many a new text and in the management of each one he shows himself a skilful homilist.

Monographs: Garrick, Macready, Rachel and Baron Stockmar. By Sir Theodore Martin. New York: E. P. Dutton & Co. $3.50.

The four monographs gathered together in this new volume are full of interest, yet none may be said to have sounded any original note, nor to have resulted in any very distinct portraiture. In 1851, the then Mr. Martin married Helen Faucit, whose fame as an actress was closely allied with that of William Macready, when the latter was encouraging Bulwer and Robert Browning, and holding them to the stage, where he was fostering the so-called literary drama. It is, therefore, with no small interest that one turns to the monograph on Macready, where is emphasized what one cannot fail to find, on reading the actor's "Reminiscences"—the utter selfishness and ungraciousness of his character and the jealous care with which he pushed his art to the front, regardless of others. Had the author, however, made his estimates more inclusive of the many elements in Macready's life—and this applies also to his characterization of David Garrick—his monographs would have been more useful, more interesting and more fluent in style. Both these

actors represented crucial periods in English drama and were distinct types of their separate ages. The author does not wholly succeed in making one feel this. But he is just, as far as he goes, and his insistence, in all three monographs dealing with the stage, upon the highest art being coupled with the moral sense, is a rare and welcome point to lay stress upon, especially in books dealing with the drama. The application is poignant in the pathetic picture he draws of Rachel. Mr. Martin was knighted soon after he completed his "Life of the Prince Consort." His monograph on Baron Stockmar, who was so closely connected with the court of Queen Victoria's early days, is, therefore, an indication of that phase of his literary career.

Porcelain, Oriental, Continental and British. A Book of Handy Reference for Collectors. By R. L. Hobson, B. A. New York: E. P. Dutton & Co. $3.50.

Mr. Hobson, the author of this book, is an assistant in the British Museum, and the catalogs of the collections of English porcelain and pottery in that Museum and the "Guide" to the same are his work. His design in the preparation of this volume was "to give in an inexpensive form all the facts a collector really needs, with as many practical hints as can be compressed in a general work of portable size." While aiming to treat of the porcelains of all countries, the book includes only those periods that interest collectors; consequently, American porcelain is not mentioned. Special attention is given to paste, glaze and decoration, the author insisting on the fact that these are safer guides than any manufacturer's marks; however, a few lists of the more notable marks have been included in the volume, and a selection from these provides an appropriate decoration for the book cover. The work opens with the invention of the ware, and seven chapters are devoted to Chinese porcelain, four to Japanese, seven to Continental (Meissen and Sèvres receiving special attention), while four chapters treat of British porcelain, and in a short closing chapter a few hints are given as to values and the forgeries and other pitfalls that beset the amateur. The author recommends patient study of authentic pieces. To London visitors he specially commends the Asiatic Saloon in the British Museum for education in Oriental wares, and the Salting collection in the Victoria and Albert Museum for the K'ang-hsi period; for Continental porcelain he suggests the Franks collection at Bethnal Green, as well as fine examples at South Kensington, and the Wallace collection in Hertford House for Sèvres masterpieces; while English porcelain can be best studied in London, at the British and the Victoria and Albert Museums. The writer does not attempt to tell the story of modern porcelain works. "From the collector's point of view the interest of the ware centres in the varied products of the experimental period"; now that manufacturers have mastered the art of making a "technically perfect but monotonously uniform" porcelain, nothing of modern make has enough distinction to merit the author's attention except the *pâte-sur-pâte* plaques of M. Solon, which became known in this country in 1876 thru the Minton exhibit at the Philadelphia Centennial Exhibition, and are no longer made. These plaques receive appreciative notice from Mr. Hobson. The chapters on Oriental porcelain will be of special service to the amateur, and the illustrations are to be commended, because they are chosen, not as superb specimens, but as typical pieces. The inexperienced collector, if he be as fortunate as the reviewer, may find depicted among them the duplicate of one of his own small collection, and then the illustration of that Pinxton cup and saucer will be worth to him more than the cost of the book.

Nero. By Stephen Phillips. New York: The Macmillan Co. $1.25.

If any confirmation were needed of Mr. Phillips's incapacity as a dramatist, his *Nero* would be enough to settle the matter. If tragedy were a set of poetical speeches to be read or recited, if it were even a series of striking and gorgeous tableau to be mounted, then would Mr. Phillips's *Nero* be very well—provided the reader or spectator were already in possession of the whole story. It contains a number of fine passages—a number of what would no doubt be very effective scenes, if staged by a friendly

manager. But as a vision of life in action it is feeble and ineffective. And the failing is not merely executive, it is fundamental; the piece is not conceived dramatically, but pictorially and emotionally. As usual the best of it consists, not of mutual passions, but of individual sentiments, which are indeed often admirably felt. The fact is that Mr. Phillips's gift is in reality sentimental and picturesque; and his attempt to subject a talent so thoroly romantic to the restraints of classic tragedy is bound by its very nature to be unsuccessful and unhappy—to say nothing of the circumstance that the type of drama which he is attempting is by this time quite obsolete.

Nicanor, Teller of Tales. By C. Bryson Taylor. New York: A. C. McClurg & Co. $1.50.

This is a story of Roman Britain, when London was "Londinium" and the Thames "Tamesis flumen," when every road was filled with war chariots, slaves, soldiers, merchants, artificers and nobles, when ardent savage life currents ran vein to vein with the lazier blood of Roman voluptuaries who had builded their castles on the island and made themselves at home there. It was a time and place when the old eternal human life took on fresh color, new vigor and when all speech was a sort of rude poetry. We are so bound by the present, so narrowed by it, that we cannot believe very far back into time, nor very far forward into the future. What happened long enough ago is as incredible as the unimaginable things that shall come to pass somewhere in the future. On either hand men and events swing like figures in a glory or a mist. This is the charm of the scenes and characters portrayed in this book. They are so remote that they do not belong now to history, but to fancy, to the airy end of our vision which changes "far off mountains to clouds." With Nicanor, the story-teller, who was son of Rathumus, the woodcutter, who was son of Razis, the worker in bronze, who was the son of Mechiur, the story-teller, inspiration was a sort of epilepsy. He fell into a poetic trance, and told simple, wonderful tales with that rare virgin color in words which we have lost in a senile facility of expression. And the author deserves credit for conceiving out of the dry pages of half-written history and out of the dust of traditions a character so consisttent with both. The book is beautifully printed and illustrated, and should find many readers now when we are wearied with so much unromantic fiction.

On the Spanish Main, or Some of the English Forays on the Isthmus of Darien. With a description of the Buccaneers and a Short Account of Old-Time Ships and Sailors. By John Masefield. New York: The Macmillan Co. $3.50.

When our people in Panama establish circulating libraries along the Zone, as they ought to, this is one of the first books to be purchased for them, because it gives in a very interesting way much of the ancient history that we have annexed. In those days the city of Panama was a rival of Venice, in commerce and wealth and the luxury of its merchant princes. It was truly the Golden Gate, for thru it flowed the treasure of all Spain's Pacific empire to be transmitted by mule back to the Atlantic port which was first Nombre de Dios, then Porto Bello as now Colon. Treasure-ships also went up the Chagres as far as Venta Cruz, then an important city of handsome stone houses with carved fronts. Along the river were many warehouses and handsome official buildings. The church, which still stands, formed part of a monastery, and the friars conducted a hospital. To look at its handful of palm-thatched huts now one can hardly realize it as the scene of the thrilling fight in which Sir Francis Drake was wounded. He had penetrated the jungle with a small party of forty-eight adventurers and Indian allies for the purpose of capturing a treasure train of "eight mules laden with gold and one with jewels," but was foiled in the attempt. Still more exciting is the narrative of Sir Henry Morgan's capture of Chagres Castle, march across the Isthmus and sack of Panama. How the Spanish defended themselves with droves of cattle, how the pirates exchanged their rags for velvet and silk and how Morgan fell in love with a beautiful Spanish woman and carried her away captive, Mr. Masefield tells in

a smoothly running style, with just enough of quotation from the original narratives to give a quaint flavor without making it hard reading. He has skilfully woven together the different accounts into complete stories of the various expeditions, elucidated with many descriptive details that must have involved much geographical and historical research, altho the casual reader would never suspect it, so naturally are they introduced just where they are most needed.

Napoleon's Love Story. By Gasiorowski. Translated by Count De Soissons. New York: E. P. Dutton & Co. $1.50.

This is the story of Napoleon's infatuation with Madame Walewska, a beautiful Polish lady whom he met in Warsaw during his Northern campaign in 1806. It is full of frozen weather, the grumbles of an octogenarian husband with a young wife, of simpering, unscrupulous women, and consequently of intrigues and deadly human nature. The latter, however, is offset by the martyrdom of the good and beautiful Madame Walewska, who was "not all she ought to have been," a common failing with noble females of that period. There is nothing like one of these thrilling old-fashioned romances, by the way, to remind us that we are coming up in the scale of things, even if a certain set of social economists do wag maliciously doubtful heads. Napoleon went on having love affairs until the English packed him off to St. Helena, and this practice is not condemned by the novelists and historians nearly so much as his disposition to turn the world upside down with wars in order to provide his family and friends with kingdoms. But now a great man is expected to be as moral as other people. Nobody thinks much of it if a little insignificant, free-booting millionaire has a mistress, because he is so cordially despised already morally that a chorus girl or two adds nothing to his infamy. But men in public life must be respectable or circumspect enough to produce the impression of respectability, because we have acquired that much moral sentiment during the hundred years since Napoleon made sheep's eyes at Madame Walewska. Neither may a woman be called beautiful, noble and good these days who does not keep her chastity out of the arms of kings and emperors, to say nothing of commoner men. In short, we may not be as romantic and interesting or even as good-looking as when Dumas and the rest of them made literary profit of our frailties, but, on the whole, we are more decent.

The Age of Transition. By F. J. Snell. Vol. I., The Poets. Vol. II., The Dramatists and Prose Writers. With an Introduction by John W. Hales. New York: The Macmillan Co. $1.00.

It is to be regretted that our histories of English literature continue, almost without exception, to represent literature as a succession of facts rather than as an evolution of ideas. As a work of the former sort, a chronicle rather than a history, of the period from Chaucer to Spenser, these additions to Bell's Handbooks of English Literature are worthy of attention. They contain little more than an account of the principal authors and their writings, together with some general reflections on the more striking phenomena of the time. They throw but little light upon the transformations of the early drama, for instance; and they leave the vexed question of ballad origins severely alone. But it is enough for once to get a clear, reliable record of the details by one who has taken pains to study them at first hand and has brought them into fair order for the reader or student desirous of orientating himself with respect to what is perhaps the least known epoch of our literature.

Sociological Papers. Vol. II. By Francis Galton, P. Geddes, M. E. Sadler, E. Westermarck, H. Höffding, J. F. Bridges and J. S. Stuart-Glennie. New York: The Macmillan Co.

Like the first volume of the proceedings of the new British Sociological Society, the most important place in this is given to Galton's Eugenics. He contributes three more papers on the subject which are briefly discussed by twenty-five students of sociology. As one of the speakers said, it is astonishing to see a man of eighty-four enter with such youthful vigor and enthusiasm on a new crusade for the improvement

of the human race by better breeding. It has been recognized ever since Darwin's time that this was a reform of such importance to humanity that changes of political laws, industrial system and financial mechanism were trifling in comparison, but the difficulties in the way were so great that the boldest of sociologists dared only dream of it. But Mr. Galton believes that without any modification of our marriage system and the ethical ideals it represents it is possible to create such a public sentiment as to overrule individual passions and selfish interests for the benefit of posterity. He shows that religion and tribal customs have imposed and enforced the most artificial and rigid restrictions on marriage, and he hopes that the same sanction and authority may be given to the rational propagation of the human race; that, for example, the study of heredity will create in men and women an instinct against marriage with an individual tainted with hereditary disease or viciousness as strong as the instinct which prevents incest. He has established a Research Fellowship in National Eugenics at Oxford, and has aroused much interest in all countries in the possibilities of this new branch of applied sociology.

Literary Notes.

....Molmenti's *History of Venice* is to be published in this country by A. C. McClurg & Co. in six volumes, each with a colored frontispiece and about 250 illustrations. Two volumes are to appear in October.

....The Baker & Taylor Co. announce that the first volume of Russell Sturgis' *History of Architecture* will be published in the early autumn. This will be a comprehensive and authoritative work in three volumes, large octavo, with 500 illustrations in each.

....Some interesting novels are promised us this fall by The Macmillan Co., among them *White Fang*, by Jack London; *A Lady of Rome*, by Marion Crawford; *Ghetto Comedies*, by Israel Zangwill; *The Amulet*, by Charles Egbert Craddock, and a translation of Pierre Loti's romance of Turkish harem life, *Disenchanted*.

....At Geneva, Switzerland, from August 28th to September 5th of this year, there will be held an Esperanto Convention, at which for the first time American delegates will be represented. The use of this universal language is rapidly extending within the United States, and quite recently in one young people's society there were enrolled 500 members.

Pebbles

TELEPHONE CONVERSATION.

HE—Will you marry me?
She—Yes. Who is it, please?—*The Press.*

BALTY MOORE—So Featherhed went on the stage, did he?
Calvert, Jr.—Yep.
"And how does he rank?"
"It isn't a case of 'does,' but 'is.'"—*Baltimore American.*

AS TO MISS METHUSALEH.

METHUSALEH—Just a word with you, young man.
His Daughter's Suitor—What is it, sir?
Methusaleh—You have been calling on my daughter one hundred years now, and I want to know if you mean business.—*Puck.*

MR. MAX BERNSTEIN, of Brooklyn, recently telegraphed to San Francisco, ordering that his uncle, Mr. Samuel Braunhart, should be cremated. The information came back that his orders had not been carried out, owing to the strenuous opposition of Mr. Braunhart, who had just recovered from an illness and wanted his body for other purposes.—*New York Sun.*

AT LAST! AT LAST!

A MAN who is always on the lookout for novelties, says the St. James's *Budget*, recently asked a dealer in automobiles if there was anything new in machines.
"There's a patented improvement that has just been put on the market," replied the dealer. "A folding horse that fits under the seat."—*Youth's Companion.*

MORTALITY AND DRESSED TURKEYS.

THERE is a poultryman in Rhode Island who once sent a consignment of dressed turkeys to a merchant in Pennsylvania having the reputation of being a very "close buyer." It had been the custom of this dealer always to claim an allowance for something or other alleged to have been spoiled during the shipment of the consignment. Before the sending of the turkeys above referred to the Pennsylvania man had dealt exclusively in live fowls. Whether or not the correspondence clerk of the Rhode Islander mixed things does not appear; but, at any rate, the shipper was surprised to receive a complaint from Pennsylvania to the effect that four of the turkeys were dead when they reached their destination. A paragraph was added, asking for a deduction from the bill on that account. Whereupon the poultryman evolved the following reply:
"It is with regret that I have to advise you I cannot make the concession requested. It is the custom of my firm to require all patrons desiring live dressed turkeys to notify us in advance, so that we may forward them in heated cars. Turkeys without feathers and [illegible]les are liable to take cold if shipped in the ordinary manner. The mortality among dressed turkeys was very large this year."—*The Gentleman Farmer.*

Editorials

From Noah Webster to Theodore Roosevelt

It did not take fifty years for the simplified spellings adopted by Noah Webster to conquer the country. Some old-fashioned admirers of Walker's Dictionary held back, the same people, in the same sections, who still follow Walker in *gyide* and *gyirl;* and those whose sentiment could not keep step with their sense compromised on Worcester, even as they found a half-way sound for *a* in such words as *half*. But Webster had the better of the argument and of the people in his *honor* for *honour* and *center* for *centre*. Old England knew better, but would not take lessons from her child.

It is exactly one hundred years since Noah Webster published his "Compendious Dictionary," altho his large "American Dictionary" did not appear till 1828. Meanwhile his Spelling Book, with sixty million copies, taught the whole country how to spell. We may count it just a century from the time when Noah Webster, following Benjamin Franklin, began the movement for reasonable spelling, until President Roosevelt ordered the adoption by our Government Printing Office of another extensive, but yet very moderate, reform. In this action of the President THE INDEPENDENT takes great satisfaction. THE INDEPENDENT was the first journal of any prominence in the country to adopt the dozen more radical words proposed, some of which, *tho, altho, thru* and *thruout,* seemed strange or even uncouth. But we were gratified that so few of our readers complained. They might have been displeased, but they knew that the change was right, and they were silent; for they also remembered that THE INDEPENDENT prefers rather to lead with the few than to follow with the crowd after the cause becomes popular. The latter course deserves no praise, carries no influence; for it is only abject and worthless to gather "the alms of other men's active prudence and zeal."

The President's order adopts the list of three hundred words selected by the Simplified Spelling Board, of which Prof. Brander Mathews is president, and which is supported by Andrew Carnegie. These spellings, for the most part, THE INDEPENDENT has been using for several years, assured that others would follow, because they ought to. The three hundred words it is not necessary to give here. Any one can get them by writing to the Simplified Spelling Board, No. 1 Madison avenue, New York. Most of them are very familiar, as *honor* for *honour, center* for *centre, plow* for *plough, Eolian* for *Æolian, fulfil* for *fulfill, program* for *programme,* and *judgment* for *judgement.* Others seem less familiar, as the spellings *tho, altho, thru, thruout, catalog, sulfur, gazel, bur* and a certain number of preterits like *kist, mixt,* which poets have often approved, and in which the final *ed* is false to the sound.

It is not the aim of the Simplified Spelling Board to make any extreme or abrupt break with the old unregenerate spelling. They are attempting a gradual reform, in the direction of the general rules and eliminating exceptions. This reform is not scientific; it is only a step. We would that the time might be hastened when the English language will be spelt absolutely phonetically; but that will require more than twenty-six letters, with but one sound to each. Then it will be easy for a foreigner to learn to read English. Then a child will learn to read fairly in three months instead of wasting three precious years in an imperfect attempt. Our present barbarous, unscientific and criminal scoliography—it is not *ortho*graphy—is cruelty to children, and robs all our youth of years of education. This is the chief reason why we abhor it as a moral wrong, while we also join in the President's wish to make English an easier world's tongue.

Meanwhile, waiting the good phonetic (why not *fonetic*?) day that is sure to come, we ask why we may not get rid of some useless letters? Why not drop the diphthongs œ and æ? Why not cut off the two final letters in such words as

prologue, gramme and *coquette?* And why not make it a general rule always to take the simpler spelling as soon as any decent authority permits it? Such THE INDEPENDENT wants to make, and to a great extent has made, its practise (not *practice*); and now when we urge it on our readers we are no longer in a condition to be told of the fox which lost its tail in a trap, for we have with us all the philological and scientific societies, the National Educational Association, a multitude of university professors, and the President of the United States, who controls the greatest printing-press in the world. We are in the best of company, and we ask our readers to join us. We do not ask publishers to throw aside their old books; but we do ask them, and we ask journalists, to come in near the head of the procession, to use the simpler spelling in their future publications, and to refuse to hang on to the antiquated crookedness for fear of annoying buyers in England. The dictionaries are with us, "The Century" and "The Standard," and the English dictionary-makers as well; and the campaign will begin in Great Britain and its colonies, and reason will carry the day there. We believe our children will have more sense than we, and will go farther and give their children a real altruistic phonetic orthography; in which case we have faith to hope that THE INDEPENDENT, which has already printed articles in purely phonetic spelling, will be one of the first journals to adopt it. We commit this will and testament to our editorial successors.

Not a few who knew better will say that the President has undertaken a task too great for him, that he cannot reform the spelling of the English language. But he can do his part. He can do what every one of us can do, control his own spelling. That is all he has attempted to do. He has authority over one printing-house, and that he uses. That job is not beyond his competence, and those may follow who please. The opposition will depend on ridicule, on quoting Josh Billings and Artemus Ward, for it has not one argument except the stupid word which is lacking in the bright lexicon of youth, and makes the task impossible.

Mill, Spencer and Socialism

A WRITER in the *Fortnightly Review*, offering a fresh estimate of the life and character of John Stuart Mill, dwells upon the disillusioned old age of Herbert Spencer, and suggests a theory to explain Mill's greater zest in life until the last. There are cynical readers who will suggest that the moral which the contrast is intended to convey might be better worthy of consideration if the premises of the argument could themselves be established. Mr. Spencer's alleged disillusionment is an interesting subject upon which much might be written. A great deal of foolishness has been talked about it, and altogether too much has been taken for granted. As for Mr. Mill's greater appetite for life and its varied interests, more than a passing doubt is awakened by the pages of his "Autobiography."

Let us, however, admit that Mr. Mill, in spite of bereavement and invalidism, was a man of warmer enthusiasms in ripe age than he had been in early manhood, and that Mr. Spencer, when he had completed the "Synthetic Philosophy," was not as enthusiastic over his achievement as he had been over his conception of it forty years earlier. Does it follow that Mill got over his early fit of the blues because he fell in love first with Wordsworth's poetry and secondly with Mrs. Taylor, as our *Fortnightly* author assumes, and that Mr. Spencer began to feel that all is vanity because no great emotional interest ever brought him into touch with the common life of humanity? There is a cant of philosophy, as there is a cant of commonplace religiosity, and we confess to feeling that this way of accounting for the admitted differences between Mill's temperament and Spencer's savors of philosophic cant.

To make the moral as unctuous as possible, the *Fortnightly* writer admits that Spencer had the larger thought and did the greater intellectual work. Mere intellect, then, cannot make life worth while. Spencer's thinking also was more concrete than Mill's. His knowledge was fuller and more varied, and yet it did not satisfy, because, as we are asked to infer, Spencer somehow failed to see

the "light that never was on sea or land," while Mill, in spite of rationalistic utilitarianism, caught glimpses of it.

Far be it from us to deny that life is more than intellectual occupation, or that the emotional nature and the consciousness of realities which science is unable to formulate are, even for the philosopher, more necessary than generalizations. We suspect that the true secret of happiness is to be found in that mere abundance of life which makes men and women reach out in every direction for renewal upon renewal of experiences, even the commonplace ones, and finds delight in unstudied expenditure of self in all sorts of disinterested activities. Mill probably had in this sense a larger fund of vitality than Spencer had, and he did not so completely exhaust his resources in one absorbing task. But, making full allowance for all this, we are fairly confident that there was a strictly intellectual factor in the dissatisfaction of Mr. Spencer's later years, and in the comparative satisfaction of Mill's, which is important enough to offer to the attention of both our moralists and our social philosophers.

Mr. Mill, long before he arrived at old age, had become a socialist, and he saw in socialism a great and glorious promise for mankind. Mr. Spencer, on the contrary, had come to regard socialism as the greatest evil that could conceivably overtake the human race, and had yet come to believe that inevitably a socialistic *régime* would be inaugurated. A more curious and thoroly paradoxical development of two great minds has perhaps never been witnessed. Mill, a veritable apostle of the widest personal liberty, the author of a book without an equal as a cogent argument for non-intervention in the realm of personal conduct, came to look upon universal co-operation thru the State as the one certain way to improve both the material and the moral condition of mankind, and he was never for a moment troubled lest the socialistic scheme should diminish the freedom of the individual. Mr. Spencer, the first mind to perceive the true nature of the cosmic process of evolution, and to describe it as fundamentally a universal integration, which, however, brings with it endless differentiation and variety, balked at the ultimate integration of the social economic order; conceiving it as something destined not to create a richer life for the individual, including an ever-enlarging liberty thru differentiation, but to destroy personal freedom and to regiment all mankind in one vast homogeneity.

All this is, we say, one of the great curiosities and paradoxes of the history of philosophy. Whether or not we need to go back of this purely intellectual phenomenon to discover deeper causes of Mill's abiding faith in the excellence of life, and Spencer's discouragement, it is certain that this one difference in their convictions will account for much. Mill never wrought his ideas into so systematic a form as Spencer achieved in the "Synthetic Philosophy," but he somehow avoided the inconsistency which, beyond any question, Spencer became lost in when, as the philosopher of evolution, he tried to save his stock of Manchestrian politico-economic principles. What really happened to him was on all fours with what happened to the theologians of his generation, who, when they in a general way accepted the Spencerian-Darwinian cosmology, tried also to hold on to their literal interpretation of Eden and the Flood. The real truth about Mr. Spencer's disillusionment is that his nerve gave out before he had finished his "Sociology" and his "Ethics." The logic of his system required him to throw overboard a creed of economic individualism which he could not relinquish. Therein lay his discomfiture.

The Election in Georgia

THERE has been no election in Georgia, and yet a new Governor has been elected after a year's hot campaign. The election will not take place for some weeks yet, but nevertheless the choice has been made and the matter decided. There has been simply a nominating primary, and yet twice as many, perhaps five times as many, have voted as will vote in October. They will go to the polls then if convenient, and they will simply register what has been decided. Only one of the two parties has been allowed to vote at this primary, but that makes no difference. The other party

does not count. Its members are very nearly as many as those of the party which voted last week, but most of them are black, or of some intermediate shade, and they are effectually discouraged from voting. They would not be allowed to elect a Governor, even if they cast the votes. The ruling party is bound to rule whether they have the votes or not. It is a white man's rule, they say, and they enforce it. The condition is just as bad as that which is common in some of our South American republics, where the party in power so controls the elections as to retain all the offices. That condition which is said to exist in Venezuela or Cuba exists in Georgia, and is there recognized and justified.

This practical election in Georgia has been the most sensational and dramatic of any of the State campaigns this year. There were five principal candidates, the best of whom was, probably, the editor of a Savannah paper. He carried only one or two counties, and he is the only one that is not called a millionaire. Against two of the other candidates certain irregular social relations were talked of to their discredit, and somewhat published. The two principal candidates, Hoke Smith and Clark Howell, both newspaper men, made a most disreputable and ungentlemanly campaign, and filled their respective newspapers with their own laudation and infamous abuse of their opponent. The spectacle has been shameful in the way of etiquet and honor.

Two matters of policy have been brought before the people of the Empire State of the South. One is the eternal, wearisome negro question, and the other is the control of the trusts and railroads. The negro question was really not an issue; that has been settled in Georgia by suppressing the negro vote. It is only a pretense, a sham, an appeal to the prejudices of the ignorant voters. Hoke Smith said that Georgia should enact the same laws which so many other Southern States have—illiteracy, grandfather clause, etc.—to shut out the negroes. Of course the law itself would not shut out the negro, but Hoke Smith promised that its workings would, because the registrars would under it manage to take in all illiterate white people and exclude even the literate negroes. Not a white man, said Hoke, would lose his vote. Howell was a bit more honest, but just as venomous. He declared that the proposed law would exclude many thousand white illiterates, and he showed how under the present laws, and especially by means of the poll tax to be paid months before election, and in other ways, the negroes had been successfully kept from the polls. He said nothing about the thousands of white men who failed to pay the poll tax. Then he made it the hottest kind of an argument against Hoke Smith that when he was Secretary of the Interior under Cleveland he had given clerkships to a dozen negroes, offices which white men might have held. It was a tweedledum matter between the two which should do the most to silence the negro vote, by what sort of law or what sort of chicanery.

But we do not think all this noise was very effective. It was the railroad question that told. Howell had had relations with railroads, while Hoke Smith had, as a lawyer, brought suits against the railroads for damages. Then Hoke was so shrewd as to make an alliance with Tom Watson. What he had promised Watson is not clear; perhaps the Senatorship. Now, Watson is the old Populist leader, and has a big following among the poor farmers of Georgia. He carried Georgia in the Populist days, but was counted out, after the South American style. To be sure, Howell, who ran the old Democratic ring, had a rule adopted which excluded Populists from the primary as not genuine Democrats, but the Populists scoffed at it, and declared that they would vote anyhow—and they did. So the combination of Hoke Smith and Tom Watson was successful, and the judge who made the bet against them had to eat crow.

Probably the election will have very little effect on policies, for it has been a personal fight and not one of principles. Something will be done to control the railroads, but probably nothing very effective. The Legislature may enact a law to exclude the negro vote, but we doubt it. At any rate, both Hoke Smith and Tom Watson have, when politics required it, been ready to take advantage

of the negro vote, and Tom Watson would again if he thought he could get that vote—and why should he not? At any rate, things cannot be much worse than they are now, and they may be better. Every citizen should pay his taxes and offer his vote, and in time he will get it. Conditions are better in Mexico and Argentina than they were, and they will be in Georgia.

The day before the election Howell's paper published a cartoon entitled, "We Who Are About to Die Salute You." It was a fat figure marked "Hypocrisy and Fraud" and "Political Grave," and surrounded by gravestones. It was meant to represent Hoke Smith. It now carries an application nearer home.

The Rebellion in Cuba

UNDER the Palma Government the people of Cuba have enjoyed prosperity. Development of industries and of natural resources has been accompanied by a notable increase of trade with other countries. New railroads have been built. The number of schools has been doubled. Nearly $200,000,000 of foreign capital has been invested in the island, and more than half of this sum has been drawn from the United States. Wages and the market value of real estate have been steadily rising. Peace and good order have prevailed. Very few crimes of violence have been reported. If there has been corruption in the public service it has been very successfully concealed. We recall no reports of such offenses, except the vague charges published a few weeks ago, when the Havana Council was reorganized by executive intervention.

All this should be borne in mind when an attempt is made to account for the rebellion now in progress. It is not asserted by the insurgents that those who rule over the island have been robbing the people or have been unfaithful to their trust in the ordinary administration of public affairs.

Yet the insurrection is not justly characterized by President Palma when he calls it "only a crazy movement on the part of discontented persons," a movement for which "there is no moral reason." It is a protest against what the insurgents believe to be political injustice and wrong. How many of the prominent Cubans now in jail would have been in the field with Congressman Guerra if they had not been so promptly arrested we do not know, but their opinions about the recent national election are like his, and among them are men who served creditably as commanders in the revolutionary army, and afterward as governors of provinces. These men, the insurgent leaders now in the field, the mayors and other officers of several towns who have become rebels, the rural guards who have deserted, and many others whose indifference or lack of loyalty has been a subject of comment in the dispatches from Cuba, believe that in a free and fair election last year, President Palma and those associated with him would have been defeated.

It was the opinion then of many impartial observers that the Liberals clearly outnumbered their opponents. It appears to be true that in the preliminary proceedings a great many Liberals were temporarily disfranchised by intimidation or fraud. By executive authority, Liberal officers were displaced by Moderates, and there was evidence that in many ways the power of the Government was wrongfully used to deprive the Liberal party of its rights at the polls. This was the reason given by the Liberal party for its withdrawal from the contest. Its course was unwisely taken. Liberals who could have voted should have done so, and should afterward have insisted upon an official investigation. Back of all this was the failure of Congress to enact laws for giving force to the Constitution. Responsibility for that failure is not easily placed. Because the laws were not made, the Government was able to exercise under old statutes the power, as to removals and appointments, which placed the Liberals at so great a disadvantage.

There is, then, a moral reason for the insurrection, altho there are probably among the leading insurgents a considerable number of men who are moved by personal disappointment or less creditable causes of complaint. We have not regarded President Palma as a man who would deliberately and consciously be unjust to his political opponents, but

rather as one who has been deceived and misled by ambitious and unscrupulous subordinates.

But the winning of a political victory by injustice does not warrant the losing party in taking up arms against the present Government; and it is clearly the duty of President Palma to suppress the rebellion. This he is trying to do, but not in a bitter spirit or in a vindictive way. It is to be hoped that his offer of amnesty will be accepted. Already there are indications that many of the insurgents desire to take advantage of it. But if the Liberals in the field and those who sympathize with them give up the fight, they may reasonably ask for an honest official inquiry as to the injustice to which they believe they were subjected in last year's campaign. If they were wronged, the wrong should be righted. If it can be shown that the present Government is not clearly entitled to rule over Cuba, then provision should be made for a new and a fair election. Unless the majority is permitted to govern, the island will not be free from rebellions in the future.

Thus far, there is nothing in the situation to call for intervention by the United States. Cuba consented in the Platt Amendment (which is a part of her Constitution) that the United States might "exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed upon the United States by the Treaty of Paris." Cuban independence is not menaced. The present Government has been adequate for the protection of life and property. If it should be overthrown, its successor might afford satisfactory protection.

If a prolonged and bitter civil war should fill the island with disorder, it would be our duty to intervene for the protection of the investments of Americans and other foreigners, but that bridge is not to be crossed until we come to it. We are not bound to uphold the Government of one party or that of another, nor is it our duty to prevent injustice or fraud in a Cuban election.

Intervention for any sufficient cause would not necessarily mean annexation, but annexation would probably follow if it were shown that the Cuban people were clearly incapable of governing themselves decently, or if they should ask for it. Unless conditions in Cuba become intolerable, or unless the people of the island freely seek to be annexed, the course of the United States will be in accord with the statutory pledge given at the beginning of the war with Spain. But if at any time the good offices of our Government should be sought by both parties to a political controversy in Cuba, or even by the Government and also by insurgents in armed rebellion, such an application might reasonably be granted.

Our Dumb Animals

A MODEST little paper, called *Our Dumb Animals* comes to us in our hammock at noon, under the big beech tree. We like it every way except the title. There are no "dumb" animals, and the best study of an articulate speaking anthropoid is to find out what all the creatures are saying. The world is ringing with speech—very fine and very wonderful language most of it—all day long, yes, and all night too. The robins are almost articulate at the daybreak; or, if in the South, the mocking birds are talking overhead, and the bob whites run about your feet, very eloquent. There is pride in the plum tree in the shape of the blue-jay, and the song sparrow is a whistling Mendelssohn in the lilac bush. Our catbirds say very charming things to us as we meet in the orchard, and—well, what is the use of talking about it, the birds beat us all to pieces in the fine art of expression.

Our dogs come dashing up. Heavens! what expression on their faces; and their tails are as witty as the pen of the Autocrat of the Breakfast Table and as talkative as Dr. Johnson. No wonder Walter Scott loved dogs; for the Scotch have used their big brains to no better purpose than developing the teachable collie. "Togo" cannot say it all with his facial muscles and his tail; but he cries his delight at our friendship so articulate that you would be feeble-minded not to understand. Then he puts his forepaws on your lap, lays his head against your

chest, and if you will not put both arms around his neck and say, My noble fellow!—why, then, you ought to. This breed has even begun to laugh; and laughing, like talking, is only another method of expressing something. "Togo" and his mother, "Foxy," and at least one more of the family, can, and do, draw up their lips and wrinkle their faces into a series of smiles and laughs that would honor Tom Hood. They have also a very decided grin when caught in mischief, and contortions that are expressions of shame and apology.

Tail talk is not to be despised. Why should all language have been differentiated to the head? In reality it is not so differentiated—very little of it is. The lower races of human beings talk all over. Those who saw the Igorrotes at St. Louis remember that words were very secondary to their gestures. Emotion drops easily into motion and becomes half of our language. With animals language goes only in very small part to the tongue. A dog's tail is positively eloquent. It can speak hate or love or shame. Horses have a very delicate language, which, unfortunately, they do not have very much opportunity to use. When two friends meet each other after a separation it is with shouts of delight and rapture. Then comes the nose rubbing—an art we have lost, or possibly turned into kissing, and then soft whinnies of satisfaction. A Morgan horse can very nearly articulate — not exactly in English, but using a very excellent horse diction. Bayard Taylor insisted that he had conversed with a hippopotamus—in Arabic. The homesick animal heard familiar sounds, cheered up at once and responded in his own Oriental way; but the gentle Bayard understood it and was glad.

We have been out this morning in the berry fields, beyond the barn, where we edited a picking match of boys and girls in the red raspberry bushes. Overhead a catbird sat and sang, and he was evidently as interested in the folk match as ourselves. We had a delightful conversation, made up of whistles and flattery. He sprung from one tree to another. Here he poured out one roundelay and then another. "Dumb animals!" on the contrary, every one of them is alive with talk. The first cicadas are abroad today singing to their mates; and they will have a deal to say before the year moves down hill, toward apple harvest. Over the fence, in neighbor Harding's pasture, twenty Holsteins feed the clover, wade the creek and lie in the shade of the willows. But at milking time, as the pickers go home, with a rattle of conversation, the cows go down to the bars, and call the milkmen to come, for the pasture clock has struck six. We cannot turn in any direction but what we hear brave words, from the sky and from the field, yet Jesus said, wittily and wisely, "He that hath an ear to hear, let him hear." Many of us are deaf to the more beautiful and to the more eloquent sayings of nature.

That is a curious contention, just started by a Mr. Bocciocco, of Vienna. Birds, he tells us, have no idea of music "as an art." A thrush has "no musical sense," and will be shunted off into a melody by any harsh noise as quickly as by some delightful harmony. This is all nonsense, for the country editor knows that song is an art of expression. You cannot get down to the bottom of music by defining it as an art or as an abstraction. It is an effort to tell a joy, or a desire, or possibly announce an achievement. Few birds sing outside of their nesting days. After that they talk prose —with plenty of intonations and emphasis. But our critic insists that the glorious song of a mocking-bird shall be made up of clippings from nightingales only and never from sparrows or homelier songsters, which only shows that he has made a very useless study of the languages of nature. The mocking-bird may be sometimes a scoffer—something like our human critics.

Now we did not mean all this to be a criticism of the little paper. It is a wonderful paper, that lives only to plead for kindness to animals. All the more we believe that you will learn this sort of kindness only by mutual understanding. When you know that the whole world is trying hard to get into communication (and that is all that this singing and whistling and tail-twisting means), why, naturally, you will help on the accord. We are not very far apart; we and the other creatures. Only a few years ago

Darwin taught us that we are all of a kin, and so we are. We have the same pleasures and the same pains; and there are no more degenerates among the animals than among men. The other day a woman, caught by a puma, sung to him; and all night he listened, and he would not disturb her so long as she uttered a language that pleased him. What was this mountain lion thinking about all this while? Was he somewhere near a level with our slum savages, who can be tamed only by music? Nothing can reach so low down as language. Go ahead, little pleader for righteousness—in deeds; but, then, there are no dumb animals.

That we are so twined in interest with the best welfare of animals, that we go down or up as we treat them kindly, the editor firmly believes. The character of a man comes from his manly courtesy to the whole creation. With many an animal he must create a loving reliance, for his own good. The young Queen of Spain is justly warned by the French press that she cannot afford to encourage bull fighting, because it aggravates the already cruel instincts of the people with whom she has her lot cast. Can we conceive what all this language of the animal world has done and is doing for us, who would otherwise be toilers in voiceless fields and tuneless orchards? How much has it done to make our poets and our musicians; to make us all sweeter, truer and happier? Frank Chapman, writing of England, says that one can readily imagine that the song of the skylark might become to listeners

> "Better than all measures
> Of delightful sound;
> Better than all treasures
> That in books are found."

A bird's call, he thinks, appeals to the ear, very much as the peacefulness of pastoral scenery affects the eye. "The two-syllable song of our bob white has the same purity and joyous serenity" that comes into the soul from a life near to nature. We find large revelations as we listen, and are convinced that one's daily prayer should be: Give a listening ear, that we may hear the beautiful and the good that comes from Thy divine life, and finds expression in the infinite creatures of Thy love.

Reduced Navies Possibly we must have general treaties of arbitration before we can have reduction of navies and armies. Then there will be no need of the burden of ever-increasing armaments, involving every new invention As it is an armored vessel becomes obsolete as soon as it goes into commission, and every other nation builds a bigger and more heavily armored battleship. Why cannot, as Paul Morton, our ex-Secretary of Navy, suggests, Great Britain, as the strongest naval Power, under its advanced Liberal Ministry, set the example, and ask the other nations to follow her in reducing expenditures for new ships, and allowing the ruinous competition to cease? It would please us much to have the United States join in this agreement. But we have men whose business it is to expand the Navy, as there is in England an organization for the same purpose. Mr. Hobson goes to Congress for this very purpose, as a navy expert and faddist. He believes that the United States ought to build the biggest navy on the seas; for, he tells us, one of these days Japan is going to make war on us, is longing for the chance, and will pounce down on our undefended coasts. Therefore, let us have a fleet stronger than that of Japan—yes, stronger than Great Britain.

Bigelow and the Canal Mr. Poultney Bigelow returns to his attack upon the management of the Canal Commission in Panama this week, publishing the first of a series of articles in the September *Cosmopolitan*. In form and manner his criticism is much the same as in the article published in THE INDEPENDENT the first of the year, which drew upon him the wrath of the Administration, but this time he is better prepared, for he has spent six weeks on the Isthmus, instead of two days. He is quite justified in again calling attention to the failure to provide Colon with a decent and adequate water supply and sewer system. Our neglect to fulfill our promises in this has only one partial excuse and that is the probable abandonment of the site for another terminal town, but if this has been decided upon

by the Commission it should have been announced. Mr. Bigelow, however, is still behind the times in his sanitary science. He makes fun of Colonel Gorgas for prohibiting the use of gutters along the eaves of houses. But a pint of fresh water in an eaves-trough is more of a menace to health than the bad smells he objects to. Mosquitoes were found breeding in the sponges of the copying presses in the administration building in Panama.

"Ruzvelt"

One of the best arguments for spelling reform is unconsciously furnished by the British press in their attempts to discredit the movement by heaping ridicule on "the President's English." They spell his name in a variety of ways. "Ruzvelt," "Rusvelt," "Roozvelt," etc., thus proving that owing to our irrational spelling the people of Great Britain do not even know the name of the President of the United States. If they had spelled it "Rosyvelt" it would have been correct and would not have proved such a boomerang of an argument. But the boldest of spelling reformers hardly dares dream of a phonetic spelling of proper names.

"The Confessions of a Drone"

The argument for Socialism cannot be better put than Mr. Patterson puts it in his article this week. The point of it is that his father, or grandfather, somehow earned or saved, or filched money enough to give him a comfortable living, without his earning anything, and that this gives him an unjust advantage. He does not have to work. Further, all that his father gave to him was wrung out of the just earnings of his workmen. This latter point will allow question and discussion. As to the former also some doubt may be expressed. Has a man a right to amass or save anything, and to give it to his children, and have the children the right to take it; or should he throw it away or give it to the State? Has the man to whom nature has given two or ten or a hundred portions of brain the right to hold and transmit the profits of it? These are elementary question that lie at the basis of the discussion. Mr. Patterson answers them in the negative; most people in the affirmative. His father, or grandfather, had the brains of a hundred ordinary men, and he amassed accordingly. He got his proportionate reward, his share of material satisfaction, and they got theirs. They all, he and they, got a comfortable and busy life, and raised up their children, and the State offered the children of all, from the kindergarten to the University of Illinois, as good an education as Mr. Patterson got, if they cared for it, and had the brains to want it. Then Mr. Patterson took the money. He may have ordinary brains and choose to be a drone. Then he will probably waste his money and lose his advantage. Or he may lend it to the Government at 2 per cent.—the country wants it—or he can invest it in railroads for the development of the country and the comfort of the people at from 4 to 6 per cent., and spend the income on other people at his own sweet will, paying book printers, tailors, upholsters, and other workers, and do what he pleases. The whole succession from parent to son goes together. Is it right that a superior man should get superior profit? then that he should give this advantage to his son? then that his son should take and use it? Mr. Patterson and the Socialists say No; the accepted constitution of society says Yes, and the injustice is less clear when we come to think of it.

A New Sort of War

In an old song of a former generation a girl bewails the evils of war:

"If I were King of France, or, what's better,
Pope of Rome,
I'd have no fighting men abroad, no weeping
maids at home.
All the world should be at peace; or, if kings
must try their might,
Let them that make the quarrels be the only
ones to fight."

The alternative suggested by the girl in the song is very nearly that adopted in the present war in Russia. No army does any fighting, but on one side the governors and generals are killed off, and on the other side the volunteer agents of the revolution are arrested and shot. We call it assassination, but really how is it any worse than any other kind of fighting? The war is declared on both sides, as much as in any other war, and

it is a great saving of life. Since Swinburne's sonnet on "Tyrannicide" and long before, it has been understood that where the oppressor has power, the oppressed have to submit or else resort to secret assassination to get their freedom, or at least their revenge. It is all bad, but the initial badness is in the oppression; and if the oppressors suffer, sympathy is reduced to the lowest terms. The ordinary sort of war is worse.

The School Children's Monument

In one of the most conspicuous spots in one of the most beautiful cities of the world—to be specific, in the Place du Louvre, in Paris—there stands a monument. It is a horse, wooden like that of Troy. It is covered with plaster and painted to imitate bronze, or rather was, for six years of French rain has torn off the paint and plaster in spots, until the bronze horse looks like a circus pony. The horse has only three legs; the other has been washed away. The man on the horse is becoming difficult to recognize, but there are many in this country who know who he was. His name was Lafayette, and they remember him as the dead man who came around and stole their pennies when they were children. That is what a monument is for—to perpetuate a memory. And it really does not matter if the plaster horse is never replaced by bronze, for Paris has more than enough equestrian statues without it, and the main object, that of impressing the children, has been accomplished. A child's heart keeps an impression better than bronze, because the heart grows and the impression grows with it. The six hundred thousand American children who were puffed up with pride because they were ten cents richer than their schoolmates, and the six hundred thousand or more who were humiliated because they were ten cents poorer, will always remember Lafayette Day. Then there was the rivalry between schools, between rooms, between individuals—the rivalry of money getting and money giving—that made an indelible impression also. It is the memory of grown people that has to be refreshed. That is why we call attention to the outcome of this particular scheme of pupil contribution. We have a dim recollection that the promoters of the enterprise were to give a picture of the statue to every school that contributed to it. This is a good plan and should be carried out. Let a picture of the piebald, three-legged horse be hung on the walls of the schoolroom, so that, whenever the teacher receives a circular from the State superintendent, or county superintendent, or city superintendent, levying an assessment on the pupils for a patriotic or philanthropic object or for any villainthropic purpose whatsoever, he will drop it quietly in the waste basket. The $60,000 will not have been wasted if this lesson is learned by the teachers.

Local Patronage for Colleges

The special interest in the figures gathered by R. Tombo, Jr., in *Science,* as to the homes of the students in our colleges, lies in the proof it affords of the importance of having such institutions accessible to the people, for they do not want to go far. Thus out of 453 students at Amherst, 351 came from New England and New York; of 995 at Dartmouth, 865 came from the same states; of Williams, 305 out of 445 came from these States; and in Harvard, which counts 4,319 students, there were 3,257 from New England and New York and 2,383 from Massachusetts. The same phenomenon appears in other parts of the country. Of 3,268 students in the University of California, 3,093 come from that State; Illinois supplies 2,872 of the 3,667 students of its University; Michigan, 2,275 of the 4,133 students in the University of Michigan; the University of Pennsylvania, with 2,914 students, has 2,046 from that State; and Columbia University, with 4,083 students, draws 2,774 from New York. Princeton and Yale are the most cosmopolitan of our universities. Princeton has 1,364 students, of whom 277 are from New Jersey, 272 from New York, 357 from Pennsylvania, 45 from Maryland, 59 from Illinois, 45 from Ohio, and from 20 to 30 each from Massachusetts, Kentucky, Indiana, Iowa and Missouri. Yale counts 3,063 students, or whom 1,057 are from Connecticut, 608 from New York, 188 each from Massachusetts and Penn-

sylvania, 147 from Illinois, 135 from Ohio, 112 from New Jersey and 187 from the Southern States. The general lesson is to put your colleges near your people if you want to educate them; and thus the figures add their support to the smaller local colleges.

The motto of *Our Dumb Animals* is "We speak for those who cannot speak for themselves." It is a motto which we are glad to adopt for a higher cause than that of dogs and cats, worthy as that is. There are a multitude of people, children in factories, and an entire race denied citizens' rights, that need spokesmen. Just now, when we are told of those who are too lazy to work, the papers are reporting the planters' meetings and the passing of such resolutions as this adopted in Texas:

"*Resolved*, That we, the organized planters of Grimes County, forbid anybody to take hands from this county that are employed by us to any other locality for the purpose of employing them, especially as cotton pickers. Any one found guilty of the above act will be dealt severely with by us."

We guess those hands will not go except for better wages, which they have the right to accept.

The Drago Doctrine is approved by the Congress at Rio, and will be presented to the Conference of The Hague. Under it the private claims of foreigners against American countries could not be collected by force, as was done a few years ago in Venezuela. But if those South American countries would have the Drago Doctrine accepted they had better be honest and compromise with their creditors and pay what they owe. There is no danger in the case of such established governments as Mexico, Brazil, Argentina and Chile; it is the ill-organized republics that make the trouble, the ones that enjoy revolutions. Our nation wants to see no foreign navies enforcing claims; we prefer the way we are doing in Santo Domingo, where we have been asked to administer the finances for the creditors, disagreeable as that is.

In July a recruiting office in New Orleans received 106 applicants to join the regular army, and found only 29 physically fit. The officer says that the usual number accepted elsewhere would have been 60 or 70. He adds:

"The bad habits of the boys of today are responsible for this order of things. I never saw so many cigaret smokers. Late hours, cigarets and other bad habits stunt them. They are under weight or under size, sometimes under both."

In some States law forbids cigarets to be sold to boys, and everywhere parents ought to forbid their use, and should not set the example.

This extraordinary editorial note appears in one of the most independent of its class, *The Catholic Citizen*, of Milwaukee:

"At Milwaukee the past week, there came before the board of aldermen a question of granting licenses to eleven notorious saloons, most of which are virtually temples of "free love." Singular to relate, all of the twelve Socialist aldermen voted against licensing these places; and, sad to say, all the Catholic aldermen, except one, voted to license these temples of free love. Evidently it is a condition and not a theory that confronts us."

We offer no comment, except to say that it concerns those whom it concerns.

The postal clerks of the Central States and the West have organized a labor union. President Roosevelt gave orders several years ago that Federal employees should appeal against any grievances thru their chief of department, so that this is a defiance of rule and makes a questionable precedent. Can employees in the Post Office Department strike? or in the War Department? or soldiers? If one, why not the other?

Raffles and eucher parties should have no place in a church sociable. A Western religious paper announces to its readers that they must not be surprised that such notices sent to it are not published, as it has received two warnings from the postal authorities that papers containing such notices will not be received in the mails.

There is trouble brewing in Egypt for the British, and the editor of one of the best of the native papers says the trouble is not political, but social, the "aloofness" of the English, who will not mix with the educated natives. There we have it again, but the stupid Anglo-Saxon will not learn.

Insurance

Life Income Provision for Beneficiaries

It has frequently happened that a man with ample life insurance in the best companies has died and the sum of his insurance in cash has come into the hands of his wife or other female beneficiary. In too many cases of this kind, when a large lump sum comes into inexperienced hands, all sorts of cat and dog investments are heartlessly offered to the woman, who, nine times out of ten, is untrained in investment finance. A skilled financier is sometimes deceived in investments, but when the investment of considerable sums is undertaken by a novice and the novice is a woman it is easy to imagine the disaster that is almost certain to overtake the would-be investor. Speculation is undertaken, and there comes only too speedily the desire to get rich quick. Stocks that have paid fair dividends, but which may be the subject of manipulation, are easily bought. Sometimes very much too easily. In the warfare of high finance there is no quarter either given or taken. Dividends are cut. Again they cease altogether. There are still securities that are "undigested." A fortune that has been many years in the making is swiftly swept away in the stock market. From the lap of luxury to grim want is but a short step, and the man who leaves his beloved wife with the hard problem of investment is doing her no kindness. The really thoughtful husband will, by way of substitution, provide a guaranteed income commensurate with his fortune and relieve his wife from one of the hardest problems of modern finance. Such an income is untaxable and continuous thru the life of the beneficiary. The arrangement of a man's insurance so as to provide a life income for the wife may require a little more trouble, it may possibly cost a trifle more, but if the man's wife is a good wife, it will be worth all the extra trouble and expense to know that her insurance money cannot be taken from her and that she cannot be reduced to penury by financial schemers. It is a man's duty, and a responsibility that he ought not to shirk, to see that proper provision is made for his beneficiary along the lines suggested in this article.

Paul Morton, president of the Equitable Life Assurance Society, returned from abroad last week. He stated to representatives of the press that during his stay in Europe he had investigated the French insurance laws and had concluded that the Equitable would be able to continue to do business in France. According to Mr. Morton, the French laws relating to insurance are not more strict than are similar laws in New York. The French companies are naturally favored to some extent in France, but, generally speaking, there is no discrimination against English, German or American companies. Mr. Morton was impressed with Europe, and especially with France, Germany and England, as an insurance field.

Nicholas Longworth, of Cincinnati, Ohio, the President's son-in-law, who recently succeeded Mr. Seymour Eaton (resigned) as secretary of the International Policy-holders' Committee of the New York Life and Mutual Insurance Companies, has indignantly denied in published interviews any Wall Street backing. Mr. Longworth is reported as saying:

"I am greatly interested in the object of the association, although not a policy-holder myself. I shall simply attend to the duties as my fellow members of the committee attend to theirs, because I feel those duties to be my share of the work and responsibility of membership on the committee."

The Metropolitan Life Insurance Company, of which Mr. John R. Hegeman is president, recently made an interesting dividend announcement relating to policies over five years in force which have matured and which will mature during 1906. The total amount of dividends which this company proposes to pay this year is nearly three millions of dollars, three-quarters of which is a voluntary gift by the company to its patrons.

Financial

Condition of Business

TRADE journals point to favorable reports coming in from all the industries. Steel mills and cotton factories with difficulty meet demands for delivery. In the iron and steel industry all previous records for August have been surpassed. Crop reports continue to be favorable. A new high record will probably be made in the corn fields, a great crop of wheat is assured, and the cotton crop will, it is expected, be next to the largest one ever gathered. A shortage in Russia's wheat crop will tend to sustain the price of the surplus to be exported from this country. Railway tonnage is very heavy. Gross earnings for the first half of August exceed those of a year ago by 16 per cent., and the increase for July was 14.1 per cent. *Bradstreet's* shows that the increase of gross earnings on 120 roads for the first six months of 1906 was 13 per cent., or $101,176,000, while the increase of net was 19.9 per cent., or $42,427,000.

Transfer of Trolley Holdings

OWING to the hostile attitude of the Massachusetts Government toward the control of trolley systems in that State by steam railway companies, the trolley properties of the New York, New Haven & Hartford Railroad Company in Massachusetts (except two small lines which were leased by authority of an act of the Legislature) have been sold to a voluntary association called the New England Security and Investment Company. The most prominent properties affected are those in Springfield, Worcester and Berkshire County. Ownership of the steam company's trolley systems in Connecticut (controlled thru the agency of the Consolidated Railway Company, a subsidiary organization) does not appear to have been disturbed by the sale.

A legal controversy with Massachusetts has been avoided, for the State was preparing to test in the courts the steam company's right to own trolley systems which it had purchased. Moreover, the steam company was convinced, it is explained, that a public service corporation could not successfully perform the service of the trolley companies "with an inflamed state of public opinion adverse to it." The names of the persons who formed the new voluntary association have not been published. It has been generally assumed that these gentlemen are in full accord with the management and policy of the steam railroad company by which the trolley lines were acquired. President Mellen says, however, that neither the steam railroad company nor the subsidiary Consolidated Company holds any of the shares of the association, and that the shares have been placed in the hands of bankers for sale, with the hope that they will in time become widely distributed. It remains to be seen to what extent the transaction will affect the growing consolidation of steam and trolley interests in southern New England.

....Fisk & Robinson have sold the $24,000,000 of 2 per cent. Panama Canal bonds which they recently purchased, thus closing in less than three weeks what has been one of the most interestning bond issues ever made by the Government. The national banks have taken most of the bonds. To the same firm was awarded, last week, at 102.28, the new issue of $1,000,000 of temporary certificates of indebtedness of the Philippine Government. The National City Bank's bid was 102.277.

....Some months ago the price of New York Stock Exchange seats fell to $78,000. Last week a seat was sold for $95,000, which just equals the best record. This seat, Alfred de Cordova's, was bought in 1875 for $5,000.

....Dividends announced:

Southern Pac. Co. (Common; Semi-Annual), $2.50 per share, payable October 1st.

Union Pac. R. R. (Common; Semi-Annual), $5.00 per share, payable October 1st.

Union Pac. R. R. (Preferred; Semi-Annual), $2.50 per share, payable October 1st.

Louisiana & Arkansas Rway. (1st mort. 5s), Coupon No. 8, payable September 1st.

Kansas City West. Rway. (1st Refunding 5s), Coupon No. 2, payable September 1st.

Iowa Cent. Rway. (1st and Refunding 4s), Coupon, payable September 1st.

Minn. & St. Louis Rway. (1st and Refunding 4s), Coupon, payable September 1st.

The Independent

VOL. LXI NEW YORK, THURSDAY, SEPTEMBER 6, 1906 No. 3014

Survey of the World

Mr. Bryan's Return

After over a year's travel about the world Mr. W. J. Bryan reached New York on Thursday, August 30th. His trip, on which he took Mrs. Bryan and his daughter, was made possible by an offer, it is said, of $1,000 a week, by a syndicate, for a weekly letter. This, with the royalty on the book, it is reckoned, will net him $50,000, after all expenses. He had traveled over India, the Philippines, Japan, the Chinese coast, and a large part of Europe, and was received with great distinction everywhere, it being understood that he was to be the Democratic candidate for President of the United States. In London he had attended and taken important part in the Interparliamentary Congress. He had submitted to various interviews, but had somewhat avoided committing himself, altho he had said that Mr. Roosevelt has so far taken an advanced position that it will be necessary for the Democratic party to be even more progressive; and while he admitted that the silver issue was dead, owing to the great increase in the output of gold, he declared that he still held his old views on the subject, and was really more radical than more conservative. Immense preparations had been made to receive him, and large delegations from his own State of Nebraska and nearly all other States, even as far as Texas and California, were on hand, including many State Governors and Congressmen. On Wednesday afternoon of last week he reached the harbor on the "Princess Irene," and was allowed to land immediately at Quarantine by an order from the President. He spent the evening at Lewis Nixon's house conferring with leading Democrats. On Thursday he entered New York as guest of the Commercial Travelers' Anti-Trust League, who had made arrangements for his speech at the Madison Square Garden that evening. There was no lack of enthusiasm as the triumphal procession of carriages moved thru the city, nor at the meeting in the evening. After the speech in this city Mr. Bryan devoted two days to hurried visits to New Haven, Newark and Jersey City, where he made shorter addresses, and took up some topics in his longer speeches; but in none of them did he repeat what he had said of railroad ownership by the nation or the States. This gave rise to the report that he had been so sharply called down for it by members of the National Democratic Committee that he had concluded to drop the subject. He said, however, that he had had no chance to confer with the Committee, but had arranged to do so later. Southern men of influence in the party, such as Representative Williams and Senator Bailey, have expressed themselves as quite dissatisfied with Mr Bryan's position in this matter. Mr. Bryan has left for Lincoln, Neb., and will very soon after visit several of the Southern States and make speeches. That Mr. Bryan does not think it wise to try to impose his railroad proposals on the party appears from a passage in his speech at New Haven, when he said:

"What I said at New York about Federal ownership of railways you should regard as a counsel of perfection. I don't know whether the country is ripe for it. For the present it is simply my personal opinion. Whether it should be embodied two years hence in the

party platform is for you and your delegates to a national convention to determine."

Mr. Bryan's Speech

Mr. Bryan's speech was an hour and a quarter long, and was not read. In it he made full statements of the issues which he held should be supported by the Democratic party. Its main points are given in the following extracts. First, after thanks to the speakers who had introduced him, and a word as to his increased admiration of his own country, Mr. Bryan spoke of the growth of Arbitration:

"While the idea is of American origin, it was heartily accepted by the representatives of England, France, Germany and other European countries. I believe that if our nation would propose to make with every other nation a treaty providing that all questions in dispute between the parties should be submitted to The Hague Court or some other impartial international tribunal for investigation and report before any declaration of war or commencement of hostility it would find many nations willing to enter into such a compact. . . . I am sure that such a treaty could be made between the two great English speaking nations and their example would be followed, until the danger of war would be almost if not entirely removed. To take the lead in such a movement would establish our position as a world Power in the best sense of the term. And what argument can be advanced against such action on the part of the United States?"

Then he past to the Drago Doctrine:

"We may not only promote peace, but also advance our commercial interests by announcing as a national policy that our navy will not be used for the collection of private debts. While protecting the lives of our citizens everywhere and guaranteeing the personal safety of all who owe allegiance to our flag, we should, in my judgment, announce that persons engaging in business and holding property in other lands for business purposes must be subject to the laws of the countries in which they engage in business enterprises."

He would give ultimate independence to the Philippines:

"Our nation has lost prestige, rather than gained it, by our experiment in colonialism. We have given the monarchist a chance to ridicule our Declaration of Independence and the scoffer has twitted us with inconsistency. A tour thru the Philippine Islands has deepened the conviction that we should lose no time in announcing our purpose to deal with the Filipinos as we dealt with the Cubans. Every consideration, commercial and political, leads to this conclusion. . . . In so far as our efforts have been directed toward the education of the Filipinos we have rendered them a distinct service, but in educating them we must recognize that we are making colonialism impossible. If we intend to hold them as subjects we would not dare to educate them. Self-government with ultimate independence must be assumed if we contemplate universal education in the Philippines."

Returning to topics at home he first directed his attention to Congress:

"While our system is superior in many respects it has one defect, viz., that Congress does not meet in regular session until thirteen months after the election. During this period there is uncertainty, long drawn out, which to the business community is often more damaging than a change of policy promptly carried into effect. Would not the situation be improved by a constitutional amendment convening the first session of Congress within a few months after the election and compelling the second session to adjourn several days before the following election?"

He would have Senators elected by direct vote:

"I am within the limits of the truth when I say that the Senate has been for some years the bulwark of predatory wealth and that it even now contains so many members who owe their election to favor seeking corporations and are so subservient to their masters as to prevent needed legislation. The popular branch of Congress has four times declared in favor of this reform by a two-thirds vote and more than two-thirds of the States have demanded it, and yet the Senate arrogantly and impudently blocks the way."

As to an income tax, as in Europe, he said:

"I am so convinced of the justice of the income tax that I feel sure that the people will sooner or later demand an amendment to the Constitution which will specifically authorize an income tax and thus make it possible for the burdens of the Federal Government to be apportioned among the people in proportion to their ability to bear them. It is a little short of a disgrace to our country that while it is able to command the lives of its citizens in time of war it cannot even in the most extreme emergency compel wealth to bear its share of the expenses of the Government which protects it."

The subject of arbitration in labor disputes he said was related to government by injunction:

"Society is justified in demanding that the differences between capital and labor shall be settled by peaceful means. If a permanent, impartial board is created, to which either party of an industrial dispute may appeal, or which can of its own motion institute an inquiry, public opinion may be relied upon to enforce the finding. . . . As the main purpose of a writ of injunction is to evade trial by jury it is really an attack upon the jury system and ought to arouse a unanimous protest. So long as the meanest thief is guaran-

teed a trial by jury a jury ought not to be denied to wage earners. However, as a writ is usually invoked in case of a strike, the importance of the subject would be very much reduced by the adoption of a system of arbitration, because arbitration would very much reduce, even if it did not entirely remove, the probability of a strike."

After a word for the eight-hour day he past to Democratic issues, and first as to free silver:

"The unlooked for and unprecedented increase in the production of gold has brought a victory to both the advocates of gold and the advocates of bimetallism—the former keeping the gold standard which they wanted and the latter securing the larger volume of money for which they contended. We who favor bimetallism are satisfied with our victory if the friends of monometalism are satisfied with theirs, and we can invite them to a contest of zeal and endurance in the effort to restore to the people the rights which have been gradually taken from them by the trusts."

The control of the trusts he made the chief issue. He would have the Democrats refuse to receive campaign contributions from corporations, and have the books open, so that before election the public might know who had made any considerable contribution. He then added:

"I congratulate President Roosevelt upon the steps which he has taken to enforce the anti-trust law, and my gratification is not lessened by the fact that he has followed the Democratic rather than the Republican platform in every advance he has made. . . . He has probably gone as far as he could without incurring the hostility of the leaders of his own party. The trouble is that the Republican party is not in a position to apply effective and thorogoing reforms because it has built up, thru special legislation, the very abuses which need to be eradicated. . . . Our motto must be 'A private monopoly is indefensible and intolerable,' and our plan of attack must contemplate the total and complete overthrow of the monopoly principle in industry. . . . Recent investigations have brought to light the fact that nearly all the crookedness revealed in the management of our large corporations has been due to the duplication of directorates. A group of men organized or obtained control of several corporations doing business with each other and then proceeded to swindle the stockholders of the various corporations for which they acted. . . . It is worth while to consider whether a blow may not be struck at the trusts by a law making it illegal for the same person to act as director or officer of two corporations which deal with each other or are engaged in the same general business."

He then proposed that corporations be required to take out a Federal license before engaging in interstate traffic, this license to be given on conditions that would protect the public:

"The control which Congress has over interstate commerce is complete, and if Congress can prevent the transportation of a lottery ticket thru the mails, by the express companies or by freight it can certainly forbid the use of the mails, the railways and the telegraph lines to any corporation which is endeavoring to monopolize an article of commerce. . . . It is far easier to prevent a monopoly than to watch it and punish it, and this prevention can be accomplished in a practical way by refusing a license to any corporation which controls more than a certain proportion of the total product—this proportion to be arbitrarily fixed at a point which will give free operation to competition."

He then took up the tariff question:

"The principle embodied in the protective tariff has been the fruitful source of a great deal of political corruption as well as the support of many of our most iniquitous trusts.

"One of the worst features of a tariff levied not for revenue but for the avowed purpose of protection is that it fosters the idea that men should use their votes to advance their own financial interests. . . . How can we draw a moral distinction between the man who sells his vote for $5 on election day and the manufacturer who sells his political influence for $50,000 or $100,000, payable in dividends? . . . The high tariff has long been a burden to the consumers in the United States, and it is growing more and more a menace to our foreign commerce, because it arouses resentment and provokes retaliation."

He next approved rate regulation for railroads, and turned to their public ownership:

"I have already reached the conclusion that railroads partake so much of the nature of a monopoly that they must ultimately become public property and be managed by public officials in the interest of the whole community, in accordance with the well defined theory that public ownership is necessary where competition is impossible."

But he fears centralization at Washington. Therefore he says:

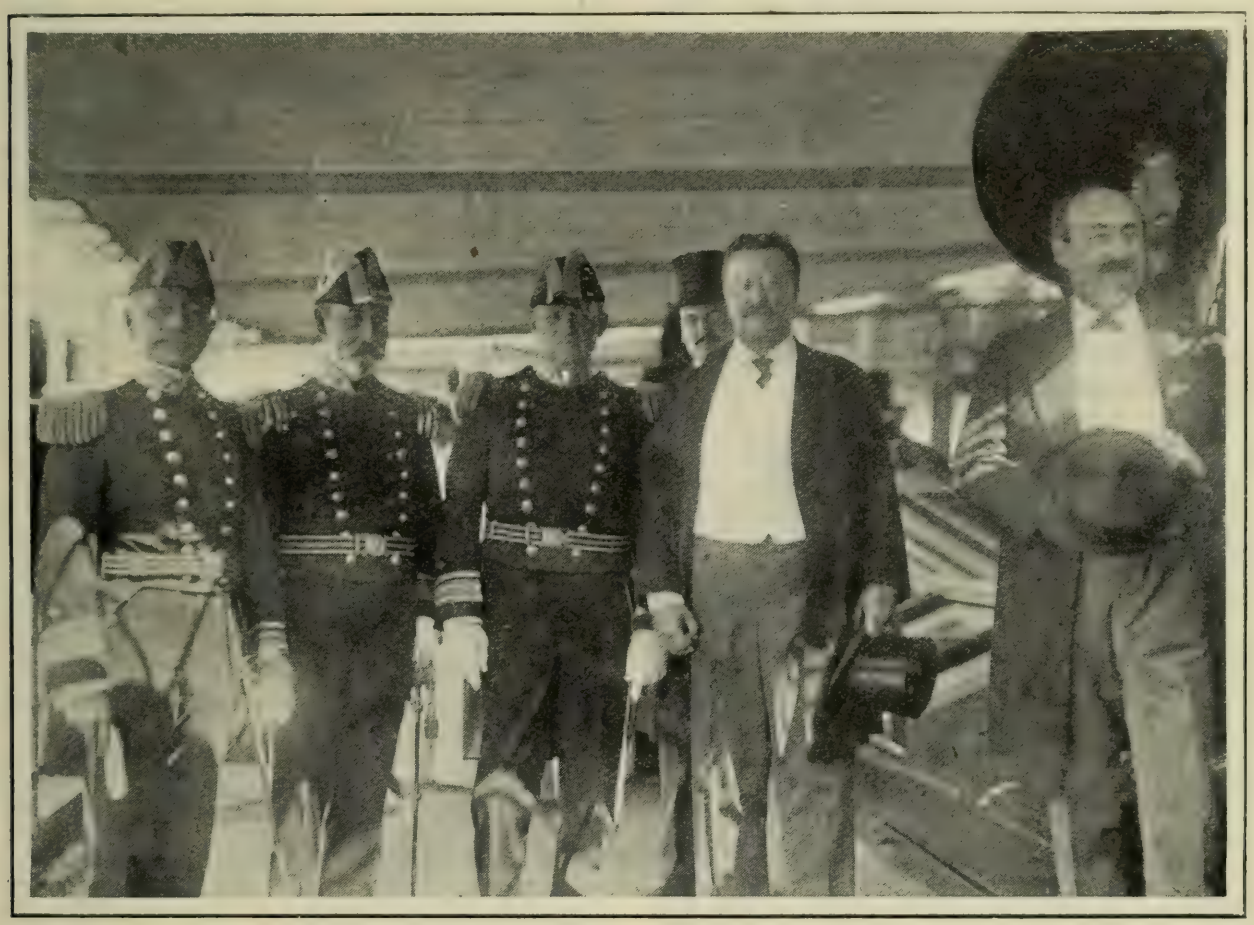
"I favor the Federal ownership of trunk lines only, and the State ownership of the rest of the railroads.

"Some have said that it would be impracticable to allow the local lines to be owned by the several States. I did not believe the argument weighty before I went abroad, and my observations in other lands have convinced me that State ownership of local lines is entirely feasible. In Germany almost all the railroads are owned, not by the Empire, but by the several states—not even the trunk lines are owned by the Federal Government, and yet they have no difficulty about interstate traffic.

"If one travels from Constantinople to Vienna, he passes thru Turkey and Bulgaria

and Servia and Hungary and a part of Austria, and every State owns its own railroads, and they speak different languages on the different divisions, and yet you travel without change of cars and don't know when you cross a line. Norway and Sweden lie side by side. Each owns its railroads; and yet, altho the political relations between the two nations are strained, their commercial intercourse goes on, and there is no interruption of interstate traffic."

Mr. Bryan then reverted to trusts, and argued that the logical outcome of monopolistic trusts is Socialism:



"The man who argues that there is an economic advantage in private monopoly is aiding Socialism. The Socialist, asserting the economic superiority of the monopoly, insists that its benefits shall accrue to the whole people, and his conclusion cannot be denied if the superiority of monopoly is admitted. . . . Socialism presents a consistent theory, but a theory which, in my judgment, does not take human nature into account. Its strength is in its attack upon evils the existence of which is confessed. Its weakness is that it would substitute a new disease—if not a worse one—for the disease from which we suffer. . . . Because I am anxious to preserve individualism, I am earnest in my desire to see the trusts exterminated, root and branch, that the door of opportunity may be open to every American citizen."

Mr. Hipple and the Real Estate Trust Company

Last week Philadelphia suffered the severest financial shock in its late history by the sudden failure of the Real Estate Trust Company thru the speculation and fraud of its trusted president, Frank K. Hipple. The loss is over $7,000,000, but it is hoped that in time the depositors will recover most of this amount. Mr. Hipple had been in the real estate business from his youth, and this trust company was his creation, and he was allowed to manage its business with very little care by the directors, who seem to have been mostly dummies. Indeed the bank examiners had allowed two years to pass without examination, because of their confidence. It was the general faith in his ability that led the trustees of the Presbyterian General Assembly to put its funds in the charge of his company, altho most of it was safe in mortgages, and other Presbyterian and benevolent organizations had about $2,000,000 of property thus cared for. His method seems to have been to be interested with a large promoter of enterprises, Adolph Segal, in his schemes, which promised very great returns; and to Mr. Segal he lent millions of money, and made false reports to his trustees. It was when the directors became suspicious and asked an accounting, and a note signed by himself and Segal was going to protest, that he suddenly died, and the coroner reported the cause as "cerebral hemorrhage." In fact, he had committed suicide. He had fired a bullet thru the roof of his mouth. The coroner decided to give the cause of death as cerebral hemorrhage, which was verbally the fact, altho misleading. This was done, he said, to prevent a run on the company, and so that if anything was wrong in his transactions the bank directors would have a chance to make up any deficit. It now became known that he was a thief and a defaulter, and it was so charged by Receiver Earle after the coroner had admitted that Hipple was a suicide, and had thus saved himself from going to jail as a bank-breaker. Beyond the looting of the bank for the visionary schemes in which Segal was interested, Hipple had embezzled collateral from the trust company in order to raise money for private purposes. In one case mentioned he had taken collateral worth $65,000 from the vaults of the bank and borrowed $50,000 upon it. He never repaid the debt nor returned the collateral, and this had been done in various cases. Receiver Earle declared that the $5,000,000 which Hipple loaned on questionable securities to Adolph Segal, loans which were carefully concealed from the board of directors, was virtually stolen from the bank and loaned to Segal. He explained the absence of the money to the directors by producing a lot of fanciful loans upon apparently good security. It has been announced by Receiver Earle that Hipple did not tamper with trust funds and estates valued at $26.000,000, deposited in his company. This has since proved a mistake. Mr. Hipple was treasurer of the trustees of the Presbyterian General Assembly, and the securities, bonds and mortgages belonging to the General Assembly, to the value of $963,896.84, were kept in the vaults of the Real Estate Trust Company.

The Naval Review

Of all the numerous parades and shows of Labor Day the most magnificent was the marshaling of our American fleet off Oyster Bay, to be reviewed by the President and Secretary Bonaparte. The vessels were in three columns, one of the smaller black torpedo boats and destroyers, of which there were a dozen; the second column, of the big white battleships, the flagship "Maine," the "Kentucky," "Kearsarge," "Louisiana," "New Jersey" and "Virginia"; and the monitors, "Puritan," "Nevada," "Florida," and "Arkansas." The third white column included the battleships "Alabama," "Illinois," "Indiana," and "Iowa"; the armored cruisers "West Virginia," "Colorado," "Pennsylvania" and "Maryland," and four protected cruisers named after as many cities. The fleet was under the command of Admiral Evans. The President and Secretary Bonaparte reviewed the fleet from the yacht "Mayflower," steaming in and out and around the columns, and being saluted by each battleship as he past. The transports and supply ships and colliers were anchored outside the line of review, making sixty-one naval vessels in all. Inasmuch as something has been said of the expense of this review, Admiral Evans has stated that the gathering here involves no extra expense beyond perhaps three hundred dollars for cost of powder for salutes. After the review the Admirals and Captains called on the President and were entertained at luncheon. The President was hearty in his admiration of the display. With the President on the "Mayflower" was the Congressional delegation, to whom the President expressed his gratification that Congress had, mostly within ten years, made such a Navy possible. After luncheon the President returned the call of the Admirals, visiting the "Maine" and the "West Virginia," and made interesting short addresses to their men. In the evening there was a brilliant display of searchlights and electric illumination.

The Great Naval Parade at Oyster Bay on Labor Day. A Group on "The Mayflower," showing Secretary Bonaparte, President Roosevelt, Secretary Loeb, Rear-Admirals Evans, Davis and Bronson.

The President on Simplified Spelling

The critics of the proposals for simplified spelling have been very free in their attacks on the President's order for the adoption of the three hundred words for which shorter spellings have been recommended by the Simplified Spelling Board. Among the critics has been President Eliot, of Harvard, but the other scholars have not noticeably objected, altho many newspapers have taken occasion to expend ridicule on the change, and some of them have indicated that the President has gone beyond his province. This was to be expected of the English journals, which still spell *honour and storey* (of a house). Of the leading English journals only *The Spectator* is reported in cable dispatches as recognizing that the simplifications approved by all the lexicographers are legitimate. The criticisms have led the President to publish a letter to the Public Printer, Mr. Stillings, in which he says:

They represent nothing in the world but a very slight extension of the unconscious movement which has made agricultural implement makers and farmers write *plow* instead of *plough*, which has made most American write *honor* without the somewhat absurd superfluous *u*, and which is even now making people write *program* without the *me*—just as all people who speak English now write *bat, set, dim, sum* and *fish*, instead of the Elizabethan *batte, sette, dimme, summe* and *fysshe*, which makes us write *public, almanac, era, fantasy* and *wagon*, instead of the *publick, almanack, aera, phantasy* and *waggon* of our great grandfathers. It is not an attack on the language of Shakespeare and Milton, because it is in some instances a going back to the forms they used, and in others merely the extension of changes which, as regards other words, have taken place since their time. It is not an attempt to do anything for reaching or sudden or violent, or indeed anything very great at all. It is merely an attempt to cast what slight weight can properly be cast on the side of the popular forces which are endeavoring to make our spelling a little less foolish and fantastic.

Political Items

Senator Tillman is renominated as Senator from South Carolina, but by a reduced vote. His attack on those who opposed the Dispensary law gave great offense, and his gubernatorial candidate was defeated, and his own name badly scratched, while J. F. Lyon, the aggressive member of the Dispensary Investigating Committee, was elected Attorney-General; but it is not yet clear whether a Legislature has been elected that will abolish the Dispensary. A second primary election will be necessary for Governor, and only the two higher candidates will be in the field, with the assurance that Ansel will win. The campaign was a hot one, and yet only about 90,000 votes were cast.——The Arkansas election was held on Monday of this week. Only the Democrats had a full ticket in the field, as their ticket was sure to be elected. The Republicans, Prohibitionists and Socialists put up candidates simply for Governor. The Democratic candidate elected was J. H. S. Little, succeeding Governor Jefferson Davis, who goes to the United States Senate. In Alabama the Democratic primary of last week, which is tantamount to an election, resulted in the choice of B. B. Comer for Governor by a majority of about 20,000. Inasmuch as the two Alabama Senators are very old men, Senator Pettus being eighty-five, and Senator Morgan eighty-two, alternate Senators were chosen to take their place if they should be disqualified to serve. The choice fell on Congressman Bankhead and ex-Governor Johnston.——What the Southern press outside of Georgia thinks of the gubernatorial campaign in Georgia may be seen from the comment of *The News and Courier*, of Charleston, S. C.:

"Hoke Smith has been nominated for Governor of Georgia after the most violent and indecent campaign that has ever been conducted in any State of the American Union. The better sentiment of the whole country has been outraged by the course of the campaign in Georgia. Day after day, week after week and month after month the newspapers of Georgia have been filled with the disgraceful story of the duel to the death between Clark Howell and Hoke Smith. If what they and their respective partisans have said about each other be true, neither is in any sense fit to represent respectable people in any office or position whatsoever. . . .

"As for Mr. Smith's principal opponent, the Hon. Clark Howell, his campaign was simply unspeakable. There is no language of censure too strong that could be used to characterize the vileness of the fight between these two leading men of Georgia. We do not know how they will get away from the mire and filth of the struggle through which they have passed."

——Of the Congressional campaigns that made by Congressman Littlefield, of

Maine, has attracted most interest from the fact that President Gompers, of the American Federation of Labor, went into the district to oppose his election on the ground that he had voted in Congress against certain bills for which the Federation stood. In a speech Mr. Littlefield said:

"Mr. Gompers has never yet discussed the real issues for which he assails me in this campaign. He does not dare. I challenge him to take before a Maine audience the position that he takes in Washington in connection with the legislation that he demands. He demands that I shall vote for legislation that would authorize men to conspire to threaten to murder, that would make it lawful for one man to do what it is a crime for other men to do and that would outlaw the right to do business as a property right, and legalize boycotting as an element to be used in the destruction of business. . . .

"He criticises me because I was one of the seven or nine men that voted on the floor of the House against a proposition that exempted employers and employees engaged in interstate commerce from the operation of the Sherman anti-trust law, which makes it a crime for all persons to enter into contracts and agreements to restrain interstate trade and commerce. Altho 250 or more Republicans and Democrats voted for that infamous proposition, it simply demonstrated their moral and political cowardice, as the vote was cast just prior to the Congressional election, and I have never heard any member of the House that so voted that did not admit that he voted for that proposition solely because he expected by so doing to escape and avoid the opposition of labor agitators in his district in the then coming campaign. The bill died in the Senate without any question thereon and is simply a standing demonstration of the moral cowardice of members of the American Congress."

——Mayor McClellan, of New York, is on his way back from his vacation in Europe, and has declared himself eager to engage in a campaign for decency in the control of the Democratic party in this State. He is strongly against Murphy as boss of Tammany, and in favor of the nomination of Mr. Jerome as Governor.

The Cuban Outbreak

There is no sign on either side of a compromise. General Cebreco, representing the Cuban veterans, called on President Palma last Sunday to beseech him to allow an arbitration of the differences between the Government and the rebels; but President Palma refused. He said that the veterans were welcome to confer with the rebels and to urge them to lay down their arms, in which case they might return unmolested to their homes or might leave the country; but they must treat with the rebels as private citizens, for the Government would not treat with them further than this offer of amnesty. According to the best reports the rising appears to be quite general. But the bands are not large and the rural guards are being raised to meet them, altho meetings are few and victories unimportant. Neither party desires armed intervention on our part—only that we should ask President Palma to annul the late election and order a new one in which there shall be no intimidation. A semi-official organ of the Government says:

"Permanent intervention would be worse than death. It would be preferable if the Caribean should engulf the Pearl of the Antilles."

There seems to be two bureaus of information established in this city, one for each side of the Cuban conflict, and their reports are so conflicting that little reliance can be placed upon them. One tells of a fight about sixty-five miles from Havana in which the rural guards killed twenty-four revolutionists and broke the backbone of the revolution in the Havana province. It is further declared that there is no uprising in the provinces of Matanzas, Santiago and Camaguey; also that the province of Santa Clara is well protected; and that in Pinar del Rio the 400 insurrectionists are running away from the 6,000 Government forces. The revolutionists' press bureau denies all these claims.

Events in Russia

While there is no general uprising in Russia, and no general strike, there is increased terror, owing to the murder of so many officials, while those that throw the bombs generally escape. The response of the Government is wholesale arrest and imprisonment or deportation of suspected persons. The revolutionists are virtually masters of the Baltic provinces by their secret tribunals and punishments, which are like those of the Ku-klux times in the South. Perhaps the most notable event of the week is the

retirement of General Trepoff, whose resignation the Czar has accepted. His health is the cause assigned, and it is probably a sufficient cause. He has been much confined, and has not taken the needed exercise, it hardly being safe for him to expose himself to public view. His physicians have ordered him to take a rest abroad. The Czar has much depended on his energy in suppressing disorder, but the late assassinations of Generals Kozloff and Mier has perhaps disturbed his faith in General Trepoff. His one object has been to assure the safety of the Czar and his family. He will probably go abroad. So extreme are the precautions now taken to prevent the assassinations, to prevent revolutionaries from gaining access to official receptions, that the Secretary of the Interior has ordered that hereafter Government officials must produce cards of admission to these receptions, military officers must produce admission tickets bearing their photographs and countersigned by the general of the division in charge, and the police must search all civilians before admitting them. The Czar is reported as having decided to make a second grant to the peasants of land belonging to him and to the State, on conditions similar to those included in a previous grant from the imperial estate. But the grant is not a gift, but permission to the peasants to buy the land on terms assigned. The revolutionists declare that this will not satisfy the peasants, who have demanded land free as a gift, just as land was given at the time of the emancipation of the serfs.

Delay for Chinese Constitution

It is the Emperor, and not the Empress, of China who has issued an edict looking to the future establishment of a constitutional form of government for the Chinese Empire. This must have been done, however, by the will of the Empress, for we have no news that the Emperor has come out of his insignificance and seclusion. It will be remembered that within the last year a commission of Chinese dignitaries has visited the United States and Europe with the avowed purpose of studying the matter of a constitution for China. On their return they have wasted no time in making their report and recommendation. In his edict the Emperor says:

"Since the beginning of our dynasty it has been the wise emperors who made laws suited to the times. Now that China has intercourse with all nations our laws and political system have become antiquated and our country is always in trouble. It is therefore necessary for us to gather more knowledge and draw up a new code of laws, otherwise we shall be unworthy of the trust of our forefathers and the people."

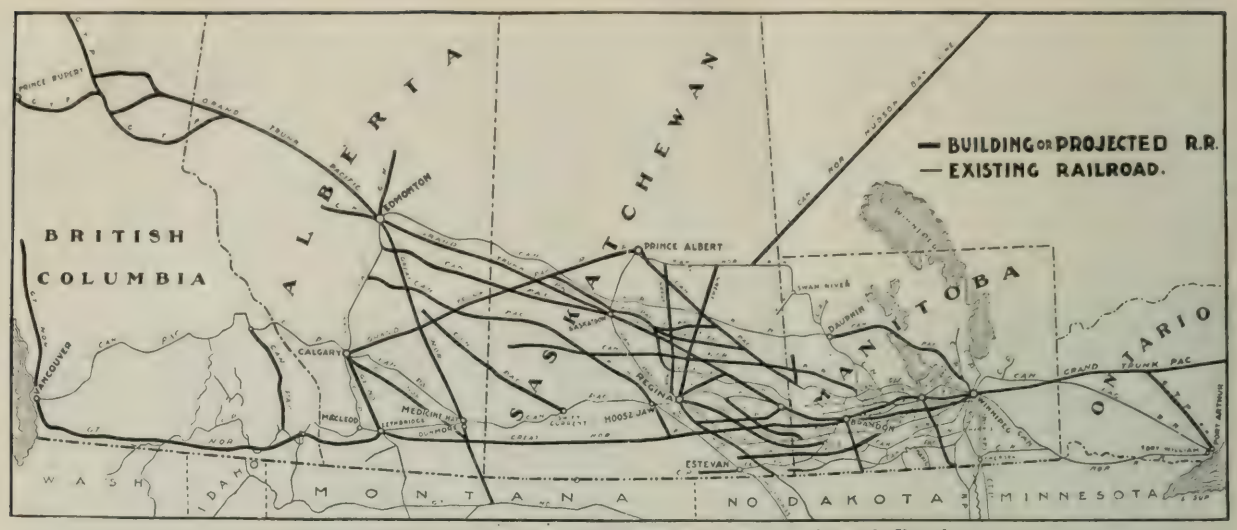
After thus referring to antiquity to support his change, the Emperor cites the report of his commission, to the effect that the cause of China's weakness is the antagonism between rulers and ruled, and promises reforms in administration and promises that when these have been accomplished, and the people are educated to understand their relations to the Government, a constitution will be proclaimed; but the time will depend on the rapidity of the nation's progress and enlightenment. At present, then, there is no expectation that China will speedily possess a constitutional government.

Foreign Items

Secretary Root has been received with great honor at Santiago, altho the extensive festivities planned were curtailed out of sympathy for the sufferers by the earthquake at Valparaiso and other towns. He left on Tuesday for Peru.——The trouble between Turkey and Persia does not seem to have been settled, and a report from Teheran says that Turkish troops have occupied the Persian district of Mongovar, which comprises twenty-five villages, and the Persian Ambassador at Constantinople has demanded of the Porte the withdrawal of the troops.——More remarkable discoveries are reported from the excavations at the island of Delos, Greece. Six large archaic lions have been found, which are said to resemble nothing else previously found in Greece, and are probably of the older Assyrian type. An extremely beautiful statue of the Muse Polyhymnia is reported, which is finer than the celebrated Polyhymnia in the Berlin Museum. Another is a very fine head of Dionysus (Bacchus), which resembles the work of Scopas. The find includes pottery, jewels, coins, etc.

THE first flurry of excitement in the Canadian West was in anticipation of the coming of the Canadian Pacific, the first railway to reach out from Eastern to Western Canada. For a time Winnipeg boomed like a mining camp. All over Ontario and away down East men soaked their chattels to chase the Star of Empire. Those who could not get away crowded the market places where leather-lunged land boomers sold lots as wizard oil is sold from a spring wagon in a country town.

Gradually the excitement died down. The long Manitoba winter cooled things. The road builders, the real pioneers, were still in the heavy rock cuts along the Northern Lake shore. Land-holders in the East pooled their troubles and sent men out to look for lots "in" Winnipeg. Sometimes they had to take a boat, and sometimes they were still unable to locate their claims. Many Ontario business men went broke in that first flurry. Fifty thousand Americans came up and went back in the days of the primitive boom. That was in the early eighties.



In 1885 the first road was completed, but no attempt was made to operate the line until 1886.

For ten long years the Canadian West labored to live down the disgrace of its first spree. In 1896 a new party came into power, a new and aggressive Minister of the Interior came out of the West. He believed in the West. He surrounded himself with Western men. He had the confidence of his leader, who, in turn, had the confidence of Canada.

Slowly but steadily the little trickling stream of immigration began to gather speed and volume. By 1902 it had grown from sixteen to twenty-six thousand. That year the bumper wheat crop caused the figures for 1903 to jump to 49,473. At first only Canadians who had gone to the States came back. Then came colonies of Mormons, Mennonites, Doukhobors and the other sects, settling in various parts of the West.

By this time the Canadian Northern Railway, controlled by the hustling contracting firm of MacKenzie & Mann, had entered the wheat field. This company, like the pioneer line, had a liberal land grant which they used for the seduction of settlers. For years quite all the revenue derived from the sale of lands went into advertising of various kinds.

The Canadian Northern has sold

Map Showing Railways in Operation and Projected Roads.

land to and secured settlers from twenty-six States and Territories, and are at this moment moving a colony from New England to the Canadian West.

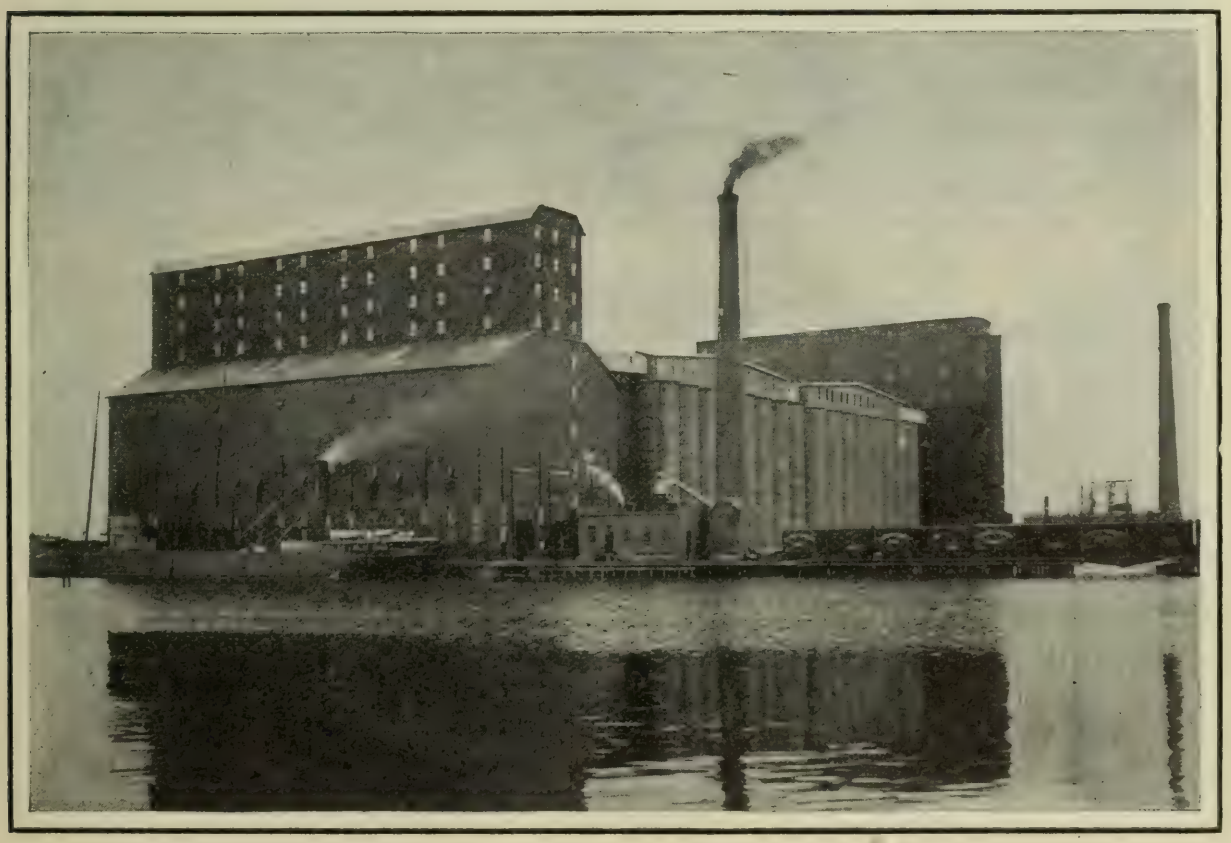
The movement is no longer confined to Canadians coming back, nor to religious societies. It is composed today, largely, of prosperous American farmers from the Western States. By 1905 the stream had become a rushing river. The report came up to Canada that Uncle Sam was becoming uneasy. It was hinted that Canada would be asked to let up a little on her proselyting.

Canadian Immigration officials were elbowed out of France. In the German Empire the Kaiser closed their shops. Of course, Uncle Sam could do nothing. He could not afford to be jealous of a "colony"—a colony he had ignored for half a century—so he said nothing. But he did something. He sent an expert up last year in the person of Mr. C. M. Pepper to see what it was all about. Mr. Pepper's report served only to confirm what others, as disinterested as himself, had said. He found that well equipped American farmers were settling in Canada at the rate of some 50,000 annually, that, on the whole, the settlers were prospering, and that the proportion of dissatisfied settlers was not large. "Certainly no larger than the number of misfits found in every pioneer settlement." He found, too, that incoming settlers brought property valued at five and a half million, annually, which was admitted duty free, but gave it as his opinion that the actual value of this property was near $10,000,000. He found that the Dominion Government, the railways and colonization companies preferred American settlers for several reasons.

First. The character of the immigrants who, as a rule, are of the best class of Western farmers and the kind of people permanently to build up a new country, genuine home-makers.

Second. Their superior knowledge and experience in practical farming. They not only do not have to be taught by official agents, but their methods are valuable in showing the raw immigrants from Europe the best way to get results from the wheat lands.

Third. The cash capital that they bring with them. Every arrival from the States is well supplied with money to buy land and to purchase the means of improving it. This creates an unusually active market condition for pioneer communities. The majority of the American settlers insist on acquiring a full section instead of being content with the quarter section which is allotted to homesteaders, and which is more than the ordinary European immigrant is capable of handling.



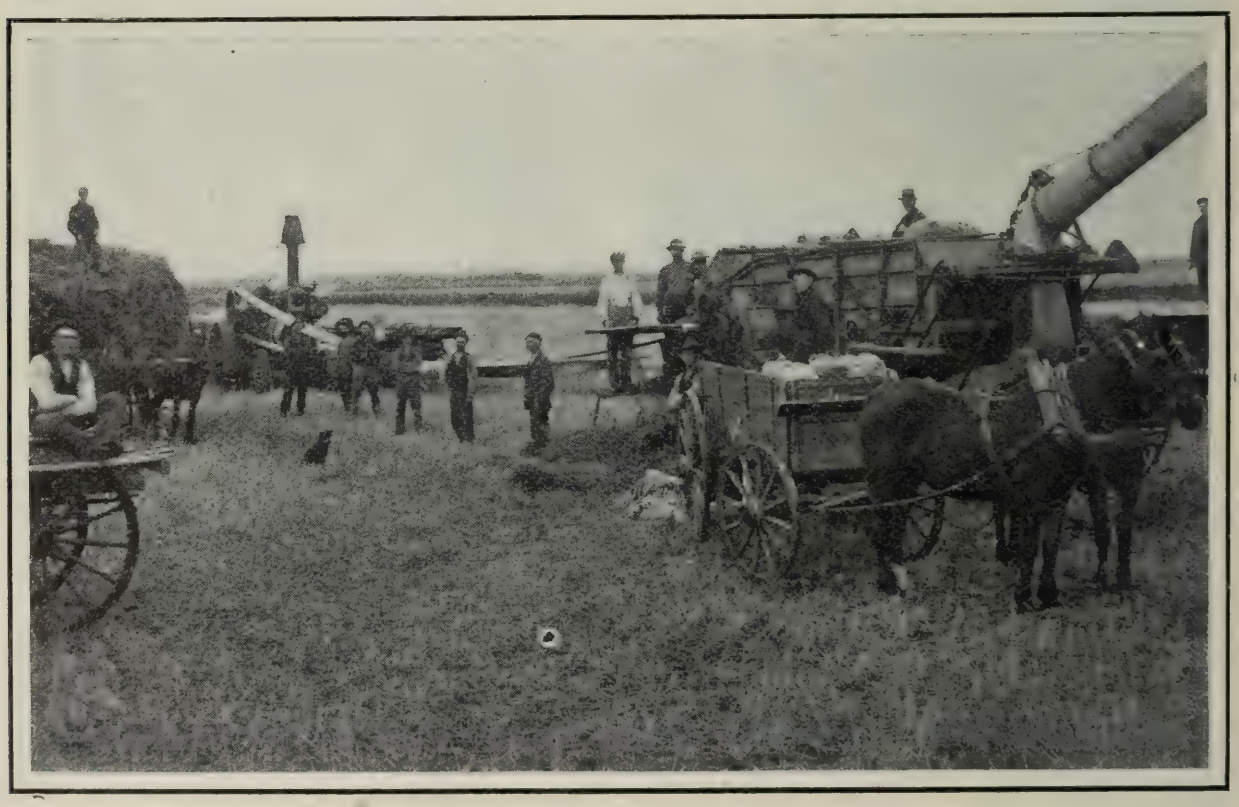
Today the stream, that only trickled a decade ago, has become a mighty river. The "movement" has become a stampede. The average price of wild land, five years ago, was $4 per acre. Today it is eight, and anywhere near a railway, present or prospective, it is from eighteen to twenty-eight, and in older, more settled districts, seventy and eighty. It produces more wheat and better wheat than any other farm land on the face of the earth, and that is the great secret of

it all. Moreover, the climate of Manitoba has been found quite tolerable, while that of Saskatchewan is no worse than Ontario, or the Northern tier of States, and infinitely better than some of the Northwestern States because of the absence of drought and cyclones in summer and blizzards in winter. Southern Alberta is as mild as Southern Colorado. This part of the new province is semi-arid, but extremely fertile. Beef cattle are often rounded up for the market in the month of February. It has an abundance of coal and timber and it is producing excellent crops of winter wheat.

West, away from Winnipeg, the Canadian Northern headed boldly for the Northwest, opening a new territory, formerly supposed to be fit only for the Hudson Bay Company and the fur-bearing animals upon which this ancient and honorable company of gentlemen adventurers prey. The railway company established an experimental farm at Dauphin, where their North Line heads for Hudson Bay, and demonstrated the fact that the good lands did not all lie along the southern boundary.

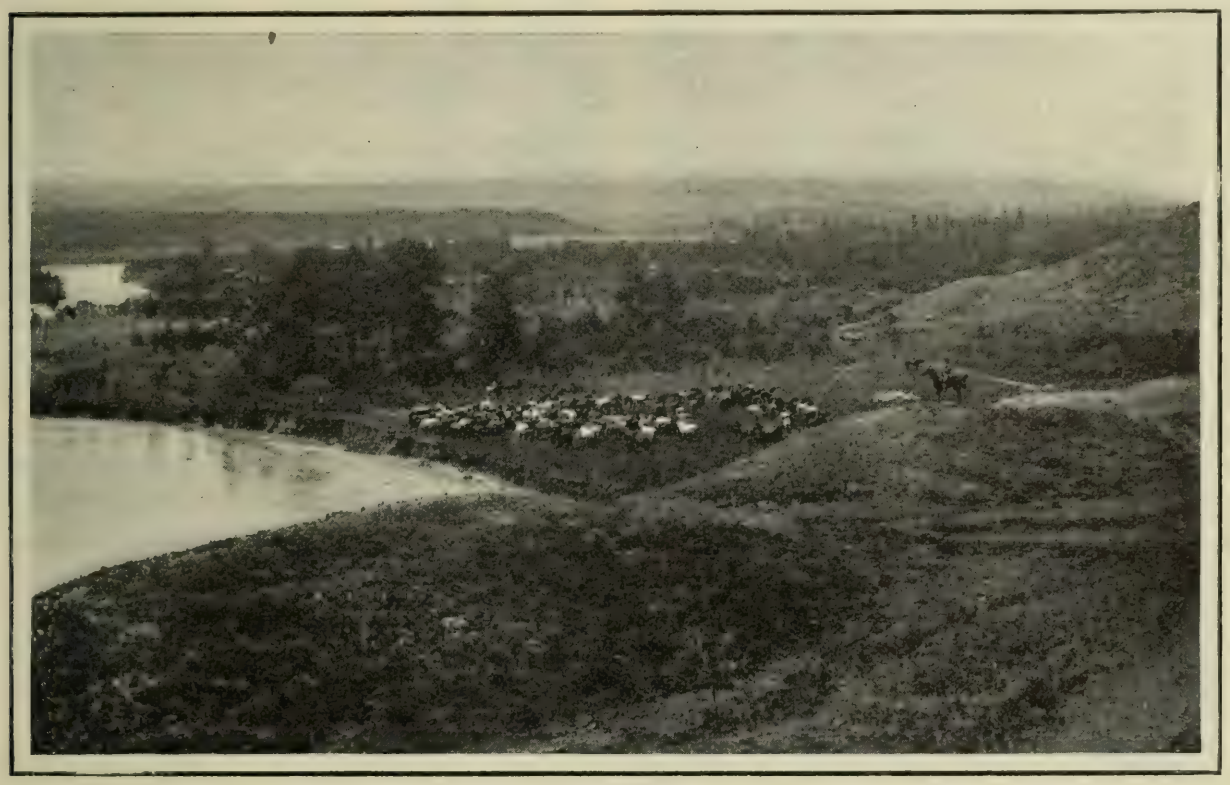
And now comes the great Transcontinental, the Grand Trunk Pacific, splitting the difference between the other two railways, and crossing the two new provinces, Saskatchewan and Alberta, in a northwesterly direction from Winnipeg to Edmonton, and ultimately across Athabasca and the Peace River to the Pacific at Prince Rupert, in Northern British Columbia.

Of course, Canada has always been on this continent and these fields have always been here in the Canadian West, but we did not know about them. Without boasting it may be set down as a fact that the Yankee discovered the Canadian West, but it is equally true that the Department of the Interior discovered the Yankee. The Yankee is the settler who makes good. It is only fair to say that many of these astute discoverers were Canadian-born, but the first real fighting force to engage in the conquest of this New Canada came from below the line, just as the first capital for the construction of the Canadian Pacific (save what came from Canada) came from New York. Once encouraged by American capital Canadians were quick to appreciate the importance of the West, and to take part in the de-



C. N. R. Elevators, Port Arthur.

Off to the Harvest Field.



velopment of the Dominion's wonderful natural resources. England has been slow to appreciate Canada, and the Canadians, despite their protestations of loyalty to the Empire, feel it, and sometimes they do not take the trouble to disguise their feelings. This is especially true of Western Canadians. They make free and fraternize with Americans much more readily than they do with Englishmen. In nine cases out of ten they will do more for a Yankee than

A Threshing Scene in Saskatchewan.

they will do for a man right fresh from dear Old London. If a man comes in with money and wants to start a ranch he is encouraged. Reporters will interview him and the local papers will comment, but if he wants to go "ranching" they look upon him with suspicion. And yet, as a matter of fact, even the "rancher" has done well in many instances in the Canadian West.

Several Western towns are growing marvelously, foremost among them is Winnipeg. My notion is that Winnipeg will be the Chicago, Saskatoon the Kansas City and Edmonton the Denver of this Dominion, with the new port of Prince Rupert forging ahead to compete with Vancouver as the 'Frisco of Canada, tho she may waive that and start in as the Seattle of the North. Winnipeg is a wonder. Just now it is easily the swiftest city, for the size of it, under the sun. The outlook for Winnipeg is certainly as bright as was that of Chicago half a century ago. It stands at the gateway to a wheatfield three hundred miles wide and a thousand miles long, taking tribute from a territory that reaches from the forty-ninth parallel to the festooned, fur-bearing forests of the far North; from the Lakes to the Rockies. A hotel and station combined has just been completed at a cost of $2,000,000. The Grand Trunk and Canadian Northern joint terminals will cost $3,000,000. Railways are reaching up over the boundary for the fat of the land. As I write Hill's fairies are lobbying at Ottawa for a charter to build from Winnipeg to the coast with innumerable branch lines. Naturally certain Canadian railway interests "view with alarm," and there is really good reason for this. If Mr. Hill gets his hands on the Canadian crop he is going to carry it away with him. Railway construction is essential to the development of the West, but the Dominion can be strengthened only by increasing the strength of the link that couples the West with the East. Minneapolis and St. Paul are too close to Canada already for the peace and prosperity of Toronto and Montreal. Railways and the best of railway connection between Eastern and Western Canada are what Canada needs, for today, the ship of the Dominion is riding like two Atlantic liners tied together with a two-by-twelve spiked to the stern of one and the bow of the other. A good political high sea might snap the coupling, so far as commercial connec-

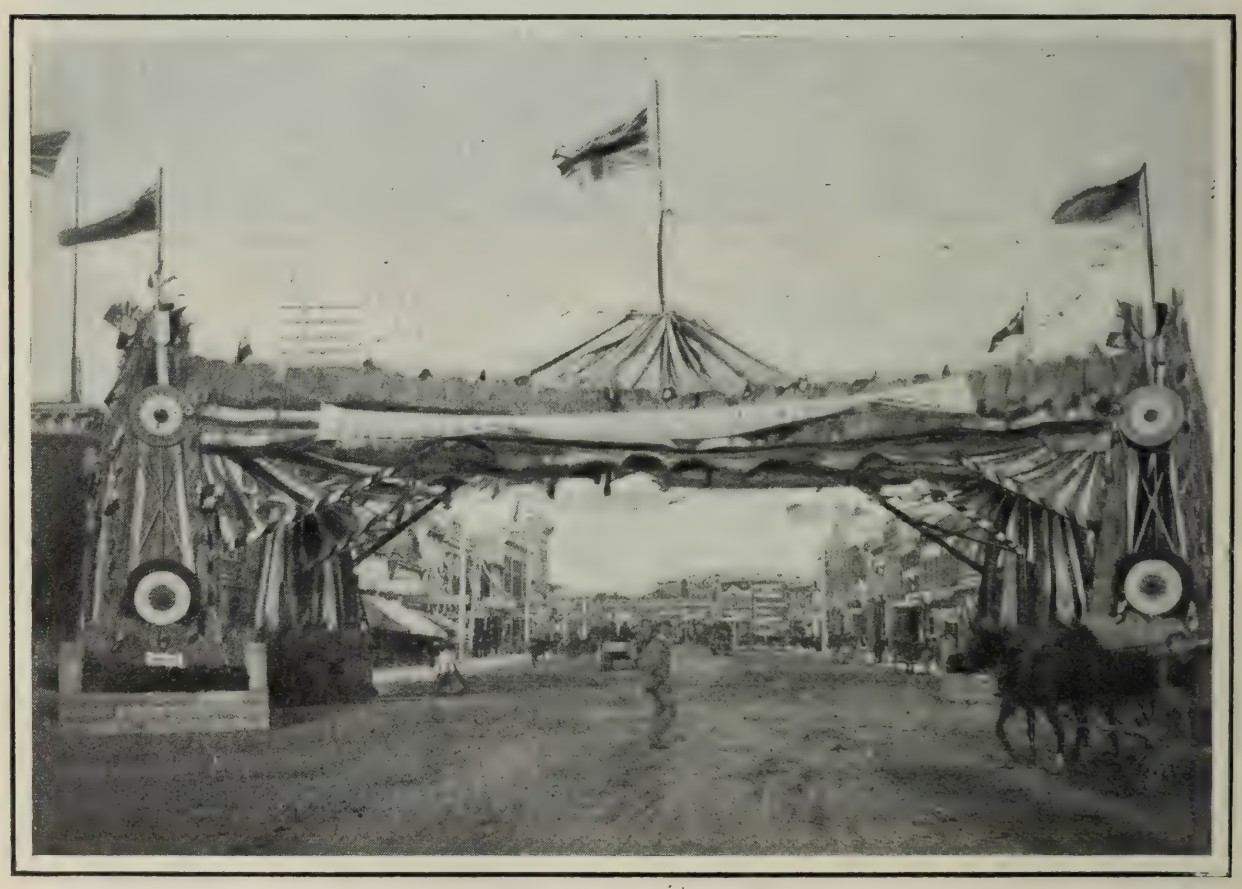
Horse Ranch, Western Canada, on Line of Canadian Pacific Railway.

tion is concerned. If this should happen it is easy to see where the West would drift and find a commercial harbor.

And this foxy old financier who dominates the American Northwest is aware of all this. Mr. Hill's changed attitude toward Canada, his native country, is interesting, if not amusing.

Only two or three years ago he made a speech out in Dakota in which he pictured the Canadian wheat field as growing green and beautiful, up to the time when well-bred Dakota wheat would grow golden and ripen. Instead of behaving in this way the Canadian crop would just keep on growing green in the cold rain until the rust came to cut it down.

That's how it looked to your Uncle Jim when he was out in the road waving his hat and trying to stop the stampede.



Now it's all changed. Finding he could not stop the stampeders he lit out after them. He not only caught up with the procession but arrived ahead of it, and is now standing before his native country which he so hotly libelled, hat in hand asking leave to enter and relieve the congestion of threshed wheat.

Well, if he gets what he wants, and all he wants, it will be after the Dominion Government has been convinced that it is some for father and not all for the husk-eating prodigal.

While the West is in the limelight it is by no means all there is to the present prosperity wave that is sweeping the Dominion from ocean to ocean, from the boundary to the barriers. From North Bay, which is directly north of Toronto, the Ontario Government has pushed a railway into the wilderness for a hundred miles and unearthed at the end of the track one of the most remarkable mining camps on this continent, called Cobalt, after the silver produced.

This line is to be extended across the hight of land, across the new Grand Trunk Pacific Transcontinental line to Hudson Bay, and if it pans out all the way as the first 100 miles have found, all the people of this province will be wearing diamonds. In fact Tiffany's expert has given it as his opinion that the source of the diamonds that have been picked up all the way from the hight of land to George Ade's farm is in Ontario.

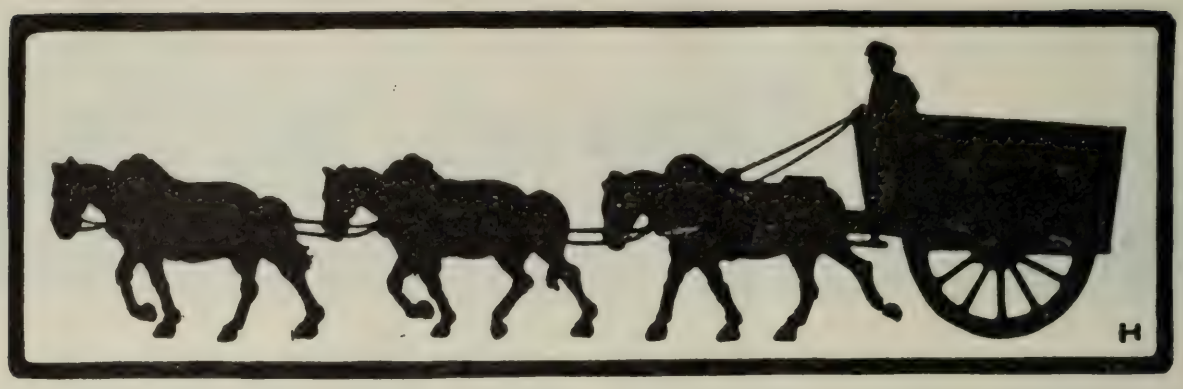
In addition to the mineral wealth and the forest product, the fish and the fur.

Arch in Honor of the Creation of the New Province, Erected in Edmonton, the Capital of Alberta.

Cattle on the Grassy Plains of Alberta.

this provincial railway will tap the Transcontinental line where the latter is crossing a clay belt, wooded to be sure, but exceedingly fertile. Some 2,000 homesteaders have settled here in this northern wilderness since the Grand Trunk Pacific and the Government line were projected, and in every instance they have found the newly cleared fields exceedingly fertile and well adapted to the growing of wheat of very high grade.

Taking a bird's-eye view of Canada, having watched it for the past seven years rise slowly from its Rip Van Winkle rest, I am convinced that the Dominion's day is just dawning and that within twenty years there will be millions of people west of the Lakes, that Winnipeg will be the second, if not the first, city in Canada, and that the big questions coming before Parliament will be settled out there in the open where the warm chinook is blowing, in the West.



LONDON, CANADA.

A Modern Boy

BY TUDOR JENKS

He has a bicycle, of course,
A camera and a racket,
And roller skates, a microscope,
A banjo, and can whack it.
He paints a little, writes a little,
Takes four magazines,
Owns tennis suits and blazers,
"Sweaters" and velveteens.
He owns a shotgun, rifle,
A lantern, set of slides,
A pony cart and pony
On which he *sometimes* rides.
He owns a paper shell and rows.
Plays polo, golf, baseball,
He has a lathe and scroll saw.
A dynamo, a motor, and an electric call,
A tool box holding tools enough
To build a railroad car,
A pantagraph, a violin,
Typewriter and guitar.
For winter a toboggan,
For summer a canoe;
And if there's something I've forgot,
Be sure he's got that, too.
But yet, amid his many fads
He leads a duller life
Than came to many an old-time lad
With just his pocket knife.

BRONXVILLE, N. Y.

The Romance of the Country Fair

BY URBAN LAVERY

THE time was late September; the harvesting was finished save for the husking of the corn and the picking of the apples. Pumpkins still spotted the cornfields; the leaves were turning color and dropping to the ground; the sky had taken on a murky cast which forboded the approach of colder weather. The board fences and barn doors thruout the neighborhood were plastered with hand bills and glowing red lithographs, for this was the week of the fair, and the fair was well advertised. The first day of the fair came, and those returning affirmed that it was indeed "the greatest ever," as the ubiquitous hand bills had described it. The country folk usually took a vacation when fair time came. Some people had been so radical as to call the fair the "farmers' three-day drunk"; others were as fervid in its praise. A conservative view would choose the happy medium, and say the fair had good points and bad points—but mostly good.

Reuben Thomas was a country youth, whose chief joy after the fair was over was, like most country youths, to look forward to next year's fair. On the morning of the second fair day he had risen bright and early, as all country boys do, to prepare for the eventful day. By seven o'clock he had milked eleven cows, taken the milk to the factory, two miles away, and returned. It was with a feeling of satisfaction that he ate his breakfast of bacon with corn bread and maple syrup, for Reuben was going to the fair that day, and was going to take his best girl. By eight o'clock he had climbed into his new buggy and set out for Arabella's home.

Reuben had ample time to ruminate, and he permitted his fancy to wander at random. He thought of his past life; of the prospects the future had in store for him. He passed by a little white schoolhouse set back from the road among some maples; and he pictured to himself the scenes enacted there, for that was the schoolhouse he had attended—that is, when he went. For he had not gone regularly, but instead had stayed at home during spring and fall to help run the farm. He was twenty-one now, and it was six years since he had gone at all. He had never been a brilliant scholar; indeed, some teachers called him dull. He himself wondered how girls and even boys much smaller than he had passed him so readily. To bound any State in the Union, or diagram a compound sentence according to the "Reed and Kellogg" scheme was an easy task for them — but he never could tell the subject of a sentence from its predicate. History and arithmetic were easy enough —they used to say that any fool could learn arithmetic—but grammar and geography simply wouldn't stick. Anyway, he was interested in other things; what good did it do him to know such stuff? Not a bit! Didn't he always know more about the farming of the country than the whole school put together? Didn't he receive the reports of the Bureau of Agriculture every year; and didn't he know more about the State Grange than any one else in the community? And these things had been of some use to

him. He could turn the best furrow of anybody in the country—everybody admitted that; but that had come by practice; he had learned something more important—he was considered the most up to date and practical farmer in the neighborhood, and facts proved that he was well up toward the top. His father owned three hundred acres scattered about in several farms—and it was a big job for one man to work alone—even with a couple of hired men it was too big. The land had been neglected, had run down for want of work; people used to call his father "land poor." But they had changed their opinions in the last few years; for the three hundred acres had changed—they were smooth now—no stumps, cleared of stones and grew big crops. Didn't his father and himself—why shouldn't he include himself, didn't he do the most of the work?—didn't they raise more hay per acre and more bushels of wheat than anybody else?

Reuben was thinking, thinking deeply, and was inattentive to the horse or things about him. Presently a house came into view, down in the valley, half a mile away. It was Arabella's house and Reuben's thoughts took another turn. He thought of his acquaintance with Arabella, of his relations with her. He recalled the first time he had ever seen her; it was several years before, at the eighth grade examinations in the district high school, where all such examinations were held. They had both passed, but Arabella was at the head of the list, while he was at the foot. Perhaps book learning was not so useless after all; at any rate he would give a horse to have been nearer the top of the list. He remembered how she looked that day—her blue eyes, light-brown hair and ruddy cheeks, the prettiest girl he had ever seen. He had walked seven miles to the examination in the morning, but in the evening she had asked him to ride home in her rig. That was the beginning of their acquaintance. It all seemed so pleasant now, in the haze of so many years. He thought of their acquaintance since that time; how he had nerved himself to ask her, at church one Sunday, to go out riding in the evening, and how she had accepted his offer. That was two years ago; since that time they had gone on buggy rides and to dances often together; and each time she seemed prettier than the last. He had reached a conclusion about Arabella; he would marry her as soon as he could.

He did not have to wait long for Arabella; she was ready and watching for him at the window. He drove into the yard and up to the side door, for to go to the front door meant you were a stranger. Arabella came out immediately and her father appeared in the door behind her.

"Hope you have a rollicking good time," he said to Reuben; "but don't run off with the girl before you get back."

Reuben looked at her and noticed that she was blushing deep red. He answered:

"Well, I think she'd have something to say about that; she's usually boss when we go any place. And, besides, I think she's willing to risk it, ain't you, Bell?"

She pursed out her lips at her father, and in answer she prepared to get into the buggy.

He looked at her carefully, as she arranged her dress, before taking his seat. She never seemed so pretty as now. Her slightly flushed face bespoke her rich passionate nature; and the new dress was so becoming! He felt a mingled feeling of pleasure and satisfaction as he took his place by her side; for once he was glad that buggy seats were made so narrow. He tucked the lap robe in about her feet to keep the dust from the new skirt; then he drove out of the yard into the road. At first he held a line in each hand, but he soon found it more comfortable to drive with one hand and stretch the other arm out along the back of the seat.

The ride alone with Arabella was usually the best part of the day's pleasure, he thought, and so took advantage of the opportunity. It was a pleasure to talk to her, he thought to himself; you could talk on any subject, and she never was offended if you meant it in the right way. After they had gone some distance Arabella asked a pertinent question—at least to herself.

"Reuben, how do you like my new dress?"

"I think it's all right. I wish I could

fix up as well as that makes you look." And he looked at his own outfit—coat dusty and mussed, ill-fitting and rather poor in quality — at his necktie, a red checkered one, tied the way Reuben tied a hay rope. His appearance was not attractive and he knew it. But Arabella had her own notion of how much the apparel proclaims the man, so she said nothing. He felt of the dress between his thumb and forefinger.

"What do you call that kind of stuff?" he asked.

"It's a dimity. I made it myself in about three days. But let us talk about something else. There's the schoolhouse where I am going to teach this winter."

They rounded a curve in the road and a small schoolhouse appeared, close to the road.

"How much longer are you going to teach school?" he asked, as he slapped his knee with the butt of the lines.

"Oh! I don't know; perhaps until I have to go to baking pancakes and feeding calves for some nice young man. But that time's a good ways off yet." And she emphasized the last sentence with a pert nod of her head.

A crowd had already gathered about the gate when the two reached the fair grounds. They drove thru the gate; inside people were hurrying hither and yon—owners of displays and others connected with the management of the fair. Arabella waited in an open shed while Reuben tied the horse to a fence and gave it a generous bunch of hay which he procured in a neighboring barn.

Arabella was nineteen and considered herself a woman; in most respects she was. She was tall and well built; in physical development she was nearer akin to a boy than a woman, for she had spent her girlhood in the fields with her father and the out-door life had produced its effects.

She was pretty; all the country acknowledged that. She even knew herself that she was pretty. "How could she help it?" But if Arabella knew she was pretty, she also knew a little more —to keep her head. She had a fund of hard sense that was larger than ordinary —considerably larger. She had even taught school for two years, and was accounted a good teacher. As a cook and housekeeper she was not famous thruout the State, but she certainly had a reputation in her own township. A sample of her culinary ability was entered in the competition at the fair; it consisted of two tins of rusk and a three-layer cake.

The two young people strolled down toward the main fair buildings, talking eagerly; they were absorbed in each other too much to notice or to care for the smiles of their friends whom they met. The dinner basket which Arabella had carefully packed before leaving home was given over to a friend in one of the buildings for safe keeping until the hour of noon.

"Let us go thru this building while we are here," she suggested, and Reuben showed his willingness by following her.

The day was still young and the crowd small, so they had abundant opportunity to stop and gaze. They strolled thru the exhibition buildings; in the domestic arts building they came upon Arabella's cake and rusk—they had taken first and second prize respectively; the poultry show and the horticultural display called for some attention. They went to see the shows, too; the attractions formed a principal part in the making of every fair. It was noon when they got back to the domestic arts building. Reuben proposed that they eat their dinner in the grove at the other side of the grounds. They took their dinner basket and strolled thither. On the way thither they discussed the features of the afternoon. They would first see the baby show; then they could watch the races and the public wedding from the grandstand.

They reached the grove. It was already well filled with people—principally young couples seeking a retreat. The place had long become famous as hallowed ground for match-making (which means more than love-making); and the rule "No tales out of school" held good. Reuben cleared a spot beneath a large beech, while Arabella laid a napkin on the ground and spread out the dinner. The basket was full enough for two—with some to throw away; deviled eggs and ham, home-made cheese, some rusk like those that took the prize, one roast chicken, a generous tankard of maple syrup and another of currant jelly—so much was the dinner; for the dessert one

entire pumpkin pie, done to a turn and brown as a berry—cut in four pieces, and when the dinner was over the score stood: Reuben, 3; Arabella, 1.

The two talked between bites, Reuben with a strong earnestness and a peculiar look in his eyes; his suggestion to come to the grove had been prompted by deeper motives than accident. Presently he blurted out:

"Say, Bell, pa's going to give me the upper farm when I get married; he told me so the other day."

Arabella was deeply engaged in opening the can of currant jelly. A silence ensued. Reuben moved closer to her; the dinner was forgotten.

"Say, Bell, I brought you out here on purpose; I wanted to ask you a question."

Arabella's eyes were gazing into the deep red jelly. For a moment he looked at her and then continued:

"I wanted to—ask—to know—I'd like —to—know—would you marry me?"

For a long time she continued to look into the clear, thick jelly. Reuben dug his thumbs into the soft earth, between his knees.

"I knew you were going to ask me that, Reuben, when we started over here, and if I hadn't wanted you to I wouldn't have come. But you will have to ask pa before I say yes," she replied.

The dinner was resumed; they had walked all day and were hungry; finally they were satisfied and Arabella gathered the dishes into the basket. Reuben lay on his elbow watching her intently. He noticed that her ankle was not loose and wobbly like many women's, but stood straight and stiff. Her shoe was not new or shiny, but what did that matter; it was what was in her shoe that counted. He looked at her face; it was still flushed and warm looking. He thought of his own toughened, puckered countenance and wondered how she had read from it that he was going to say "that" to her.

Arabella put the basket at one side. She sat down and began to brush the crumbs and dirt from her dress? Reuben moved closer beside her. She was leaning forward, picking the dried grass and pieces of bark from the new skirt. Reuben seized her head between his hands and pressed his mouth against her blood-red lips.

"Well, that's the first one you ever got. How did it taste?" and her sincere smile and blushing face were irresistible. Reuben turned to look off toward the fair.

"Can't describe it," he muttered.

The baby show was over; half a hundred women carried a frown away from the show house, as well as baby; two or three carried a baby, also a smile, for they had won. The hot afternoon sun blistered the necks of those in the bleachers. Halfway around the track was a row of spectators who preferred a free seat on a picket fence to one in the grandstand, for a quarter. The races consumed more of the afternoon than was intended. It was nearly five o'clock when some strips of carpet were carried out and spread in front of the grandstand. The announcer in the judge's stand tapped his bell. "The public wedding will now take place," he shouted thru his megaphone.

Arabella and Reuben sat in the front seat of the grandstand and looked out on the scene before them. The space of the track was rapidly filling up with people; all the available posts and fences were topped by small boys anxious to see the affair to the fullest. All the preparations were ready and the crowd waited impatiently for the chief actors to come on the stage. Presently some one shouted," Here they come," and a crowd was seen making its way down the track. It stopped on the track, but the bride and groom were plainly missing. "Where is the couple?" "Where are the two geese?" and other questions were shouted out by persons in the crowd. The venerable minister stood with his hands behind his back, while the president of the fair took off his hat and began to speak.

"Ladies and Gentlemen—We advertised to have a public wedding here today. We had one all arranged. We received applications galore and had one all fixed up. We were going to show you a wedding that after we got thru with them the folks would stay married —there'd be no divorce proceedings with them. But we have been disappointed, for the chief actors took stage fright.

The fact is, ladies and gentlemen, the bride and groom are not on the grounds." He waited till the general murmor of disapproval had subsided. "We're sorry the young folks lost their nerve. We've hunted for some of the other applicants; they are not here, either. We're sorry to disappoint you. You wanted to see two young birds get buckled up, and if we had them here we'd buckle them so tight they'd never get loose. But you see the fix we are in."

"Now I'm going to make a new offer —another proposition. Now there are lots of young people right there in that grandstand who have agreed to join partnership. As I look over those faces I recognize dozens of my young friends whom I'll guarantee to be married within a year. Some of them I'll bet popped the question today, out there under these trees, on these very grounds. Now, if any of those young folks will step down here and have the knot tied right now, we'll not only give them the fifty dollar prize, but we'll double it and make it an even hundred dollars."

He waited till the clamor had subsided. Then he raised his hand and waved it in the air. "Here's a plump hundred dollars in new greenbacks. You'll never get another hundred so easy." His hand was high in the air moving back and forth. Suddenly he commenced beckoning some one in the grandstand and shaking the money vigorously. A young man and woman were walking toward the entrance to the track. The crowd parted before them to let them pass. It was Arabella and Reuben. They walked briskly along, Reuben leading; when they reached the carpet they stopped and stood, hand in hand, waiting for the tumult to cease. The president grasped each by a hand and shook them tremendously, while the crowd fairly howled to know who they were. Then he turned toward the grandstand and fairly bellowed: "Arabella Powers and Reuben Thomas."

The ceremony was over in a jiffy. Again the big, burly president seized them and all but jerked their arms off. Then he caught Arabella in his arms and pressed her cheek against his wooly beard while he implanted a loud resounding kiss. "Give her another for me," some one shouted while the big man held her in his arms, smiling at her.

But the big man paid no heed; it was his turn to do his duty, and counted into her hand ten crisp new ten-dollar bills. Arabella folded them carefully; then she plunged her hand down into Reuben's pocket and drew it forth empty.

A rig was being driven down the track. The driver—one of the fair police—stopped beside the crowd in the track, for it was Reuben's buggy. The new couple climbed into the buggy. Reuben attempted to turn to go back to the track entrance. But the crowd protested; they must drive around the track.

As they were leaving the grounds Arabella caught Reuben's arm: "We've forgot the rusk—the ones that took the prize."

"Well, pa is coming to the fair tomorrow and he can get them. I think we've done enough for one day."

Arabella did not speak for some time.

"Well, Reuben, I wouldn't have done it, but I thought we might as well be married now as any time—and I'd have to teach school all winter to get a hundred dollars clear."

Reuben looked about to see that nobody was in sight:

"Why, Bell, I'm not kicking," he said. In a few moments he added:

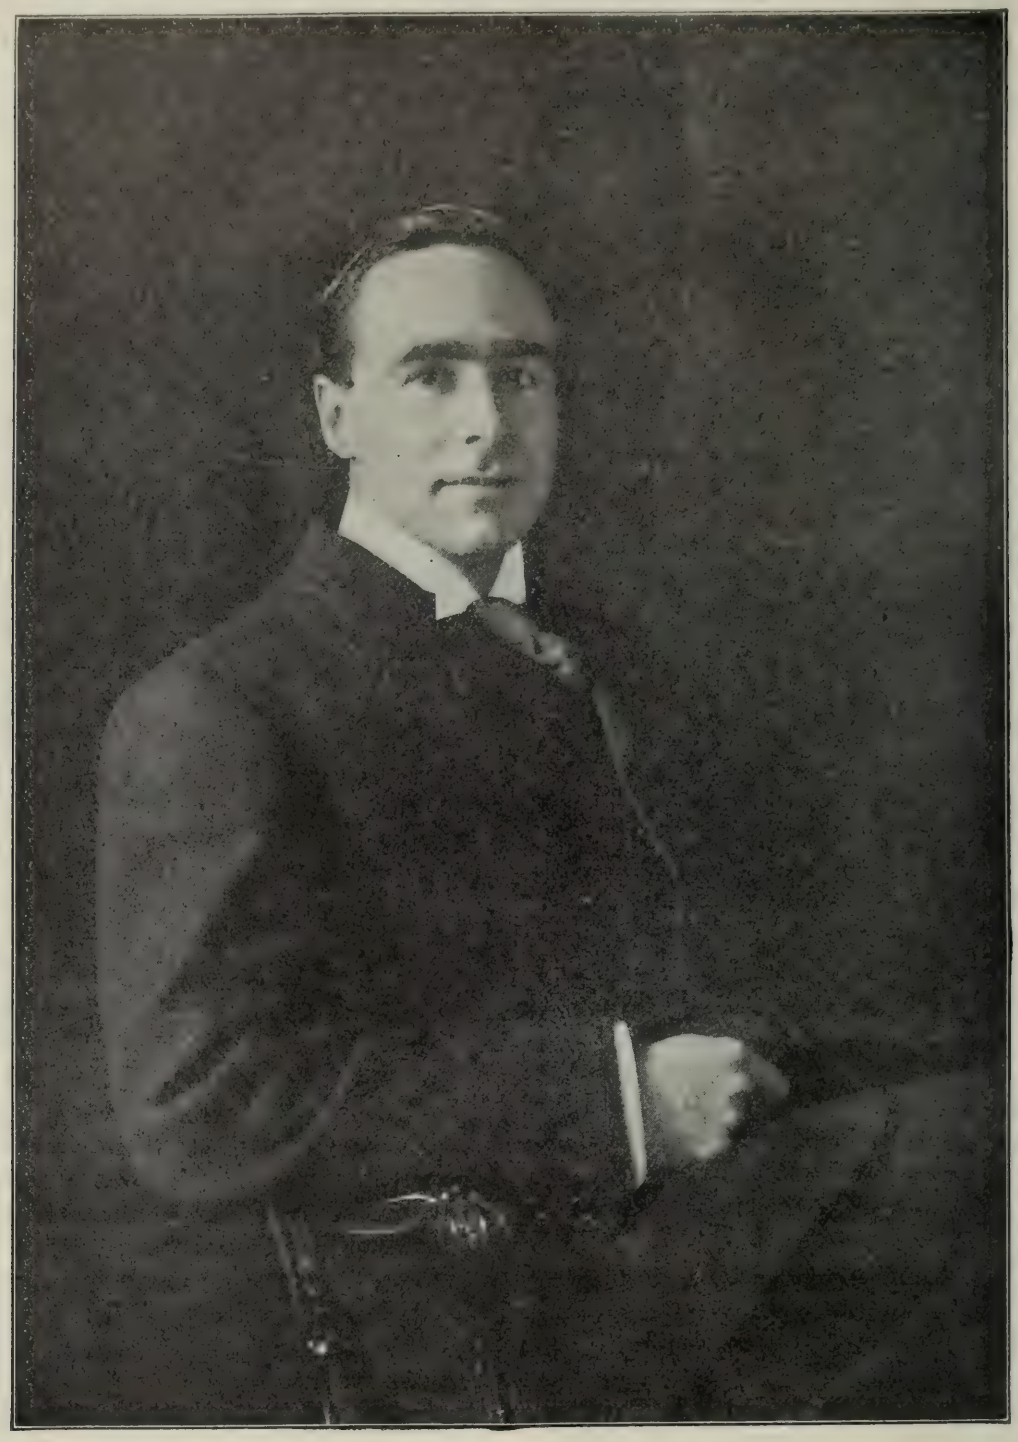
"I think there would be more room this time if I had both hands free," and the lines dropped over the dashboard.

PHILADELPHIA, PA.

Gossip About Novels and Novelists

BY MRS. L. H. HARRIS

PRESUMPTION is no longer a sin from which we pray to be delivered; it is one of the characteristic virtues of our times. We have practised it until what we dare not undertake is almost inconceivable to the modern man. And this kind of "Smart Alec" courage is a very good thing to have in the commonplace emergencies of life, but some things are not to be achieved this way. Literature, for example, is not so much the product of cleverness and enterprise as some writers think it is. But it comes more particularly from a certain inspired patience, a sort of long suffering with life and a clairvoyant quality of the mind. The latter, I think, is often mistaken for genius, but it is really that rarer touch of nature which makes us poetically kin to one another and which is sometimes denied to the greatest geniuses. Mr. William Dean Howells has it, and no one would accuse Mr. Howells of being a genius. He is a kind of literary clubman, looking at his fellow creatures over a cup of black coffee and a good cigar. Yet he is the only man in this country who can interpret literally and sympathetically the mind, mood and meaning of the very friz of a young girl's hair into his novels. And he can do it thru the same clairvoyant faculty which enables him so easily to see other people's "apparitions." He is a fortune-teller of the heart, a "medium" of the spirits about him—nothing more.



Mrs. Humphry Ward,
Author of "Fenwick's Career" (Harpers).

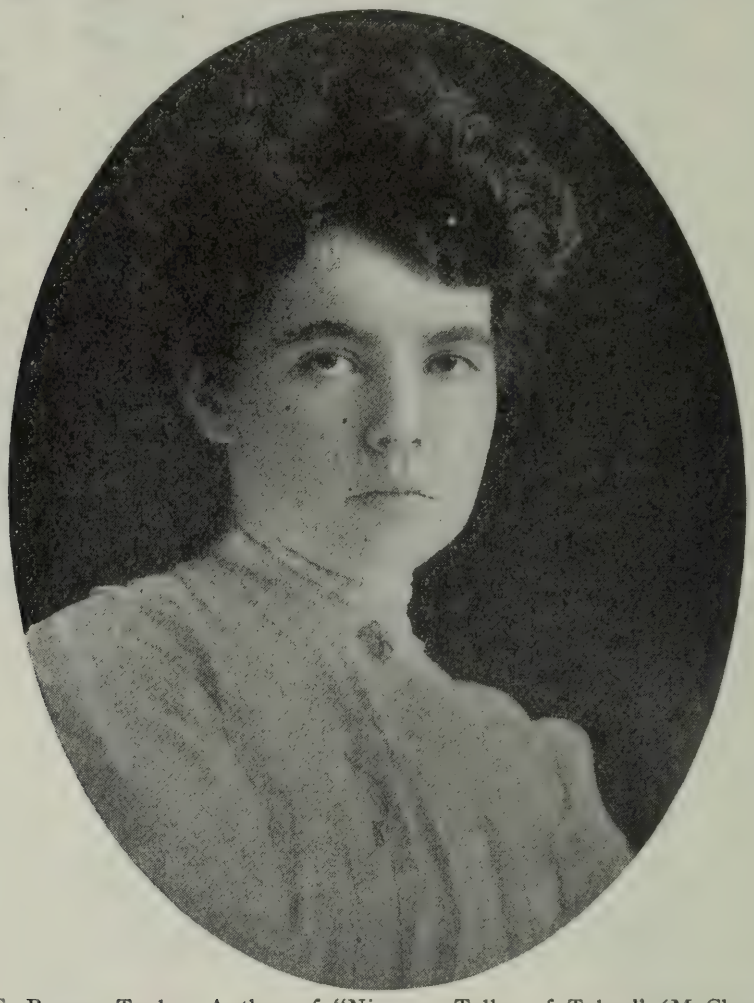
But I was about to enter some complaints concerning the tarradiddle class of literature known as current fiction when Mr. Howells interrupted me. Really it is not literature, merely the fashionable sounding brass and tinkling cymbals of life. And too much blame cannot be laid at the reader's door for this state of affairs. He is simply a necessary evil, and it is a pity that we cannot get on without him. Then the clever, enterprising authors would have no motive for producing so many skyscraping novels out of which the heroine descends in a popular parachute style to her ruin, or to somebody else's ruin, and only those would remain in the field who write because they divinely must. Mr. Kipling is reported as having said:

"Every writer has hope or has had hope that thru him a miracle with words would be wrought. And why not! If a tinker in Bedford jail, if a pamphleteering shopkeeper pilloried in London, if a muzzy Scotchman . . . can be miraculously afflicted with the magic of necessary words, why not any man at any time?"

It is too late now, of course, to contradict Mr. Kipling, no matter what he says; but the fact remains that not one of the writers he mentions sustained a sycophant relation to his readers. The tinker, for instance, must have been writing more particularly for the angels in heaven, which would account for the lofty simplicity of his literary style and for the matter of his composition. But now every writer must reckon with his readers. And this is especially damaging to the young ones. For in the literary world, as elsewhere, a man usually comes into paying possession of his wits before he gets a scrupulously moral conscience in the use of them. Each one of them leaps into his inkpot with the apparently innocent ambition to secure his literary salvation by writing a book that will attract popular attention, and so he does very frequently, only it is not literary, but financial. As a reviewer of fiction during a number of years now, the

Winston Churchill, Author of "Coniston," "The Crisis," etc. (Macmillan.)

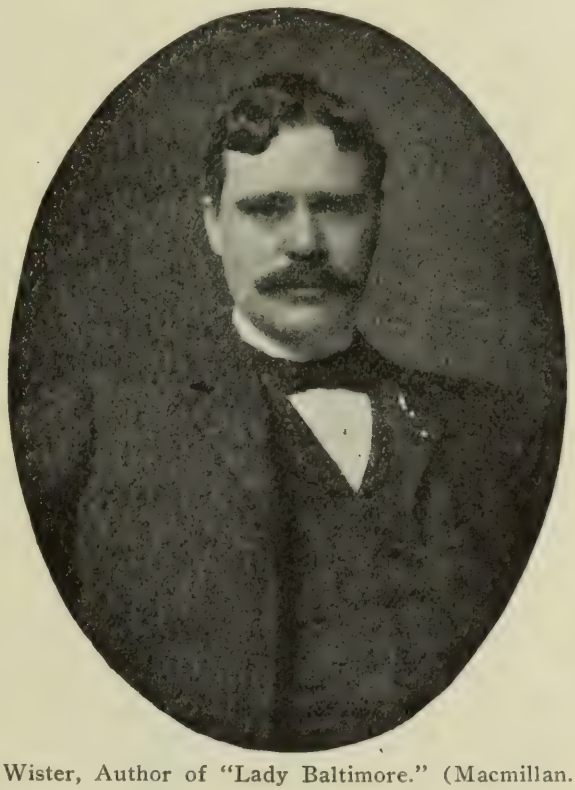
writer has known many "promising" authors buried while yet they were alive —and buried with a competency! One young man, I remember, wrote what all the reviewers called "up-to-date" novels —when the older writers used occasionally an old-fashioned Enoch Arden plot for their stories. They were founded sarcastically upon as many "problems of the day" as he could reach, and so brilliantly written that it made one's back ache to read them. At last they became so clever that everybody saw it was simply a monkey-shining literary way the author had of collecting dimes. And now it has been four years since his name has appeared on the back of any novel. I have often wondered what became of him, whether the publishers killed him, or whether he died of his own wit. And there was another whose first book called to the heart like a spirit let loose above the altar of love and poetry, but now she is conducting a "Woman's Page" somewhere upon a better assured income. And to read her little butter-



Upton Sinclair, author of "The Jungle," etc. (Doubleday, Page), from a photograph by Hollinger & Co., taken especially for THE INDEPENDENT.

and-egg poetry and cake-receipt stories, no one would think now that she had ever had anything beyond a gas-stove inspiration. Still another set sixty thousand readers to wondering joyfully over a beautiful cryptic forest tale which they did not understand. Then she tried to write one that they could understand, and succeeded so well that she lost fifty-eight thousand of them. And there are others.

Some, to be sure, survive the temptation. Winston Churchill is a recent example of this courage. There was a time when he appeared to have his literary ear cocked too much in the direction of the popular reader's gallery. But his new book indicates very strongly that he has at least a year's support ahead, and that he had time to read Sir Walter Scott's novels between chapters—not that there is any suggestion of Sir Walter's literary style in the way the story of "Coniston" is told, but it is a rare thing for an American author to lay his scene in the midst of all our newness, keep faithful to what we really are and yet create an illusion which exalts and stills the troubled modern mind — an illusion all the more remarkable when we consider that Mr. Churchill counted in everybody's sins. For there is something so vulgar, disillusioning about sin nowadays. They lack the romantic manner and charm they had when the villain went about with a beautiful chased dagger up his sleeve, as they were likely to do in Scott's time.



And having come back to Sir Walter, I am reminded to say that we should not fling him in the teeth of our novelists so often as we do by way of reproach. The *naïveté* of both writer and reader in those days is a mutual advantage which no longer exists. Scott's novels were popular, more particularly because he and his world were *en rapport* and neither was over-refined, artificial or tired. Now we are edged up into a state of nervous sensibility, more difficult to deal with than over-refinement, and we are too sophisticated to be easily amused.

C. Bryson Taylor, Author of "Nicanor, Teller of Tales." (McClurg.)

And the effort to meet this satiated condition of the reader has had its evil influence upon writers of fiction. Always the temptation is to invent some new and startling variety of vice or virtue, because nobody is interested in the things that have always been. In some cases, like that of Mrs. Humphry Ward, ingenuity has taken the place of genius. Some of the best novels are historical, and it is not so long ago since Mrs. Ward could write them herself, but she began to take a pride in exciting the puzzle-solving curiosity of her readers, until now that is the chief interest in her stories. Who are the characters, and out of what gilded drawing-room of the past did she take them? And so, any one familiar with all the sources from which "Fenwick's Career" is taken will recognize it as a confession of sterility. It is a sort of silk-quilt romance pieced together, without a spark of inspiration, from the character fabrics of many people well known in the social and artistic world in England during the early part of the nineteenth century. The one thing in the book which belongs to the author is the elegance of sensibility displayed, and this is not a moral elegance, but merely the hysterical niceness of people whose refinements have given them shuddering nerves.

Another thing we miss in writers of acknowledged ability is the earnestness that imparted a tone of stern sincerity to their work. In the days when Hugo wrote his "Les Miserables," they dealt not so much with the mere graces of personality, and more with the eternal elements of character. And they had a depth of power and of emotion which kindled the imagination and gave them a coercive use of words. There are men and women in some of these old romances who stand out before us along with other great characters in history, and there are starry sentences in them that shine in the firmament of our minds as clearly today as when we read them long ago. But who quotes from a modern novel or remembers the limelight wit of one for longer than a day? Often the author is a literary prestidigatateur like Stanley Olmsted, with his story of "The Nonchalante," performing a foolish but difficult feat before a sophisticated audience, expecting applause for the dexterity of the achievement. He does a slight thing well, but he could not do a great thing at all. He can write a story with a pun for a plot and a golf-stick

Owen Wister, Author of "Lady Baltimore." (Macmillan.)

stroke for a denouement, but he could not make any character in it really good or bad.

Many novelists have not even recognized the fact yet that the art of writing fiction has to be learned, like any other art. They lean too heavily upon the chance of being geniuses. But no artist ever had such a genius for painting that he did not need to learn how to mix his colors, and no novelist can dramatize character without having mastered the wit, color and spirituality of language. Observe how perfectly the poetry of Ossian (and in my humble opinion it really is Ossian's, not Macpherson's!) conveys the impression of the misty, lowering Highland scenery, and of the savage, simple hero-men who stalked thru it, mood to mood with it. "He comes like an eagle, from the skirt of his squally wind! . . . They come to the host of Lochlin, each in his own dark path; like two foam-covered streams from two rainy vales! . . . Shrill sounds the blast of darkness in Starno's floating beard," etc. If we could mix metaphors so well now it would improve the modern literary style. They lie yet like fresh green garlands upon the yellowed page. And listen to this bagpipe note expressed in words: "From her cave came forth in her beauty the daughter of Tarcul-tarno. She gathered her hair from the wind. She wildly raised her song." Who among us makes bugle sentences these days? The nearest approach we make to national music effects is in the use of "ragtime" phrases.

I do not contend, mind you, that it would be true to life in this day if the heroine of a modern novel were to come out and "gather her hair from the wind," or that she should sing wildly when she expected her lover, but I insist that the poet makes his words *fit* the leaping, incoherent spirit and the noble, simple, savage character of his times, and that if we are using them as aptly it proves that we have very poor times and sorry characters.

The trouble, however, is not so much with the times as it is a lack of lofty inspiration. This is the chief fault, by the way, to be found with a certain class of fiction which is now attracting particular attention. It is produced by clever, enterprising, dunghill novelists for the most part, and is founded upon greed, graft, corruption, poverty, stench and sickness of every kind. Naturally such writers do not cultivate any artistic power of illusion, because they think it does not comport with their purpose. They use words as if they were the mere signs and angles of ugly chilblain facts, and cultivate a slatternly genius for literary expression, by way of getting *down* to the dramatic situation which lies in the gutters and tenements and cellars. What we need is some one who can come *up* to it. There is a ragged knighthood among the poor, a sorrowful womanhood there, like that which bleached and suffered in the windowless castles of old times, which nobody has yet interpreted. Meanwhile these same writers lay much stress upon what they call "local color," but what they really mean is local accent, factory smoke, rancid odors, squalid provincialisms italicised, not colored. They know little of that pigment which the mind should impart to language as the sun paints the leaves green and the rose red. If only they could be induced to read Keats' "Endymion" as a soul-palling lady once told me she read Dr. Lyman Abbot's religious editorial—on their knees—the stories they write even of Packingtown would not smell so exclusively of fried ham, decaying matter and stagnant sewers. I am not saying that we do not need reforms. (Doubtless the high economics of Heaven itself must be changed from star time to star time, in order to meet the singing needs of the ascending generations!) We do need them, and we shall even after these new social economists come into transient control of our poor destinies. But the bravest, most ancient and unconquerable hero among us is human nature. No government or society or religion has ever changed him. They are like shadows that pass over and leave him what he was before, regnant, elemental. Therefore why try to reform him with a muck-rake or a brush-broom, especially in fiction, which nobody takes for a moral tonic?

But one thing the literary outrages of these walking-delegate novelists bring

clearly before the better writers of fiction, and that is the necessity of interpreting the spirit of the times.

Now the spirit of the times is the spirit of man struggling to get in touch with reality. And by reality I do not mean the popular muck heap of discreditable facts, but that reality which is our definition of all the facts we have, fair and foul. The novelist must not oppose himself to any form of this realism. Often it is a movement of the sensibilities rather than the intelligence toward some new consciousness of God or man. Just now it is the wider heart throb of humanity toward humanity, the great pilgrimage of man seeking his brother man. The call has come—not from the muck-rakers or the walking-delegate tract makers, but from that high place, wherever it is, from which all such calls have come. And we must answer. No time nor government can stand between us and it, nothing shall hinder us till we arrive, because this is the new reality, the truth to which we must eventually adjust ourselves.

And we must get over the notion that this truth comes to us in an orderly, processional manner. It does not belong to the orderlies of this world, nor to the scholars, nor to the respectable people exclusively, but it belongs also to the mob, to the thieves, drunkards, liars. Every man, whether he will or no, is a scripture maker. And so it is time the novelist discovered this, dropped his little insignificant, irrelevant good and bad from the tale to grapple intelligently with the virtues and vices which are really molding society. The walking-delegate novelist has recently caught a fiery hold upon the aching end of this idea, and made a most indecent use of it (because he does not know, and cannot be made to understand that it is not his business to lead a reform, but to *show* it. He is the picture maker of life, not the yeast of it.) But now the better writers may as well help him along with it, give coher-

Egerton Castle, author of "The Pride of Jennico" and "If Youth But Knew." (Macmillan.)

ence to his incoherence, tone the thing up and down till we can see what he really is trying to portray. As it is we cannot depend upon Upton Sinclair. He has only an historical capacity for telling the truth and a fanatic's idea of dramatizing it. He sees thru his glass too darkly, and Jack London sees too redly. We shall never know what really is going on until we get some sane person to tell it. If, for example, Mr. William Dean Howells could be induced to write "socialistic fiction," he would soon take the fever out of it and show how much like other fiction it ought to be.

Besides, nothing lasts until it is put in the ideal form, not even the truth. And no matter how right they are in their point of view, the walking-delegate novelists cannot do this because they lack the mental dignity, the power to impart the beauty which always belongs somewhere to the most unsightly truth. And the things we keep, love and live by are all informed with a kind of spiritual beauty, a divine color, else it is harmful and even degrading to keep, love or live by them. Therefore it is the duty of the novelist in particular to lift up the life he portrays at some point, set stanzas in it like prayers to God, color it with love, pinnacle it with immortal hopes, because these things belong somewhere in every life. Every ruffian and every drab, every "wage slave" and every "scab" has folded away in him somewhere the image of his heaven. And it is not fair to him for the artist who draws his picture to leave it out. He cannot see *himself* rightly thus or with sufficient reason to hope. And there is always sufficient reason for that.

However, the "spirit of the times" is transient, already on its way to be lost in that of another day and order of things. But there is a spirit which has nothing to do with our limits of time, which leads men and women in every age to realities that do not change or pass away. And a very few writers have it, but when they do they need not bother with any little fashion of passing thought. Margaret Deland is one in this country; and Quiller-Couch, when he chooses to be, in England. They confer peace. They teach right and wrong simply as it used to be taught when we were children and in the only effective way it can be taught. And they both command the best literary style and the most restrained, correct powers of dramatizing what they see.

NASHVILLE, TENN.

Eastern Love Song

BY OLIVE WALFORD KINDERSLEY

I AM waiting at the bottom of the hill—
  Oh, hush, my dear; and closer creep to me—
I am listening for your answer, all is still;
  Whilst you give your little, tender heart to me.

In the darkness I can feel your soft, soft hand.
  There, lay it on my shoulder, let it rest
Whilst I twine the blossoms round it, white and red,
  And lay this opening bud upon your breast.

Here, beneath the Southern Cross, alone with thee,
  I feel and know the mystic Eastern spell.
Spite the darkness and the blackness I can see,
  And in the jungle shadows all is well.

Can you see the fire-flies flashing to and fro—
  And smell the heavy scent of sleeping flowers?
Hush! Weep not. Speak not. We will hear it so,
  Whilst the fullness of the starlit night is ours.

PENANG, STRAITS SETTLEMENT, MALAY PENINSULA.

How My Priesthood Dropped From Me

BY J. R. SLATTERY

[This article may be taken as the renunciation of the priesthood by the Very Rev. J. R. Slattery, Founder and Superior Emeritus of the St. Joseph's Society for Negro Missions in Baltimore. He is the representative of a distinguished Catholic family in this city, which has given large support to Catholic charities. For several years he has lived mostly in Europe, devoted to historical studies, and has a very large acquaintance with distinguished Catholics here and abroad.—EDITOR.]

THE year 1884 was the turning point in my life. After six years of work among the negroes of Baltimore, I was transferred to Richmond to take charge of the mission there and establish others among the colored people thruout Virginia. Stricken the following summer with a serious illness, I was advised to go abroad for a rest. At Manchester, England, I arranged with my superior, Bishop, afterward Cardinal Vaughan, of Westminster, to open up with the consent of the ordinary Archbishop, now Cardinal Gibbons, a seminary in Baltimore for the training of priests, white and black, for the negro mission. Upon my return I bought a place, but was stopped by order and sent back to Richmond. Before leaving Baltimore a news reporter caught me. The interview was read by a widow, who wrote offering to sell her home for the proposed seminary. Answering her about the end of the year I wound up by wishing her every blessing of soul and body during the coming year. The wish struck a responsive chord and soon came a reply. Then I sent her "The Imitation of Christ." She balked at the chapter on Hell and wrote that she believed not in it. Thereupon followed a correspondence which lasted till July, when she sent me Darwin and announced her departure for Heidelberg, with her only son, who was about to enter that university, in which her dead husband had studied. I never laid eyes upon her.

A well-read woman, familiar with Haeckel, Darwin, Huxley, Tyndall, and a lot more, she outclassed and outmatched me. But she opened up new vistas. The Bishop of Richmond gave me the help of his own reading and put his library at my disposal. We depended chiefly upon St. George Mivart, Bishop Clifford, of Clifton, England, and the London *Tablet*. This Catholic organ of Great Britain opened—and perhaps still opens—its columns to all sorts of writers, who furnished me with divergent views. In 1887, I was ordered to Baltimore to start St. Joseph's Seminary.

Those years in Richmond saw the first sloughing off. I entered the capital of the "Lost Cause" with the faith which a devout mother had impressed upon her only child. Upon leaving it my frame of mind may be summed up thus: The story of Adam was a myth; the Pentateuch composite: Chronicles a priestly recast of Kings, the Deluge a myth, or at most partial; Abraham, Isaac, and the other Patriarchs, if real personages, were painted in the Bible much as the Lives of the Saints; the Levitical Code post-exilic, with perhaps a strain or tradition coming down from Moses; the Psalms, with perhaps one exception, post-exilic; no sign of immortality in the Hebrew canon, or of original sin. In a word, the conclusions of higher criticism had found a disciple, who in accepting them might still be called a good Catholic.

Besides, I had learned how to study St. Thomas. For about eight years I had been reading daily an article of the "Summa." A very estimable priest, with whom I was quite friendly, taught me the method in vogue in Rome, where he had spent six or seven years. It helped me very much.

In September, 1888, the new House was opened with four seminarians, of whom one was colored. At times officious priests and meddlesome nuns had said to me: "If you receive negroes into St. Joseph's Seminary, you will have to close it." "All right," was my one answer; "then closed it will be." It is still open

— to negroes also. Two tasks—teaching class and presiding at the spiritual exercises—tended to peel off the priesthood. My class was an hour's lecture on history every week to the philosophers; even that short course was fifteen minutes more weekly than that of St. Mary's Seminary, where our boys attended lectures on theology and philosophy, scripture, canon law, and for the theologians church history.

The course of lectures covered two years, and was upon the first age of the Church with the "Acts of the Apostles" as a text book. My first surprise was that I could find no critical study by a Catholic. After Migne, the best at hand was the Dutchman, Beelen's, rather dogmatic than aught else. Forced to turn to outsiders, I soon gathered a fair library on the "Acts" and St. Paul. The Pratt Library of Baltimore had also a goodly list of authors, whom by securing cards the seminarians used quite freely. Every one of them wrote an essay each semester upon a given subject. As history was a by-study and cut no figure in the results upon which orders depended, the course was for the boys somewhat of a fizzle, but for me a development of the widest reach. As a Catholic anchorage I stood by Doellinger's "First Ages of the Church," written before the Vatican Council, which the great Bavarian scholar refused to accept. His dictum—the Episcopate slept in the Apostolate—was ever in my mind. My own simile in explaining its growth was that of a hatching egg. The apostolic days were the pregnant period, and with the passing away of St. John the Episcopate stood forth full-fledged. Hatch and Reville were familiar, as also was Duchesne. The last I found and still find obscure in his chapter on the origin of the Episcopate. It was in Rome, in 1895, that I ran across Duchesne's "Origines." The stumbling chapter I read five or six times, and discussed it with several others many more times. Perhaps the witty French scholar was mindful of the *bon mot,* said to be his own: "*Legem* [*Regem*], *cui omnia vivunt, venite adoremus!*"

The brawls and disputes of the Epistles; the harsh language of Jude and St. John's Epistles; the curious idea of religion as offered in St. James as against the same under the veil of the priesthood in Hebrews; the silence of the Acts and the Epistles in regard to the Episcopate, save the one instance in the Philippians and the mature hierarchy of the Pastoral Epistles, all present a different picture from the peaceful, easy-going Congregational Church of the Acts. In my mind the conclusion was come to that the Acts, composite as they are, are a piece of special pleading. The purpose may have been to secure the good will of the Roman authorities, especially if it was brought out after Titus captured the Holy City.

Again, the Council of Jerusalem was always a crux: St. James presiding and not Peter; its decree, with fourfold prescriptions, seems never to have been accepted; not more than two or three scraps of proof are at hand that the scattered churches recognized its binding power.

Again, the many contradictions surrounding the career of St. Paul—*e. g.*, the different stories of his conversion; his claim of an immediate extraordinary call without any evidence on the part of his friend—the editor of the Acts—of an Episcopal ordination; his three years in Arabia and subsequent years in Tarsus; his missionary appointment by a synod of second-rate men at Antioch; his appeal to Cæsar—to the civil authorities ignoring the supposed Pope; his shaving his head and playing the Nazarene when in Jerusalem, and many more.

Soon I got Harnack's "History of Dogma," which carried me onward beyond the Apostolic Age. A great work indeed, but not near so damaging to Catholicism as the Abbé Turmel's "*Histoire de la Theologie Positive jusquau le Concile de Trent,*" which came out in 1902 or 1903. Wisely Turmel stopped at Trent; hence thus far his book has escaped the Index.

Of course Church history followed. Alzog, Neander, Mueller, Kraus, Funk; also special subjects: Gregorovius's "Rome," Creighton's "Papacy," Pastor's "Popes"; also reviews in various languages. Tedious would it be to list here my readings. In four words I may sum up their results.

1—In almost every case of a contest-

ed point between Catholics and Protestants the latter are right and the former wrong.

2—The widespread use of inventions, forgeries and interpolations on the part of Catholics. The Pseudo-Decretals of Isidore are the main prop of the Papacy. Turmel exposes a system of wholesale forgeries on the part of the Dominican missionaries of the Levant in order to help on the sacraments and the Papal claims.

3—Adown the ages what has been condemned at first as heresy, becomes later on dogma—*e. g.,* Pelagianism stands condemned, yet the Jesuit teaching on the efficacy of grace is Pelagianism. We have heard several professors in Catholic institutes make the same remark.

Again in the Syllabus all modern government is condemned, yet Papal Infallibility was carried in the Vatican Council by a majority vote—an essential element of modern government. This, moreover, in bald opposition to the traditions of the churches which had any, French, German, Bavarian, Austrian, Piedmont. Finally Loisyism is condemned, yet Loisyism is taught everywhere in seminaries, not openly, but under the cloak of Newman as a rule.

4—In some way or other heresies and civil liberty are co-related. The heresies at first ran afoul of the Church, and in former ages of governments also, but in the long run liberty gains the day, and the heresy, its work done, becomes fossilized and useless as Church dogma.

On the other hand, religious autocracy has gone hand-in-hand with slavery to government; so much so indeed that the absolutism of Ignatius of Loyola has become the norm of Church government; save where Concordats protect the hierarchy and clergy; *e. g.,* the removal of Bishop Keane from the rectorship of the Catholic University was simply impossible in France or Spain, or Bavaria. In one word the Catholic Church has degenerated into the tail of the Jesuit kite.

Besides the class in Church history, daily I presided at the spiritual exercises, and reading. A seminary is a world in itself. Always for myself and at first for the boys, the spiritual development was taken seriously. As the years sped on it grew upon me that no one—from Leo XIII. down to the youngest seminarian—looked upon the religious exercises as anything more than the harness with which to break in the seminarians. The seminary in study, in spiritual work, in daily life is a treadmill.

Once a man was ordained priest hardly one cared a snap about the spiritual life. To myself, however, the mystic life was the real life. For many years Lallemant's "Spiritual Doctrine" and Caussade's "Abandonment" were my guides. Both were Jesuits, but writers of a school quite outside the drift of Jesuit thought. Both these authors insist on the personal touch of the soul with the Spirit of God. Of course, *ad cautelam* they recognize the controlling power of the Church's *magisterium.*

In our land the writings and example of the venerable Isaac Hecker have helped to popularize these two out-of-tune Jesuits, whose order egged on Leo XIII to publish the encyclical on Americanism. It rather scathes the natural virtues, cleanliness, honesty, truthfulness, but we believe if Hecker had been more closely allied to Manresa instead of to Naples, Leo XIII. would have spared his pen for a better cause.

Let me here add that it was only after the appearance of Loisy's "Gospel and Church" that I learned the source of the Church's mystic theology. In the London *Pilot,* Baron von Hugel—a devout Catholic and a very learned scholar—pointed out that the writings of the Pseudo-Dionysius, the Aereopagite—which St. Thomas grafted into Catholic theology, were really of pagan origin; they are taken from a disciple of Aristotle. Hence Catholic mysticism is from paganism.

Nothing worked more to slough off my belief in the mystic life than the daily experience of the seminary and convents, whose official I was. Many an hour have I watched from my window the boys of St. Mary's Seminary and my own. Slovenly in dress, their hands, as a rule, struck thru the slit of the soutane into the trousers' pockets; an old pipe in the mouth, strutting like a lot of toughs, sprinkling their talk with "hell," "damn" and the like, they were the salt of the earth, at whose presence, St.

Liguori in his "Selva" tells us the angels bow down.

Again, I was well aware of the bad conduct in most lecture rooms; shuffling of feet, cat calling, having the open text book on the lap, the matter of class written upon cuffs or slips of paper. A venerable professor of the seminary spoke to me once of the widespread disorder in his class. He could only wring his hands. My advice was to bounce the whole lot. "Ah, but the bishops!" was his hopeless remark. He was right, for the prelates would send the expelled to other seminaries, for priests they must have. I am happy to add that the offenders were nearly all of European birth, and, to my sorrow, mostly Irishmen. In fact, the dead Superior of St. Mary's Seminary, Dr. Magnien, told me more than once that the boys from the public schools were the best behaved and most studious.

At first such pranks shocked me, but once I realized that most of the supposed vocations were of men whose aim was to better their station in life, I began to take them good humoredly. But ever rang in my ears, "What are the Sacraments worth?" Daily mass, weekly confession and communion, meditation, beads, prayers, cassock, seminary cloister—*ad quid?* It was my own experience that the longer a boy was in the house the more careless about his soul's life he grew. And once ordained, everything went by the board, except the hurried mass and wearisome office. It has always been thus. And the attacks from priests who have left the Church are but milk and water alongside the "Selva" of St. Liguori, "De Consideratione" of St. Bernard; the "Gomorrhianus" of St. Peter Damien. Neither Council nor Pope, bishop nor priest recognizes any self-fault. The reform canons of Council or Synod read alike and fail alike. In fact, the Catholic Church's greatest enemy is her own clergy.

A million times better would it be to have them as are other public men, mixing in the public crowd and mart, and taking their everyday chance with the rest. No false halo would surround them in the eyes of the people. Just look at France. For 100 years the Catholic Church had all the primary and grammar and much of the higher teaching in her own hands. Within twenty-five years every official, from President Faure down to the humblest livery, was friendly—ostentatiously friendly—to her. And today, France has thrown her out, like a filthy rag. Who did this? Not Chinese or Japs, not Turks or Russians, not Germans or Danes, but her own Catholic sons, baptized at her fonts and brought up in her schools. Does a child cast off its mother? Of course, the old hue and cry of Freemasonry and the Jews has been raised by the Jesuits, Assumptionists and their ilk. But the shame of Diana Vaughan and the disgrace of the Dreyfus affair should make them hide their countenances forever; that is, if they were honest men.

Thrice young priests have come to my room and cursed the day they took orders. And one bright young fellow, worth his weight in gold, only a month or so after he was ordained said to me: "I only understood the priesthood the day after my ordination. There's nothing in it."

A similar experience I found in convents, but there is no need to relate it, as the story runneth the same.

An outcome was the question, which came to my mind: "Do morals depend upon religion?" This led me to read up the origin of religions. Robertson Smith, Jevons, Jastrow, Frazer and other writers on primitive religions and folk lore, I read as well as taking a large dabbling in the sacred books of the East. For many years my associate in the seminary was one well up in Oriental lore; to him I owe very much for his aid and services in this course of reading. In the long run I became convinced that morals are the expression of the will of society and not of religion, *quâ* religion. The moral principles of Catholicism and Protestantism are Aristotelian. The evangelic teaching, *e. g.*, the eight Beatitudes; the various other doctrines of the "Sermon on the Mount" have no foothold among either the one or the other.

In the recent insurance and stockyard scandals can be seen how far religion and morals are divorced. The culprits were churchmen, Protestants and Catholics, and perhaps Jews. Of the three

insurance presidents, one a Catholic, who had a number of co-religionists among the Beef Barons. What meant religion for those men? Merely to change their coat on Sunday and hear mass or attend service. From Monday till Saturday they defied the laws of their country and broke the teachings of their respective Churches. And on their part, how have the Churches acted? They were like dumb dogs and let the Socialist, whom they decry, call aloud to heaven and earth against the infamy.

Furthermore, the government of the Church came before my eyes while in the seminary. When Leo XIII's Encyclical on the Christian State appeared I read it with great care. Like all American Catholics, I believed in a free Church, in a free State. But Leo XIII taught that the Church is supreme and the State her handmaid. My surprise was great. Later on I noticed that when our American prelates spoke of the Church and State they always explained, carefully, that the status here is *the best for us.* The only exception I can recall was the sermon of Archbishop Kain, of St. Louis, at the conferring of the red hat upon Cardinal Martinelli, in Baltimore Cathedral. He came out fairly and squarely for a free Church in a free State, and whether he knew it or not, preached thereby heresy. From the Catholic standpoint the Church is right. If she is the mother of all truth she dare not brook a rival in the State any more than in the sects.

It was, however, the local Church government which passed before my eyes, at first to my horror and later to my mirth, that showed me how things were done. The mere machinery—the party caucus, if I may use the term—was ever at work. Prelates dangerously near the red hat had to be shunted; bishops with eyes upon Metropolitan Sees checked; the religious orders kept in their place; Protestantism—"Accommodating Protestantism," as O'Donnell calls it in his "Ruin of Education in Ireland"—humored; State and city grants for Catholic institutions secured; the drift of political sentiment watched. In fact, the clerics who drove Tertullian from Rome, the upstart Calixtus, who branded the scholar, Hippolytus; the Augustine, who called in the civil power to crush Pelagius; the court prelates, who egged on the banishment of Nestorius; the truculent bishops, who forfeited their rights at Constance; the insolent minority, to use Newman's phrase, which domineered the Vatican Council, still live. To one who had read Hefele's "Councils," Sarpo's "Trent," and half a dozen histories of the Vatican Council, it was nothing amiss to observe the same clerical ways and methods at work in our own land. Numberless illustrations are at hand; not indeed notorious, like the Corrigan case in Hoboken, the McGlynn of New York, or the Muldoon-Feehan of Chicago, but unknown and unnumbered instances, which we need not waste space upon.

In Church history such data are so common that it finally dawned upon me that they are part and parcel of the system. Mankind, too, have thought the same, for in all languages a common word of sinister meaning expresses the whole *modus operandi—priestcraft.* Not, indeed, that the Catholic clergy and Sisters are not, as a rule, fine characters, but they are such in spite of the system. Such, too, would they be if they never wore the stole or veil. The system tends only to spoil them and to mar the handiwork of nature.

Symbolism, which makes every doctrine merely the symbol of a universal truth, had been a prop till about 1900, *i. e.,* as long as I recognized the two orders, natural and supernatural. Once the twofold division had melted into one, symbolism came to mean words, words, words. But while holding to the natural alone I saw no difficulty in recognizing an original sin which might mean the struggle between our animal propensities and our higher powers. So, also, we may concede a fall in the sense that civilization itself is a fall. Certainly such it is on the score of health. For our diseases are the outcome of our way of dressing, living, eating—most potent offshoots of civilization. Again, poverty is a fall, likewise class distinctions.

With the rejection of a twofold order came the disbelief in revelation as taught in Catholic dogma. Of course, there is a steady unfolding. Every new departure in science; every original poem or

work may be termed a revelation. There seems to be some infinite energy at work under the veil of things, moving onward and upward. Spinoza may have grasped the notion of it best, altho that ancient heretic, Paul of Samosata, is not far off. Nor can I see much sign of free will in man. Over the salient parts of one's life, place of birth, country, language, religion, parents, health or unhealth of body, education, home, a man has no freedom; it is the same with death and the manner of taking off. Man's freedom seems not much more than a bird's. How much have I inherited, which follows me like mine own shadow? Parents, society, nation, religion, heredity, all act toward the offspring as infallible Popes.

As to Jesus Christ, there is one point in which he stands unique; he betrays no consciousness of sin, unless the account of the Temptation and Fast, as also the Baptism in the Jordan, may body forth self-reproach or at least in the case of the former, a belief on the part of the Disciples that sin had touched Him. For the rest, I see no essential difference between His life and that, say, of Francis of Assisi. After all, I once wound up a chat with a professor of dogmatic theology in a Catholic seminary, "Christ taught nothing new." "Quite right," was the answer, *"non nova sed nove"*—"Not new things; only new ways."

So, too, in regard to the State, every Church is politic, allied in one way or other to the civil power. In England and Germany, in Russia and Turkey, in Spain and Italy it is an open league. Everywhere, even in the United States, the civil authorities regard the Church as a conservative element. She is a moral police. Joined with the legislative, judiciary and executive, the Church rounds out the impossible of mathematics by giving a fourth dimension to conservatism. Apparently a strong point—this standing by authority—has always wrought her downfall.

I gave 1900-1901 mostly to reading Newman. His "Development of Christian Doctrine" I had read five times since 1877. Brownson, as is well known, rejected Newman's theory, which, as far as my knowledge goes, has not as yet been incorporated into any text-book of theology. Dr. Tanqueray in his "Theology" used Newman a great deal, but unless my memory is playing tricks, he did not set up Newman as a standard. It would be too risky. His "Grammar of Assent," the great English convert, I believe, wrote not merely to keep himself within the pale of Catholicism, but in fact within revelation. Following Butler's "Analogy," Newman makes a "congeries of possibilities" as a safe basis upon which to build revelation. Probabilities there are which may be changed into certainties or uncertainties—*e. g.*, in science. But probabilities of events long past, or of transmundane facts, cannot but remain such. Just as ten thousand doubts make not one difficulty, so as many probabilities create no certainty. Today, when the study of Newman is widespread in France and Italy, his is not a name to conjure with, but an object of suspicion. Up to now his life in English from a Catholic pen has not been written. True, Wilfrid Ward is now engaged upon it. But as his own quarterly, *The Dublin Review,* has been recently denounced to the Roman Inquisition we may look for an emasculated life.

In conclusion, my work among the negroes may be termed the rake which finished the sloughing off. I may say that I know the negro missions. If anything in this world is certain, it is that the stand of the Catholic Church toward the negroes is sheer dishonesty. The negroes have suffered at her hands. In the white heat of the abolition movement, Kenrick, Primate of the Church, justified slavery in his "Theology." Just before the Civil War the Jesuits sold their Catholic slaves to a Protestant, once Governor of Louisiana. The unfortunate wretches, so I was assured in Louisiana itself, were seventeen years without mass. When the Confederacy sent Slidell and Mason abroad to get aid from European Governments, the only ruler in Europe who gave them any signed document was Pius IX. It meant nothing and accomplished nothing. But it was an official State paper of the Papal Government. After the War, when the Baltimore Council of 1866 appealed for the negroes, no religious order, male or female, would take hold of the negro mis-

sions. It was an Englishman who started the work.

Now my readers need not regard me as an isolated case. Obliged to go about the country a great deal, here and there have I met learned and thoughtful priests; so also in my travels in England, France, Germany, Switzerland and Italy. The same thoughts seemed uppermost. "I wonder," was my remark to a very scholarly professor, "how long have men discussed as we are now doing?" They have always done so on the quiet. Some put dogma above history, science, and aught that might tarnish it; others rest upon symbolism; others again take up other studies in order to divert their minds. Some have left the Church; others drift along. "How am I going to live?" was a not infrequent question.

Naturally arises this question: Have I changed? True, certain formulas, *in toto* called Catholicism, have sloughed off and disappeared from my life. The man—the *egomet ipse*—is not conscious of any change; the principles of honesty and truthfulness which had been instilled in boyhood remain; the fondness for books, the sobriety of life—in a word, the many traits which form my character and temperament are today the same as heretofore. Nor has the peeling off caused me pain or sorrow. Some years ago a priest showed me a letter which he had received from a prominent Unitarian minister, who described in it the anguish it had cost himself to throw up his belief in Christ's divinity. For me there was nothing of the kind; only a feeling of unfetteredness. Of course this open confession will meet with the usual clerical weapons of calumny and ridicule. One must bear them in silence, content that the eternal smother, upon which clericalism banks, may yet ferment and unmask the

"ways that are dark and tricks that are vain."

While the pen and tongue will reach me, the gag and stick can hardly do so.

NEW YORK CITY.

The Far Journey

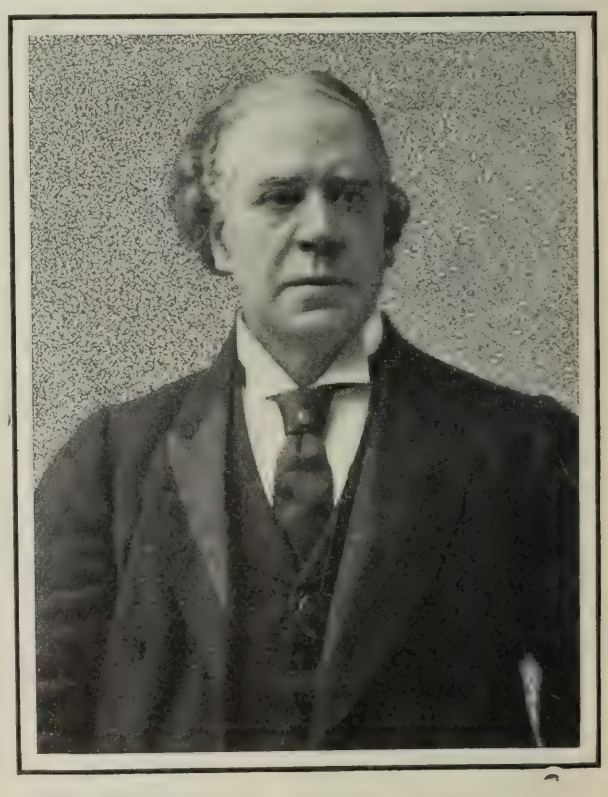
BY KATHARINE LEE BATES

A RUDDY moon thru winter skies
  Was slowly climbing up,
That night she turned her lips from ours
  To drain the stirrup cup.

She whom the tender household care
  Encompassed day by day,
With only God for company
  Went the uncharted way.

Beyond all hail of human voice,
  All hold of mortal hand,
Across the Perilous Stream she passed
  To the Adventurous Land.

For when our strength that lifted her
  Along life's quiet length
Turned suddenly to weakness, then
  Her weakness turned to strength.



And still we muse on it, how she,
  So timid and so shy,
Our little Stay-at-Home, should find
  Temerity to die.

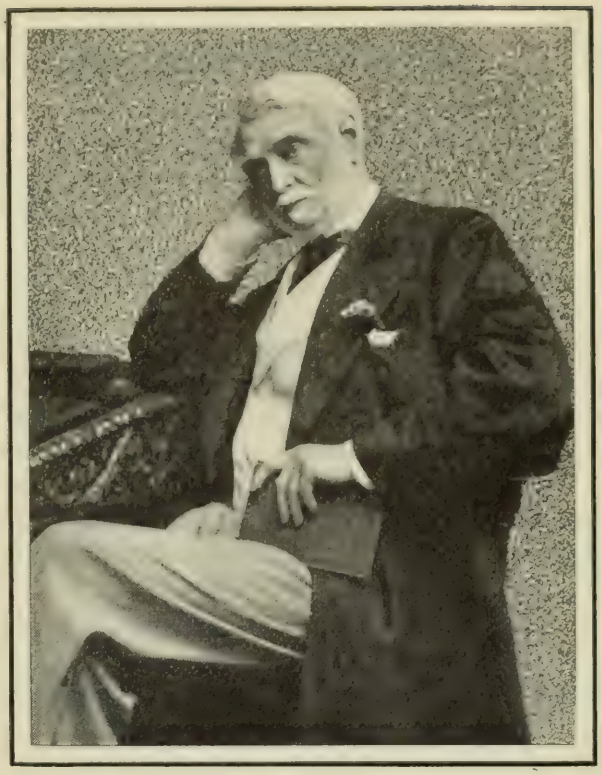
WELLESLEY, MASS.

No Parliament in Westminster

BY JUSTIN McCARTHY

THE House of Lords and the House of Commons are now empty and have been thus desolate for some few days. It would not be strictly correct to say that the session has come to an end, for it has been only interrupted by the process of adjournment and will still be the same session when it meets again in October. It has been a hard-working session, holding its sittings long and late, at least so far as the House of Commons is concerned, and occupying itself for the most part with the construction of the Education measure. During the last few days we have all been somewhat startled by a piece of news which seems to threaten that the toil of the House of Commons over that portentous Education Bill has been merely labor thrown away. One of our great courts of legal appeal has, it would appear, just come to a decision on a case submitted to its notice which will, if the decision should be maintained by our highest legal tribunal, make the new Education measure of no value or meaning whatever, if it should be passed unaltered into law under the present conditions. I shall not attempt to enter into any minute explanation of this perplexing legal question for my American readers, and I readily give them my assurance beforehand that I shall not regard myself as an injured man, tho they should come to the conclusion that I am not quite able to explain those legal subtleties even to myself. I may say, however, that the whole trouble arises from the fact that the present Education Bill, the work of the Liberal Government, was intended to remedy certain defects in the Education Act passed by their predecessors, the Tory Administration, and that the decision of the appeal court declares that the former measure did not legally possess the powers which the Liberals ascribed to it and therefore desired to abolish. Let me put the matter in this way. Mr. Balfour and his Conservative colleagues desired in 1902 to enforce some measures in dealing with public education which they had devised and to which the Liberals objected. The act was passed, and after several years the Conservatives were defeated at the general election and the Liberals came into office. Then the Liberals introduced their Education measure, and in that measure, after long and wearisome debate, they had included several clauses to destroy the effect of the particular enactments which, as I have said, were passed by the Conservative Government. And now behold! Our highest legal tribunal save one, the House of Lords, which has yet to be appealed to, has declared that Mr. Balfour's measure did not and could not confer any such powers as those to which the Liberals objected, the result of which decision, should it be maintained, must be that the greater part of last session's debates and work was wasted, and that the whole country had been thrown for years into the "passive resistance" of powers which had no legalized existence whatever. One can easily understand the feelings of Mem-

The Late John Lawrence Toole.



bers of Parliament, who worked hard during the spring and summer months over the Education Bill and whose periods of autumnal and winter relief from work are cut short by the renewal of the session in the early October, when they find that the greater part of the session's past work has been, according to the late legal decision, absolutely thrown away.

There has been much discussion in the newspapers as to the rising men of this new Parliament. So far as my judgment can go I feel quite certain that the most rising man of the present Parliament is

The late Mrs. Craigie (John Oliver Hobbes). From a photograph taken in her drawing-room at Lancaster Gate, in London, by THE INDEPENDENT representative.

the Prime Minister, Sir Henry Campbell-Bannerman. When the new Liberal Administration was formed Sir Henry was almost universally recognized as the only available personage under all the conditions for the office of Prime Minister. But he was thus recognized only "under all the conditions." One eminent leader of the party had already declared that he would under no conditions accept the position of Prime Minister. Another distinguished and influential figure in the party was that of a man who held opinions on some religious and political questions which were considered rather

Duke of Portland.

extreme to make him suitable for the leading place in a Liberal Administration. Other difficulties came in the way with regard to other men, and thus it began to be understood that the choice of Prime Minister ought to fall on Sir Henry Campbell-Bannerman. Now that the Parliament and the public of England have had some experience of Sir Henry Campbell-Bannerman's fitness for the place of Prime Minister it is almost universally admitted that he has proved himself in every sense absolutely suited for the discharge of those great duties which he has had to undertake. During a session especially trying both as regards home and foreign politics he has shown himself equal to every critical occasion, has been prompt in decision, far-seeing in his survey of each situation, faithful to the advanced principles of his party, and an enemy alike to any attitude of timidity and hesitation as regards foreign affairs and to the absurd Jingoism which was encouraged during recent years by nearly all Conservatives and by not a few Liberals. I may perhaps say for myself that as an outside observer I have long had great faith in Sir Henry Campbell-Bannerman's intellect, judgment, genuine Liberalism and force of character, and it seemed to me

that when the present Liberal Government came to be formed he was by virtue of his own qualifications the best man among the Liberal leaders to hold the office of Prime Minister. I think that very gift of humor, that characteristic Scotch humor, which he possesses and understands how to use, is another and a very valuable qualification for one who must have in public debate to bring very often into strong light the weaknesses of his opponent's case, to reconcile disagreements and disputes among his own colleagues, and even now and then to do his best at "soldering impossibilities," if I may introduce here that Shakespearean phrase.

The death of John Lawrence Toole is a melancholy event in the history of England's theatrical art. It is true that Mr. Toole had for several years withdrawn altogether from his place on the stage, owing to the almost complete breakdown of his health, but his marvelous comic acting still remained a living figure in the public memory, and there was always a kind of hope against hope that he might yet be restored to that peculiar dramatic work which no other living actor could do so well as he. It made, therefore, a deep impression on the public when the sad news came that John Lawrence Toole was dead. I need not say much to my American readers about Toole's comic impersonations, for my late friend had played almost everywhere thruout the United States. I shall only point to the fact that his style of acting was in itself quite peculiar and original, that he made even the most extravagant comedy seem living and natural so far as his own figure in it was concerned, and that he never descended to any vulgar effects. Those of us who knew John Toole well must feel that, however they may for the time have been grieved by the news of his death it could have been nothing less than a relief to him to pass out of life. He had for many years past been losing all that makes life dear. He lost a beloved brother who had been the best of friends and comrades to him; he had lost his only son; he had lost, in her youth, his only daughter, a most charming, gifted and promising girl, who made much of the happiness and hope of his life. Later still he had lost his wife, and finally came that great breakdown in his health, part of which showed itself in a disease of the palate rendering clear articulation impossible for him, and thus putting an end to all chance of his returning to the artistic work which might even still have sometimes relieved his grief. It seems as if some of the grim contrasts of life could not be more effectively and painfully illustrated by the most saturnine and melancholy moralist or satirist than by this picture of the great comic actor from whom successive deaths had removed every one he dearly loved, as he was daily wheeled about in a bathchair at one of England's seacoast health resorts, unable, owing to his imperfect articulation, to take any intelligible part in a conversation. I may add that among the heavy personal losses Toole had recently sustained was that caused by the death of his dear and ever-true friend and comrade, Sir Henry Irving.

Another once very prominent figure, prominent however in an entirely different field of life from that in which Toole did his work, has lately passed out of existence. This was the figure of the Duke of Rutland, known thru the greater part of his career as Lord John Manners. I am afraid that Lord John Manners will be best remembered by the present generation because of certain verses which he wrote in his earlier years to chant the praises of "our old nobility." In these verses Lord John declared his comparative indifference as to any extinction which might come upon learning, commerce, art and letters, provided only that the powers above would "spare, oh! spare our old nobility." Lord John was himself an ideal type of what enthusiastic Conservatives might have tried to believe was that exalted class of society "our old nobility." He had a tall, stately and graceful figure, a handsome face, dignified and yet charming manners, and he had unquestionably a generous nature and a noble heart. He was fond of writing and publishing verses and essays, and no doubt believed himself to be a literary artist notwithstanding his expressed readiness that the world should part with literature and art if only it could succeed in retaining our

old nobility. I am not aware that he ever attempted to define that precise era in England's history during which that old nobility had displayed such all-surpassing virtues and intellectual gifts, and I am afraid that the closest research of history would not enable us to get at any evidence of its actual existence. Lord John Manners was a great admirer and patron of Mr. Disraeli during most of Disraeli's career, and he makes a figure drawn with a very favoring hand in one of Disraeli's novels, "Coningsby." Lord John was a leading member of the "Young England" party, a name adopted by a number of Conservative nobles and squires, who for some years, beginning with 1842, formed themselves into an association with the purpose first of all to oppose the Liberal measures for the abolition of the Corn Laws, but also with the object of reviving the old friendly and familiar relations between the higher and the lower classes in the English rural districts and bringing them together in genial fashion by companionship in rural sports and in public celebrations. Every one, I should think, liked Lord John Manners, even while many must have been often inclined to laugh at him. There was no harm whatever in him and he appears to have been kind and frank to all with whom he was brought into contact. He entered the House of Commons as a Conservative in 1841 and held in successive administrations the office of First Commissioner of Works, Postmaster General, and Chancellor of the Duchy of Lancaster. In 1888 he succeeded his elder brother as Duke of Rutland. During his lifetime the old Conservatism entirely passed away, whatever may have become of the old nobility, concerning whose fate I do not venture to offer any conjecture. He cannot be said to have made the slightest impression on the political life of his time, and, perhaps for that very reason, nobody had a harsh word to say of him. He was in his eighty-eighth year when he passed away from this life, in which it must be owned that he made at least a picturesque and ornamental figure.

Yet another death—this time the death of a most gifted and noble-hearted woman—Mrs. Pearl Mary Teresa Craigie, known in literature as "John Oliver Hobbes." I have only just heard the news of Mrs. Craigie's death, which took place at her London residence, Lancaster Gate. Her end was indeed peace. She had not been in very good health lately, but no fear was felt by her friends as to any immediate danger, and she was found dead in her bed on the morning of the day before that on which I am writing this article. She passed away very much as Thackeray did in 1863. I need not say anything to American readers about the literary genius, the productions and the noble character of their brilliant countrywoman. It was my great good fortune to have many opportunities of meeting her in London, and I need hardly say how much I enjoyed those opportunities and how deeply I was grieved by the sad news of her all too early death—too early indeed for her relatives and friends, but not too early for her fame, which she had securely established and which will hold its place in literature.

London, England.

The Electric Cars at Night

BY ELIZABETH ROBERTS MACDONALD

We sat on the porch at night and watched the cars go by,
(Watched thru the screen of leaves, under a brooding sky)
With gleam of light resplendent, with hum of mighty sound—
The force that flares in lightning to human uses bound.
Out of the dark they came, into the dark they fled,
Each with its freight of souls, and my thought with their going sped,
Glad with their flight, beholding a fragment of the plan
That links the powers of nature with the destinies of man.

Fredericton, N. B.

Literature

A Novel That Is Making History

*Il Santo** completes the trilogy, of which "Piccolo Mondo Antico" and "Piccolo mondo Moderno" are the other two works. Its author—an Italian Senator—has made an honest effort to reconcile medievalism with modernism. His hero, Benedetto, is at once an ascetic and a ripe scholar; a priest with the spirit of Subiaco and the knowledge of modern Pisa or Naples. Of old, Roger Bacon, the Franciscan, would be his counterpart. In our day Isaac T. Hecker most nearly resembles him, save that the founder of the Paulists knew not love and, besides, was no scholar. Like "The Saint," however, he loved reason and liberty. Rome, however, has put the work upon the Index. Once again the engulfing waters of the Tiber smother the hopes of Catholic scholars and leave their writings wrecked upon the clerical strand. In nowise does retrograde Rome injure the movement. Oscurantism has cost the Vatican France, and it may also lose Italy and Spain. For the great movement in the French Church has a strong following among Italian Catholics; in fact, it has infiltrated European Catholicism and reached dormant Ireland. The Catholics of America alone seem unaffected. The study of Newman, the popularity of the French translation of Elliott's "Life of Hecker," and the writings of the Abbé Loisy may be looked upon as the chief elements of the present status, religiously and perhaps politically, of the advanced Catholics of France and Italy. *Il Santo* gives abundant signs of their influence. Nor must we here forget the letter of the Jesuit Tyrrell to a professor of anthropology, which Fogazzaro is credited with having translated into Italian. Tyrrell was chased by the Jesuits, and, *ipso facto,* suspended. For some years he had been to all intents and purposes a prisoner within the limits of Richmond, Nottinghamshire, but the Italian translation of the audacious letter led to his beheading. The whole movement on the Peninsular is significant. The Christian Socialists, under the fiery stimulus of the Abate Murro, a priest of the diocese of Rome, but now exiled in Ancona, are also an outcome. *La Rassegna Nazionale,* of Florence, published every fortnight, is a worthy advocate of the entire cause.

In spite of all, however, the movement grows. And only within a month has Pius X in an encyclical to the Bishops of Italy laid down the measures needed to remove the blight from the seminaries. In vain! Few condemnations show up the eternal opposition of Rome to modern ideas as that of *Il Santo.*

Mr. Thayer's introduction gives a good idea of Catholic Italy and deserves to be read as well after as before taking up the novel.

The note preceding the title-page calls Fogazzaro "a loyal Catholic" and refers to difficulties attending the present translation. It would have been honester to have stated at once that Fogazzaro had submitted to the Index. Its Catholic readers will in many cases find their own views in the pages of *The Saint.*

* THE SAINT (Il Santo). *By Antonio Fogazzaro.* Translated from the Italian by *M. Agnetti Pritchard,* with an introduction by *William Roscoe Thayer.* New York: G. P. Putnam's Sons. $1.50.

The Measure of Life

THIS is an unmeaning title of a very definite book.* It would have been better to have called it Silhouettes of Life. It consists of disconnected pictures, every one of them rich and unique, and all illustrative of the meaning of sorrow—for thru the whole volume there is a key of sadness, altho the key turns the door that opens into eternal beauty and satisfaction. If there be a more perfect prose poem in recent literature than the opening sketch, entitled "The Scarecrow," we have not seen it. The pathos and the originality are equally manifest, drawn with a delicacy of touch belonging only to a word artist. We have less and less of this art in handling words; and it is due perhaps to the rush of authors to get

* THE MEASURE OF LIFE. *By Frances Campbell.* New York: E. P. Dutton & Co. $1.50.

into print, the elbowing of the ten thousand to express themselves thru the publisher. We think more of accurate observation than of poetic description. We may be right, but the exquisite power of English ought not to be lost.

Another charming sketch is "Songs in the Rain," while "Blown from the Infinite" will hold you spellbound. But, as we have said, it is the song of salvation thru sorrow:

"A lark sprang suddenly from a tussock of grass behind me, and went up, cleaving the blue with a blade of pure rapture. Denny, following its flights, said thoughtfully: 'They do be sayin' that the song iv the lark is the childer's prayers. Like enough 'tis a true word, for the heart of a child is joy, an' childer will be singin' iverythin', prayers and all, an' 'tis right they are, for God made this world to be happy in. So!"

It is a book that tempts one constantly to quote, for one can scarcely do more than put discord in the place of melody by discussing these songs of wild nature. I should like to give the whole of the (shall I call it song, or shall I call it essay?) in the middle of this book, entitled "The Music of the Wind." We are told that nature is always singing, in various languages and in all tones; that not only the woods, but the gardens have voices. The voice of the wild rose and of the apple tree and of the meadow sweet and the water mint are as audible to the ear of a nature lover as that of the oaks that chide and the beeches that whisper:

"While the lone pine tree moans its mystic word."

The author of this unique volume calls her tales "spiritual adventures," and dedicates them to Lady Archibald Campbell, to whom she avows that she owes her inspiration for the best part of the contents. There is a certain femininity —we do not mean weakness, but spiritual strength—which indicates that the volume is rightly attributed. We have few characters in recent literature more perfectly drawn than those of Denny and Conal. Love for nature is of that frank and simple sort that sees the most beautiful in the bogs and the mosses, as it does of purity in the poverty and the simplicity of the uncultivated soul. Old Conal is a hand loom weaver—very old and a thinker; but a poet whose songs are known to the peasantry only because they are unwritten songs, recited and sung by those who know his beautiful life and love him. Denny is over ninety years of age, rather dried up in his body, but his soul, like a rare and beautiful flower, found only in the woods.

Modern Germany

TIME was when Great Britain stood forth peerless among the nations of the earth, all of which had to pay tribute to her industry, her merchant marine, her commerce, and her finance. To make these factors of her greatness irresistible for all future time she adopted the policy of free trade, of magnanimously admitting free of duty foreign foods and raw materials, the primary necessities of her industry. She hoped that foreign nations would be duly grateful for the bounteous favors thus unselfishly bestowed upon them, and would glady welcome the goods of England to compete their infantile attempts at establishing a modern industry out of existence. But, alas, the foreign nations, knowing neither gratitude nor political economy, refused to continue playing the *rôle* of tribute bearers to the "workshop of the world," and, entrenched behind barriers of protective circumvallation, they built up a modern industry of their own, and proceeded to compete with England in all the markets of the world.

It is true that notwithstanding foreign competition the industry and commerce of England continued to grow apace, but relatively, compared with the industry and commerce of the upstart nations, they declined. England lost its unrivaled primacy. Thence a wailing and a gnashing of teeth in the gates of the modern Zions, and the merchants of Birmingham and Manchester began to hark back to the fleshpots of Egypt, the economic policy, formerly declared anathema, of their benighted ancestors, and of the Americans and Germans. The success of the Germans, in particular, was galling, and seemed unaccountable but for their policy of protection, since they were not in possession of a vast, virgin and exceptionally rich soil, nor were they purveyors of the wheat and

cotton so essential to English industry, nor even were they Anglo-Saxons. Thus arose the controversy centering around the name of Joseph Chamberlain.

Modern Germany[1] is an outgrowth of this controversy. Its avowed purpose is to impel Britons to import the economic policies and governmental methods "made in Germany." Its cardinal principle is that England has fallen behind because she follows a *laissez-faire* policy, and that Germany has forged to the front because the German State is all-powerful and controls the individual citizen in all his doings. It is strange that our otherwise so keen-witted author fails to perceive that even if his fundamental propositions were as true as he deems them to be, it does not follow that England is free to adopt his counsel. The Germany of today is, first of all, Prusso-Germany, and the masses of the English nation are not likely to create, consciously and of their own free will, a class analogous to that military squirearchy which at one time was the Prussian State and is today its chief upholder and beneficiary. The same tendency to violent abstraction from the actual social conditions and consequent hasty generalization is observable thruout the book, as when the decline of the Netherlands from their former greatness and the destruction of the Polish Republic are attributed to an excess of individualism. The greatness of Holland, like that of Portugal, which was not overburdened with individualism, was bound to decline, because it lacked the necessary extension of base to support a structure reared to such dizzy hight, and the downfall of Poland was due to the total absence of those elements which are essential to a modern national existence—a native industry and middle class. Our author forgets that Polish "individualism" was not a *régime* of industrial *laissez-faire,* but an agrarian medieval anarchy.

Nevertheless, tho *Modern Germany* is a partisan, one-sided book, tho it abounds in errors of fact and errors of interpretation, tho its authorities—largely newspaper and magazine articles—are frequently quoted without due reservation and criticism, yet it is an extremely interesting, suggestive and instructive book, far more so in fact than many an academic work that boasts of its scientific impartiality and marshals a long array of unimpeachable authorities. Whatever one may think of the fundamental thesis of the book, its studies of world politics are exceptionally stimulating, and its conclusion that "the Eastern Question may be regarded by Great Britain with indifference," startling as it is, is expounded in an illuminating manner. The presentation, too, of German economic development, her rural industries, waterways and canals, railways and chemical industries will be grateful to every student of practical economics.

[1] MODERN GERMANY. Her Political and Economic Problems, Her Policy, Her Ambitions, and the Causes of Her Success. *By O. Eltzbacher.* New York: E. P. Dutton & Co. $2.50.

Canadian Conditions and Tendencies

THERE has never been any lack of books on Canada written by Englishmen; but there have been few of the class of Mr. Whates's *Canada: The New Nation.** In the main it differs from most English books on Canada in the extreme freedom with which Mr. Whates puts forward the results of his five months' thoro and conscientious study of social, economic, political and religious conditions in the Dominion. Most of the books on Canada of the last twenty years have been by English journalists and agriculturalists who have toured the Dominion at the expense of the Department of the Interior, and who in putting their experiences and observations into print had an eye to the production of a book which might be included in the literature of the Government immigration propaganda. Mr. Whates describes his volume as a book for "the settler, the emigrant and the politician"; but there is little likelihood that his work or any large part of it will be circulated in Great Britain at the expense of the Department of the Interior as a means of stimulating emigration to Canada. The book might be of service to people in England who are contemplating emigration to Can-

* CANADA: THE NEW NATION. A Book for the Settler, the Emigrant and the Politician. *By H. R. Whates.* New York and London: J. M. Dent & Co. 1906. Pp. xvii, 284. $1.50.

ada; for it makes clear what type of emigrant is likely to succeed and at what cost success must be purchased. It is, however, scarcely likely to fall into the hands of many Englishmen who have come under the influence of the continuous and energetic immigration propaganda which has been pushed in England since about 1897. If it did it might cause them to pause and reconsider their position; because while Mr. Whates shows that Canada undoubtedly offers great opportunities for settlement on the land, he makes it equally clear that the larger Canadian cities—Montreal, Toronto, or Winnipeg—offer no opportunities which should tempt either skilled or unskilled laborers to leave England for the Dominion.

Except for the fact that Mr. Whates lays far too much stress on the Canadian winter, and erroneously gives the impression that arctic conditions prevail from October to April, Canada as a field for British immigration has never been more discriminatingly described; nor have other phases of Canadian life and economy ever before received such outspoken treatment from any English writer who has put his observations into book form. Mr. Whates went out to Canada as the special correspondent of the London *Standard*. He was commissioned within a few months after the *Standard* had been acquired by Mr. Chamberlain's political friends to support his policy of fiscal reform. Next to the acceptance of Mr. Chamberlain's scheme by the electorate of Great Britain its success hinges on Canada; yet Mr. Whates devotes a whole chapter to showing that Canada has no use for Mr. Chamberlain's scheme; to explaining why Canada can never consent to part with her fiscal independence; and to exposing the humbug of the Canadian Manufacturers' Association in regard to Mr. Chamberlain's newest propaganda.

Another of the newer Imperialistic idols that Mr. Whates unceremoniously bowls over is the Cockney idea that Canada is anxious for a reorganization of Parliament at Westminster on lines that would admit the Dominion and the other self-governing colonies to be represented there. Mr. Whates finds that Canada's desire is to become an independent nation. Proof of this, he holds, is forthcoming in the recent movement for treaty-making powers; and in his opinion Canada will undoubtedly get this power "whether Great Britain makes such a concession of its Imperial rights gracefully or grudgingly."

The Princess Olga. By Ervin Wardman. New York: Harper & Bros. $1.50.

Apparently the day of the story of the imaginary European kingdom whose chief industry is intrigue is not yet over. A fair sample of the narrative of this class, Mr. Wardman's romance presents something distinctive in that its imperturbable and tremendously efficient hero is a representative of an American banking-house. Gordon Harding has plenty of exciting experiences in Crevonia, his fortunes being strangely intermingled with those of Mlle. Vaillant, a determined and, withal, charming young woman whom he meets before leaving New York. Mr. Wardman has a good sense of the dramatic, and the situations are handled satisfactorily.

A Sicilian Marriage. By Douglas Sladen. New York: James Pott & Co. $1.50.

An apology for a novel is Douglas Sladen's rambling narrative with Sicily as a background. The people are deadly dull and the author essays the impossible when he tries to arouse interest in what they do. He is scarcely more successful in his bits of description sandwiched between lifeless dialog. The illustrations showing Sicilian scenes are well enough, but one would not care to be burdened with the book in order to possess them.

Contrite Hearts. By Herman Bernstein. New York: A. Wessels & Co. $1.25.

Few writers—Jew or Gentile—have succeeded in penetrating the core of Jewish life, and presenting a picture of the Jew that is stamped with truth. While it is almost a truism that only the Jew understands the Jew, it is also a fact that the Jew has rarely been able to translate himself into the language of the stranger. Herman Bernstein is one of the few Jewish writers who always comes to the very threshold of success,

and, not having the genius necessary to grasp and transfix the living truth, misses it by a hair. *Contrite Hearts* is the story of an ever-present phenomenon in the abnormal life of the Russian Jew today—the struggle between fathers and (in this case) daughters, between the stern and unbending faith in the past and the mighty and passionate outburst for "life, more life," found, alas, away from the old. A typical Jewish household in the Russian pale is pictured, the father Cantor and Melamed (teacher) of the village. The eldest daughter falls in love with a university student who has objured the Jewish faith, and is compelled to choose between her lover and her home. Finally deserted by her lover, she comes to that Maelstrom of the New World, the East Side of New York. After a while she finds there her sister, whose experience has been somewhat similar. In time the father joins the immigrant stream, and, a broken-hearted man (his wife having died from sorrowing), meets the contrite pair. The charm of the story lies not alone in the fidelity of its presentation of Jewish life, but even more in the perfect simplicity of its language.

Where Speech Ends; A Music Maker's Romance. By Robert Haven Schauffler. New York: Moffatt, Yard & Co. $1.50.

Mr. Schauffler tries to put too much into his three-hundred-page study of the musical temperament. In the first place, there are two heroes—a rather distracting state of affairs at the best, and the more irritating when the novelist has yet a good deal to learn about balancing characters. Too many subsidiary stories are introduced in the account of the experiences of Peter Morris and Franz Hartmann in the Wolfgang orchestra. There is a superabundance of German dialect, and the author would have done well not to include in the narrative verses of his own making. One of these poems—ascribed, by the way, to the heroine of the tale, Gretchen, daughter of Herr Auber, a violinist—is prefaced with a statement from "one of the oldest and most revered men of letters in the West," who tells the gratified Gretchen that God has made her a poet. All this tends to obscure some really excellent work in the way of portraying the existence of such as respond to the conductor's *baton*, and things are not helped by Mr. Schauffler's efforts to make capital out of the pranks of Princeton collegians. However, there is in the book enough love of music and appreciations of certain sides of musical folk to justify Dr. Henry van Dyke's words of praise in the "Prelude." Not much interest will be taken in Peter and Franz's joint love affair, but the descriptions of concerts are well worth while, and one enters with zest into the merry-makings of the members of the orchestra.

The House of Cobwebs and Other Stories, By George Gissing. New York: E. P. Dutton & Co. $1.50.

The chief value of this lies in the introductory essay of fifty pages by Thomas Seccombe, which gives a very interesting account of Gissing's life and a sympathetic critique of his work. Few authors nowadays have literally suffered as he did for the bare necessities of life; walking twelve hours in London to save 'bus fare and living on peanuts for five days in Troy, N. Y., are two instances of his penury. It was such bitter experiences that gave him the power to describe the squalor and sordidness, the vulgarity and snobbery, the dulness and triviality of lower middle-class life in London. We are not surprised to read that Dickens was his admiration and model, for he was much like him in his choice of subjects and treatment, but he lacked Dickens's Mark Tapley faculty of seeing the bright side of everything. These seventeen stories form a good introduction to Gissing, for they well represent his power and his limitations.

Bess of the Woods. By Warwick Deeping. New York: Harper & Brothers. $1.50.

There is sufficient incident in Warwick Deeping's latest romance to hold the attention, altho the story is not particularly ingenious. The scene is Sussex, and the time far enough removed so that a duel between English gentlemen is not surprising. Richard Jeffray, a young squire, whose knowledge of womankind is of the slightest, is about to be inveigled into a marriage with Jilian, the daughter of Sir Peter Hardacre, his neighbor.

The match is sorely needed to repair the Hardacre fortunes, and the designing Jilian and her family play their cards so well that the end is almost attained. But Richard meets Bess, a beautiful creature of gentle birth, whose lot has fallen with a gang of smugglers and cutthroats, and soon he comes to know real love from the counterfeit. Many obstacles must be surmounted before the time-honored ending, for Jeffray's troth has been plighted to Jilian and Bess is made to marry the brutal Dan Grimshaw. The situation might dismay matter-of-fact people, but a story-teller is incited by it to further effort. The author's character sketching is rather superficial, his only creation worthy of note being the hero's world-wise aunt. The most distinctive element in the story is the expression of Mr. Deeping's love of nature, and many a descriptive passage will be read with pleasure.

In Cure of Her Soul. By F. J. Stimson. New York: D. Appleton & Co. $1.50.

J. S. of Dale, whose "Guerndale" delighted readers a generation ago, has written the story, becoming so common in our fiction, of a man who chooses the wrong woman in early life and is unfortunate enough to find it out in the light shed by another woman's eyes; but he has not made his hero immoral or ignoble, in an essentially ignoble situation. Austin Pinckney is a fine young fellow, who comes back from Europe, at four and twenty, with the fixed desire of entering public life and giving his best energies to his country. This he has to enter thru the doorway of the Cambridge Law School. "In America a man must take some mask of serving himself if he would serve his country." The chivalrous boy learns in the first chapter that a beautiful and innocent girl of eighteen is to be forced to marry many millions, and, incidentally, a very bad and brutal man. He resolves to save her by the means young Lochinvar used: a swift escape and a hasty marriage to a girl whose unformed nature he does not know or understand, tho her beauty is an open book to be read of all men. The little that any newly married people know about each other is least in their case, as they have had no courtship acquaintance. They half-love, and doubt and drift apart, the wife is ambitious in a social way, and learns to regret the millions she had repudiated. And the other woman comes, Mary Ravenel, a lovely, gracious creature, a settlement worker, full of unselfish care for others, the ideal of man and the crown of womanhood, and Austin's heart goes out to her, in love and worship, which are never told, save in a letter buried for three years, until his wife would seek a divorce. Mary's ethics are not those of the world about her. We wish the author could have worked out his problem without having recourse to the old expedient of removing one of the factors by death. People in real life usually have to live on, and find some answer to their questionings for themselves. They cannot die when they wish, even to straighten the tangled threads for those they love. But Mr. Stimson is to be commended for making no plea for easy divorce; for, indeed, repudiating it with all the strength of his art.

The Treasure of Heaven—A Romance of Riches. By Marie Corelli. New York: Dodd, Mead & Co. $1.50.

This is another of Miss Corelli's series of "Tracts for the Times" in romantic form. This time the root of all evil is attacked in her usual lively style, on the theme of a multi-millionaire of seventy years, who, failing to find honor, love, friendship or loyalty among the crowd of sycophants that surround him, conceals his identity, and going into the country as a poor man finds that in rural England there still linger a few hearts untainted by the corruption of the day. Needless to say all those who befriended him when incognito find themselves surprisingly rewarded when his will is read. Incidentally the authoress slaps all around at her particular aversions, such as modern education, the newspapers, motor cars, Andrew Carnegie and ritualism. The reader will be surprised to find in this volume her photograph, published for the first time. Certain sketches and amateur photographs of Miss Corelli have been in circulation, even on postals, supposedly to gratify the natural curiosity of her numerous and devoted admirers, but it appears from the "Au-

thor's Note" that she regards these pictures—which apparently did not do her justice—as attempts to injure her literary reputation:

"But—owing to the fact that various gross, and I think I may say libellous, and fictitious misrepresentations of me have been freely and unwarrantedly circulated thruout Great Britain, the colonies, and America, by certain 'lover' sections of the pictorial press, which, with a zeal worthy of a better and kinder cause, have striven by this means to alienate my readers from me . . . it appears to my publishers advisable that authentic likeness of myself, as I truly am today, should now be issued in order to prevent any further misleading of the public by fraudulent inventions."

This apparently is a new scheme invented by the "reptile press" for downing an author, publishing his picture. Why did not some of the many enemies of George Eliot and Ernest Renan think of it and try to stop the sale of their books by publishing authentic portraits of them? We are sorry that Miss Corelli's generosity does not go so far as to allow us to reproduce this photograph. But perhaps it will be sufficient to tell our readers that she looks just like her books. *Le style c'est la femme.*

In Vanity Fair; A Tale of Frocks and Femininity. By Eleanor Hoyt Brainerd. New York: Moffat, Yard & Co. $1.50.

Should the Parisian dressmaker ever discover that the creations of the Rue de la Paix were not attracting deserved attention, an appeal should be made to Mrs. Brainerd to write another book. Her invitation to the shrine of fashion—do her sisters need the bidding?—is an alluring one, the only thing lacking being detailed description of the marvelous gowns held up as models to the world of fashion. It is with what may be called the atmosphere in which these gowns are produced and worn that the vivacious author concerns herself. She writes of the famous dictators of styles and their work shops—"ateliers" is the word she prefers—and pays all the tribute that enthusiasm could demand to the artistic qualities constantly exercised in the adorning of beauty. She descants on the places in Paris where the well dressed are to be seen, having something to say, also, of Trouville and Deauville, Cannes, Nice and Monte Carlo. The style is well suited to the theme.

Erichthonius and the Three Daughters of Cecrops. By Benjamin Powell. 8vo, pp. 86. 9 plates. The Macmillan Co.

This thin volume is one of the "Cornell Studies in Classical Philology," and a very careful and admirable investigation in the line of Miss Harrison's studies of the origins of Greek mythology. It is especially a study of serpent worship, and the author is probably correct in seeing much more of Oriental influence in such worship than does Miss Harrison. But the study is confined to classical sources, with some modern ethnological comparisons, and no reference is made to the numerous evidences of snake worship in ancient Semitic art, such as the archaic seated Babylonian god with a serpent body, and the nearer and later figures in which the two legs become serpents. And in the discussion of serpent phallism one expects a reference to the famous bas-relief of Bel and the Dragon in the British Museum.

Uncle William. The Man Who Was Shiftless. By Jennette Lee. New York: The Century Co. $1.00.

Mr. Pratt. By Joseph C. Lincoln. New York: A. S. Barnes & Co. $1.50.

Would not the writers of seacoast stories do well to vary their program a little? In reading Jennette Lee's *Uncle William,* and Joseph C. Lincoln's *Mr. Pratt,* one feels very much the same as when witnessing a play in which the leading part is tolerably well taken, but with decidedly poor support. Had Mrs. Lee and Mr. Lincoln devoted more attention to the rounding out of their narratives a better impression would be created. As it is, the moderate interest in the central figures is not sufficient to balance the failings of the books in other respects. Team play among the characters is needed. The "shif'less" Uncle William looks upon the sea from Nova Scotia; Sol Pratt studies the waves and the sky from Cape Cod. One point of resemblance between them makes an immediate impression—they are both so very obliging. Indeed, it is to be gathered from these narratives that the mission in life of dwellers by the tides is to make things comfortable for fellow mortals who come their way. The desire to please is really a master passion with Uncle William, the chief object of his

solicitude being a young artist who, certainly, is in need of assistance pecuniarily and otherwise. Before Uncle William has finished with him a love affair is brought to a happy conclusion, and the painter is on the high road to fame. How this all comes about directly and indirectly thru the kindly ministrations of the grizzly veteran of the Northern shores, Mrs. Lee tells pleasantly enough, tho the book people, outside of Uncle William himself, are on the lay-figure order and the plot is quite absurdly mechanical.

Faults of construction are even more glaringly evident in Mr. Lincoln's story, if so slight an affair from the viewpoint of incident can be called a story at all. Two city men come to the Cape and the author proceeds to make sport of them. Sol Pratt standing, of course, for the incarnation of knowledge as opposed to the ignorance in regard to various important "Down East" matters exhibited by the strangers. It is interesting to speculate what would have become of the innocents deprived of the care of their willing slave. But Sol enjoys doing quite as much as they enjoy being done for, so, perhaps, it's an even thing. There is some fun in the tale and some would-be fun, the latter rather predominating. Mr. Lincoln has done better with Cape scenes and people than in the book at hand.

In Olde Connecticut. Being a Record of Quaint, Curious and Romantic Happenings in Colony Times and Later. By Charles Burr Todd. New York: The Grafton Press.

This book is one of the Grafton Series. a series established for the purpose of giving to the public in convenient style a set of books dealing with the early history of our country—in the form of short biographies and reprints of important old books and documents. Three or four of these books are already on the market; among the rest "Historic Hadley" and "King Phillip's War." The present volume is a model of those that can be gathered from the byways of history. It fits well into Old Home Week sentiment, which sentiment is probably accountable for the increase of such books. The turning of the tide of population from the city to the country has something to do with it. The renaissance of simple living in country surroundings has wakened an interest in the legends and local incidents associated with our villages and more rustic life. The object of this series, the editor tells us, is to pick up historical data of this humble sort and save it from oblivion. The main traveled roads of ordinary historians are to be avoided, and the authors of these books will take the crossroads, the tow-paths and the by-paths thru the meadows and the woods. The result will no doubt be something very acceptable to the American readers. In this volume the purpose of the series has been admirably accomplished. We find a most interesting history of the whale-boat privateersmen, during the Revolutionary War—very little of which can be found in current history. There is a full account of Longfellow's relations to the town of Killingworth in Connecticut, and the story of his famous poem, "The Birds of Killingworth." There seems to have been no real basis for the poem in any town action, except that Killingworth yearly chose two leaders, whose business it should be to organize companies for a challenge attack upon hawks, owls, crows, blackbirds, and squirrels, excepting the gray, and other mischievous animals. Some years each side would bring them in by the bushel. But it is true that the birds grew scarce, and probably the valuable varieties often got shot. The Connecticut declaration of independence, issued by Governor Trumbull, June 18th, 1776, that is sixteen days before the one adopted at Philadelphia, is here given us in full and its history. It is a theological manifesto rather than political. It seems probable, however, that the spirit of the immortal document drawn up by Jefferson was the common property of the whole people. It only put in form the universal popular sentiment. There is more piety in this Connecticut declaration, or rather proclamation, than there is political eloquence; but it was the spirit that animated New England thruout the war. It was an appeal to God as much as to man. It closed with these words:

"In the name of the General Assembly I do hereby earnestly recommend to all, both min-

isters and people, frequently to meet together for social prayer to Almighty God, for the outpouring of His blessed Spirit upon this guilty land—that he would awaken His people to righteousness and repentance, bless our councils and prosper our arms."

All the ministers of the gospel in the colony are directed to read the proclamation in their churches, and enforce the exhortations contained in it, in their public instructions and by their pious example.

Memories of a Great Schoolmaster. By James P. Conover. Pp. xxv, 270. Boston and New York: Houghton, Mifflin & Co. $1.50.

The Rev. Henry Augustus Coit, D.D., was born January 30, 1830. Early in 1856, Dr. and Mrs. Shattuck, of Boston, gave a country house, about two miles from Concord, N. H., for the site of St. Paul's Boys' School, to be conducted in connection with the Protestant Episcopal Church. Mr. Coit was appointed headmaster in April, 1856, and remained in that post until his death in February, 1895. Nearly thirty-nine years of teaching and management in the same institution is the record of the clergyman whose life has brought forth this tribute from "an old St. Paul's boy." Such a work as this is above criticism, for it is the outpouring of gratitude for the privilege of being under the teaching of a man of striking personality, wise judgment, and a loving and lovable temperament. Mr. Conover has added a paper of Dr. Coit's, which appeared originally in *The Forum*, on "An American Boys' School—What It Should Be," and a sermon on "The Resurrection Life." There is also an appendix, with notices of his death and appreciations from several sources.

Days of the Past. A Medley of Memories. By Alexander Innes Shand. Pp. 319. New York: E. P. Dutton & Co. $3.00.

Alexander Innes Shand is too well known in the field of sport and military biography for any question as to the acceptability of anything that comes from his pen. He calls his *Days of the Past* a medley of memories, and very interesting memories they are. In 1851 Mr. Shand was a youth old enough to enjoy seeing Queen Victoria, the Prince Consort, the "Iron Duke," and the "Great Exhibition," the first of the long series of expositions. This will give some idea as to how far back the memories go. He tells of changes in the rural conditions of Scotland, his native land; of changes in the mode of living in London; in Edinburgh; in the Scottish ecclesiastical system; of changes in the conduct of sport and the preservation of game; and there is a wealth of literary recollections which embrace some of the foremost names in literature and journalism. The book is written in a pleasant, easy and attractive style and will commend itself to those who desire to know what London life, especially in literary circles, was half a century ago. It deserves its place among Mr. Shand's lighter works, such as "Mountain, Stream and Covert," "Shooting" and "Old-Time Travel."

Months at the Lakes. By the Rev. and Honorary Canon of Carlisle, H. D. Rawnsley. New York: The Macmillan Co. $1.75.

Canon Rawnsley is getting very well known in this country as a poet-naturalist. He describes his present book as a series of compound pictures or impressions, drawn from the notes that he has taken during the past twenty years, while spending his time at the English lakes. He has been a student of human nature quite as thoröly as of physical nature, and a good half of the interest in the book comes from his account of the goings on among the Dale folk and matters of general interest for lovers of country life in the cottages. It was a well thought out plan to arrange these notes under the head of the months. The result is considerably better, in the way of making a readable book, than some of the volumes of Thoreau, as lately edited. The book warms our hearts for January as surely as for May and August. Good observers are not as scarce as they used to be, thanks to the scientific turn of our colleges, yet all of these observers are not skilful with the pen. The Canon has told his story so well that we are able to see and to hear almost as if we were his companions. The engravings are of such admirable quality as to help us still farther in our personal observations. The book is in every sense a home book, much more so than those of our own

Abbott, Bolles and even Burroughs. The Canon tells us a great deal about the common folk, and never overlooks any bit of quaintness that comes in his way. His pictures of country games are specially full and delightful, showing his British blood. The Grassmere Sports, occurring always on the third Thursday of August, show rural England to be almost as simple in its ways as in the days of Scott. It is during this August month that rural England opens its heart and its doors most freely to outsiders; let Americans make note of this. The fashion of what is termed "tekking in parties," that is, summer boarders, is growing of late, and there is hardly a farm in the dales that will not open its doors to those who are called "far-comers." The woman body at these lake land farms is always "t-maister," and she is a shrewd wife you may be sure; and if she opens her door to be "bodered wi' sic like" she will have her perquisite in full. The habit is making the English peasantry less provincial very rapidly, while it takes a good deal out of the cockney Londoner. In other words, the drift countryward, which has grown so steadily in this country, is taking possession of Great Britain as well.

Cornish Saints and Sinners. By J. Henry Harris. Pp. vii, 312. New York: Bohn, Lane Co.

On somewhat the same lines as "Three Men in a Boat" Mr. Harris begins his *Cornish Saints and Sinners* by telling how he and two companions went for a vacation to Cornwall, in the southwest of England. Two of the party were of a decided literary turn, and as the "West Country" is full of legend, folklore and superstition they had no difficulty in collecting sufficient material for one of the most amusing books on the Cornish folk that has appeared. Baring-Gould and Robert Hawker, of Morwenstow, have gone over the same ground, but their work has a far more serious tone. Mr. Harris sets out to find amusement and he finds it. Cornwall is a land of saints, and probably no other part of Great Britain and Ireland has such a number of quaint legends about the early British Church. Mr. Harris has collected many of these. But it is also a land with a peculiar people, until recently speaking an old British tongue, and exhibiting a strong relationship to the Bretons of the coast of France. Fays and fairies (under the name of "piskies") still haunt many a nook and corner; the folklore is among the richest in the British Isles, and the people are characterized by a sense of pithy humor, on which Mr. Harris has drawn largely. *Cornish Saints and Sinners* is undoubtedly a very enjoyable book.

Christianity and the Working Classes. Edited by George Haw. New York: The Macmillan Co. $1.50.

Two years ago Mr. Robert Blatchford, by a series of articles in his newspaper, *The Clarion,* which were afterward published as a book under the title "God and my Neighbor," stimulated into hostility the existing indifference of members of the working classes to the churches and stirred churchmen to anxiety over the decay of religious faith. Mr. George Haw edited a series of articles in reply to Mr. Blatchford, and this volume is an echo from that controversy. Almost all the writers agree that "the all-essential thing today is for 'the Church' to be converted to Christianity"—a confession of faithlessness that is sufficient to justify the lamented detachment of the workmen from the Church. The clergy contend that workingmen are naturally religious and can be attracted by a modern, vital presentation of old teachings. The labor leaders agree that the Church's neglect of social questions is the prime cause of the alienation of the workmen; but the clerical essayists, tho chosen for their radicalism, do not accept that contention, and give little hope that the Church will seek to win back the multitudes by taking a keener interest in social readjustment.

Trinity College, Cambridge. By W. W. Rouse Ball, Fellow of the College. Pp. xiii, 107. New York: E. P. Dutton & Co. 75 cents.

The book the title of which stands at the head of this article is the first of a very interesting series, called "The College Monographs," which proposes to deal with the colleges of the English Universities of Oxford and Cambridge. They are very convenient in size, very

moderate in price, written by members of the societies which they treat of, and they are well and quaintly illustrated. They will be invaluable to those who intend to visit the ancient universities to study the college buildings, their constitutions and their history. This volume, by W. W. Rouse Ball, Fellow of Trinity, is an admirable handbook to Trinity College, which is the largest collegiate foundation either at Cambridge or Oxford, and which was founded by Henry VIII in 1546. Mr. Ball, adequately and appreciatively describes the buildings, both exteriors and interiors, enters into a short history of the medieval university and then gives a history of the college and of the most famous names connected with it. As every one who goes to Cambridge visits Trinity, the book will be very useful.

Pebbles

ONE of these days a man will jump into the Missouri River and drown, and his widow will sue the city because it permitted the river to flow by without a wire net over it to keep out would-be suicides.—*Atchison Globe.*

A NEW story relates that a boy said at breakfast that he knew the name of the beau sister had in the parlor last night. It was George Dont. He had heard her call him George Dont a dozen times or more.—*Kansas City Journal.*

"MY wife sent two dollars in answer of an advertisement of a sure method of getting rid of superfluous fat."

"And did she get the information she wanted?"

"Sure; she got a reply telling her to sell it to the soap man."—*Mystic, Conn., Times.*

A COMPANY selling salve sent a quantity to a man, requiring him to write a puff. He wrote that he had a dog that got about two inches of his tail cut off. He applied the salve to the wound and the tail grew out to natural length. He applied the salve to the piece of tail and a whole new dog grew on—*Woman's Home Companion.*

A MEMBER of the faculty of the University of Wisconsin tells of some amusing replies made by a pupil undergoing an examination in English. The candidate had been instructed to write out examples of the indicative, the subjunctive, the potential and the exclamatory moods. His efforts resulted as follows:

"I am endeavoring to pass an English examination. If I answer twenty questions I shall pass. If I answer twelve questions I may pass. God help me!"—*Harper's Weekly.*

WILBUR J. CARR, of the State Department, had occasion to call at the house of a neighbor late at night.

He rang the doorbell. After a long wait a head poked out of a second story window.

"Who's there, asked a voice.

"Mr. Carr," was the reply.

"Well," said the voice, as the window banged shut, "what do I care if you missed a car? Why don't you walk, and not wake up the people to tell them about it?"—*Pittsburg Press.*

WHY all this fuss about the peek-a-boo waist? It looks cool, is cool, and is certainly pretty and becoming. What's wrong with it? Do the modest men who are fighting the peek-a-boo want a girl to wear furs in summer? The men would wear peek-a-boo garments, too, if it were not for their ugly hairy skin showing thru.——A PICNIC doesn't seem to be the only occasion when the man wanders off after the feast and the woman is left to clear up the debris.——WIVES might remember this: When a husband is neglected, he is in a particularly receptive mood for the flattery which the Other Woman pays him.—*Atchison Globe.*

THE story is told of two Trenton men who hired a horse and trap for a little outing not long ago. Upon reaching their destination, the horse was unharnessed and permitted peacefully to graze while the men fished for an hour or two.

When they were ready to go home, a difficulty at once presented itself, inasmuch as neither of the Trentonians knew how to reharness the horse. Every effort in this direction met with dire failure, and the worst problem was properly to adjust the bit. The horse himself seemed to resent the idea of going into harness again.

Finally one of the friends, in great disgust, sat down in the road. "There's only one thing we can do, Bill," said he.

"What's that?" asked Bill.

"Wait for the foolish beast to yawn!"—*Outing.*

A COUNTRY newspaper man who is very fond of honey visited a neighboring city recently, and at one of the hotels he was served with some delicious honey. He enjoyed it so much that he told his wife all about it when he returned home.

On his next trip to the city she accompanied him. They visited the same hotel, and when the noon meal was being served he said to his wife that he hoped they had some more of that honey. It did not appear, however, and the newspaper man, therefore, beckoned to a waiter and said: "Say, Sambo, where is my honey?" He was almost paralyzed when that worthy grinned and replied: "She doan work here no more, boss. She done got a job at the silk mill."

The wife received a handsome new dress before they returned home, after making a solemn promise not to tell the story.—*Lippincott's.*

Editorials

Mr. Bryan and the New Democracy

THE spectacular return of Mr. Bryan from his tour around the world and his immediate presentation of himself to the American people as an independent leader of a new Democracy is an event of deeply interesting and possibly of serious import. His speech of last Thursday evening in Madison Square Garden was no ordinary performance. His political enemies and his friendly critics must concur with his warmest admirers in recognizing it as an able, a thoughtful and a thoroly fearless review of existing conditions.

Ignoring all the old questions that have furnished the stock platitudes of Democratic platforms for a generation, Mr. Bryan, with a sure perception, selected the really vital issues of the present time—those that the people feel, and upon which they wish under competent leadership to align themselves. With discrimination he analyzed forces and tendencies. With the courage and the independence of a man who has thought out his own conclusions, and proposes to stand for them without asking what others think, but with the faith also of the leader who believes that the people will see what he sees, and go where he leads, he suggested the policies that he wishes to see put in operation. His program is nothing less than a reconstruction of American political democracy, and, in our judgment, he has inaugurated a movement that will grow to formidable proportions, and which, therefore, must be very seriously regarded.

Naturally enough, the Republican press attempts to minimize the scope and the force of Mr. Bryan's declaration by selecting from it certain specific propositions, and dealing with these as if they comprised his whole exposition and program. Thus they single out for comment his indictment of the trusts, or his plan to transfer the railroads to national and State ownership. They deceive themselves, however, if they suppose that the people will see in Mr. Bryan's Democracy only these particulars. The real substance of Mr. Bryan's doctrine is that the American republic is rapidly becoming a plutocracy, and that the enormously wealthy minority of the people is wielding a gigantic power which threatens incalculable evil unless it is curbed in time. The causes of plutocracy he sees chiefly in the trust organization of industry, and the policy of discrimination, long practiced by privately owned railroads, which has enabled the greater corporation to crush their weaker competitors. His proposed public ownership of railroads is, therefore, only a means to an end, namely, a restoration of competition in industry and a more equal distribution of wealth. He does not believe that any less radical step will avail. The regulation of rates by the Interstate Commerce Commission he regards as opening the way for the most thorogoing and shameless control of politics by the corporations that we have yet witnessed. Only by public ownership of the great means of transportation can all producers and consumers be placed upon terms of equality in their business relations, as thru the public operation of the post office they are placed upon terms of equality in the communication of intelligence.

It is idle to assume that the American people will not take Mr. Bryan's analysis of our economic situation and his suggestions of policy very seriously, or that multitudes will not adopt them as their political faith. The revelations of individual and corporate wrongdoing, of outrageous betrayal of trusts, of corrupt alliances between corporations and politicians, have profoundly moved the great masses of honest, hard-working farmers, traders and workingmen thruout the length and breadth of the land. Interest in the possibilities of the public ownership of the greater public utilities has been very rapidly growing, and a desire to see a considerable extension of our experimenting in this direction is very general. Mr. Bryan's appeal to this mass of sentiment and opinion will, we think, be immensely more effective than Mr.

Hearst's. Rightly or wrongly, Mr. Hearst is regarded as self-seeking by many elements in the population which have no fault to find with the political philosophy set forth in the editorial columns of his newspapers. Mr. Bryan, on the other hand, is almost everywhere regarded as a genuine man of the people, capable of much disinterestedness, much capacity for self-sacrifice, and, above all, as holding his real convictions so sincerely that he would rather imperil his political chances than compromise with his conscience.

Among the plain people to whom a man like Mr. Bryan will thus undoubtedly appeal there has been for two or three years past an exceedingly eager watching of President Roosevelt and his official conduct. There has been a very generous disposition to hope for much from this quarter, believing, as they do, that Mr. Roosevelt is sincerely determined to defend popular interests against corporate power, they would gladly rally to him. But yet they do not fail to observe the too obvious circumstance that, after all is said and done, the great corporate interests are still, as in the past, closely allied with Republican party politics.

This much, then, at least, seems fairly certain. Mr. Bryan has made the attempt to reorganize the political democracy, namely, that of asserting the overshadowing importance at the present time of the great issue of social economic democracy in the struggle against plutocracy. He has at least opened up the possibility of again rallying some millions of American voters to the standard of a Democratic party. He has made it probable that once more our politics will be a struggle over real issues and that they will be profoundly interesting because fraught with vital destinies.

Mr. Bryan on Railroads

Mr. Bryan says he does not believe in Socialism, but in individualism, and yet he wants more Socialism. That is a perfectly reasonable position and is one that we have long defended. He would have individual ownership where competition is possible, and public ownership where monopoly is in the nature of the case unavoidable. That is a perfectly clear and sane proposition, and it provides for very large application. It would provide for the protection of free competition against trusts, and on the other hand for public ownership in many cases where competition is impossible or difficult, as with railways, canals, trolley lines, telegraphs, telephones and municipal lighting and water.

It is these monopolies, given by franchises to corporations, which chiefly produce enormous and inordinate fortunes and endanger the community. Inasmuch as they possess their dangerous power by means of their franchises from cities or States, the remedy is in the hands of the people. The people can do something by rate regulation, by three-cent fares, eighty-cent gas, and by State and interstate commissions; or they can resume their full authority by ownership of monopolistic public utilities. This is what Mr. Bryan proposes for the railroads of the United States.

He would have the United States Government own certain trunk lines, and the several States own and control other more local lines. The public ownership of railways has been with us an ultimate object of desire, an ideal to be looked for, but one which there is no hope of soon reaching. The task would be enormous of transferring from private to Government control 211,000 miles of railways, a mileage equal to that of Europe and Asia combined, and with a valuation of over fifteen billion dollars, about half as much as the total debt of all the nations in the world. To take on this stupendous amount of obligation at once, and attempt to operate all these railroads as one system, would be an enormous task, which might stagger the wildest economist; but we believe that the time will come when it will be undertaken and achieved, but gradually, not suddenly or hastily, as has lately been attempted in Japan.

But Mr. Bryan's scheme is an extraordinary one. He does not tell us yet when or how he would reach his desire, but he would have a few trunk lines owned by the United States, and most railroads owned by the several States. On the face of it this would seem to produce intolerable confusion, worse than that of

the conflicting State legislation on divorce. How would State commissions, operating their railways within State lines, while at an imaginary line the railroads pass into the ownership of other States, manage to keep schedules and rates in harmony? There is room for intolerable chaos. But Mr. Bryan gives us some comfort. He tells us that he has traveled on such trains in Europe, crossing national lines, and that he has observed no trouble. There the railroads are mostly owned by the governments, and yet commissions manage to work in harmony, Sweden with Norway, Germany with Austria and Switzerland. This is true, and we presume that, with great trouble and complexity, interstate comity might generally be maintained. Yet it would be a most complex task, ever liable to confusion.

Mr. Bryan's declared object in having the States rather than the nation own most of the railroads is to maintain the old consecrated doctrine of State rights. Possibly to our view those rights are not as sacred as they are to him, and we should feel that public interests were quite as well secured by national as by State ownership of railroads. It is in that direction we have looked. To that conclusion we think that Mr. Bryan will come. We seem to remember that in his feelers on the subject before his profitable trip abroad he spoke only of State ownership. Now he allows national ownership of certain trunk lines. That limited number will increase, when the question becomes a practical one, and the branch roads will go with the trunk lines.

But a new difficulty is introduced by the Southern Democrats. To a man they seem opposed to Mr. Bryan's plan, and for a reason not at first suspected. They say that any national ownership will endanger their general system of Jim Crow cars for negroes, for national laws will follow national ownership and will not allow discrimination between the races. Jim Crow cars they will have, profit or no profit, with no regard to pocket, politics or religion. It is declared that it was this difficulty, this passionate sentiment in the strongly Democratic States, which led Mr. Bryan to favor State rather than national ownership. He has spoken warmly for the belated races in India and the Philippines, but he has been very silent as to any wrongs of a corresponding race in this country. It was very noticeable that John Sharp Williams, leader of the Democrats in the House of Representatives, purposely avoided paying court to Mr. Bryan on his return, for the reason that he does not believe in public ownership of railroads and he knew it was to be in Mr. Bryan's platform. Southern conservatism, with Southern love for the Jim Crow car, explains the Southern frost.

Now the difference between Mr. Roosevelt and Mr. Bryan is this: Mr. Roosevelt says that if the railroads resist control by Congress and the Interstate Commission the people will have public ownership, but he does not say he believes in it or desires it. Mr. Bryan plainly says he does desire it, but he yet says that if the railroads gracefully submit to control public ownership will not be a speedy issue. There is no practical difference between the two. Both put off the issue to see how control by the Interstate Commission works. We do not, therefore, think that the Southern Democrats, or any one else, need take Mr. Bryan's pronouncement on railroad ownership very seriously at present. They need not fear to follow his banner in the next national election; and if a certain number of conservative men, like Mr. Williams and Senator Bailey, of Texas, are unwilling to vote for him, the loss will be more than made up by the Tom Watson following of Populists.

We agree with Mr. Bryan that public ownership of railroads is not a present nor an early issue. It must wait. It is well to accustom the people to the idea, but it must ripen while other public issues nearer at hand are being settled, such as municipal ownership of local public utilities, and the development of the Post Office, by adding postal banks and postal telegraphs and telephones and expressage—a process of experience and education, with an improvement in our Civil Service, and the reduction of our national debt, are necessary before we can take on the prodigious task of buying and operating our railroads.

Our Navy and Our Commercial Marine

During this week there has been a grand display of our splendid Navy in the presence of the President of the United States, the Secretary of the Navy, and many thousands of admiring citizens. There have been boasts that ours is the third navy in the world in point of strength. Twelve mighty battleships, four armored cruisers of the first class, as many monitors, and as many protected cruisers, and over twenty other destroyers and auxiliary vessels have manned their yards, gone thru with their evolutions, and fired their salutes. Besides these, we have nearly twice as many other corresponding ships of war in commission or under construction, and the lovers of the Navy tell us that it is this new Navy that has given us our recognized power and influence among the nations of the world.

It has, doubtless, had its influence; but it was with a vastly inferior Navy that we destroyed the Spanish fleet and captured the Spanish colonies. We do not seem to discover that it is the possession and employment of a strong Navy which is turning the goodwill of the South American Republics toward us, but the assurance that we will not use our Navy as Great Britain and Germany have used theirs to collect debts. We confess that we can see no advantage to be gained by further increasing our naval strength, so as to keep it even with or superior to that of Great Britain, France or Germany. Indeed, that was no bad parable which Mr. Bryan repeated for our readers last week, when he represented three men living on a lake, and a builder of boats going from one to another urging each to protect himself against the others. This is a day for growing peace and arbitration, rather than for increased armaments of war.

A principal argument on which the Emperor of Germany has relied in trying to persuade the Reichstag to build an enormous navy, is the claim that a big navy will be of great advantage to develop and protect a commercial marine. It is true that the German commercial marine has grown rapidly by the side of the growth of the German navy. But the one growth is not the result of the other. It will be instructive just now, when so many are calling on us to increase our ships of war, to notice what is the state of our commercial marine. Indeed, it is almost true that we have no foreign commerce under our own flag. Nearly the whole of our foreign commerce is in foreign ships, and that, too, when a hundred years ago and less we had a fine body of American vessels engaged in foreign trade. And then we had no Navy. It might be profitable for our statesmen to discuss the reason for this extinction of a very profitable carrying trade and find and adopt a remedy. We have a splendid coasting marine, for the very good reason that our laws do not allow any other nation to take a share in its business, but our legislation is not sufficient to re-create our foreign commercial marine.

During the year just closed the total net tons of both sail and steam vessels that entered our ports was 2,030,584 tons, an increase of 2½ per cent. on the previous year. But during the last year the total foreign tonnage entering our ports was 17,418,386 net tons, or an increase of 1,922,247 tons, or about 12½ per cent. That is, the bare increase for one year of foreign tonnage engaged in commerce with this country was very nearly equal to the total tonnage of American-owned commercial marine. While, during the last twenty years our Navy has grown so prodigiously from almost nothing, our commercial marine has grown relatively smaller and smaller. We may be getting to be magnificent in the art of war, but in foreign commerce we are insignificant, so that our consuls abroad, in many cities, hardly see an American flag enter their ports once in a year. Our vessels may venture as far as Havana, and some may cross the Pacific to Manila or Hong Kong, but very seldom to the other Asiatic or African or Australian ports, where British and German ships monopolize the trade; and, indeed, very few are the American vessels that enter the Baltic or the Mediterranean Sea.

Our points are two: first, that American commerce does not depend on a great American Navy; and, second, that it is a first duty of statesmanship to remove the obstacles to, and to make the

way easy for, the building up of a prosperous American commercial marine.

The Psychology of a Pious Thief

In the case of President Frank K. Hipple, LL.D., of the Real Estate Trust Company of Philadelphia, we seem to have another case of a good man gone wrong. He was so good, so trustworthy, so conscientious, so unwilling to employ any one who drank or gambled or smoked, so strenuous in his righteousness, that the bank examiners did not think it important to examine his company often or very strictly, and the directors took his word for everything, and the Trustees of the General Assembly of the Presbyterian Church made him their treasurer and put nearly a million dollars in his trust, and the Sustentation Committee of the Synod of Pennsylvania also made him their treasurer, as did the Presbyterian Hospital of Philadelphia, and the American branch of the Pan-Presbyterian Alliance. He was, then, a prominent, notable, trusted, Christian man of business, lawyer and financier.

But he went wrong. He robbed the depositors in his company, deceived and lied to his directors, stole and borrowed on securities deposited with his company, and wrecked it to the tune of seven million dollars; and then, when exposure was certain, he committed suicide. That was the kind of a "good man," whom all the world trusted. They said that he did not steal from the benevolent or religious societies whose funds were in his power. But these funds, by later reports, are in confusion, and he sacrilegiously abstracted bonds of the Presbyterian Hospital. This is pleasant to know — that most of those funds were in the form of mortgages, which he could not hypothecate.

Such a case is interesting as a psychological study. We may presume that Mr. Hipple began his religious life with the usual reality, for we are not now required to believe it impossible to fall from grace. Doubtless the temptation to gross dishonesty came gradually, and it was a long time before he found out that his religion had quite vanished, if, indeed, he ever discovered it.

It is the commonest of all observation and experience that right and wrong exist side by side in the same person. That there is such a dual nature, having its alternate victories in the soul, St. Paul remarks at length, speaking of the law in his body warring against the law of his mind; and there are few people so far advanced as to reach that state when they are of those

> "Glad souls, without reproach or blot,
> Who do Thy will and know it not."

Most of us find that when we would do good evil is present with us, and that we have too blindly reposed our trust in our tried virtue or religion.

And this commingling of right and wrong impulses is by no means prevented by religion. Indeed, religion is only one phase of morals—duty toward God, as well as duty toward man; and one may alternately be controlled, it is sad to say, by his selfish passions and his altruistic or religious principles. That is the experience of nearly every soul; and that should make us hesitate always to put the worst construction on the public fall from reputable virtue of a supposed good man. The lapse may have come under a special impulse of evil, just as John B. Gough went on a debauch after he had begun the life of total abstinence. David's case is typical.

But there are other cases in which the victory of the right and wrong impulses does not alternate, but seems to coexist at the same time. A man may have great religious nature and purpose, and yet be caught in such a net of wrong that he has not the strength and courage to escape it, while genuinely grieving over it. A secret wrong may involve others; or there may be a hope to escape from the public exposure and the injury thus liable to be done to innocent parties or to the interests of religion. In such a case it may be difficult to analyze the motive, and tell how much is mean fear for one's self and how much is dread of injury to a cause or to others, for both may coexist.

Suicide is confession of guilt, but it is not necessarily a confession of utter hypocrisy. A man may go to death for the sake of others and in obedience to duty, as we all know; and the despair which leads to suicide may be in part a

despair of being able to redeem a wrong which has grown far beyond what was expected. But suicide implies a greater fear of the judgment of men than of the judgment of God. The man who kills himself because he dreads to meet those he has deceived, and to go to prison, fears prison more than he fears Hell. We may fairly presume that he has lost his belief in the system of doctrine taught in the Presbyterian Confession of Faith, which says:

"The souls of the wicked are cast into Hell, where they remain in torments and utter darkness, reserved to the judgment of the great day."

The new Presbyterian Creed seems to say the same thing more euphemistically when it tells us that at the last judgment there shall be "a final separation between the righteous and the wicked," when "the wicked shall receive the eternal award of their sins." Doubtless Mr. Hipple had assented to both these creeds, and probably voted to adopt the last. And yet this peculiar psychological fact is to be considered, that growing laxity of life and indulgence in known wrong courses has a corroding effect on one's system of belief. The religious life holds one to the religious faith; and faith goes rapidly when one recognizes that his life is persistently bad. Such a one asks himself if it can be that there is any life beyond the present, or any God to make "eternal awards."

It may be presumed that while such a man as Mr. Hipple had long lived the life of a hypocrite, knowingly posing as an honest and religious man and living a lie, he may for months or years have seemed to himself to combine, if not harmonize, his rascality with his religion, just as a Sicilian bandit may be very worshipful, or as any one of us may experience both good and bad impulses, and possess even permanent good and bad traits and habits. But the necessity which seemed to be upon him to continue in an evil course, less and less able to resist while growing worse and worse, can hardly have failed, in these days of materialism and unbelief, to undermine his faith in religion, faith in the future life and faith in God, until suicide appeared to him an easy relief and probably the final end of his conflict and shame.

Politicians to the Penitentiary

All public officials should be carefully watched. If they are honest they will welcome it as a defense. What one watchful citizens' association can do is seen in Chicago.

During the last eight months the Citizens' Association of Chicago has been devoting itself assiduously to an investigation of irregularities in the conduct of Cook County officials. Statements were made to the Association in December that the payrolls in the office of the clerk of the Superior Court had been systematically padded for years. This charge was quietly investigated and complete evidence substantiating the truth of the charge was presented to the State's Attorney in January. In February the grand jury voted twenty-five indictments against John A. Linn, clerk of the Superior Court of Cook County from 1897 to 1904. The indictments charged forgery, larceny, embezzlement of funds received as a public official, conspiracy to defraud the county and conspiracy with other parties to spirit away the principal witness in the case, and still another indictment was based upon withholding the books of account of the office from his successor. Payroll frauds aggregating about $24,000 were unearthed, besides large thefts of fees. As the State had the benefit of the evidence of Linn's former cashier and tool, Linn pleaded guilty in April, and was sentenced to the penitentiary, where he is now serving his term. His stealings have been shown to aggregate at least $70,000, but as he is worth half a million dollars a large part of this will probably be recovered by the county.

After the conviction of Linn, the Association investigated the administration of John A. Cooke, clerk of the Circuit Court of Cook County from 1897 to 1904, and brought to light facts which were almost a repetition of those in the Linn case. Evidence was gathered against the chief clerk of the office during Cooke's term, which placed Bradley in the shadow of the penitentiary. He then broke down and turned State's evidence, with the result that in April the grand jury returned thirty-one indictments against Cooke, charging forgery of endorsements to county warrants, or payroll signatures;

conspiracy to defraud the county; embezzlement of public moneys and withholding of public records. Cooke was brought to trial in July, and after a court battle lasting three weeks he was convicted on the conspiracy charge, which involves a sentence of from one to five years in the penitentiary. At this trial it was shown that Cooke had defrauded the county by stuffing payrolls to the extent of about $24,000. His thefts of fees will probably bring his total shortage up to $60,000 or $70,000.

Investigation also brought to light considerable shortages on the part of the clerk of the Superior Court, the clerk of the Probate Court, and the former clerk of the Probate Court, now Public Administrator of Cook County. Shortages amounting in the aggregate to some thousands of dollars have been made good by the officials mentioned.

An important result of the investigation conducted by the Citizens' Association was the calling of public attention to the fact that for years there had been no auditing, worthy of the name, of the receipts and disbursements of the ten great fee-offices of Cook County. Altho semi-annual reports had been made to the County Commissioners by these various fee-offices and altho these reports were submitted to the Finance Committee for approval this procedure had been merely perfunctory, so that the head of each fee-office of the county had been practically a law unto himself, accounting only for such moneys as he saw fit, without much danger of being questioned by any other official. These facts are significant in view of the further fact that the fee-revenues of Cook County had declined noticeably during the last ten years, the total for 1903 being only $1,005,000, as compared with $1,321,000 in 1896. Since the indictment of Linn the receipts of several of the great fee-offices have very noticeably increased; and it is apparent that receipts of these fee-offices for the current year will be much larger than ever before. As a result of the abuses brought to light a greatly improved system of bookkeeping has been installed in all the county fee-offices, and it seems certain that a supremely important reform will be accomplished in the immediate future, viz., the placing of all county employees under civil service rules. The extension of the merit system to those county employees has been earnestly sought for years by public-spirited citizens, who, until now, have been unable to accomplish their object because of the opposition of spoils politicians. The sending of Linn and Cooke, both prominent politicians, to the penitentiary has served to overcome this opposition, and both political parties have now declared in favor of extending the civil service system so as to cover all county employees. The Citizens' Association is still continuing its investigation of county offices.

Farmers' New Education

The West has a new idea. It is making the education of its young men include the farm as well as the workshop and the laboratory. For several years the Western States have been conducting agricultural colleges in which the best of scientific knowledge has been dispensed, and the students have been graduated full of practical information concerning grains, breeds and culture. But now the West is going even farther and is carrying this sort of education into the lower grades of its educational system, a movement of considerable importance in its relation to Western development. It indicates an appreciation of the needs of the community worthy of consideration because it is rare in new commonwealths.

In one county high school a system has been followed that included the judging of cattle, the planting of crops and the selection of seed. The result has been an increased attendance of boys from the farms and a lively interest in the doings of the school that has added to the effectiveness of the year's work. Other schools are taking up the idea, intending to follow it to its legitimate end —the fitting of the farmer for his work in the same degree that the teacher or the artisan is trained.

Probably the full advantage of agricultural education has not been recognized. For many years the colleges under State management, and with the assistance of the Federal authorities, have conducted schools devoted directly to

the training of farmers. More than that, they have sent instructors out into the farming districts with lectures calculated to inform the settlers how best to till and plant their lands. Of late years, thru the efforts of the railroads, "good seed trains" have been sent on long journeys, thousands of farmers visiting them and listening to the experts, who went prepared with charts and samples of grain to show how big crops can be raised.

All this is practical and, so far as the railroads are concerned, to some extent selfish; for the raising of larger crops means increased traffic and larger prosperity on the part of the farming communities. This has been accomplished, too, for the grain average has been materially increased in those parts of the prairie States where this education has been most thoro. What it will be when the education is extended to the academic schools and is made to a degree compulsory, instead of being confined to the few who are willing to go to an agricultural college, is not easy to predict.

It is easy to understand how the West, which is essentially a farming section, will take to the new idea in education. The high-school course that does not include a few weeks, at least, in farming and stock judging soon will be as much out of fashion as is that which now does not have manual training in its curriculum. It is too plainly practical to be ignored by the taxpayers.

Productive as the West is, it does not live up to its possibilities. For instance, the report of Secretary Coburn on the Kansas wheat crop just given out estimates an average yield of 14.3 bushels to the acre, yet there are hundreds of thousands of acres that yielded 35 to 40 bushels, or over twice the average. The corn crop is reported as promising much, yet it will average only half or a third of the high mark in production. If the younger generation of farmers can be educated so that the best results shall be not the exception, but the rule, the West will double and triple its yields, and its prosperity of today, which is a wonder to the financial world, will be beyond the dreams of its most ambitious promoters.

The beginning of agricultural education in the high school is the first step in the movement for greater returns from the fields. It is not alone moisture nor culture nor seed selection that makes a great yield. Rather it is the full understanding of the utilization of all these forces and their application to the climatic needs and limitations of the country. This it is that has made it possible for settlers to thrive on the high plains, where formerly thousands of homesteaders were starved out because they did not understand what could be done profitably. In that very section the Government is maintaining experiment farms where scores of varieties of grain are being tested and where the principles that should govern agriculture in an area of limited rainfall are taught.

One danger exists: that farming methods be discussed and taught to the loss of that wider culture that comes of books and goes far to make for happiness and the satisfaction of life. The West glorifies the god of statistics—so many bushels, so many head, so many pounds. The greater the number and value, the loftier its pride. It should take care that it does not sacrifice higher things in education for the advantage of greater crops and better stock. As the extension of agricultural training in the common schools goes on, its tendency will be apparent, and educators thruout the nation will watch the outcome with interest. Let us hope that it may be practical without being destructive of ideals.

Election of Senators

The Constitution of the United States says:

"The Senate of the United States shall consist of two Senators from each State, chosen by the legislature thereof, for six years."—Art. I., 3, 1.

That fixes the way the Senators are to be chosen. They must be elected by the State legislatures, not by popular vote. But we have come more and more to understand that the will of the people, as against that of party managers, is best secured when the power of election rests directly with the people, and does not have to filter down thru several intermediaries. That explains the extension of the referendum. It accounts for the success of the government of Galveston by a commission, and the probable extension of that system to other Texas cities. It is the reason why the system of pop-

ular primaries is being rapidly developed, so that the people have nominated Hoke Smith as Governor of Georgia; and it has been successfully applied to the nomination of United States Senators, the people thus registering their will as to whom they would have the legislature elect. Thus the people get around the error in the Constitution, just as they get around its ridiculous plan for choosing a President by electors. The Constitution needs amendment in this matter. Some would have it made obligatory on the States to elect their two Senators by popular vote. It would perhaps be better to let each State determine for itself which way it prefers. Thus in place of the paragraph quoted above the amendment might read:

> The Senate of the United States shall be composed of two Senators from each State, chosen in such a manner as shall be prescribed in each State by the people or by the legislature thereof.

In that case we presume most of the States would prefer popular election.

Renunciation of the Priesthood

We by no means express gratification that the Very Rev. J. R. Slattery has withdrawn from the priesthood of the Catholic Church, or, rather, that his priesthood has dropped from him; for the reason that he gives is one that we regret to hear. He is like many an earnest student, educated in an unquestioning faith, who begin to read widely in science, criticism and history, and find that their new beliefs have undermined their old faith. That is a phenomenon peculiar not to Catholics alone, but probably even more frequent in Protestantism, and one that may be expected in any other religion. Spinoza was a Jew. Father Slattery—or, we must now call him Mr. Slattery—seems to drop his priesthood partly because he has ceased to believe in the ecclesiastical claims of his Church, but still more because he has lost faith in supernatural Christianity. More than that, his thought of God has changed. God seems to be to him no longer a personal being, but a sort of mystic, or unsubstantial, non-personal spirit, or order, of the universe; not the being to whom one would pray. When he came to such a conclusion he could do nothing else, as an honest man, but withdraw from any claim to the priesthood in a supernatural Church which holds to the three Persons of the Trinity. We respect him for making the honest, frank public acknowledgment of his change. As a priest he did an humble and difficult work with little sympathy, trying to build up a Catholic clergy among the negroes; and it is to his honor that, brought up in wealth, he thus sacrificed his ambition to his devotion. But we see no reason why one who is deep in modern science or criticism or history should not also hold to a personal God, nor any reason why the essential truth of Christianity should be sloughed off. As an honest man he could do nothing other than he has done; but other men quite as honest and quite as learned have not found it difficult still to pray to a personal and present God, and to acknowledge themselves as disciples of our Lord Jesus Christ. While we regret the conclusion which our correspondent has reached, we are sure that the account of his experience is well worth the reading. We do not gather that he feels any ill-will toward the great Church whose priesthood he has left or that he has any desire to do it injury, and still less that he is a convert to any Protestant body.

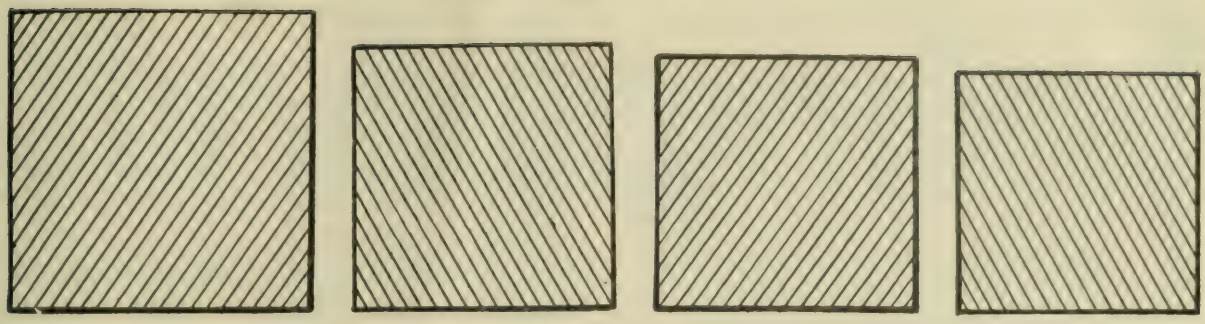
The President's Defense

The British critics are in error who think that President Roosevelt may be able to bring Russia and Japan to terms, but he is powerless to make any impression on our sacred spelling. But the impression has already been made. There is nothing sacred about it; indeed, it is about as profane a system, and as conducive to profanity, as anything that lingers superfluous on the stage. The President's reply to the criticisms is admirable. He shows how comparatively insignificant the present change is, and he does not pretend to dictate as to its permanence. If these slight changes in three hundred words wholly or partially meet public approval, then, he says, they will become permanent without any reference to what public officials or private individuals may feel, and "if they do not ultimately meet with public approval they will be dropt [observe his spelling], and that is all there is to it." The criticisms made, he says truly, have been in

entire ignorance of what the step is and what is its purpose There is nothing in it revolutionary, and it has the approval of the great body of English scholars, and of the editors of the Oxford Dictionary, as well as of the "Century" and the "Standard." With these authorities one is in good company. It is nothing in comparison with changes that have been made since the time of Shakespeare or even Milton. It is continuing the work of Johnson and Walker and Webster; and we heartily wish the time may be hastened when much more radical improvements may be made. Shakespeare spelt his own name in a dozen different ways.

Authority Over Words

Unthinking people, and some who usually think sanely, have strange notions as to the authority of rulers, dictionary-makers and grammarians over language. Some are speaking of the President's order as to the Government Printing Press as if the Government were making arbitrary changes in orthography or grammar. Even a stark despotism could not do that, and certainly the President has not thought of such a thing. The maker of a dictionary does not dictate how a word must be spelt or pronounced or defined. He simply takes the best usage he knows of and records it, and he may recommend a change, but nothing more. The ones who possess and use authority are the people—no one in particular, but all in general. Edward VII. has no authority over the King's English, and it would be impossible for him, if he would, to make the word *euphuism* take the meaning of *euphemism*, or to require us to leave the second *r* out of *bridegroom*, as Noah Webster advised. It is the readers of THE INDEPENDENT, and others who ought to be its readers, who say how words should be used, and any intelligent one of them has the right to differ from the dictionary and to say that he does not follow the dictionary, but that it is the business of the dictionary to follow him—and so it is if he understands better than the lexicographer how the word is used in intelligent society. All this the President knows, and he has made no absurd attempt.



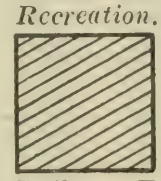
Gratitude for Service

Even from as far off as West Africa there comes to us a response to a remark made by Mrs. Rebecca Harding Davis in her comment on our "Stories by Undistinguished Americans." She asked why it was that in not one of those stories was there a word of gratitude expressed to the country which had given them opportunities so much greater than many of them had enjoyed in their native land. Our correspondent is a missionary, and he remarks that it is a common experience of those who work for the poor or degraded people, that if he looks for appreciation of his efforts, no matter how self-sacrificing, he is sure to be disappointed. That is generally true. It takes a long time to disabuse the beneficiaries of the idea that one is working for some selfish purpose. They often resent meddling, are fairly satisfied with their present condition, and are very suspicious of those who try to improve them. This is a usual experience, until long patience has proved that one is disinterested. This is no reason for discouragement, even if it makes such work less enjoyable.

The particular lesson of the late Philadelphia failure is an old one, never learned, that directors should direct. We have a "Directory of Directors," and many are directors of a dozen companies, whose business they cannot possibly attend to. We can say one good word for John D. Rockefeller. For many years he refused to be on any board but that of the Standard Oil Company. He gave all his time to that company, for he held that no man should be on a board unless he knew its business.

The public is with Secretary Wilson and against the packers, when he tells them that there must be no delay in obeying the law as to labels, and that the labels must be more specific, giving plain indication to the buyer of what the cases contained. For instance, the sausage label must tell that it is entirely of pork, or pork and beef. Consumers have the right to trustworthy information, and it is the business of the Government to see that it is given.

Insurance



Accidents to Pedestrians. | *At Home (Indoors.)* | *Horses and Vehicles.* | *At Home (Outside.)*

Accidents In and Outdoors

It is authoritatively stated that more than 50 per cent. of the total losses paid by accident insurance companies are due to injuries received in the streets. Statistics also show, as a matter of fact, that it is 2,500 times more dangerous to move about in the streets of New York city or on the waterways adjacent thereto than it is to travel on a railroad train in the midst of the hazards that are supposed to lurk along the iron rails. Those who think "it is safest to stay at home" will learn with surprise that it is very dangerous to box one's self up in a house, and that around the house is a very common place for getting hurt. *The Insurance Press* recently printed a very interesting diagram showing the proportion of accidents by causes, according to insurance experience, the wounded in times of peace. In this diagram, which is herewith reproduced, it is strikingly set forth that pedestrians are subject to the greatest hazard. In New York City some one is killed every hour and three-quarters. A New Yorker perishes by means of street car, elevated or subway train, either by being run over or by collision, every six hours. A drowning casualty comes every eight hours, and a life is lost in a burning building in the metropolis every fourteen hours. The accidental deaths in this city last year totaled 5,191, or one for every 800 inhabitants. The hazard signified by railway travel, as shown by the diagram is comparatively insignificant, and according to the Interstate Commerce Commission reports for 1903, out of 700,000,000 people who traveled on trains drawn by steam locomotives, only 355 were killed. The use of firearms, animal bites, assaults, steamship travel and miscellaneous causes form a constantly decreasing scale of hazard. One person in every eight with an accident policy goes to the insuring company with a claim.

Fire and Other Dangers From Telegraph Wires

Mr. D. S. Creamer, State Fire Marshal of Ohio, in an official circular dated August 26th, warns people against the dangers that frequently lurk in telegraph wires. Wires of this kind are ordinarily charged with from 25 to 60 volts, but long distance wires are given 265 or 300 volts. Even the latter voltage would only jar, not kill, but a telegraph wire may carry a killing current from accidental contact with a high tension wire or from lightning. An arc may also be formed between wires carrying but 25 volts in which they will be heated white hot and fire any wood with which they are in contact. Any wire is consequently a constant fire hazard. Bodies of dead birds are often found under telegraph lines.

Financial

"Preferred Borrowers"

THE financial columns of *The Evening Post* recently contained a reference to "preferred borrowers" to whom minimum rates are always given by banking institutions where they are dealers, no matter what the prevailing market rates on loans may be. To the ordinary observer this custom seems curious, if not unjust, since generally speaking a banking house in considering a loan decides for or against it on the basis of the merits of the securities offered as collateral. It is to these that the lender looks for reimbursement in case the borrower fails to make payment.

It was the tremendous uncertainty as to the value of the collateral pledged in connection with the over loans negotiated by the Real Estate Trust Company, of Philadelphia, which was the moving cause that led to that bank's undoing. A tradition in Wall Street is to the effect that the safest borrowers always deposit the safest collateral, supplying additional margin in case the market chances to break before the lender has a chance to call for it. Such borrowers constitute the class of "preferred borrowers" to which the *Post* referred. They can obtain money from lending banks in the tightest markets when no one else can do so. A prominent banking institution in this city has a long list of loans on its loan books that have not been "called" in ten years. These loans will be continued as long as the borrowers wish for accommodation. Money for the financial goths and vandals may rise to 25, 50 or even 100 per cent., but the rate to "preferred borrowers" will never be marked above 6 per cent. To be a financial giant means much, and so long as lenders continue as timid as they proverbially are it is not so very strange that astute bank officials, whose business it is to loan money, will gladly do this to some borrowers at 4 per cent. when the market offers 5 per cent., and refuse 6 per cent. from others who offer good security for the loan.

....The total value of the raw cotton exported during the fiscal year which closed last month exceeded the sum of $400,000,000. This establishes a record which exceeds the value of any other article of merchandise sent out of the country, and cotton may again well be called king, as it was designated in 1860-5. The total value of the exports of breadstuffs of all kinds, as reported from Washington, was $186,000,000; provisions, $211,000,000, and manufactured iron and steel, $161,000,000.

....Speaking a few days ago of James J. Hill's (or the Great Northern Railroad Company's) project of building a new road in Canada from Winnipeg to the Pacific Coast, Sir William C. Van Horne said that for every mile built by Mr. Hill in the territory of the Canadian Pacific road, two miles in the interest of the Canadian Pacific would be built in Mr. Hill's territory on the southern side of the boundary. Sir William (a native of Illinois, and in his early life connected with railways in the States) was for some years president of the Canadian Pacific and is now chairman of its board of directors.

....Dividends announced:

Chicago, Grt. West. R'way Co. (Preferred), semi-annual, $2.50 per share, payable October 1st.

American Chicle Co. (Common), 1 per cent., payable September 20th.

Buff. & Susq. Iron Co. (Debenture Gold 5s), coupon, payable September 1st.

Internatl. Paper Co. (Preferred), quarterly, 1½ per cent., payable October 1st.

Am. Express Co., semi-annual, $3.00 per share, payable October 1st.

(*Continued from page* 597.)

Now, a bird may perch indefinitely upon a telegraph wire without feeling the smallest thrill from the electric current, if the bird so perching is in contact with nothing else. If the bird perching on one wire but touches another bird perching on another wire, the current passes thru their bodies and they die together. A living body touching two charged wires short circuits the current with dangerous if not fatal results. In cities so great is the danger from hanging wires or from wires lying about that children should be taught to shun such wires, no matter how small they may be, in order to avoid a serious burn, if not sudden death.

VOL. LXI. NEW YORK, THURSDAY, SEPTEMBER 13, 1906 No. 3015

Survey of the World

The Maine Election

On Monday of this week the election was held in Maine, and Governor Cobb, Republican, was re-elected Governor by a much reduced majority, and the four Republican Congressmen were re-elected. The principal local question was the maintenance of the prohibition law, which was supported by the Republicans, while the Democrats urged resubmission to a popular vote. In the Second Congressional District the labor question was made a principal point by the coming of Mr. Gompers to oppose Mr. Littlefield, because he had voted in Congress against a bill urged by Mr. Gompers. On this subject, and the general support of Mr. Roosevelt's policy, an important speech was made last week in Bath, Me., by Secretary Taft, in aid of Congressman Littlefield's campaign. The speech was mostly devoted to showing what had been done under Mr. Roosevelt's administration to aid labor and control trusts. A certain revision of the tariff he approved, but it was impossible to take it up before the recess of the present Congress. When Mr. Taft came to the special defense of Mr. Littlefield he referred to the attack by Mr. Gompers because Mr. Littlefield had voted against the American Federation of Labor's bill which denies the right of injunction against unlawful interference with rights of a pecuniary nature, and which legalizes boycotts and blacklisting. In both these matters Mr. Taft defended Mr. Littlefield's position as sound. Mr. Littlefield was one of only some half-dozen members who voted against the bill, but which it was known could not pass the Senate. His majority is much reduced, but in his district, as in the others, it was the prohibition question that had the chief influence. The cities generally went Democratic, and the the Democratic representation in the Legislature is much increased, but not sufficiently to endanger the re-election of Senator Frye.

Mr. Bryan

In his address at Chicago, on his way to his home in Lincoln, Neb., Mr. Bryan made an extraordinary speech, two hours long, before over a thousand guests at the Jefferson Club. He spoke in the most independent manner, and especially devoted himself to denouncing Roger C. Sullivan, Democratic Committeeman from Illinois, and the convention which endorsed him. He advised the nominees of that convention to bolt Sullivan or "deserve defeat." His eloquent address was received with tumultuous applause. He further declared that no man identified with a public-service corporation should be permitted to hold an executive office in the organization of the Democratic party. That would seem to be directed against such a man as August Belmont, treasurer of the Democratic National Committee. He further demanded that not a dollar be received for campaign purposes from corporations. His views as to Government ownership of railroads he said were personal, and if the people did not want them he could get along by himself. Senator Bailey, of Texas, does not think it worth while to make any attack on Mr. Bryan's railroad doctrine until after election. He has expressed himself very kindly toward Hoke Smith, the next Governor of Georgia, as the Democratic candidate for President. This would be a nomina-

tion in defiance of the custom for forty years which takes the nominee from the North, where the election is contested, but it would be agreeable to many Southern Democrats, who think it is time for them to present a candidate. A curious theory has been presented that Mr. Bryan's purpose in approving Government ownership of railroads, and in so bitterly opposing Mr. Sullivan in Illinois, is to prevent his own nomination for the next Presidential election, believing it not to be for his interests. Mr. Sullivan has responded to Mr. Bryan's attacks, saying that he prefers the approval of the Democratic convention to that of Mr. Bryan; also that if Mr. Bryan charges him with being in politics for a living, Mr. Bryan himself has made all his money in politics.

Elections and Nominations

The Vermont election on Tuesday of last week made Fletcher D. Proctor, Republican, Governor by 20,000 majority over P. W. Clement, the fusion candidate. The Senate is solidly Republican, and the lower house 40 or more Democrats out of 243 members. The issues of the campaign were largely personal. Both candidates are very wealthy and expended much money.——The Georgia Democratic Convention has met and obeyed the will of the primary election by nominating Hoke Smith unanimously for Governor. Clark Howell and the other defeated candidates did not attend. Bryan was endorsed for President, and the convention endorses generally his platform except that it demands the extension of the State's railroad (the Western & Atlantic, from Chattanooga to Atlanta) to the sea, to fight the railroad trust. Hoke Smith's proposal to disfranchise the negro by the educational test was approved.——The Republican Convention of California has turned down Governor Pardee because of his asserted indecision at the time of the earthquake and his refusal to recall the State militia. The nominee is James N. Gillett.——At the Delaware Republican caucuses last week Mr. Addicks was completely beaten, and the State and Congressional tickets were captured by his opponents. One negro was put on the State Committee.——The Democratic Congressional Convention in West Virginia has commended Mr. Bryan's views generally, but failed to nominate him for the Presidency, and the resolution opposing centralization of power by the general Government was meant as a rejection of Mr. Bryan's views on State-owned railroads.——The Republican primaries in Wisconsin last week went against ex-Governor Follette by 55,000 majority. In Milwaukee Theobald Otjen, who has served six terms in Congress, went down to defeat with the other La Follette candidates.——After the most exciting campaign known in Texas politics, Col. T. M. Campbell has been nominated as Governor. By the primary system Colonel Campbell had a considerable plurality of the popular vote, and in the delegated convention the lowest candidate was dropt on every vote. The prohibition question was a principal one, and the result is to uphold the present local option law.

The Trust Company's Failure

The investigation into the failure of the Real Estate Trust Company of Philadelphia now involves other officials than Mr. Hipple, who committed suicide. Mr. Segal, whose schemes Mr. Hipple aided, and the treasurer and assistant treasurer of the company, have been arrested. District-Attorney John C. Bell, in bringing charges against them, said that these men had been engaged with Mr. Hipple in this gigantic conspiracy in which they robbed the company of $5,500,000. All this money was applied to the schemes of Mr. Segal. Segal's checks were honored to the extent of $140,000 at a time when he had not a cent in the bank. This the treasurer and assistant treasurer knew and made no complaint, but even helped the fraud. Hipple's own balances were overdrawn as much as $800,000, and his and Segal's due bills were carried as cash. Sometimes money was borrowed on worthless securities, and at other times on good securities abstracted from those belonging to depositors, for which worthless securities had been substituted. In this way the trustees of the Presbyterian General Assembly have suffered loss. When further examination

was made of the securities of the trustees of the Presbyterian General Assembly it was found that the funds were in a sad tangle. Good securities had been taken out and bad ones substituted. In place of $15,000 of bonds of the Presbyterian Hospital was an unsigned note saying that they were in another box, which has not been found. The total loss has been said to be not over $45,000, but it may be considerably more; and the losses of the various other Presbyterian organizations may bring the sum up toward $1,000,000. Mr. Hipple left a note saying:

"There is no one to blame but myself. Segal got all the money. He fooled me."

Yet Hipple had Segal sign a lot of blank notes, which he filled up to the amount of $2,000,000 without letting Segal know. He also tried to get Segal's life insured for $100,000 in several companies without Segal's knowledge, and the fact has sinister interpretations. In the attempted reorganization of the Trust Company two of the directors are left out, among them Joseph de F. Jenkins, a lawyer, who was solicitor for the company, and Judge Wm. W. Porter, who had received in three years about $750,000 for legal services for the company, but who were among the heaviest losers by its failure. The first plan for the reorganization of the Real Estate Trust Company was unsatisfactory to the depositors, because it gave the directors and reorganizers the preferred bonds. A second plan is likely to succeed, by which they take the Segal collateral as their security. If those securities were approved as good enough for the company, they ought, the depositors say, to be good enough for the directors who past them. Mr. Segal was supposed to have salted away a large amount of money. At any rate, he has given over nearly $2,000,000 in the effort to make a compromise with the creditors.

Political Items The American Federation of Labor is going into politics somewhat vigorously in the Congressional campaigns. The vigorous campaign of President Gompers, of the American Federation of Labor, against Mr. Littlefield, of Maine, has now ended by the election this week, as Maine has its election earlier than most other States. Now President Gompers will lead the attack on Representative James S. Sherman, of the Utica district of New York, who is chairman of the Republican Congressional Committee, and who was elected by a plurality of 5,765 in 1904. A similar attack will be made on the seat of Speaker Cannon. The ground of Mr. Gompers's opposition to these men is that they did not favor the Federation bill in Congress to exclude injunctions in case of strikes, and to relieve boycotts of the charge of conspiracy. It was these points that Secretary Taft discussed in his speech at Bath, Me., in support of Mr. Littlefield. Against Mr. Sherman the trades unionists have put up J. K. O'Connor, and they expect to make a fusion with the Democrats and the Hearst League against Mr. Sherman. ——The up-State Democratic leaders—or a section of them—held a conference in Albany last week, the object of which was to oppose the asserted pact between the Tammany and Hearst organizations, and to aid the nomination of Mr. Jerome. Accordingly no representatives were invited from Greater New York. Mr. Edward M. Shepard, who is now a resident of Warren County, presided over the meeting of 52 of the 56 counties north of the Bronx line. The call frankly stated the object "to prevent the completion of the corrupt deal which is contemplated, involving the sale of the Democratic name and organization." Mr. Jerome made a very earnest speech against boss rule and the methods of Mr. Hearst, which aroused great enthusiasm. The resolutions adopted denounced "the control of the party organization by purchase, by intimidation or by hired agents," and equally "any efforts to commit the party to a Socialistic position." "Protection, Socialism and imperialism" were sharply opposed.

Various Items Postmaster-General Cortelyou has issued a statement to the employees of the postal service, calling attention to the language of the last annual reports, and reminding them that any organization of the men to improve the service or for benevolent purposes is approved, but not for other purposes, as their supreme allegiance

must be to the Government and the Department, and not to any outside power. The statement is taken as a warning against the organization of a labor union. ——The United States Civil Service Commission has decided to follow President Roosevelt's lead and allow the simplified spelling in its examinations hereafter. In Iowa and South Dakota the State Superintendents of Education have approved the new spellings, which will be adopted in the normal schools.——In the recent gathering of the National Federation of Catholic Societies in Philadelphia a series of resolutions was adopted on points on which all could agree. They are first, under the head of "Socialism," opposition to socialism and anarchism. Workingmen are warned against being inoculated with socialistic principles by reading socialist publications. The attempt to pervert good labor organizations into political organizations is denounced. The use of wealth for the purpose of corruption is denounced. Protest is made against the admission of anarchists or the permission of their meetings and publications. Next, absolute divorce is opposed, but limited divorce allowed. Again, the observance of the Sabbath is urged, so that it may not degenerate into a mere day of pleasure. Catholics are urged to support their parochial schools, and they propose that the parochial schools receive public money, but none for religious instructions, as shown by State or city examinations. Finally they commend the action of President Roosevelt in favoring their Indian schools, and await the decision of the Supreme Court of the District of Columbia as to the rights of the Indians to tribal funds for their schools. ——Captain Amunden, in charge of a Norwegian expedition with the steamer "Gjoa," left Norway in June, 1903, to attempt to make the Northwest Passage to Bering Strait. In the summer of 1904 he reached Leopold Harbor, and in the summer of 1905 he established his second base on King William's Island, where he located the true magnetic pole and found near it the monument set up by Sir John Franklin. Here the "Gjoa" went into winter quarters, near the mouth of the Mackenzie River, and Captain Amunden left in August, with dog sledges, to go overland and announce his success. He reached Eagle City, Alaska, last December, and made his report to the world. He then returned to his vessel, and set out in the summer of this year to complete its voyage. It is just announced from Bering Strait that he has finally accomplished the Northwest Passage.——Under the Tariff act the Philippine Commission was empowered to change or abolish the tonnage dues imposed on all shipping that entered the port of Manila. The Commission, on Friday of last week passed such an act, abolishing these dues, so that Manila is now a free port; indeed, the only absolutely free port in the East. Hong Kong, usually called a free port, imposes a light tax of 1 cent a ton on ships entering the harbor. The tax hitherto at Manila has been 6 cents. Of course, this does not affect duties imposed on imports.

The Cuban Revolution

Apparently deciding that patience with the rebels was no longer a virtue, President Palma, after summoning the Cuban Congress to meet September 14th, this Monday issued a decree suspending all constitutional guarantees in the provinces of Pinar Del Rio, Havana, and Santa Clara, now in possession of the insurgents (see accompanying map). This decree, which is equivalent to martial law, has been communicated to all officers in the field. At the same time the Government has revoked the amnesty offer to all those rebels who would peacefully return to their homes, and ordered the arrest of practically every prominent Liberal, altho Alfredo Zayas, the president of the Liberal party, and several others, were able to escape before they were apprehended. The effect of these repressive measures upon those who are striving for peace thru compromise has been to drive them over to the camp of the revolutionists, and for the moment at least to widen the breach between the two parties. With the exception of the above items there has been little news of importance to report since our last issue, save a number of guerrilla skirmishes and petty depredations. Reports from either camp still seem utterly untrust-

worthy, for each side has a press bureau thru which only colored news is given out. Whether the revolution is really owing to the just discontent of the outlying provinces, or to the factional quarrels of greedy politicians, or to the sinister influences of foreign planters and capitalists, is not clear, tho all three explanations have been given. As yet there is no demand from either side for intervention under the Platt amendment. There is no doubt, however, that there is considerable anxiety over the situation at Washington, for the "Des Moines" has already been dispatched to Key West, so as to be ready for any contingency.

Harvard Defeated

The international boat race between Harvard and Cambridge universities, which has excited more interest than any other international contest in years, was won last Saturday on the Thames River by the British eight, who finished the course of 4¼ miles two lengths ahead. The time, 19 minutes and 16 seconds, was fast, and was within 29 seconds of the record for the course. Before the race it was generally expected that Harvard would win, but from the start Cambridge took the lead and kept it to the end. At the middle of the course Harvard was over two lengths behind, and tho she then began to "hit up the pace," she could not overcome the Cambridge lead. When the race ended the Cambridge crew was almost exhausted, while it excited much comment that the Harvard crew appeared fresh, for generally the losing crew rows itself to exhaustion. The entire course was thronged by multitudes, some estimating it as high as 400,000, and altho the English have no system of concerted cheering, as we do in this country, a dull roar of applause greeted the crews the whole length of the course. Every one in England speaks of the modesty and sportsmanlike conduct of the Harvard crew, who seem to have created a very favorable impression. President Eliot, of Harvard, thinks such contests ought not to occur more than once in ten years, chiefly on account of the expense. Cambridge beat Oxford this year, and was therefore the champion university crew of England. While Harvard defeated Yale, she did not meet Cornell, and therefore did not claim to represent America.

British Trades Unionists

Considering the comparatively conservative position taken by the trades unionists in England, and the opposition, which has been at times very bitter bethere were only seven. A million and a taken by the Thirty-ninth Trades Union Congress, meeting at Liverpool September 3d, is of especial significance. Without discussion and by a unanimous vote the Congress instructed the Labor members in Parliament to introduce a bill providing for the nationalization of all railways, canals and mines of the United Kingdom. There were thirty Labor members of the House of Commons in the present Congress, while last year there were only seven. A million and a half trades unionists were represented in the Congress by the 490 delegates present. Resolutions were adopted in favor of an eight-hour day and in sympathy with the Russian people in their struggle for liberty. The American delegates, F. K. Foster and James Wilson, addressed the Congress on labor conditions in the United States. A picturesque feature was the presence of the Countess of Warwick, who appeared on the platform in a handsome gown and a Gainsborough hat covered with black ostrich plumes, and in a fervent speech predicted the speedy coming of the social revolution. Socialism, she said, was the only hope of the working classes.

The Separation of Church and State in France

The French Bishops and Archbishops met at Paris, September 4th to 7th, to discuss the questions raised by the Pope's Encyclical and the possibility of conforming to the new law providing for the separation of Church and State. Cardinal Richard, Archbishop of Paris, presided, and about eighty ecclesiastics were present. Their first action was to send to the Pope a telegram expressing their loyalty and gratitude for the advice and direction contained in the Encyclical. The proceedings of the Council were, as usual, secret, and the action taken can only be surmised. It is reported, however, that the Council decided in general upon a policy of passive resistance with the intent of forcing the Government into an attitude of persecution. All Church funds will be placed in the hands of the Bishops to prevent confiscation, and each Bishop will take such actions as seem most advisable in the special conditions of his diocese. If the churches are seized by the Government and closed, services will be held in private houses or new church buildings erected by private subscriptions, to be exclusively under the control of the Church. It is generally assumed that the French Catholics will carry out strictly the policy of the Encyclical and refuse to form the *associations cultuelles* which the law provides shall have control of ecclesiastical property. This is very different from their attitude previous to the issuance of the Encyclical, if the revelations of the *Temps* and the *Siècle* are correct. These papers have published what purports to be a detailed report of the proceedings of the French Bishops at their Plenary Assembly on May 31st, which met for the discussion of the Separation Law. According to these reports the Bishops at that time, while they disapproved of the law, yet declared themselves in favor of conforming to it, even in the formation of associations for public worship similar in form to the *associations cultuelles* prescribed by the law. These were to be called *associations fabriciennes,* or associations of vestrymen, which had been already authorized in some cases. The members of such associations were to make public professions of faithfulness and submission to the dogmatic and moral teachings of the Church and to the authority of the Pope and the Bishop of the diocese, and were to be pledged to strict obedience of all the canonical rules and prescriptions of the Church. They must abstain from membership in any secret society. The actual control of such an association would be vested in a council, presided over by the curé, and appointed by the Bishop. This proposal, it is said, was adopted by the majority of twenty-two, but was received with marked disapproval by Pius X, who, according to the *Temps,* claimed "they have voted against me. They have voted as Frenchmen." The anti-clerical papers point out that the Pope in the Encyclical implies that the French prelates were unanimously

opposed to any such compromise. The Protestants and Jews are already organizing their *associations cultuelles* in accordance with the law. The *Temps,* the semi-official organ of the French Foreign Office, accuses the Pope of German proclivities in the following language:

"We see clearly that Pius X, elected Pope by the will of the Triple Alliance, is largely paying his debt of gratitude towards Germany and Austria. His intervention with the Polish Bishops in favor of Prussia has not escaped us. We also note the Ultramontane efforts in Alsace-Lorraine to induce the Catholic Opposition to make common cause with the German Center. For the first time since there have Catholic congresses in Germany a Cardinal of the Curia, Cardinal Vincenzo Vannutelli, has has been delegated to attend it. Finally, we have realized fully the hostility of the strangely contradictory attitude of the Holy See in making advances towards the guest of the Quirinal while forbidding M. Loubet to pass a couple of hours there. Yes! we know all that and, besides, we predicted the consequences of the conclave three years ago. The choice, specially made as the result of a reaction against a policy regarded as too favorable to France, is bound to bear its full fruit. Let the Church take care lest the consequences be bitter, particularly for itself."

The political opposition to the Catholic Church in France will be increased by the election of a German priest to be General of the Jesuits. The congregation of the Company of Jesus, meeting in Rome on September 8th, elected Francis Xavier Wernz General of the Society, in succession to Father Martin, who died last May. The election was at once approved by the Pope. Father Wernz was born in Rothwell, Würtemberg, on December 1, 1842, and entered the Society at the age of fifteen years. He has been rector of the Gregorian University since 1904. He is the author of standard books on canon law, and is a consulting member of the Congregation on Extraordinary Ecclesiastical Affairs and of the Congregation on the Index. It is reported that his election was chiefly opposed by the Spaniards, who wanted one of their nationality elected to pursue the conservative policy of the last General.

The Reign of Terror in Russia

In view of the revival of revolutionary activity the Government has decided upon more severe repressive measures. Imprisonment, banishment and execution by administrative process are more common than at any time since the assassination of Alexander II. A new ukase has been issued empowering the Governor-Generals and others in authority in districts under martial law to try and execute any persons by court martial, without recourse to the civil courts. The court martial will consist of a president and four army or navy officers. It will hold a secret session, and its sentences will be carried out within twenty-four hours. This practically gives the officials unlimited power against the people. The court martial which tried the girl who assassinated General Minn on August 26th at Peterhof found her guilty and sentenced her to be hanged. She was identified as Zenaide Konoplianikova, daughter of a non-commissioned army officer and a teacher. She was a member of the "Flying Section" of the Northern Social Revolutionists, and had carried out the orders of the Central Committee of that body. The prisoners of the Central Detention Prison of St. Petersburg revolted and barricaded the prison on account of the shooting of Miss Semenova, a medical student and revolutionist. She had reached out of the window of her cell to distribute among the other prisoners some sugar which she had obtained, when the sentry seeing her killed her instantly. In order to obtain funds for their war upon the Government the revolutionists are resorting to systematic robbery, especially of the Government liquor shops and the trains for the payment of troops. A party of revolutionists at Vladivostok, disguised as officers and soldiers, presented themselves at the bank and drew from it the entire amount on deposit, $107,000, which had been sent there for the payment of troops. In many places the churches have been stripped of their gold and jewels. Fines for the revolutionary cause are levied upon land owners, peasants and shopkeepers, and collected by threats of bomb-throwing or by torture. Many large estates have been ravaged by bands of peasants, who burned the property which they could not carry off, thus destroying many valuable collections of rare art treasures. The revolutionists of Moscow attempted to circulate a pamphlet composed entirely of the speeches delivered by the Em-

peror during the past two years, prefaced by eulogy of the "talent and wonderful oratorical ability of our beloved monarch." The speeches were so arranged as to be contradictory and absurd. The publication was confiscated by the authorities. It is reported that the Government will authorize the admission of Jews freely to the primary and secondary schools. The universities, which had been practically closed for two years, are expected to open on October 15th.

A Massacre at Siedlce

On Saturday night, September 8th, a massacre of the Jews took place in the Polish city of Siedlce, 55 miles southeast of Warsaw, and continued for two days and a half, causing great destruction of life and property. Reports as to its origin are contradictory. According to the official version, the Terrorists began the disorder by shooting two soldiers who were guarding the Government liquor store. A detachment of infantry, attracted by the noise, fired a volley, killing two men and wounding two others, and on the following morning the concerted massacre of the soldiers and police by the Terrorists was begun, which so infuriated the Libau Infantry Regiment that it attacked the crowds on the street indiscriminately. According to the report of the refugees from the city, the massacre of the Jews was planned beforehand and the Christians warned in advance to hang out their ikons to protect their homes. They claim also that the disorder began in drunken carousing and pillaging by the soldiers. The local Governor, Engelke, refused to do anything to put a stop to the slaughter, and telegraphed for permission to use the artillery. A cordon of troops was put around the city, and the Jews and Poles trying to escape were driven back into the city, which was being swept by incendiary fires and the artillery. Four batteries were placed so as to command the streets of the Jewish quarter and destroy the houses from which Terrorists' shots had been fired. The Bundists, or Jewish revolutionists, defended themselves against the troops, but in vain. It is thought that more than 200 Jews were killed and thousands flogged, wounded and imprisoned. The Jewish shops were looted by the soldiers without interference by the officers and the loot openly sold. Watches and jewelry were peddled by the soldiers among the passengers at the railway station. The soldiers attacked the hotels and destroyed the furniture and carried off the liquor. There was great disorder in Warsaw, and similar riots are likely to break out at any moment.

In Morocco

A battle took place at Muluya between the troops of the pretender and those of the Sultan. The pretender is said to have had 6,000 men, while the force of the Sultan only numbered 4,000, but the pretender was defeated and his two principal chiefs were killed. The depredations of the Raisuli extend even into the City of Tangier, and Arab heads have been carried on pikes thru the streets of that city. At Mogador hatred against the Jews took the form of a raid upon the town by Anfloos Kaid, who, with 300 men, seized the city, with the exception of the citadel, held by the Governor with a few guards. The object was to compel the Jews to retire into the Mellah, the quarter legally assigned to them. They have for many years, however, been living in the town. Upon the threat to burn the city the consuls telegraphed for aid, and the French cruiser "Galilée" left Tangier for that port. The Jews in Mogador number about 4,000 and constitute about one-fourth of the population. The Sultan of Morocco has released his elder brother, whom he has kept in prison ever since the death of their father. At Tangier James Keeley, of the Chicago *Tribune*, and Henry Olson, Assistant State's Attorney, captured Paul O. Stensland, the absconding president who wrecked the Milwaukee Avenue Bank, of Chicago. Altho we have no extradition treaty for embezzlement with Morocco, the authorities promptly turned over the prisoner to Minister Gummere, and he will be brought back to the United States to answer for the crime of forgery and embezzlement.

The Coming Peace Conference at The Hague

BY AMOS S. HERSHEY, Ph.D.

[The following article by one of the professors of Indiana State University is worth the attention of our readers as it takes a somewhat more conservative view of the Peace Movement than we do. Professor Hershey is about to bring out this fall a book on International Law.—EDITOR.]

WHEN the Hague Conference adjourned on July 29th, 1899, it left on record an expression of its "pious wishes" (*voeux*) for the discussion at a future Conference of such important questions as "the rights and duties of neutrals, the inviolability of private property in naval warfare, and the bombardment of ports, towns and villages by a naval force." Altho it had failed in the main task for which it had ostensibly been convoked by the "Czar of all the Russias," viz.—that of "checking the progressive increase of military and naval armaments" and of considering "any possible means of effecting their essential reduction"—its labors had not been in vain. It had codified the rules and customs of warfare on land, and had adapted the principles of the Geneva Convention of 1864 to maritime warfare. But its most important contribution to international law and humanity was the creation of an independent tribunal or Permanent Court of Arbitration for the decision of "questions of a judicial character," and especially of "questions regarding the interpretation or application of international treaties or conventions."

It should especially be noted that the Russian plan of compulsory arbitration was rejected by the Hague Conference, that resort to the Hague Tribunal was only recommended as a means of settling certain kinds of disputes, and was made purely voluntary even in these cases. The great advantage of this provision over previous methods of arbitration lies in the fact that civilized nations are now furnished with a Permanent Supreme Court which has a fixed constitution and clear and definite rules of procedure for the settlement of such disputes as they may choose to submit to arbitration, and that it has now become unnecessary for governments to enter into long and tedious negotiations respecting the selection of arbitrators or the settlement of the mode of procedure in each and every controversy. But it still remains necessary for states which desire to resort to arbitration either to negotiate general treaties of arbitration for the submission of any or all disputes to the Hague Tribunal, or to make special agreements to arbitrate upon the occasion of each single and separate dispute.

As Mr. Holls, in his excellent book on "The Peace Conference at The Hague" (pp. 351, 352), justly remarks:

"The Hague Conference of 1899 should be regarded, historically, not as the outcome of a sudden impulse on the part of the Emperor of Russia, but as the natural and almost inevitable consummation of a movement and tendency in European diplomacy whose beginnings date back to the Peace of Westphalia. . . . The gathering at The Hague was the lineal descendant, so to speak, not of the innumerable Peace Congresses held in various quarters of the globe, but of the diplomatic assemblies called for the purpose of solving a present problem, and of furnishing guarantees, more or less permanent, for peace between the Powers represented—beginning with the Conferences of Münster and Osnabrück in 1648, including those of Utrecht in 1713, of Paris in 1863, and above all, the Congress of Vienna in 1815, and that of Berlin in 1878."

The Hague Conference was essentially a European Congress, to which only two American States—the United States and Mexico—were invited to send delegates, and of which there have been numerous examples, especially in the nineteenth century. Many of these—as, *e. g.*, the Vienna Congress of 1815, the Congress of Paris in 1856, the Brussels Conference of 1874, and the Congress of Berlin in 1878—either introduced important changes into international law, or declared and codified existing law, altho

their main object was, for the most part, the negotiation of treaties of peace. With one exception, they were held immediately or soon after a great war or series of wars, when public opinion was ripe for such changes or declarations. The Hague Conference was no exception to this rule, for it was not until peace between Spain and the United States was practically assured, and after the Protocol of August 12th, 1898, had been actually signed, that the Czar's famous rescript of August 24th was issued. The Conference itself did not meet until May 18, 1899, *i. e.*, over five months after the conclusion of our final peace with Spain.

Since the close of the Russo-Japanese war there has been ample time and opportunity for investigation and a calm consideration of the questions raised during that great struggle, and yet its stirring events are not so remote as to have caused any appreciable loss of zeal or interest in their solution. Surely sufficient time has now elapsed since the signing of the Treaty of Portsmouth to give effect to President Roosevelt's suggestion of a Second Hague Peace Conference, made in a circular note to the Powers on October 21st, 1904.

This suggestion by President Roosevelt was made at the request of the Interparliamentary Union, which held one of its annual conferences at St. Louis during the summer of 1904, and on September 13th unanimously adopted a resolution in favor of an International Peace Conference. This resolution was presented to President Roosevelt and accepted by him on September 21, and it was incorporated into Secretary Hay's circular note referred to above. This resolution reads as follows:

"Whereas, enlightened public opinion and modern civilization alike demand that differences between nations should be adjudicated and settled in the same manner as disputes between individuals are adjudicated, namely, by the arbitrament of courts in accordance with recognized principles of law, this conference requests the several governments of the world to send delegates to an international conference to be held at a time and place to be agreed upon by them for the purpose of considering:

"(1) The questions for the consideration of which the Conference at The Hague expressed a wish that a future conference be called.

"(2) The negotiation of arbitration treaties between the nations represented at the conference to be convened.

"(3) The advisability of establishing an international congress to convene periodically for the discussion of international questions."

The most important of these questions are, in my opinion, those specified in the opening paragraph of this article and referred to in the first section of the above resolution. Of the questions deferred for consideration at a future Conference, it is generally agreed that the most vital and important at the present time are those relating to the rights and duties of neutrals. The subject of neutrality is one of the latest additions to international law, and has been contributed largely by the United States, whose Government has, generally speaking, always maintained an attitude at once self-respecting as to its own rights and interests and respectful of the rights of others which is perhaps unique in the history of international relations. But in spite of the great progress which has been made since the close of the eighteenth century in the development of the theory and practice of neutrality, there is no portion of international law (with the possible exception of intervention) where there is such a conflicting chaos of opinion, such a wide divergence between theory and practice, or such a failure to apply fundamental principles upon which, after all that is said and done, there is general agreement. The same States take a very different view of their rights and obligations as neutrals and belligerents, and, whenever a war arises, neutral governments follow very different standards of conduct in respect to their neutral duties. Neutrals are thus largely at the mercy of belligerents, to whose prize courts or military and naval officers they are largely beholden for such consideration as may be their portion.

There have been few modern wars during which so many important questions affecting neutral rights and duties were raised as during the recent struggle in the Far East. The belligerents, more particularly Russia, naturally took an extreme view of their rights and a somewhat lax view of their duties; some of the neutrals, on the other hand, were naturally disposed to emphasize their rights and minimize their obligations.

First in importance among the questions affecting neutral rights and duties

which arose during the recent war was the old question of what constitutes contraband of war. It is well known to students of international law that there exists on this point a wide divergence of opinion between what we may call the Anglo-American view and that of the European or Continental school. The English and Americans have been wont to divide articles which they propose to treat as contraband into two classes, viz. —(1) goods absolutely contraband, and (2) goods conditionally contraband. The contraband character of the former class is always inferred from the nature of the goods themselves whenever these have a belligerent destination; but goods conditionally or occasionally contraband are only treated as such under particular circumstances, as when they are destined for a place besieged, or when clearly intended for the direct and immediate use of the army or navy of one of the belligerents. Articles of dual or double use (*res ancipitis usus*), *i. e.*, equally useful in peace and war, are generally classed as conditional or occasional (sometimes also called relative or accidental) contraband. Such are, *e. g.*, food stuffs, coal, horses, cloth, railway and telegraphic material, etc.

Continental publicists for the most part denounce or deny the Anglo-American doctrine of conditional contraband—a doctrine which, be it observed, is at least as old at Grotius—and recognize but one class, viz., goods absolutely contraband. Some of them would restrict contraband of war to arms, munitions of war and explosives, and military material or equipment, and this view obtained the sanction of the Institute of International Law in its session at Venice in 1896; but the great majority of Continental authorities practically concede the principle underlying the British and American practice by admitting exceptions or qualifications which virtually weaken or destroy the validity of the doctrine for which they contend.

During the recent war Japan unreservedly accepted the Anglo-American distinction between absolute and conditional contraband, as she had done during her previous war with China; but Russia published on February 20th, 1904, a long list of articles, which she appears to have regarded as absolute contraband. This list included many articles *ancipitis usus*, such as rice, food-stuffs, horses, telegraphic and railway material, and finally, raw cotton, by an additional Imperial order on April 21st. In the publication of this extensive list of articles held to be absolutely contraband, and still more by her subsequent conduct, Russia showed that she not only ignored the Anglo-American doctrine of conditional contraband, but intended to treat, as subject to capture and confiscation, many articles which had hitherto been regarded either as not contraband at all, or, if so, as subject to seizure and pre-emption or confiscation only in certain contingencies or under certain circumstances. Her action in attempting to treat articles *ancipitis usus* as contraband, regardless of destination or circumstances, amounted to a paper blockade of Japanese ports and a declaration of war upon neutral commerce, and fully justified Secretary Hay's vigorous protest of August 30th, 1904, in the case of the "Arabia."

Russia's action brought into bold relief the dangers lurking in the Continental doctrine of absolute contraband; and, in view of this attempt at a revival of Napoleonic methods of warfare upon neutral commerce by a Government which had hitherto posed as the champion of neutral maritime rights, it ought not to be impossible for the delegates at the coming Second Hague Conference to arrive at a compromise of opposing views on this subject. This might, one would think, be brought about by a frank recognition of the principles underlying the Anglo-American doctrine of conditional or occasional contraband in return for the transfer to the class of conditional contraband of many articles now deemed absolute contraband by Russia, and by an extension of the practice of pre-emption.

Next to the questions relating to contraband, the most important issues raised during the recent war from the standpoint of international law were those connected with the rights and privileges of belligerent armed ships in neutral ports and waters.

Hitherto the view generally held in regard to this matter is thus expressed by a leading authority:

"A vessel of war may enter and stay in a

neutral harbor without special reasons; she is not disarmed on taking refuge after defeat; she may obtain such repairs as will enable her to continue her voyage in safety; she may take in such provisions as she needs, and if a steamer, she may fill up with coal; nor is there anything to prevent her from enjoying the security of neutral waters for so long as may seem good to her."

But it has been well-nigh universally assumed in recent discussions* (and Japan at least appears to have acted on that assumption) that it would be a breach of international law for a neutral State to permit belligerent armed vessels to remain in neutral ports longer than twenty-four hours except in case of necessity, or to allow such vessels to take in supplies of coal oftener than once in three months and then only in quantity sufficient to take them to the nearest home port or to some nearer neutral destination. Japan also insisted that Russian warships seeking refuge in neutral ports be dismantled and disarmed and their crews paroled or detained until the end of the war, as in the analogous case of defeated troops or fugitives seeking refuge from pursuit on neutral territory in warfare on land. A new series of precedents in favor of this view was created during the late war, but their force is perhaps somewhat weakened by the fact that the majority of these vessels sought refuge in Chinese territory under the shadow of a Government which was incapable of perfectly fulfilling its neutral obligations. In any case, the force and validity of the twenty-four-hour rule appears to have been greatly strengthened by this war, and it can no longer be maintained that a warship entering a neutral harbor "is not disarmed on taking refuge after defeat."

But there still exists the greatest divergence in practice in respect to the furnishing of coal to warships in neutral waters. On the one hand, the Governor of Malta, acting, presumably, in accordance with instructions from the British Government,† went so far as to issue a proclamation refusing to grant facilities for coaling or provisioning to a belligerent fleet proceeding to the seat of war or in quest of contraband, and declaring that "such fleet shall not be permitted to make use in any way of any port, roadstead, or waters subject to the jurisdiction of His Majesty for the purpose of coaling either directly from the shore or from colliers accompanying such fleet." On the other hand, Germany appears to have allowed even the cruisers of her auxiliary navy to supply coal to the Baltic fleet, and France undoubtedly violated the spirit, if not the letter, of the law of neutrality in permitting the use of her territorial waters at Nossi Be, off the coast of Madagascar, and at Kamranh Bay, in French Indo-China, for the coaling and provisioning of the Baltic fleet during the months of February and April, 1905.

The law of this subject is in great need of definition at the hands of the coming Hague Conference. It is generally said that, according to international law, a belligerent warship in a neutral port should not be allowed to take on more coal than is necessary to take her to the nearest port of her own country or to some nearer named neutral destination; but this limitation only appears in the neutrality proclamations of comparatively few countries like Great Britain, the United States, the Scandinavian countries, Holland, China and Japan. Besides, it was again demonstrated during the recent war that it would be possible for a warship or fleet of warships almost to circumnavigate the globe without touching at a port or coaling station belonging to their own country.

As pointed out by Hall* over twenty years ago, in such a case the neutral country would practically become "the seat of magazines of stores, which, tho not warlike, are necessary to the prolongation of the hostilities waged by the vessel" or fleet. She (the neutral country) would obtain "as solid an advantage as Russia in a war with France would derive from being allowed to march her troops across Germany. She is enabled to reach her enemy at a spot which would otherwise be unattainable." The present vagueness of the law or principle governing this subject is perhaps best

* Hall's Treatise of International Law. Third edition, p. 630.

† Instructions similar to these are said to have been sent to the governors of other British Colonies and dependencies. See London *Times*, for August 23d, 1904.

* Treatise on International Law. Third edition. Section 221, p. 607.

set forth by Prof. T. E. Holland in a letter to the London *Times*. He says:

"It is admitted on all hands that a neutral power is bound not to permit the 'asylum' which she may grant to ships of war to be so abused as to render her waters a 'base of operations'* for the belligerent to which these ships belong. Beyond this, international law speaks at present with an uncertain voice, leaving to each Power to resort to such measures in detail as may be necessary to insure the due performance of a duty which, as expressed in general terms, is universally recognized."

In spite of the failure of France and Germany to realize the extent of their neutral obligations during the Russo-Japanese war, there can be no doubt but that modern States are becoming more fully alive to their neutral obligations in this respect. It looks as tho a new chapter in the history of international law were being written; and it is certain that Governments are beginning to take a very different view of their neutral obligations than they did in the days when Confederate cruisers, built or purchased in foreign ports, were able to begin and complete their errands of destruction without ever having as much as touched at a Confederate port.

Among other questions affecting neutral rights and obligations raised during the Russo-Japanese war, which urgently demand solution by the coming Second Hague Conference are the following: the establishment of an international system of prize courts; the proper treatment of sailors of belligerent ships whose crews have been rescued by neutral vessels; a declaration to the effect that neutral States lie under an obligation to prevent the construction, sale and exportation of warships, torpedo-boats and other vessels adapted to warlike use and intended for belligerent service; the limitation of the use of wireless telegraphy on the high seas or on neutral territory in cases where belligerent interests are liable to suffer detriment from such use; the liability of a belligerent government for the placing of submarine mines in belligerent waters or on the high seas in such positions and in such a manner as may constitute a menace to the safety of neutral vessels and a danger to the lives and property of neutrals; the question of the existence of an alleged right of sinking neutral prizes supposed to be carrying contraband of war and the circumstances under which such a right, if it exists, may be exercised; and last, but not least, an enumeration of the circumstances, if there are any, under which mail steamers are subject to the right of search and their mail bags liable to seizure, detention or confiscation. It is evident that the coming Hague Conference will have deserved well of humanity if it accomplishes nothing more than the solution of a considerable number of the questions affecting the rights and obligations of neutrals which have been raised during the recent struggle in the Far East.

The second object, as stated in the resolution of the Interparliamentary Union, for which the next International Conference is to be convened is the negotiation of arbitration treaties. So much progress has been made within the last three years in this direction that this question no longer occupies the first place among the needs of international law and humanity. Much, however, still remains to be done. It is my opinion that the best service which the Conference could perform at the present time would be to agree upon a general treaty of arbitration, or, if that prove impracticable, to extend the jurisdiction of the Hague Tribunal and furnish the nations with a model treaty of arbitration together with a recommendation for its general adoption. The principle of compulsory arbitration might again be discussed, but it is extremely doubtful whether the time is as yet ripe for an attempt at coercion in such matters.

The third object of the Conference is to consider "the advisability of establishing an International Congress to convene periodically for the discussion of international questions." The importance of this proposal has, I think, been somewhat overestimated. No exception can possibly be made to this section of the resolution of the Interparliamentary Union in the form in which it appears, but it is not a novel idea. As has been shown in the first part of this article, the custom or habit of holding International Congresses or Conferences for the discussion of such

* There is no general agreement as to what constitutes a "base of operations." Hall (p. 696) and Lawrence (see *Principles*, section 250) agree that it consists in "continuous use."

questions is firmly established. The only change or innovation proposed is that such congresses be convened *periodically*. This proposal is not only wholly unobjectionable; it is highly desirable. It is greatly to be hoped that provision will be made at the next Conference of the Nations for the periodical meeting of such Congress or Conference, say, every four or five years. It might also be well to appoint a permanent committee to sit during the interim in order to watch over international interests, to use its influence in behalf of peace and the enforcement of law, and report upon desirable changes or improvements in international law at the meeting of the following Congress or Conference. *Such a committee might in time gradually develop into a sort of international executive.*

But it has been suggested that the time is ripe for the establishment of a "World's Congress," or "Parliament of Man," with a definite constitution and more or less ample powers of legislation. Three such plans were outlined—two by Mr. Hayne Davis and one by the Hon. Richard Bartholdt—in two noteworthy articles published in THE INDEPENDENT on July 7th, 1904, and on May 11th, 1905, respectively.

According to the one plan proposed by Mr. Davis,

> "The Congress of Nations should be given authority to initiate legislation, its resolutions to become operative when opposed by, say, four-fifths of the nations, representing four-fifths of the population, or when not vetoed by one-fifth of the nations, representing at least one-fifth of the population."

In respect to its organization, Mr. Davis thinks that the Parliament of Man should be modeled somewhat on the Congress which existed in the United States under the Articles of Confederation; but "the number of delegates from each nation should be fixed, and each delegate should have a vote instead of the vote being by nations."

Mr. Davis also presents, in the article above referred to, an alternative plan. This is based on the idea that, inasmuch as the regulation of commerce would be the most important function of the World's Congress, "volume of international trade would really be a better basis than population on which to found representation." He suggests that a satisfactory unit of representation might be obtained by "allowing each nation one delegate and apportioning the remainder of the one hundred members according to the volume of international trade."

In THE INDEPENDENT for May 11, 1905, Mr. Bartholdt proposes an International Congress of *two* houses—a Senate and House of Deputies. According to his plan, each nation shall have two representatives in the Senate, but its representation in the House of Deputies shall be "proportionate to its international commerce." The rule of the majority shall prevail in all matters (each member having one vote) and the concurrence of both houses shall be necessary for the enactment of all laws.

> "The deliberations of the Congress are to be confined to matters which directly affect intercourse between nations, and its resolutions limited to the declaration of general principles for the conduct of such intercourse."

In order to preserve its sovereignty and independence each State is given the following rights: the right to withdraw from the Congress at any time; a guarantee of territorial and political integrity; the right to arm and make war; and a certain number of national Parliaments are to be given a veto on international legislation. Mr. Bartholdt also proposes that "the armed forces of all nations represented be at the service of the Congress for the enforcement of any decree rendered by the Hague Court, according to the treaties of arbitration"; but this provision would seem to be superfluous in view of the fact that the decisions of courts of arbitration have seldom been disregarded or disobeyed.

It is not my purpose to criticise in detail any of the plans above outlined, but merely to point out some fundamental objections to the scheme as a whole. Mr. Davis rightly argues that the establishment of the Hague Tribunal, which he aptly calls the "Judicial Department of the United Nations," is in itself "manifestly incapable of preserving the world's peace" and "hopelessly inadequate for peaceful and just government of the world." But this would be equally true of a World Parliament or an International Congress whose decrees were not enforced or enforceable by a strong international executive. In order to make

such a Union or Federation really effective it would be necessary to organize it on the basis of a Federal Union (*Bundesstaat*) rather than on that of a Confederacy (*Staatenbund*). The great Powers like Great Britain and Russia would never permit smaller states like Servia and Denmark an equal vote in the Federal Legislature or an equal voice in the Federal administration. Not to do so would, however, violate two of the fundamental principles which lie at the very root of the modern or Grotian system of international law, viz., those of the absolute sovereignty or independence and the legal equality of States. Neither Mr. Davis nor Mr. Bartholdt contends that the time is ripe for the establishment of a World Republic or Federal Union similar to those of the United States or Switzerland. On the other hand, the day of confederacies seems to be over. The history of Germany and our own experience during the years following the outbreak of the American Revolution sufficiently demonstrated their incapacity and worthlessness, and there are fortunately no survivors of this species of governmental inefficiency in existence at the present time. On the whole, it appears to me preferable that the present system of International Congresses and Conferences be made the basis of any further progress in the evolution of the World State, and that growth in this direction be gradual and on historical lines or bases of development.

It is difficult to see how the realization of these dreams of a "World's Congress" or "Parliament of Man" would prevent the outbreak of war, as Mr. Davis seems to think. The experiences of confederacies have not been particularly happy in this respect. The existence of the German Confederation did not prevent war between Prussia and Austria in 1866, and our own experience has taught us that even a strong Federal Government is not always capable of preventing the outbreak of civil war. In the immediate future, at least, we must look to arbitration, to a more tactful, honest and enlightened diplomacy, to the growth and better enforcement of international law and to the work of educational agencies rather than to international legislation in the proper sense of the term for influences which will make for a gradual cessation of warfare. Nothing short of a centralized international executive or an administrative power such as that possessed by a Roman Emperor or a modern bureaucracy could possibly prevent an occasional outbreak of violence in the present stage of our high, but still imperfect, civilization, and few Americans at least would be willing to pay this price for a lasting and permanent peace.

If we are to have a "World's Congress" or "Parliament of Man"—a consummation which I admit to be ideally desirable—let representation by all means rest on the basis of population rather than on that of "volume of international trade," and let the rights and interests of the smaller States be carefully guarded and protected. There are signs that two of the great passions of the modern world—territorial expansion and commercial supremacy—are passing and giving place to ideals more genuinely democratic. To base a system of world representation solely upon commercial interests would tend to give additional prestige and power to a class against which the masses in America as well as in Europe are already in revolt. Besides, it is not necessarily true, as Mr. Davis claims, that "only international commerce and such things as grow out of it would fall under the jurisdiction of the Union of Nations." There are other interests equally precious and important which might well engage the attention of such a body. There would be, *e. g.*, the question of an international copyright; the amelioration of warfare and the codification of international law; the establishment of a great world university for purposes of research; the encouragement of art, science and invention; the promotion in various ways of communication, intercourse and co-operation among the nations. These are only a few of the questions that suggest themselves to the imagination which allows itself to dream of the possibilities of the future.

But sufficient for the day are the possibilities thereof, and for the present I would respectfully suggest that the coming Hague Peace Conference confine its attention to the purposes for which it has

been called. These are, in the order of their present (not intrinsic) importance: (1) to decide upon the rights and duties of neutrals, more particularly upon such points as have arisen during the recent war; (2) to enlarge the scope and extend the principle of arbitration as far as practicable; (3) to make provision for periodical congresses or conferences of the type of those already in existence. These objects furnish, in my opinion, a sufficiently wide scope for the activity of a peace conference at the present stage of our imperfect international development and civilization. As the London *Spectator* for December 3d, 1904, says: "If it (the Second Peace Conference) refuses to dissipate its energies in professions of vague brotherly love, and grapples with that very practical question—how war, which is inevitable, can be restricted in its area and ameliorated in its conditions—it will deserve well of humanity."

BLOOMINGTON, IND.

Whose Business Is It?

BY JOHN BASCOM, LL.D.

[The author of the following significant article is, as most of our readers krow, Professor of Political Economy at Williams College and the author of many standard books on Economics and Sociology.—EDITOR.]

SPEAKING not long since to a friend whose business for a considerable period had been embarrassed by a strike, I inquired as to the issues of the conflict. He replied, "I am running my own business." The manner in which he planted himself on this familiar affirmation showed at once his confidence in it and in the justification which, in the minds of many men, lies back of it. The obtrusive philanthropist is often told. "This is none of your business." These retorts are sufficient to raise the question. How far is any man's business exclusively his own, to handle as he thinks best?

One might suppose that workmen dropped into the world at the opening of each day and retired at its close with no permanent occupation or interest in its affairs; that they had nothing more to do with the current of its events than has the driftwood on the swollen stream to do with the direction of the water. Have these men any business, and what is that business; or are their lives a mere series of disjointed and extemporized efforts? Are they conscripts who are to fight one battle or another precisely as they are directed? If they have no business in the world, what right have they to be in the world? Or, being in it, what rational use can they make of it? We sometimes, when intrusion and interruption are anticipated, see the curt notice, "Keep out." It would seem to be in order to post such a notice—indeed, the economists have posted it—somewhere on the outskirts of the world for the benefit of that larger half of humanity who, search as they may, find no business which they can call their own.

In early spring a railroad, close at hand, was heaping its yards with a large supply of coal, apprehensive of a coming conflict in the coal region. Those of us who went thru the coal famine of two years ago are reminded, by the forecast of our neighbor, of the expense, inconvenience and helplessness of that time. We are tempted to ask whether we have no ultimate rights, no lines of action in these premises, but are left to drift without remedy into any evils which the caprice of others may prepare for us. The methods of those who own and those who work in the mines occasion us immense and unavoidable mischief. Are the consumers no party to this strife? Is the management of the coal market a private business which those interested in it can handle as they will? Do we in this connection belong to the unlucky class who have no business, and wait to be flung idly hither and thither by those who have?

The effect of growing civilization is to alter in many ways our notions of personal independence. The man who lives on the frontier may have quite another form of liberty from that of the man who lives in a flat. The latter, in spite of his restricted actions, gains liberties, enjoys

intercourse and finds at hand resources and pleasures which the former cannot secure at any price. He has parted with a great deal of freedom, but he has won more in return; freedom which he values more highly than that which he has lost. The gains and losses of the two positions stand each on its own basis, and no man must expect to commingle them at his pleasure. A harbor with a little commerce and light craft may have few rules; one crowded with large vessels and rich freights, one possessed of costly piers and deep slips, must have extended and precise regulations. One cannot go about with his heavy steamer as suits his own ignorance and independence.

That community is most fortunate, is possessed of the largest and most desirable liberty, that sees at once the price of every improvement and cheerfully pays it. Fighting for a liberty that has been outgrown is vexatious, unprofitable and tyrannical in a high degree.

If workmen have reached a point in which they are prepared to watch over their own affairs, to combine for their own interest, to assert and maintain liberties, it is far better to give them the opportunity for judicious and wise action, for peaceable methods, than it is to force them into a hostile attitude. This is to fill our productive life with a bitter temper which is sure to do much and unexpected and increasing injury. Our previous conceptions of our own rights and the rights of others will become at once partial and conflicting, and we shall bandy about phrases of liberty which have no real application. If we can settle a conflict between mine owners and miners for two years, we can devise means of permanent settlement and see to their enforcement. This is what the exigency calls for. The present policy of adjusting disagreements between capital and labor by the strength which either can at the moment show is virtually to live without law, and resolve each controversy into a street fight. This is barbarism, barbarism in reference to the contestants, barbarism in reference to the community at large. Our earlier relations between employer and employee are quite outgrown. They involved a liberty no longer sufferable. Business has now assumed those large and critical forms which take it out of the hands of the individual and bring it under the law of the welfare of the entire community.

A feeling which checks our commonsense and holds us back from forming and enforcing regulations for our joint interest is, that we cannot constrain a man to employ workmen whom he does not wish to employ, nor can we compel workmen to remain in the service of one whom they dislike. There was fitness in this feeling when employees were many and workmen many, and each class adjusted itself individually to the other. This state and the sentiments incident to it have passed away. There is now little personal knowledge or personal interest between the employer and his hands. The ground of contentment or discontent lies chiefly in the nature and the returns of the labor. The employer is not asking whether the workmen like him or he likes them, but whether the contract between them is satisfactory. It is this which determines their feelings toward each other. The loss of good will between capital and labor is much to be regretted; but that which has taken its place, and by which alone some portion of it can be recovered, is justice. If this is freely conceded on either hand contentment will be restored.

If disagreement arises, a simple and adequate legal appeal is the most ready way of maintaining whatever good will is possible. What chafes the workman is his impotency in securing any consideration of his claims. What offends the employer is that the workman should present any claims. "This business is exclusively mine" is the rock on which both are wrecked. The present method does not retain and extend good will; it smothers it. Many of the complaints against workmen arise from the fact that they have been led to take an attitude of hostility to their employer and to separate their interests from his interest. The chief assuaging force is an open opportunity for joint consideration. When the employer says, "This business is my business," he excludes the workmen from any participation or interest in it, and drives him, as far as possible, out of the world of interests and claims, hopes and responsibilities.

WILLIAMSTOWN, MASS.

Evolution in the Barnyard

BY E. P. POWELL

Author of "The Country Home," "Old Farm Days," Etc.

BY barnyard I do not mean that side issue of a country barn where animals wade in filth and are necessarily degenerate — a place so wretched that nothing in civilization compares with it except the slum life of our cities. By barnyard, on the contrary, I mean the well-adjusted surroundings of a noble country residence— where man and beast meet on terms of mutual helpfulness. The house is not the real center of life on a farm; but the barn is. There is more of experimentation, more of application of science going on in and about the stables, the cow-yard and the chicken-coop than there is inside and around the house. What I want to show you are some very curious evolutions that are going on in both animal and plant life, that we can classify best by referring them to the yard or yards that surround the barn. I shall include in this field of observation the air as well as the earth, and the tribes of the air as well as the inhabitants of the pasture and the soil.

I have a flock of Plymouth Rock fowls, fine, plump, neat-looking creatures, and good layers of large eggs. It is a cross of Black Spanish and Dominique. The result has been a curious breaking up of natural tendencies in the way of selection. The cocks are not peculiarly showy in contrast to the hens; but have passed over some of the traditional male qualities to the female. They are unusually peaceable, while the hens are Amazons for fighting. No other hen has such a stout bill and neck, and no other can so easily draw blood from your hand. In the crossing of varieties, sexual peculiarities have been interchanged; the hens acquiring the habits of the cocks and the cocks the temperament of the hens. Between themselves the cocks are peacemakers; but two hens will fight it out to the death. In fine, the females of this cross breed have secured masculine qualities, and the males, as in some species of spiders, are kept mostly for fecundation.

This interchange of sex characteristics is set down by Nordau as a sign of degeneration; but we cannot study animal evolution in our yards without finding it to be of very common occurrence. The Jersey cow is the model of gentleness, but a Jersey bull lacks every trace of honor and gratitude. The long process of selecting cows for pets left the full measure of courage for defense and offense to the male. On the other hand, the Ayrshire cow is resourceful, gamy, unconquerable by force; while the Ayrshire bull is a cow in temperament. The pure-bred Scotch collie bitch is more fearless by all odds than the male and a better fighter. There is nothing in any of these cases to indicate degeneration. But there is evidence that intellectual traits and moral qualities are not necessarily associated with sexual functions. The peaceful environments under which our animals are bred tend to a more equal distribution of sex characteristics. This must go on till the wild and savage is bred out, just as we are breeding out thorns and other protective agencies in the garden. They are no longer needed. Dehorning is a temporary resort, but we have already one race of cattle that is born without horns. A cow should be gentle and kindly, and that is just what is coming about. This sort of evolution is rapid, if we choose so to have it. Mr. Burbank breeds out cacti spines and blackberry brambles.

Local environment brings about a very great number of special variations. This is markedly evident in the vegetable garden and the orchard. Cion affects the stock; in turn every stock affects, possibly very minutely, the scion. Every shovelful of soil modifies the plant it feeds. It is impossible to create an absolute equilibrium of environments. An Ayrshire cow can climb a stairway into your haymow. She will keep in good milk and flesh on less food, and she needs less care, than any other of our prominent breeds, because developed on the Scotch hills and under Scotch temper

and treatment. She is a sort of John Knox among animals. We could not possibly have created any such a cow in America. Neither will it be possible to keep the breed without modification under any environment that we can furnish. This is constantly to be taken into consideration in our horticulture and agriculture.

Voice modification to environment is so general, and by such slight changes, as a rule, that most casual observers fail to observe it. Our new breeds of cows do not bellow, at least after the old-fashioned sort. They moo or loo on minor keys, and their calls are addressed to human beings rather than to other animals. An old-style cow would bellow to be heard clear across the valley, and the noise would echo from hill to hill; the modern cow is rarely heard outside of her pasture. An approaching storm does not seem to excite animals as rudely as formerly. Some years ago I owned a Morgan mare, a creature that almost articulated, so fine were her modulations of voice. One day I heard her call me when she was in a basement stable, opening to the south, while I was thirty rods north of the barn. I responded as quickly as possible, and found that the calves had broken thru into the common stables, out from their own enclosure. There was a lively time, which the mare understood was decidedly out of order. As soon as I showed my face at the stairway she gave a whinny of satisfaction, and turned around to her manger and began eating. On another occasion the same mare, while living with me in St. Louis, had slipped on the slope of the lawn, and falling, had caught her foot between the spikes of an iron fence. As I came up the street I heard her call, with almost the intonations of a human being. As I drew near she softened her tones to a quiet satisfaction, but lay perfectly still until I could relieve her feet from danger. Not one movement was made until I stroked her nose, and taking hold of her mane, said: "Come, now we are ready!" If the expression she made as she rose to her feet and went down the yard was not one of sincere gratitude I am a bad interpreter.

I have learned a good deal of language of late by talking with my pet catbirds. It had never occurred to me that their catcalls were anything in the way of conversation until I began to respond with similar cries. I find now that bird language can be divided into poetry and prose, nearly as well as our own. From May until August the catbird is mating and rearing its young. During this period he is elated, joyous, and his soul goes out in ecstatic trills. From August onward he has nothing especially to excite these warmer sentiments. He will whistle, and try to convey to you his view of affairs, in very sober prose—as long as you will converse with him. In other words, there are season languages; in the summer poetry and song, but in the autumn prose and philosophy. A careful study of birds will show you that some of them are not singing at all as they used to sing. Give robins pleasant homes, and their morning orison (which is one of the most wonderful evolutions in nature) brings out a greatly varied repertoire. On my lawn one of them sings, or almost articulates, "Hear this birdie!" While another chimes in with, "Here is a Presbyterian." This last fellow's notes are evidently in part borrowed of the grosbeak; the grosbeaks having become very common in this environment.

The steady change of habit of the birds that home about our houses and barns can be very easily marked. I have seen robins for the past few years modifying their choice of food, so that certain berries which were very much absorbed by them are now rarely interfered with. It is not a difficult matter to take advantage of this possible readjustment of appetite, and by planting a large supply of wild cherries and Tartarian honeysuckles, to spread a feast that will entirely protect our raspberry gardens and to some extent our cherries. The orioles are undergoing similar changes: not disturbing our peas in the garden as much as formerly; but where the orchard and fruit gardens are large, confining their depredations to that department—destroying the new varieties of plums that Mr. Burbank has recently originated, and feasting on those hybrid grapes which were intended to rejoice our August days. The oriole leaves the Northern States just about September

1st, and we are not interested in his later evolutions. A few years ago we could scarcely raise cherries at all in our small country gardens, but the very much larger development of berry gardens has led the birds to desert cherries and currants almost entirely for the sweeter fruits. Our own changes of industries start new habits in the creatures associated with them. Birds that were formerly wild are drawing nearer our houses. I never heard a catbird sing before I was ten years of age. I saw them only in thickets where the wild cherries grew, and there I think they never did sing. Certainly when human beings came near they scolded us like cats, which gave them their name. When I did hear one sing it surpassed all bird music. How that sly, brown bird did pour out her soul. She had been drawn nearer our house, to build, by the fact that my father was introducing fruit growing. Now, every May, nearly a dozen pairs come to me from the South and build in my gardens and shrubberries. We own the fruit in common.

Other wild birds are more domestic than formerly. The grosbeaks and yellow birds of spring that eat both worms and fruit, the wood and hermit thrushes, the scarlet tanager and the indigo bird, are all becoming familiar. So we lose sight about our yards of old varieties of birds and get new ones. Chimney swifts built in trees before we came with our chimneys; and now that we have taken to coal for fuel they are leaving our chimneys to hunt for wild nests once more. Barn swallows cannot get into our modern buildings, so we no longer find their nests stuck to the rafters. The consequence of this meddling with evolution is, that the chances of survival of some birds are greatly increasing and others greatly decreasing. Occasionally some form of life, like the English sparrow, evolves a power to defy all changes and master all conditions. It is not many years since herons nested in the communal manner; but increasing danger has led them wholly to adopt individualism. Today the heron invariably nests by the single family.

I predict that before this century is half gone there will be a great movement to intellectualize our animal friends. We have done about all that we can in the way of biasing their evolution for our purely material advantage. The hog, as a hog, is nearly perfect. The horse has about reached his goal as a racer or a puller or a trotter. The cow is not going to exceed an annual production of about nine thousand pounds of milk. We must eliminate the scrub stock, and that will not be a speedy job for scrub farmers. But we are finding out that no creature is ever as useful to us as the most intelligent. The collie is worth all the fancy breeds of dogs ever petted; and for that reason he holds his own and wins favor, while other sorts have only a temporary popularity. We had the best horse that the world ever saw in the Morgan, the best all around, because he was not only developed physically, but intellectually and morally. We came near losing him, but we are now finding out our folly. The improved Morgan will become our national horse. We did quite as foolishly with that great, kind old-fashioned cow which we used to breed. It had all the qualities now sought for in the dairy, was kind as a kitten, and as safe in the street as in a tight pasture. We gave it up for a lot of fancy foreigners; but now the cry is once more for that same big, loving, old native, that used to fill our twelve-quart pails, and then wait for another pail. Bear in mind also, as Professor Shaler says, that no animal is so capable of manifesting intelligence as the hog; yet, so far, we have only created a thing capable of eating, sleeping and growing fat. We have bred brains down and out, and now complain of the stupidity of our product. In other words, the drift of farm evolution has been to brutalize nearly every animal, bird, or other creature under our care.

The collies and the St. Bernards are the products partly of environment and partly of education. The Scotch herder could not possibly take care of his sheep without the help of just such a being as the collie dog. Savages have done just as good work, and sometimes better, than civilized races. The early Britons had horses that in war were as valuable as their owners. The Arab and his horse are not only companions in every-day life, but undergo a parallel evolution.

The Esquimau has created a dog with all the shrewdness and adaptability of his master. In our barnyards we have been employing the meanest brains for grooms, herders and milkers, and the result is that animals are of the same sort. Anthropologists tell us that civilization is a transition stage from ignorant childhood to childlike wisdom. It is not improbable that we shall soon reach the riper and manlier stage of sympathy with all life. What I want to show you is that we have in all our animal stocks a certain suppressed intellectual force which can be bred to the front as easily as fat and speed.

It is peculiarly interesting to note the evolution of altruism in the realm of our observation. A cow will die for her calf, until it is weaned, after which it at once becomes to her like any other animal, and is prodded with a sharp horn and driven away from the food. This is equally true of most of the birds. If a hen falls sick the rest of the flock will pick her to death. There seems to be a very low grade of savagery about this. The flock considers the food that is consumed by the useless as wasted. But this is not by any means a universal law among our domestic animals. Horses will sometimes manifest great regard for weak companions. The higher breeds of dogs exhibit a very marked degree of sympathy and a self-denial that would honor human beings. A horse that I owned some years since would share her meals with a favorite sheep. Nanny would jump into a manger, and each one would then considerately take turns in nibbling at the oats or hay. Taking a mouthful, the horse would draw back her head, in order to make it easier for her friend to get a bite. I am confident that, with a little care in this direction, we may develop ethical qualities among all our domestic animals.

But the tendency to degeneration or to reversion has always to be counted with in our experiments, both with animal and with plant life. The seeds of our highest bred pears and apples rarely produce varieties as good as the parent. Mr. Burbank throws away one thousand plants to one that he saves. I have myself produced four hundred new sorts of beans, out of which only ten were worth preserving. These ten being crossed, or allowed to sport, show a tendency to produce a larger proportion of valuable sorts. It takes at least ten years to *fix* a good bean, and meanwhile one of its progeny may so surpass it that it becomes comparatively worthless. So it is constantly coming about with our new grapes and berries, that we are outgrowing our best achievements. Thirty years ago the Philadelphia raspberry stood at the head; it is now unknown. Then followed the Cuthbert and Golden Queen, which are no longer ideals, but are not quite displaced. In some directions, however, we now and then reach a stage of evolution where the progeny is either closely like the parent or an improvement. It is a peculiarity of the Crawford peach that its stones are likely to produce other Crawfords. One of the most interesting families of apples is the Fameuse or Snow. This apple is of Canadian origin, very hardy, exceedingly high quality, and nearly perfect in type. The seedlings from this apple are, almost without exception, proving to be of decided value; already including Princess Louise, Walter Pease, McIntosh Red, Shiawassie and Crimson Beauty.

This increased stability in evolution will be welcomed only as ideals are achieved. Man is in the lead of all organized life only in this, that he, apparently, cannot be completed. In him evolution finds the most infinite variability, and at the same time he has no ideal, except that which he has wittily named the eternal and the infinite. Evolution in man passes over into spiritual phases and ethical purposing. Our lives are made up of crossing motives and wills, and working out new strains of thought, imagination and emotion. Memory multiplies our capacity to intellectually cross forever. But in the yard and garden this sort of cross-breeding is very limited—as yet. Those pears, peaches and apples that reproduce their family traits progressively do so very much like the bees, who are examples very nearly of reproduction without variation—creatures finished long ago, and thereafter to go on honey-making forever, with no new powers, and with a social organism that permits no amending. Man's immortality lies in his non-perfectibility. He cannot

be finished. His constitutions can always be amended.

A very curious and very interesting phase of evolution goes on in our orchards, which we must call a stage of indecision. Our pears do not yet know which is most important, to color their fruit like the leaves, in order to hide them from the squirrels, or to color them very brightly, so as to attract the birds. If a rodent eat a pear, it will only eat the seeds; and there ends the propagation of that pear. But if a bird feed on the same pear it will be on the pulp, and the seeds will be voided or dropped around the fields, where many of them will germinate. Evidently the interest of the pear is to escape the rodents and attract the feathered tribe. So the tree stands at a sort of crossroads; sometimes swinging full of golden fruit, that invites the orioles and the jays, but just as often holding a lot of green Sheldons or Anjous, that only keen eyes can distinguish from the leaves.

Fully as interesting are these foreign trees of mine, placed under new environments—the English oak, the English elm. They have brought along a heredity for dropping their leaves three weeks later than American oaks and elms; and this they continue to do, notwithstanding the weather grows very unfit for holding foliage. They look out of season, but they are remembering English seasons. There is, however, a good deal of difference in the behavior of different trees. In Florida I planted a large number of Northern trees and shrubs. Some of these, as soon as they felt the warmth of the Southern January, forgot their heredity and leaved out at once; but others declined to do anything of the sort. There was little reckoning ahead on the will of the trees, for there is a vegetable will as surely as an animal. Governor Wood, and the Biggareau cherries in general, were very conservative — waiting for their accustomed time to send out leaves. Garden vegetables, however, did not care when they grew, if they only had warmth and water. Will the conservatives after a while give up to environment? I do not know, but I propose to find out.

These evolutions are going on all about us. Nothing is quite fixt. Evolution is simply a universal and an eternal law. We have found that we can direct it for our own advantage—bringing about better bushes, better trees and better fruits. What I have wished to show is that evolutionary changes are a part of everyday life in our dooryard and barnyard, and that any one can have a hand in it. It is not quite so easy for us to regulate the evolution of forest trees, and yet we are doing a great deal of that sort of work. In the woods every tree struggles with its environment to climb up and reach after a share of sunlight and air. But, set on a lawn for several generations, any sort of tree learns to spread out, not needing to climb. In this way our maple has become very umbrageous, and the ash and the beech even more so. The weeping tree is only a tree that, having climbed, finds a lot of sunshine left down below, and turns back to get it. So we get the white elm magnificently holding its old heredity, and learning new lessons at the same time.

When I pass by a white elm, lifting itself fifty feet high, and sweeping its superb limbs over a diameter of fifty more feet, I feel like lifting my hat, and shouting, Here's to my handsome neighbor. You have done it up finely! You are as complete an illustration of successful evolution as we have! Hurrah for success!

The beech tree is another illustration of complete readjustment to environment. Set it on your lawn, with plenty of room, and it spreads out almost to the ground. Its limbs are as thick as a forest, and it is at once the best of bird homes and squirrel banquet halls, while its shade is absolute—and its sweetness fills the atmosphere. The maple does nearly as well or quite; only man does not know enough not to meddle. He goes in with his saw to upset readjustment, and after he has cut off the lower limbs of his shade trees the sun blisters the bark, the worms find homes, and everything is upset. This evolution all about your home is a study well worth your while. It brings you into a very intimate understanding with nature. You will understand better than to shear up evergreens, which nature has built for vegetable pyramids—ideals of the unshakable. You will know more of your own fruit trees, and you will find out a great many secrets known at present only by your vegetables and flowers.

CLINTON, N. Y.

The Autobiography of a Country Spinster

BY AUNT JANE

MY little brown cottage stands on top of a hill that slopes downward pretty sharply for half a mile all the way to Lake Seneca, New York, so that I can look over the trees and see the lake in all its various moods —and that makes it sort of company.

Lots of people say that Seneca Lake is only good to look at. They say that the fish in it are sulky and won't bite. It's too cold for bathing, and yet it never freezes over—or so seldom that it might as well be never. It is so treacherous, too, with its sudden squalls, that folks are afraid to sail on it, and it's so deep that no one has ever been able to find bottom in the middle. And men drowned in it are never found. I have heard a doctor say that the cold springs in Seneca make it too chilly for bathing—but how could they hinder its freezing in the winter time?

Anyhow, even if Seneca has faults in other respects, it is beautiful to look at, and I don't believe that anywhere in all the world one could see better sunsets than I get sitting on my front stoop. Seneca is three miles broad opposite my house, so it spreads out right from my feet, and on a clear evening I can see far up and down the water and the rising shore on the other side, with the farms and their buildings, and the people going along the roads.

Even tho I am seventy-six years of age my eyes are pretty good yet, and I can tell what the farmers across the lake have planted and how the crops are getting along. That's now in the summer time. In the winter, of course, the whole country is white, but that makes the houses across the lake stand out all the clearer, and the teams going along the roads are company then.

All seasons are good for me here, but I think I like the Indian summer best, tho the haze prevents me from seeing so far. The Indian summer is soft and quiet and mild and friendly and still—as if the lake and the woods—everything—was just thinking—like me. I am in the Indian summer of my life, but I'm not like the trees, for they wear their brightest colors, while I wear gray and my hair has turned white.

My life now makes me think of an Indian summer sunset, it is so calm, and I suppose that, like a sunset, it will go out soon, but may be not so very soon, because I come of people who lived to be old. One of my father's brothers was eighty-five when he died, and an aunt lived even longer. I am only seventy-six.

I do not do any work now. Not what we used to call work in my day. Of course, I keep my house, and if people can find any dust in any of the six rooms they must have sharper eyes than mine. I do my cooking, baking, ironing, washing, mending, dressmaking and gardening, and in the fall I put up preserves; but that is really only play. I have plenty of time to read and to sit out in front, gossiping with the neighbors and watching things go by.

If I was on a farm, all alone, I suppose I should be very lonely, tho I was a farmer's daughter and brought up on a farm. But here I am on the main street, with the post office only a hundred yards away, and three stores near the post office, and a blacksmith shop down the cross street that leads to the lake, and the Methodist church fifty yards across the street from me.

So there are plenty of people coming and going, and when I sit out in front the neighbors stop and talk to me. Then there's only the garden between my house and my brother's, and he is very good. He is much younger than I, and married. There is a string stretching from house to house, and if anything happened to me when I was alone I could pull that string and they would come to me.

I own my house and furniture and have a little money laid by in the bank.

People in the city might think it a small store, but it is enough, because I can live on so little. If I mentioned what it cost me a week for provisions, folks would laugh—girls nowadays think they must spend two or three dollars a week for board, and I have heard that in the city people who take boarders charge them as much as seven dollars a week. The garden helps wonderfully. I grow corn, potatoes, beets, onions, cabbages, radishes, peas, beans, melons, pumpkins, cauliflowers, apples, pears and plums—and in the bargain I have a flock of chickens. Maybe I'll have bees next year.

My father's folk were from New Jersey and mother came from Dutchess County, and they moved to this part of the country when it was very new and when I was only six years of age. My father had gone on ahead to prepare a place for us—he had bought 160 acres of land in the woods—but he wasn't ready in time, and mother got impatient waiting at last, and said that she'd join him anyhow, no matter what.

So mother and I and my sister and grandmother and an old doctor who had joined the party came along in a wagon that had no springs, and that bounced and jounced us for three days, till we were nearly dead. The roads were so rough. Sometimes there was a mile of corduroy, as it was called—just logs laid side by side stretching across a swamp—and that sort of a road will make any wagon bounce like all possessed.

At the end of a hot day we came upon father, and he was half dead, too—working away in the hole that he had made in the woods. He was black from the smoke of the smudge fires that he lit to burn the brush and drive the mosquitoes away.

Father had been working all alone in his clearing—except for a team of oxen—cutting down the trees and digging up the roots, burning the brush, plowing and planting. He had only about four acres cleared when we arrived, and they were not really cleared, either, as the big stumps were standing. But he had a crop planted—corn, potatoes, turnips and hay. Enough to support us and the oxen thru the winter.

Father was living in a lean-to—just a high trestle with boards sloping down from it. And there was where mother and grandmother went to housekeeping. The doctor stayed with us and things were rough, but what we didn't have we could do without.

That first night, mother said, we were all so tired that we just ate some bread and had a drink of tea, and then all went to bed. I and my sister slept in the wagon.

Next day we went to work in the clearing—father, mother, the doctor and I. We hauled brush and the doctor tried to chop, but he was a bad hand at it. Grandmother kept house, and, as my sister was only three years old, she could not do anything.

Father set about making a root house in order to save our crop from frost. He dug into the side of a hill and lined the hole with logs, putting a strong door on it and covering the roof with two feet of earth. This took a week.

Next thing was a log stable for the oxen. We all helped at making that. Father was quite a carpenter, and he rigged up a machine for making the oxen hoist the logs into place. The doctor drove, the oxen hoisted, and father eased the logs down into position. But the stable was a small affair with a very low roof—just a shed. Father lent the horses to our nearest neighbor, three miles away, and he had the use of them thru the winter for their keep. The oxen were better for our rough work.

As soon as the stable was roofed father began to get the crop in, for it was September, and the corn and potatoes were ripe. We were hungry enough to eat raw turnips and we did very well without milk or butter or meat.

We helped at getting the crop in, and as soon as that was done we began to build the log house. We knew that winter would begin early in November, and we would freeze to death if we had no shelter. All thru October we worked away, and by the end of the month had the walls up ready for the raising.

So, then, we had a raising bee. There was a mill five miles from us, and father wrote an invitation to the people and posted it in the mill. The neighbors came from ten miles away on every side. We had as many as twenty men helping us.

A raising bee gets a new settler ac-

quainted with everybody, and the people who give it make a sort of feast for the workers. Father traded some potatoes for cider and applejack and such stuff. We never wanted those things for ourselves—I've always been teetotal—but father thought that it wouldn't do to go against the custom, seeing that we were strangers.

Anyhow, they gave us a good lift by putting the roof on, and then there was a race between father and the cold weather. We moved into the house just as soon as the floor was down, but it wasn't finished, and father worked nights on it, doing the shingling by moonlight.

There was, also, the door to make and three windows, and the snow was coming down and drifting before we were ready to shut it out. We boarded up the window places, as we had no glass. One of the windows was in the end of the house and the other two in front—one on each side of the door. We got a stove and put the stovepipe out thru the top of the side window, and then we were ready for the winter. We had enough to eat and a place to shelter us, and every day the farm got better, for father cut down more trees.

We were not without meat, either, for father got a side of beef in exchange for cordwood that he cut and hauled. The meat kept frozen in a barrel behind the house. When we wanted a piece we chopped it off with the ax and soaked it in cold water till it thawed.

We got a lamp, too, and that was a great comfort to grandmother, as she had brought her spinning-wheel, but couldn't see to work by candle light. The daylight was shut out of the house on account of the boarded-up windows.

Inside of the house was all one big room, but only half of it was floored over at first, because we couldn't get enough smooth boards. The bedroom for mother and grandmother was partitioned off in the dark end, and we children slept on a sort of mattress on the floor. Father and the doctor slept in a loft made by a few boards that was reached by climbing a ladder. They rolled in blankets and stretched out on the boards. If they had been restless they might have fallen to the floor, but they were very tired every night, and that kept them quiet.

It was a long, cold, hard winter, but that was good for chopping, and in the spring the sap ran well in the sugar maples, and we had fresh sap, and grandmother made a lot of maple sugar.

There was a little settlement about four miles from our place, just a cross-roads country store and blacksmith's shop, with church, tavern, schoolhouse and a few dwelling houses, but it looked like a city to us. We traded the maple sugar for wool, and then grandmother was able to go on with her spinning.

By the time the snow was away father and the doctor had twelve acres cleared, except for the stumps, and he put in corn, wheat, potatoes, turnips, oats, peas, beans, hay, pumpkins, melons and some other small garden truck. He traded a lot of cordwood for a cow, built an extension on the stable, and got glass windows in the house. Then we began to be more comfortable. In the winter we had suffered a deal on account of snow drifting between the logs, and one of my first jobs in the spring was to get clay and go over the outside of the logs, stopping up all the chinks as high as I could reach. The doctor helped at this, too. He was gradually getting more used to the life and better able to work. He was quite a great scholar, and had ten big books in his box, and sometimes he used very long words. He made medicines out of plants that he got in the woods, and when any of the neighbors were sick they sent for him and he mostly cured them. He didn't charge anything, either, but sometimes they brought presents, a pair of chickens one time, and a pig, or the like of that.

The heavy job this second summer was fencing, and father worked just as hard as ever at that. Mother and I and the doctor weeded and hoed and my little sister came out and tried to do some weeding, but she was just as liable to pull up good things as bad, so she had to stay in the house and help grandmother by holding the thread.

By the time the second summer was over our fight was pretty well won. When our crops were in there was plenty to keep us and the animals till next crop. The miller ground up our corn, oats and wheat, charging us a percentage. We had some produce to sell, so that we were

able to get grandmother all the wool she needed, and flax, too, and some print for dresses.

Father also hired a man to help us get the farm in shape. They finished the fencing, grubbed up a lot of stumps, broke some new land, built a hen house and a pig pen and hauled and sold twenty cords of wood down at the dock, seven miles away. Father paid the hired man in produce and cordwood. There was no money in that part of the country then.

Some of these things I'm telling I can remember about, altho I was so little at the time. I remember, for instance, claying up the cracks in the house. We used to have to mix moss with the clay to bind it. Other things came from conversations I've heard between father and mother about the hard times they had that first winter.

When the hen house was built we got more hens, and, as we already had a cow, that meant milk and eggs. We put four pigs in the pen and felt that we were beginning to get up in the world. We got the horses back, and as we had a bob sleigh we used, sometimes, to hitch up and drive to the Methodist Church in the village on a Sunday morning; but we didn't join the church at that time.

Father and the doctor went right ahead clearing land all the time that the snow was on the ground, and by the spring there were twenty acres to plant. They also chopped fence rails and made and hauled a lot of cord wood. Then the doctor had to go on to try his fortune in a little town that was just beginning to be built up by Lake Erie.

After the first two years we began to have a fine farm, but the better it grew the more work there was for some of us. Grandmother died about the end of the third year, and that left mother and I to do everything. We owned five cows by that time, so we had to milk and make butter and cheese, as well as bake, wash, cook, iron, mend, spin and weave and plant and weed the garden.

Father was clever at carpentering, as I have said, and he did some things that helped us a little, such as rigging up a line and pulley so that mother could draw water from the spring without going out of the house. But mother carried an awful burden. She never complained though; father used to grumble and find fault, sometimes, but mother never did.

We made all our own clothes, right from the wool or the flax. Mother used to get the patterns out of her head and the fashions by watching the stage coach when it came to the village. Sometimes it would be a plaid that we wove, and sometimes a plain cloth that we had to have dyed brown or blue. Whatever we made did for all of us—mother, my sister and I. There was only one cloth the season, so our dresses were all alike. It was good cloth, too—it wore forever—I have some of it upstairs now. These were our best dresses that we made out of our own cloth. Cheaper things for everyday use were of print that we got at the store. Mother was quite a hand to observe, and sometimes, after being in the village and seeing the stage coach, she could come back and tell us the new styles, so that we could try to make them.

When I was very young I used to be kind of skittish and full of great notions that I'd like to have fine things, and to travel and see other folks. Maybe I took after mother, for she told me one time that before she married she used to dance and carry on, and read story books. I was so full of the mischief that once I ran down the hill to the spring so hard that I couldn't stop myself in time, and fell in, head first. I had to back out, like a crab.

As soon as I joined the Methodist Sunday school they taught me that it was sinful to dance or to read story books, and so I put those things out of my head.

That was one good thing that I learned early—to do without—when one is used to doing without things, it is almost as good as having them.

So, I never danced all my life, and I never read any story books until just lately. But I didn't give up wanting to travel and I didn't give up wanting a fine dress. I got my fine dress at last, when I was about eighteen years of age. I picked so many berries one season that the storekeeper in the village gave me, in exchange, silk enough for a dress—I have part of it upstairs, yet.

And the Lord let me travel, too, but not quite in the way I wanted. First when I was thirty years of age doing dressmaking. I had to go to Watkins, a place where there were three or four thousand people. I was a week there making things for a wedding. There was a deal of shipping on the lake then—it is all dead now, since the railroad came—and Watkins was a real lively place. I used to like to look out of the window and watch the crowds —sometimes as many as ten or twenty people together, all strangers—and wonder who they were and where they were going and whether I'd ever see them again. Then, when I was forty years of age I traveled again, this time to Rome to a hospital. A cancer had been growing and I'd been ashamed to tell anybody, till at last I had to. There was an operation and then I went home, but had to return for another operation, and that ended my traveling; but I did see a city—Rome was a city even at that time. After all, folks are about the same all over the world, I guess, and if I'd had my full wish I wouldn't have been any better off.

I began to go to school when I was about nine years of age. Of course, only in the winter time. In the summer there was too much work, and even in winter the pupils stayed away so much that the schoolmaster used to say that he wished all the flax was at the bottom of Seneca Lake.

I was very fond of school and eager to learn. Often I and my sister used to get up at three o'clock of a winter's morning and do the family washing and get breakfast, so that we could go to school. That was after mother broke down and had to stay in bed. She could not do anything then except spin, and we used to leave her lunch by her on a chair. We had to leave her all alone, but she wanted us to go to school.

School was at the village, three miles away from our house, and we tramped all the way thru the snow, carrying a sandwich for lunch. There was only one teacher and one room in the school. All the classes were together, the boys on one side and the girls on the other. Some of the boys and girls were grown up, and some were only seven years of age. When a class was called up to read or recite it went and took the front benches and the teacher asked questions. The other classes were supposed to be studying their lessons, but a lot of the time they were just carrying on and fooling. But I was there to get all I could and I studied so hard one time that I had to stay home all the end of the term because I was breaking down, too, just like mother. Perhaps it was the home and farm work that made me so weak, but school got the blame for it.

I might have made a good scholar if I'd had the chance, because I was so fond of learning and learned so fast. Anyhow, I did learn to read, write and cipher, and maybe, after all, it was good for me not to have too much of it, because I might have ruined my eyesight reading, like some folks I've seen since.

A singing master came to the place when I was sixteen, and I joined his class. He was a tall, thin man, with legs like stilts and stoop shoulders, and a small face with a big nose. He formed a choir in the church and taught class in the village two nights a week, and mother sent me and sister to the class. It was great fun. We met other young folks, boys and girls, and sang the old psalms and hymns, and of course there was a deal of carrying on. I have my old singing book upstairs with my old, old school books.

Sometimes there were parties at the farmhouses, and I and my sister would go. We played round games, Pillows and Keys, and Turn the Trencher, and Wink and Ketch 'Em, and others like that. They all amounted to about the same thing—the boys had to chase the girls about and kiss them. They didn't have any husking bees, but instead there were apple bees. We went to a farmhouse and all pared and cored apples, and after the work was over we had a party, with cider and apples and nuts and cake.

There was one game that I thought great fun when I first saw it played. Two boys would be set in chairs opposite each other, and pretense would be made to blindfold them both, but only one would really be blindfolded.

The one that was blindfolded would have to guess who touched him. He would have to say: "Brother, I'm

bobbed," and then the other would ask: "Who bobbed ye?" And the blindfolded one would make all kinds of guesses, but he never guessed right, because it was the boy who sat opposite who was bobbing him. Of course, we could only play that once in an evening, because everybody saw the trick.

Sometimes a circus came through. We never were allowed to go to that, because circuses were wicked, but we used to go down to the main road in the daylight and look at the tracks of the strange animals, elephants and camels—that wasn't wicked and didn't cost anything. I used to feel rebellious sometimes. I wanted to see a circus so bad. But I'm just as well off now as tho I'd seen a dozen of them. Young folks don't know what's good for them.

Along about the time that I was eighteen years of age revivalists came to the village and began to stir things up. We all went to hear them. Mother was up and about again by this time, and she and father were converted the first night with many others. My! but those were smart men, those preachers. But I was ugly and contrary.

Next day Brother Condon, one of the revivalists, came to our house. I was in the best room, lighting the fire and dusting and fussing. I just fussed and fussed, but Brother Condon he just stayed and stayed; and I had to go out at last. He wanted me to go to church, and I was just as ugly as get out. But I had to promise at last.

That night when the service began there were half a dozen of us girls standing around the stove talking about getting religion. One said that she didn't think it any disgrace to go forward, and I said I thought it would be a grace. Then said another girl: "I'll go forward if some one else will." That made me mad, because I thought that if one was to go forward at all, she ought to be willing to go if all others held back. So I went forward and got religion then, and I've held to it safe ever since.

Old Satan he tried every way to frighten me. He said: "You're too late; you've sinned beyond forgiveness." But I defied him, saying that there was grace for me, too—and so there was.

I used to be very uneasy and unhappy before that time, thinking about my sins—not any particular sin, but just my general state—that I hadn't made my peace with God. But after that there was peace.

I took a class in the Sunday school after I got religion, and I taught in Sunday school and helped in church work for more than fifty years, and sang in the choir till my voice broke down.

There was a time when I thought I might get married. A young man paid me some attention and we had a philopena which I won, and he gave me a little glass box—I have it upstairs now, with my other treasures.

But after I joined the church I became more serious than ever, and wouldn't play the wild kissing games at the parties. And then, again, I was weak from the hard work I did when a little girl.

Maybe he thought I was too quiet. Maybe he thought I was not strong enough for a farmer's wife. Anyhow, he went his way and married somebody else, and so I stayed single. I never told anybody how he treated me.

I broke down for a while after that, and I had to give up farm work and take to dressmaking. I soon got quite a knack at dressmaking, and used to go around from house to house cutting out and stitching up. I met plenty of company that way, so that that part of my life was quite happy. I always liked company and conversation and to learn about new things.

I saw the books with all the new fashions, and they were worth seeing. Folks said that some men in Paris made the new fashions every year. How ever can they contrive to get such notions—and men, above all things! I've seen a lot of men in my time, and I would not like to trust them with fashions.

I was able to save a little money from my dressmaking, and finally to retire to my little brown cottage, and my sunsets, and my old furniture, and other treasures of the old days—like the singing school book.

Within the last two or three years I've been reading story books. We used to think them wicked, but they're not wicked at all—only silly—they're all alike. You can tell what's going to happen. Still, there are times when I have noth-

ing else to do, and then I like to take up a book. I got so excited over "Ben Hur" that I was all of a tremble when I was reading.

Of course, I always had the Bible, and the other books don't compare with that, but then they are good in their way, because they brighten you up. People are liable to get poky unless they read books. Not long ago I heard one of the little girls of my Sunday school class saying to another little girl: "Doesn't Aunt Jane dress old-fashioned?"

It hurt at the time, but I guess I do seem old-fashioned to a little girl. I get so much wear out of things that the fashions run ahead of me. I turn and twist and make them over and over.

But it's just as well. I can't go about much now, and my day is really over, and I'm happy and ready to go when the call comes. Meanwhile I just sit here watching the sunsets that are so glorious, and wondering and wondering about the things behind the sunsets.

SENECA LAKE, N. Y.

Russian "Patriots"

BY OUR RUSSIAN CORRESPONDENT

THE recent Duma was not all rebel. It included a few reactionaries and a few half-hearted reformers like Count Heyden. The latter and his entire party (which consists of one man) have been rewarded with portfolios, and several English papers seem for some unknown reason or other to regard this as a great concession to popular sentiment. It is not, however, of poor Count Heyden and his "Party of Peaceful Renovation" that I wish to speak, but of a very large and very stupid peasant who used to get up in the Duma and, in semi-ecclesiastical language, deliver himself of the most tiresome reactionary nonsense. The complacent, condescending manner of this ignorant bumpkin and the way he used to turn up the whites of his eyes toward Heaven, with which he seemed to be on terms of easy familiarity, made that man so offensive to me personally that I should have experienced the keenest pleasure if I had seen him taken out and ducked in a horse-pond. The majority of the Duma seemed to share my views about him, for, after he had once or twice lectured and admonished them for hours in a fatherly manner, they used, whenever they saw him heading toward the tribune, to let off a yell that frightened him back. On one occasion, if I remember aright, this person called himself a "patriot," whereupon one of the liberal leaders, a man who has spent all his fortune in the uplifting of his countrymen, rose and said that the word "patriot" stank in his nostrils. I did not understand at the time why he spoke with such heat, but some facts about the "Russian Patriotic Society of Tiflis" that have just come to my knowledge have enabled me to understand.

This society is a reactionary organization, expressly founded to combat "rebels" and "liberals," by which terms the patriots mean all who do not agree with them, and it is now so powerful that all the civil and military power in the Caucasus is in its hands, the Viceroy and the Governor-General being powerless before it. That this is so is proved by documents that have come into my possession. Among these documents is a report of General Shirinkin, Chief of Police in the Caucasus.

Of course, the "Patriots" profess to be much more imperialistic than the Emperor himself. Their flag bears the inscription, "God Save the Tsar!" and "Understand, Heathens, that God is with us!" Nevertheless, General Shirinkin regards them as the greatest stirrers-up of strife in the country. He adds:

"In several instances they were guilty of the most revolting cruelty. For instance, on the 19th of October last, when there were riots in Vladi-Causasus, the Patriots were found to have in several instances killed injured men lying in the street. . . . In

Baku such murders were very frequent and, as as a general rule, the murderers were not arrested.

The General goes on to explain how, when things got worse and martial law was proclaimed, the Patriots extended their propaganda to the army until "there was the closest intimacy" between them and the soldiers. The leaders of the army, so ready to beat and imprison soldiers found reading even moderately liberal papers, do not seem, by the way, to have objected to an association of extreme reactionaries thus obtaining an ascendancy over the minds of the soldiers. Their reasons for acting thus I shall explain at the end of this paper. After this all the civil, police and even military power passed quickly into the hands of the patriots. To use the words of General Shirinkin:

"Declining to limit themselves to a passive *rôle*, the Patriots began to make use of the soldiers and police for making arrests and conducting searches, entirely without the permission of the police and military authorities. In some cases, especially on the branch railway lines, they went to the most monstrous (*samiya urodliviya*) extremes and were in open conflict with the authorities. No wonder, for tho they may have been prompted by the highest and purest motives in making their domiciliary searches, the sad fact remains that on such occasions they were frequently guilty of common theft."

The General then gives a long list of facts, and here I may remind the reader that General Shirinkin is not a doubtful politician or a disgraced official. He is a man of high character, still at the head of the Caucasian police force, and the document from which I am quoting is a confidential report intended only for the information of the Viceroy. Incredible as it may appear, he shows that the Patriots not only arrested people and conducted searches without authority, but that without their consent the Governors of gaols were afraid to let any prisoner go. Whenever they accused a railway servant of liberal tendencies, the railway company had always to part with that man instantly. The wives of arrested persons used at length to go to the Patriots to pray for the enlargement of their husbands or the reduction of their sentences. The Patriots seldom showed mercy, however; if ever they interfered at all, it was to have prisoners' punishment increased. Sometimes they threatened to shoot prisoners and greatly enjoyed the dismay of the latter and their preparations for death. General Shirinkin calls their proceedings "atrocious." Once when a member of the party was murdered, the Patriots insisted on the police arresting five men, while the Patriots seized the rest and confined them in a small railway wagon. For some reason or other the police showed quite surprising obstinacy on this occasion, for they released these twenty-two men, but they had the greatest difficulty in doing so, and then the Patriots accused them—the police—of being revolutionists!

In conclusion, General Shirinkin says that "the lawless conduct" of these Patriots has rendered the local authorities helpless. Not only is General Shirinkin powerless, but the Viceroy is also powerless. He lately "took determined measures to prevent further lawless proceedings on the part of this organization," but the organization simply laughed and complained to the Home Minister about him.

The fact is that the Patriots are supported by a powerful secret, oath-bound society in the army called "the Military Union." The headquarters of this reactionary body is in the staff at Tiflis; its ramifications extend to every part of the Russian Empire, and it numbers among its members some of the most exalted people in this country. Its origin is fear, a dreadful fear that the civilian will get on top; and in order to prevent this terrible consummation it is ready to ally itself with anything or anybody, even with the devil himself, even with the "Russian Patriotic Society of Tiflis."

The French Man

BY ALVAN F. SANBORN

[Our readers will remember a companion article to this, entitled "The French Woman," which we published last month. Mr. Sanborn is recognized as an authority on French affairs.—EDITOR.]

ON one of the hard, smooth white roads of France, a red-sashed, blue-corduroy-clad wagoner walks beside a heavily laden dray drawn by a superb Percheron. At the beginning of a short, steep hill horse and driver halt simultaneously, as if by a secret understanding, in anticipation of the coming climb. The wagoner takes the horses's nose in his palm, croons playfully and confidingly in his ear, and, having thus pulled themselves together, without any further visible exchange of signals they begin simultaneously to mount. As the ascent grows difficult, the wagoner bellows angrily at the straining horse and bastes him unmercifully with his whip. The harder the horse tugs and strains the louder and more angrily the wagoner bellows and the more unmercifully he bastes. But when, at last, the horse stops, spent and panting, on the summit, the wagoner throws both arms about his neck, draws down his head, and kisses him passionately on the forehead.

In this common little incident of the French high road you have the Frenchman's emotional temperament in a nutshell. The typical American wagoner would probably not have gotten angry with a favorite horse and lashed him thus, simply because he was having a hard time getting up a hill; but, on the other hand, it is certain that the typical American wagoner would not have rewarded his horse for a brave effort with a kiss.

And so it is all along the line. Mobility is the Frenchman's distinguishing trait. He is alternately violent to the verge of brutality and tender to the verge of weakness. He invariably redeems an unlovely indiscretion with an engaging one.

This is particularly true of him in his dealings with women.

As a lover he is jealous, exacting, unreasonable to the last degree, but he is correspondingly passionate and devoted. He displays that dash of recklessness in love which is so flattering and so precious to its object. Hawthorne has said somewhere that the greatest obstacle to a man's being sublime is his fear of appearing ridiculous. In love, at any rate, the Frenchman does not know this fear, and the result is that in love he is often sublime—at least in the eyes of his inamorata, and this is all that really matters. His instinct for form is so unerring that he is inimitable in the expression of sentiment. An American writer of considerable note said not long since that he would give the world to be able to produce in his lifetime one page that could compare in perfection of style with what the average French writer produces every day. Similarly, many an Anglo-Saxon whose besetting fear of ridicule or morbid introspection keeps him from expressing his best self would give the world to be as graceful in uttering sentiment on a single occasion as the Frenchman is whenever and wherever he has sentiment to utter.

As a husband the Frenchman is disposed to be overbearing, but he responds to tactful, conciliatory treatment as readily as the bud responds to the appeal of the sun. When his affections are deeply engaged, he retains after marriage the attitude of the lover, and in his good moments (his *"bons moments"*), which are by no means rare — no matter how much he may be harassed by the petty cares and annoyances incident to married life—he employs the gestures and the phrases of the lover as zestfully as if he were at the very beginning of his romance.

He praises his wife eloquently to her face, saying boldly in her presence the complimentary things which the more reticent Anglo-Saxon husband utters only to his friends, if he permits himself the indiscretion of uttering them at all.

In the lower and middle classes, as

well as in the upper classes, the French husband has a faculty that amounts almost to genius for bestowing the delicate attentions which cost little except the exercise of a modicum of tact and thoughfulness, but which carry joy to every true woman's heart. He not only thinks to take home to her often (in the absence of the means to make a larger offering) a ten-cent bunch of violets, pinks or roses from the flower market or the itinerant flower vendor's barrow on his route, but he presents them gallantly with the compliment and the caress the occasion calls for; and this makes them confer a pleasure out of all proportion to their intrinsic worth. He remembers her birthday or *fête* day with a potted plant, a bit of game, a box of bonbons, a cake from the pastrycook's, or a bottle of good wine. He is marvelously fertile in expedients for making the time pass quickly and agreeably for her. He has a thousand amusing and successful devices for helping her to renew her youth. He projects unique and joyous Sunday and holiday excursions. He improvises dainty little banquets. He is a past master especially in the art of conjuring up amiable mysteries and preparing charming little surprises. And in all these trivial enterprises he vindicates the old French theory that true courtesy consists in taking a certain amount of pains to so order our words and our manners that others "be content with us and with themselves." "In the repasts or *fêtes* one gives to others, in the presents one makes them, and in all the pleasures one procures them," says La Bruyère, "one must often choose between doing the proper thing and doing the thing that suits their tastes; the latter is preferable."

The American husband is particularly solicitous to do the proper thing; the French husband to do the agreeable thing.

There is no better "provider" than the American husband, no man more ready to give his wife everything she asks for, whether he can afford it or not; but his memory is lamentably poor, where her habits and preferences are concerned, and he lacks intuition. He makes her presents, to be sure, but he makes them perfunctorily. He does not give enough of himself with them, and the gift without the giver is bare. The American woman who complained that her husband held that he had fulfilled all the law and the prophets because he neither drank, smoked, chewed nor swore, and was excused thereby from putting himself out ever so little to make her happy, was voicing the grievance of a large class of women in America. The husband about whom the best his wife can say is "He hasn't a single bad habit" is, in nine cases out of ten, a sorry apology for a husband. "With virtue, capacity and good conduct one may be insupportable."

In other words, the American husband is second to none in doing his duty conscientiously by his companion, but he is less expert than the French husband in showing appreciation of her beauty, vivacity and wit, and in displaying that ideal deference which makes her feel that he esteems it a great honor as well as a great privilege to be permitted to share her existence, and that his life would be but a dismal, barren waste without her.

The difference is fundamental, since it is the difference between the Puritan and the Cavalier, between austerity and gallantry, between repression and expression, between the conception of life as a dreary round of duties and the conception of life as an inspiriting succession of opportunities.

The French husband possesses another faculty that goes far toward making the rough places smooth in matrimonial existence, namely a marvelous fund of gayety that is made up in about equal parts of *esprit* and of animal spirits. In default of passionate affection he offers his companion the most sprightly and engaging sort of *camaraderie,* which is the next best thing. Even when indifferent, sentimentally speaking, he is still vastly entertaining; still capable of being the best of daily company, thanks to his cheerful philosophy, which bids him make the most of life as he finds it, and to a winning playfulness of manner which comes as naturally as breathing to him. "That people should laugh over the same sort of jests," says Stevenson, "and have many a story of 'grouse in the gunroom,' many an old joke between them

which time cannot wither nor custom stale; is a better preparation for life, by your leave, than many other things higher and better sounding in the world's ears."

In sum, the Frenchman is not a model husband, but he is an adorable one—imperfect and adorable—a splendid illustration of the "glory of the imperfect."

Like husband, like father. The French father displays his quick temper before his children and makes them the victims thereof. He treats them impulsively as they treat each other. But, by reason of this very impulsiveness, which is, after all, but a form of childlikeness, he penetrates deeper into the child-consciousness than he otherwise could. He does not unbend toward his children, for he is so completely a child himself that he does not need to unbend to find himself on their level. He enters heartily into their whims, caprices, happy pretenses and fantastic imaginings because they are so very like his own. This makes him an ideal children's playmate. He has not lost, and he cannot lose, no matter how hard he tries, the happy expectancy and the capacity for wide-eyed wonder of childhood. He would be no Latin if he could. Patience being the last of his virtues, he has less patience than the American father with his children's naughtiness, but he is less shocked and worried by it, because it reminds him constantly of his own. The natural result is that the French child, whatever bitter moments his father's hot temper may cause him, rarely starves for an expression of affection, as the child of the perfectly self-restrained American father does far too often. Furthermore, the French boy as he grows into manhood enjoys a genunine comradeship with his father, that would be impossible if the latter were systematically concealing the fact that he is a frail and faulty human being like himself.

As the Frenchman lavishes tenderness on women, so he demands it from them. This is why his very social vices are less gross and more engrossing than those of the Anglo-Saxon; why, even at his worst, he is less addicted to the lupanar than to the *liaison,* and why, at his best, he esteems an attempt at platonic friendship with any woman not old enough to be his mother a foolhardy venture. His instinct tells him, what the more introspective but less intuitive American has to learn by experience—usually bitter experience—that this much-lauded relation almost invariably involves nervous wear and tear, wounded pride or heartburning, on the one side or on the other, in the long run.

It is because of this craving for tenderness that he insists on an eminently feminine helpmeet. He cares little what opinions his wife may hold on literature, art and philosophy, or whether she holds any opinions at all on these subjects, so that she possesses the secret of the soothing caress, has a talent for tender ministrations and a genius for loving. He clings to his house like a cat. His home life (*vie d'intérieur*) is far and away the most important part of his existence. Everything must give way befor it. He cannot admit long absences from home on the part of his spouse. The American fashions of sending a wife away for the summer and of shipping her off for a period of foreign travel ranging all the way from two months to two years he would consider monstrous.

The Frenchman demands tenderness even in his friendships with men. He is demonstrative and exacting in this as in other relations. He expects from his intimates consolation and encouragement rather than criticism and counsel. He courts their approbation and even craves a certain amount of innocent adulation from them, wherein is again apparent the essential childlikeness of his nature. Hence the kiss on the cheek and the hearty embrace when men friends come together after long absence; the ready shedding of the sympathetic tear on occasions calling for condolence; and all those outward signs of feeling at which the colder-blooded, more stoical races sneer as womanish, but which have never been so considered in Gaul—as the weepings by strong men, with which the pages of Cæsar's "Commentaries" abound, bear ample witness.

In order to find time for a proper discharge of the good offices of love and friendship, the Frenchman is obliged to sacrifice many things that are esteemed enormously important by the men of our people. The seriousness with which he

takes these intimate relations makes him averse to globe-trotting, even in the interests of trade, and renders him exceedingly loath to go to the colonies. It forces him to let slip business opportunities of which a man less preoccupied with sentiment would take advantage. This is one of the reasons why the French people are lagging behind in the international race for the commercial and industrial supremacy of the world; but it enriches the Frenchman's individual life amazingly.

The truth is that the Frenchman is only moderately anxious to "get ahead." He takes little satisfaction in money-making for its own sake. His highest ambition is not a colossal fortune, but a modest competence, which will insure him the leisure to gratify his taste for the sentimental joys just referred to, and to cultivate the other amenities of life.

He assigns a lofty place in the great scheme of things to the pleasures of the table, and makes them worthy of such a place. He cannot imagine eating as a process distinct from talking. A meal that is not seasoned with sprightly conversation is to him only a shade better than no meal at all. "The most fruitful and natural exercise of the mind," said the gloriously garrulous Montaigne, "is conversation; I find the use of it more sweet than of any other action of life."

The Frenchman has slight inclination for any pastime or social function which does not admit of untrammeled talk. This is scarcely to be wondered at, since talking is the one thing in the world he does best. His mobility of temperament finds in conversation its completest and most striking manifestation. With him, as with the poet, words are a medium for expressing not only ideas, but rapidly shifting moods. The most unlettered Frenchman is easily the peer, in this respect, of the most cultivated man of almost any other people. At the café, at the dinner table, in the drawing-room, on the railway train, wherever, in a word, two or three are gathered together, with time to kill, he skips from grave to gay, from lively to severe, with an agility that is nothing short of disconcerting to the slower Anglo-Saxon mind. He is flippant, fervent, extravagant, judicial, imaginative, logical, caustic, kindly, playful and pathetic by turns. Piquant anecdotes, picturesque narratives, quaint characterizations, clever raillery, telling climaxes, stinging epigrams, whimsical skits, astounding paradoxes and brilliant rejoinders follow each other in swift and dazzling succession. Indeed, this extraordinary virtuosity becomes at times almost a vice in him, since he cannot resist the temptation to make a *bon mot* even at the expense of the reputations of his dearest friends. But—and this shows that his motive is not that of the backbiter, but that of the artist—he will sacrifice his own reputation to a witticism with just as little hesitation.

This attitude, whatever its drawbacks, renders him delightfully democratic. He will hobnob gladly with any one, whatever his station in life may be, so that he does not bore him.

The Frenchman's need of chatting is so imperious that he chats on paper when he is prevented by circumstances from chatting with his tongue. He cultivates the gentle art of letter writing, which is a lost art in our country, so far as our men are concerned. He is still, phenomenal as it may seem, a reader of books. Culture should not be, in his view, a peculiarly feminine adornment, and it is he and not the "women folks" who determines the national taste in literature and all the arts.

In a chapter descriptive of the life of the artist colony at Barbizon, Stevenson says: "Honesty was the rule; the innkeepers gave, as I have said, almost unlimited credit; they suffered the seediest painter to depart, to take all his belongings, and to leave his bill unpaid; and if they sometimes lost, it was by English and Americans alone. At the same time the great influx of Anglo-Saxons had begun to affect the life of the studios. There had been disputes; and in one instance, at least, the English and the Americans had made common cause to prevent a cruel pleasantry. * * * The Frenchman marveled at the scruples of his guest, and when that defender of innocence retired over-seas and left his bills unpaid, he marveled once again—the good and evil were, in his eyes, part and parcel of the same eccentricity; a shrug expressed his judgment upon both." The comparative absence in the

Frenchman of the spirit of what the American calls "fair play," to which Stevenson thus graphically calls attention, is attributable in part to the unwitting and unmalicious cruelty of the perpetual child in him, and in part to the penchant for pleasantries at any cost, which is the very quintessence of sophistication. He is highly indifferent, furthermore, to the strict truthfulness of many of his utterances. An impertinent question, according to his standards, never merits a truthful answer. The falsehood that evokes a laugh, or that, by flattering or otherwise, gives pleasure, is not only venial but distinctly virtuous in his sight. The Gaul, like the Gael, rarely hesitates to lie to you amiably rather than hurt your feelings. Totally unreliable, then, in matters of relatively slight importance, he is, nevertheless, splendidly loyal when loyalty really counts and scrupulously conscientious in money matters. Failure in business, for instance, is still esteemed a dishonor in France.

His moral code is rather instinctive than rational, and is colored, if it is not created, by his emotionalism. Thus, there is nothing more contemptible in his eyes than for a person who is not a professional detective to aid in ferreting out crime, and he would be shocked beyond measure at the bare suggestion that a husband might demand money damages for the alienation of his wife's affections. Nevertheless, he does blithely a score of things that the American man holds quite beneath him.

There is a new Frenchman, more or less in evidence just now, who imitates British brusqueness and American hustle, studies foreign languages assiduously, travels furiously, talks glibly of capturing distant markets and colonizing the world, and affects to despise sentiment and the fine arts. But he is only a passing fashion. He is not typical and never will be typical. The real Frenchman holds a smile above a world market and an apt retort above a labor-saving machine. Today, as always, he is the enthusiastic devotee of anything and everything, from a good dinner to a good poem, that contributes to the beauty or the joy of living.

MARLBORO, Mass.

A Plea for Association Football

BY JOHN MORGAN

[Mr. Morgan is an Englishman who has played in most of the popular sports in England and America. What he has to say of "Socker" football should interest all our schools and colleges now at the opening of the athletic season.—EDITOR.]

THE football season will be on again in a few weeks from now, and it may interest the readers of THE INDEPENDENT to learn something of the English association football game—the most popular of all outdoor sports across the pond. Undoubtedly the game will be booming in the States this fall, as great interest will be manifested in the visit of the world famous Corinthians—England's *première* amateur club—a far more powerful aggregation of players than the "Pilgrims," who toured Canada and the States last fall. Thirty or forty years ago the Rugby game had the field to itself. But the undue roughness and closeness of the play and the constant stoppages to form scrimmages exasperated the public and, accordingly, when a new game was started in Scotland, the faster, more open, more easily learned by player and spectator, it achieved instant popularity.

In the early days of the game the Rugby clubs outnumbered the socker by twenty to one, but today the clubs under the "dribbling" code outnumber those under the "carrying code" by at least fifty to one. During the visit of the famous New Zealand Rugby Football team to America, on its way home to the Antipodes, early in the present year, the American press and public were astounded by the marvelous kicking and

the wonderful passing of the three-quarter-backs. Yet more wonderful kicking and far more clever and accurate passing is seen on scores of football grounds in Britain every week, especially with the crack Welsh clubs, who were the first to initiate the four-three-quarter-back system and who have perfected the passing into a science.

Yet this fine kicking and passing, which appealed so strongly to both the American press and public, in witnessing the New Zealand exhibition, fails to enthuse the ordinary British onlooker, because he has in a sense discarded Rugby for association football. This latter game is faster, more open, more attractive, also far more spectacular than either the Rugby or the American game, and it is the most scientific of all because success in this does not depend on sheer weight or brute strength, but on the scientific manipulation of the ball when in motion solely by the feet. The clever footwork seen on English league grounds would strike American onlookers with amazement. In fact, association football has sent sheer weight and strength, as the chief winning factor, to the scrap heap. The principal winning factors are speed, agility, good wind, endurance, quick perception, thoro command of the ball solely by the feet when traveling at top steep, the ability to give and receive accurate passes when on the run, also good judgment (distance) in the placing of the ball, all of which attributes are as easily attainable by the 130-pound athlete as by the 200-pound giant, who would be absolutely useless in the socker game, and who, if pitted against English youths in a fast socker game would be—owing to the latter's love of cross-country running — completely run off their legs to a standstill long before half time. I have seen each goal visited and both goal-keepers having to save twice each inside of one minute so fast does the ball travel from goal to goal.

Again, one point in favor of the socker game is its freedom from dangerous accidents, at least as far as Britain is concerned, owing undoubtedly to the strict enforcement of the laws of the game. At a very low estimate it can be stated that at the very least 600,000 persons, including thousands of youths, barely in their teens in fact, players, varying in ages from ten to thirty-five and up to forty, turn out regularly every Saturday afternoon to take part in regular socker scheduled matches, from September 1st to April 31st, over thirty-four weeks of continuous football in Great Britain. The total number of fatal injuries received during the last twenty years can be comfortably counted up on the fingers of one hand. Indeed, I question if the total fatal injuries received in socker in England during the last twenty years will amount to five. The heavy total of over twenty-two deaths in the intercollegiate style of football in America last season, with its short period of only seven weeks, and the small number of players, is simply staggering in comparison. Yet English players wear no defensive armor, no head guards, ear and elbow guards, no nose guards or padded knickers, simply a shirt and knickers, bare at the knees, a neat and businesslike outfit for a game that demands so much running. But those who in their ignorance imagine that socker is a ladies' game had better join a team and play, just for once, against a fast socker bunch. I am certain that before twenty minutes elapsed their opinions would need some revising. Socker will take every whit as much out of a player as will the intercollegiate, but in a far less dangerous manner.

I have no wish to disparage the American intercollegiate game of football in my effort to popularize the socker game, but wish the American colleges will add the game on to their athletic curriculum as an additional outside sporting event. We all know that the intercollegiate game is not suitable at best for more than ten per cent. of the athletically inclined. The fact is that even thousands of well-trained athletes are barred from the intercollegiate game, else there would be no need of the professional coaches scouring the country for suitable material to form the football squad each fall. On the other hand, the association game is open to all; it receives all and bars none; it is the ideal game both for the thoroly trained athlete and the weakling, who, by playing this manly game, will find it both an attractive and pleasant means of attaining perfect physical de-

velopment. Association football is still a sport, a pastime and a recreation, and once a game or sport ceases to be that then it is time to drop it and abolish it *in toto* or time to make it "walk the plank." Also the attractiveness of the association game is shown by the immense gates, and in the severe winter months that the chief matches draw, making the recent record baseball attendance of 35,000 in New York look small in comparison. A crowd of 35,000 only occurs once or twice at the outside during the baseball season in the United States, and that only under exceptionably favorable climatic conditions. American sporting crowds, in spite of the vaunted encomiums in the press, at best are only fair-weather crowds, and no game or sport, however important on this side, will draw out crowds like the 58,000 crowd at the final tie Scottish Cup at Glasgow two years ago, on a wet, showery day, or the crowd of 46,000 that packed the Manchester United grounds at Clayton, Manchester, in the second round English Cup last February on a cold, miserable, wet afternoon, in which there was both a murky fog and at times blinding sleet, but which entirely failed to dampen the enthusiasm of the onlookers, who were treated to a glorious exhibition of football on a sodden ground.

Before closing, a few figures as to some of the big socker crowds seen on some English enclosures last season only. Toward the end of September, in what in Liverpool is called the "local football Derby," in the league match between the two Liverpool clubs, Everton *vs.* Liverpool, over 52,000 paid for admission. In November, at the Northern "Derby," Newcastle United *vs.* Sunderland, fully 58,000 paid for admission. Before Christmas the 40,000 mark in league matches, counting the above named, had been passed four times, and the 30,000 from fifteen to eighteen times; sometimes three gates of 30,000 and up and six or seven of 20,000 and up occurring at different grounds on the same Saturday afternoon. Boxing Day (day after Christmas) over 150,000 attended the contests in the first league matches alone. Then came the last Saturday or so in January, the contest in what is called the first round proper English Cup (the world's greatest football tournament), and with rain and fog prevailing at most places a total of over 400,000 spectators attended at the thirty-two contests. Not a week passes but what the 30,000 mark is passed on one or more grounds. Then early in April came the great "socker" international, Scotland *vs.* England, at Hampden Park, Glasgow, the famous enclosure of the Queen's Park Club (now the finest football ground and enclosure in the world), when the immense total of 103,000 and some odd hundreds paid for admission. Then the following Saturday, on the new enclosure of the Chelsea F. C., at Chelsea, London, a match that practically decided the championship of the second division of the league, that between Chelsea and Manchester United, took place, a wonderfully exciting game ending in a draw or tie game in the presence of fully 76,000 spectators. On the week following this also came the final tie English Association Cup at the Crystal Palace enclosure, Sydenham, London, and altho no local interest was created in the final teams, as the one Everton team came 200 miles and the other, Newcastle United, traveled over 380 miles (enormous distances in the old country) to the final, yet the attendance reached the high total of 75,609 actual paid admissions; this crowd, great as it was, being over 30,000 below the record of 1901, when, with Tottenham Hotspur, a London club in the final tie, the crowd reached the magnificent total of 110,812 paid admissions, being the world's record for a crowd at any kind of a ball game.

Where do American football or baseball crowds compare with these figures? American intercollegiate football apologists state time after time that if the undue roughness is taken out of the football games it will not attract the crowds. Utter tommyrot is at least my answer to such twaddle. Undue roughness has been suppressed in English football, Rugby included, a cleaner game established and better gates are the result. Any crowd, I should think, and even the most prejudicial American one, after being educated up to it, would prefer to see a clean, fair, manly, open game, fast, with the ball always in view, in which opportunities are given to the real scientific part of football, such as clever run-

ning, dodging, kicking, dribbling and passing, in which players act as the occasion arises, on their own initiative and depend on the quickness of their own perception to meet, intercept and beat any move or pass of their opponents, and who, on the spur of the moment, as the occasion arises, conceive some idea, combined with the quickness of action, to follow it up, to deceive their opponents by either passing or make an individual attempt, such as making a feint of passing but penetrating by individual effort. Such playing is far more attractive to watch and tends to bring out the sterling qualities of a player far better than by carrying out some prearranged movements of the professional coach, made in the classroom the night previous to the match, in which only one team knows where the ball is to go; also, the plays will be far more attractive to watch than the close game at present, in which huge, clumsy, beefy giants succeed in penetrating the defense, not by superior scientific football, but by battering the opposing defense into a misshapen mass, in which, owing to the mixup and piling, any foul and dirty play is encouraged and indulged in with impunity, so long as it escapes the none too watchful eyes of the referee.

Anything, so long as you win or win at any or all cost, is the curse of more than one phase of American sport today. With the advent of the Corinthians the American public will have an opportunity for once of seeing real football in every sense of the word, as the socker game is played solely by the feet, and the Corinthians are absolute jugglers with the ball in that respect. When the Americans have reached anything like the standard set and maintained by their English cousins in socker football it will not be long before the huge gates seen in England will be duplicated on this continent. The professional socker clubs in England have gone in for baseball with a vim, as a mode of keeping their players in trim during the summer for the coming football season; let the American youth reciprocate by taking up "socker" in the fall, winter (where practicable) and early spring months, and those who will follow and act upon this suggestion will find that playing socker during the above mentioned months will be both an enjoyable, pleasant and effective means of keeping the various athletes in fine trim and fettle, not only for baseball, but also for other athletic events, such as cricket, tennis, rowing, track events, and especially for long distance and cross country running.

My Youth

BY EDITH M. THOMAS

My youth—my youth brooked not defeat,
  Deed following thought, with glowing haste:
Then, all sweet things did savor sweet,
  All bitter things did bitter taste!

My youth—my youth had store of tears,
  And lording Sorrow had full bent;
Mine anger set in rest keen spears,
  And favors won at tournament!

My youth—my youth in black would go
  Whene'er its idol fell in dust;
And breathed about, a world of woe,
  When Love, light-pinioned, cancelled trust.

My youth—my youth! How great the change!
  Such wounds from Time—such sore defeat—
Such broken faiths—defections strange,
  Unmoved I've met, and still do meet!

Such wounds, such wounds as thou, my youth,
  Hadst opened oft, nor let to heal;
But now, I only grieve in truth—
  That I so little grief can feel!

WEST NEW BRIGHTON, S. I.

Literature

Jaures' Socialism

THO Socialists would probably count him only as one among a half-dozen of their most eminent men, to the outside world Jean Jaurès appears as the most striking figure in the Socialist movement. His learning, his eloquence, his versatility, his personal magnetism and his inexhaustible vigor have in a few years raised him from local and academic distinction to international celebrity. It might be hard to say whether his reputation rests more upon the part he played in opposing the reactionary forces in the *Affaire Dreyfus* or upon his leadership of the more moderate wing of the Socialist movement in opposition to the "orthodoxy" of Bebel and Guesde; certainly the latter has especially commended him to the favor of non-Socialist public opinion. The growing strength of Socialism on both continents gives even its internal discussions of theory and tactics a general interest, and Miss Minturn deserves a vote of thanks for laying before us an excellent translation of these *Studies in Socialism,** which present a well-rounded exposition of the French leader's views. With her introduction we have but one fault to find. In her admiration for M. Jaurès she does him a real injustice by praising what she conceives to be his insincere submission to the adverse decision of the Amsterdam Congress. That decision was not, in fact, meant or taken as a censure, mutual understanding rather than recrimination being the keynote of the debates; and Jaurès should be credited with entire sincerity in his acceptance of the result. It is reported that Karl Marx, in his later years, once found occasion to say: "One thing I know—I am not a Marxist." In view of the exaggerated interpretation put upon his moderantism by some of his Socialist friends and by most opponents of Socialism, it is likely that Jaurès often feels moved to deny that he is a Jaurèsist. The present book will go far to correct the misunderstanding among English readers.

The four papers in the first section, "Socialism and Life," show us the aggressive and fundamentally revolutionary Collectivist, the same Jaurès whom we saw the other day in Parliamentary duel with the Radical Clémenceau. Those in the second and longer section, entitled "Revolutionary Evolution," deal with questions of Socialist method. Some of them have now only a historical interest; others, especially those in which the writer combats the semi-Anarchistic ideas of the anti-Parliamentary Socialists, the advocates of the general strike, are as timely now as when they were written in 1901. The burden of Jaurès's argument against these, whom he regards as revolutionists in phrase only, is that, with the present wide extension of political rights and the intensity of public life in all sections of society, it is Utopian to expect that the revolution can be accomplished by a *coup de surprise* on the part of a minority. The necessary condition to success, he holds, is the awakening and conversion of a majority of the people, who must be convinced by example, as well as by precept, that the Socialist idea is both right and practicable. The task calls for infinite patience and self-restraint. But while this work is being done, immediate results are also being achieved, which both give present relief to the proletariat and strengthen its aspirations and its powers for the complete transformation of society. Immediate partial reform, Jaurès holds, is by no means inconsistent with the revolutionary purpose; on the contrary, they go hand in hand. In this view, indeed, Guesde and Bebel quite agree with him, as he agrees with them that an aggressive and self-reliant proletariat must be the main factor in carrying on the movement. On the whole, the impression one gets from these papers is that the schism between "orthodox" and "moderate" Socialists was much less deep and their bonds of unity much stronger than the persistence and occasional acrimony of their polemics seemed to indicate; and such is undoubtedly the fact.

* STUDIES IN SOCIALISM. *By Jean Jaurès.* Translated by Mildred Minturn. New York: G. P. Putnam's Sons. $1.00.

Historic English Rivers

If the rivers of Great Britain were judged merely by their dimensions, the island would make but a poor showing. Mr. Wack, the author of *In Thamesland*,[1] goes so far as to say that to one who knows the Mississippi, the Missouri and the St. Lawrence, the Thames just above London, "seems hardly a river at all." And if this be the case with the Thames, what shall we say about Shakespeare's Avon? You have to be careful how you row upon it or you will go aground. But the Thames has a history reaching back to the time when the Romans crossed it just above Londinium; and Avon has bestowed an epithet upon the sweetest singer the English language has known. And so, wherever the Englishman goes, he carries with him the names of Thames and Avon.

Mr. Henry Wellington Wack, F.R.G.S., member of the New York bar, undertakes "to lead my own countrymen to traverse the beautiful valley of the great little river, to guide them ardently to its shrines and memorials." Hence he has written *In Thamesland*. He and a friend voyaged down the stream from near its obscure source to Kingston-upon-Thames, a short distance above London, where tidewater is met with. Mr. Wack has quite a faculty for accumulating facts, and his *Thamesland* is a veritable mine of history, interspersed with much observation of scenery and occasionally a facetious remark at the expense of the natives with whom they came in contact. The book, which is admirably illustrated and has a good map, will serve as a very useful and interesting guide to those who wish to take a similar voyage down the historic Thames or spend the days in wandering among the towns on its banks.

Mr. John Henry Garrett is not so imbued with a sense of humor as Mr. Wack is, but in *The Idyllic Avon*[2] he has given us an admirable description of a journey of fifty miles which he and some companions took in a boat up Shakespeare's Avon, from its junction with Severn, near Tewkesbury, to above Stratford-on-Avon. They stopped at every village, explored the banks within a range of a mile or two, and gathered as they went a wealth of historical material and close observation of the people. Here again the route lay thru one of the most beautiful districts of the Midlands, and Mr. Garrett's book, which is also well illustrated and has a good map, will be a valuable guide for any one who wishes to follow his steps. He is a poet, and with a poet's nature he has entered into the spirit of Shakespeare's country. Thirty poems connected with scenes and incidents of the voyage are interspersed in the volume.

The Civil War and After

Of the making of books on the Civil War there is no end, and doubtless never will be. Despite the great number of new issues that have arisen in all the realms of social and intellectual activity, the various phases of the great American conflict still provide motive and subject for an ever-swelling tide of print.

Mr. French[1] tells the story of the *Army of the Potomac* from the official records. Unfortunately excerpt and comment are jumbled together without sufficient typographical distinction between the two, and it is often difficult to tell what is official record and what is Mr. French. The proofreading, moreover, is frequently of a sort to add to the reader's distress. But the matter collated is of the greatest value, and one may read here the plain, unvarnished tale of the operations of the great army which, though for so long a time badly led, was at last destined to deliver the finishing blows against the Confederacy. The account closes with the supersession of General Hooker by General Meade immediately before the battle of Gettysburg.

Captain Battine[2] is an English army officer and a sympathizer with the Confederacy. He relates, at great length, the operations of the Federal and Con-

[1] The Army of the Potomac. From 1861 to 1863. *By Samuel Livingston French.* New York: Publishing Society of New York. $2.50.

[2] The Crisis of the Confederacy. A History of Gettysburg and the Wilderness. *By Cecil Battine.* New York: Longmans, Green & Co. $5.00.

federate armies in Virginia, Maryland and Pennsylvania, from Bull Run to Spottsylvania, and punctuates his account with critical judgments on men and their actions. He finds in the history of the Civil War a subject of great fascination, declaring that it

"Still remains the most important theme for the student and the statesman because it was waged between adversaries of the highest intelligence and courage, who fought by land and sea over an enormous area with every device within the reach of human ingenuity, and who had to create every organization needed for the purpose after the struggle had begun. . . . The Americans still hold the world's record for hard fighting."

Captain Battine is a clever, a vivid and an engaging writer. But his judgments, both of men and of events, are often airy and unbased. His assertion here and there that the Confederacy would have won the war had only this or that thing happened, as, for instance had Lee defeated Meade at Gettysburg, reveals an utter lack of knowledge of the the Northern attitude in the conflict. His laudation of Stonewall Jackson is extreme; and his admiration for McClellan and his statement of the numbers of soldiers engaged and of the comparative losses in the various battles, indicate that he has gathered his material from Southern partisan writers rather than from the official records.

Mr. Weeden[3] lays about him with a cudgel and hits heads right and left. His task is to show the relation of Federal Government to State government during the war, but he uses his opportunity for an undue amount of denunciation of his very numerous Dr. Fells. The material he has gathered is of great value, but the arrangement of it is faulty in the extreme, and the style and tone of the book are, to say the least, unfortunate. It is not easy to see what useful purpose his chapter headings serve; for tho readable matter is grouped under such specific titles as "The Genesis of the Union" and "Federal and State Interference," it might, with almost equal appropriateness, be assembled under any of the other headings. A string of pungent judgments upon men and affairs, anecdotes, excerpts from letters and speeches on every conceivable subject, now and then threaded together with a bit of historical narrative—of such is this book. It is entertainingly written, and only the most *blasé* of readers of Civil War matters can fail to find an engaging interest in its pages. It reveals, moreover, a vast deal of research. But it can heardly be called a critical study of the relation of Federal to State government during the Civil War.

A partisan, tho on the whole a temperately worded narrative, is Mr. Reynolds' history of the reconstruction period in South Carolina, ending with the removal by President Hayes of the Federal soldiers from the State House, at Columbia, in 1877.[4] Despite an evident effort to minimize the odious character of the acts of the Ku Klux Klan, admission is candidly made that some of its acts were deplorable. An unworthy bitterness against President Grant, based on his support of the State governments during the many troublesome periods in that commonwealth, crops out from time to time, and the great soldier is characterized as the "smallest man that had ever sat in the chair of Washington." In spite of certain faults of temper and attitude, the book is, in many respects, worthy of high praise. A patient care in the gathering and use of its voluminous and minute data is everywhere observable, and a judicial method is attempted thruout, tho unfortunately not always maintained.

Nelson's Encyclopedia

If we march with Russia in quantity of book production, Russia a little ahead, and the other nations far in the distance, at any rate in quantity of production of those substitutes for books, to wit, newspapers and magazines, we outstrip the rest of the world, and in the number of cyclopedias, those substitutes for systematic knowledge in special fields, we are abreast of Germany. Our newest cyclopedia* is the production of a Brit-

[3] War Government, Federal and State, in Massachusetts, New York, Pennsylvania and Indiana, 1861-65. *By William B. Weeden.* New York: Houghton, Mifflin & Co. $2.50.

[4] Reconstruction in South Carolina, 1865-77. *By John I. Reynolds.* Columbia, S. C.: The State Co. $2.00.

* Nelson's Encyclopedia. Everybody's Book of Reference. In twelve vols. Illustrated. Vols. I to IV, A to Fern. Editors-in-Chief, *Frank Moore Colby,* New York, and *George Sandeman,* Edinburgh. New York and London: Thomas Nelson & Sons.

ish firm long established in the United States, Thomas Nelson & Sons, famous for beautiful Bibles. We gather from their preface that the work is intended rather for the man in the street than for the man in the closet when he ventures into other fields than his chosen own, and this impression is confirmed by comparison with its immediate predecessor, the "International." The first volume contains about half as many words as the corresponding part of the "International," while the number of articles is in the ratio of five to seven; nor are the articles so long, full and rich in appended bibliographies as those of the earlier work. The compacter size has, however, not been attained by snipping, but by distillation. The partial list of specialists, both American and British, ensure in advance the comfortable feeling of security. And when we make acquaintance with the shorter technical articles like *Apperception, Abstraction, Absolute* we find that these articles, which are almost as brief as definitions in a lexicon, have the lucidity of essays. The limitations of space have been understood, and the results are like a painter's clever feats in composition. And longer articles, such as *Ballad, Asia* and *Army,* display the same ease and certainty of movement. It seems to be the custom in our cyclopedias to abandon the mass of biographical subjects to that worker who may be called the generalist. In most cases doubtless the loss is not great, but when it comes to the masters of men, these demand the historian who is master of his subject. We cite in *Nelson's* articles on Abélard and the personage whom the Germans call Baco of Verulam.

The publishers claim superiority in wealth of illustration. The claim is just, and the illustrations are not only abundant, but accurate. Portraits meet you again and again, and are usually photographic. But at this day it is a misdemeanor in science to give drawings instead of photographs for the portraits of races. The types of Chinese, Japanese and Samoyeds in the article *Asia,* and of North American Indians in *America* might have been done by some painter of a hundred years ago to whom Winckelmann was a divine spokesman. Map illustration is equally abundant. Here the British source of the work made it easy to surpass predecessors in quality. British maps are far behind the French, still farther behind the German, in representation of terrestrial surface, and in beauty for the eye apart from symbolism, yet they are more successful in rendering fact and pleasanter to look upon than our maps. Is this impotence of hand connected with the neglect of geography in our high schools, colleges and universities?

We regret that Messrs. Nelson have followed the practice of French publishers in letting their book go undated. It is a scientific immorality. Altho of British origin, we have before us manifestly an American edition. The American form of a thing common to both continents has been presented, the European reserved for other longitudes. The articles *Age, in Law* and *Army* are examples of what is the rule. In *Army,* after the history of the institution has been traced, the only contemporary army described is the American. To sum up—this first volume leads us to believe that *Nelson's Encyclopedia* will be a compact, accurate, agreeably written presentation of the sum of human knowledge at the entrance of the twentieth century.

The Legislative History of Naturalization in the United States. From the Revolutionary War to 1861. By Frank G. Franklin. Chicago: The University of Chicago Press. $1.50.

Of this book it may be truly said that the reader is unable to see the forest owing to the leaves. The mass of details given by the author in his endeavor to exhibit the course of opinion regarding naturalization in the United States from the Revolutionary period to the beginning of the Civil War prevents the mind from clearly grasping the important matter contained in the work. The value and importance of the study, however, cannot be overlooked. The freedom of the colonies had hardly been asserted when Congress began to discuss and define citizenship. The liberal policy of extending the protection of the laws to all foreign settlers regardless of nationality or religion was early inaugurated by the Continental Congress, and repeated ef-

forts were made during the Revolutionary War to detach the foreign element from the British army by offers of land and citizenship. But no definite action regulating naturalization was taken until the adoption of the Constitution in 1789, when Congress was given power to establish a uniform rule of naturalization. The response to this grant of power was the Act of 1790, providing, in addition to good moral character and an oath to support the Constitution, a two years' actual residence in the United States of all aliens wishing to become citizens. These provisions were considered as unduly lax by many statesmen of the time. The danger of foreign influence in Federal elections and the fear that foreign settlers, unaccustomed to republican institutions, could not properly exercise the elective franchise, led to agitation for a more restrictive measure. The desire to promote immigration, especially in Pennsylvania and the Western States, prevented Congress in subsequent acts from placing serious obstacles in the way of naturalization. In 1795 the period of previous residence was fixed at five years, and in 1798 was increased to fourteen years, but again reduced to five years in 1802. Since then, in spite of the activity of the Native American Association, formed in 1837, and the rise of the Know Nothing party during the decade between 1850 and 1860, the naturalization law in all its general features has remained unchanged. In the three chapters devoted by the author to an account of the "Native American" agitation in Congress, the close connection between the volume of immigration and the outbreaks of anti-foreign feeling in certain sections of the country is clearly shown.

Highways and Byways in Oxford and the Cotswolds. By Herbert A. Evans. Illustrated by Frederick L. Griggs. Pp. xv, 407. New York: The Macmillan Co., $2.00.

Now that the automobile offers the tourist a rapid and comfortable means of penetrating into regions which were closed to all except bicyclists and him who went afoot, it is quite possible that many of the historic districts of Great Britain and Ireland, which lay out of the reach of the ordinary traveler, will be largely visited by Americans. To such as make the tour, the series of "Highways and Byways," of which some twelve volumes dealing with England, Wales and Ireland have been published, can be heartily commended. The volume, *Highways and Byways in Oxford and the Cotswolds* gives an actual experience of a journey made upon a bicycle. Mr. Evans began and ended at the City of Oxford, passing thru the northwest of the County of Oxford toward the valley watered by Severn and Shakespeare's Avon, and so on to the eastern slopes of the Cotswold Hills. He very wisely says but little about the university city, for there are already guidebooks enough, but he does take a preliminary walk around the ancient place. When, however, he sets out upon his journey, his treatment of his subject is full and good. The district passed thru is full of historical associations, especially with the civil war, for Charles I made his headquarters for some time at Oxford. Nor is it deficient in scenic beauty and ancient mansions which were old before Blenheim was dreamt of. Mr. Evans takes pains to lay down his route very clearly, and we notice that he gives warning when the motor car will be useless. The volume is a thoroly good one, and will be of service to the tourist who visits Oxford, for all necessary instructions for following the route are given.

Empires and Emperors of Russia, China, Korea and Japan. Notes and recollections by Monsignor Count Vay de Vaya and Luskod. New York: E. P. Dutton & Co. $4.00.

This book of traveler's sketches in Russia and the Far East is somewhat belated, for it was written in 1902, and since then many things have happened there. The Hungarian Count tells of his observations on his extensive journey in the interests of the Church in a pleasant way, but not better than the same scenes have been many times described before now. He adds a chapter on later events in which he expresses the remarkable views that the war has not changed the Eastern situation to any great extent, that Japan forebore to push her conquest further for fear of arousing

Russian hatred, and that Australia and the Philippines may fall a prey to Japan.

Literary Notes

....The story by Robert W. Chambers entitled *The Fighting Chance,* that has been running as a serial in the *Saturday Evening Post,* is now published in book form by D. Appleton & Co. Mr. Chambers in this story has made a careful study of social life as it exists in high society at the present time, and has produced a real rival to Mrs. Wharton's "House of Mirth."

....Some 250 organized Esperanto societies now exist in the United States. Organizations of this kind meet regularly in nearly all of the principal cities of the country. Esperanto is easy to learn. The standard text book is O'Connor's "The Student's Complete Esperanto Text Book," published by Fleming H. Revell Co. The Emperor-King of Austria is said to have abhorred Esperanto, the reason given being that "Scoundrelly anarchists with a grammar and a dictionary could in half a dozen lessons acquire sufficient of the language to be able to communicate with each other all over the world."

....It is true that our best song writers do exercise a powerful influence upon the people, beside which the influence of our law makers is dwarfed, and the music of our favorite songs as played by the bands and even by the barrel organs and various other mechanical devices is fast becoming an important part of our national and home life. "The Star Spangled Banner," "Dixie," "America" and "Home, Sweet Home" move people and bring them to their feet in public gatherings. These will probably be sung as long as we are a people. Mr. Gustav Kobbé, the musical critic, in his forthcoming book, entitled "Famous American Songs," has struck a popular theme, and the scraps of information with which he will crowd it will doubtless make interesting reading. The volume is to be published by Thomas Y. Crowell & Co.

....Some one has discovered that Winston Churchill, who is an author as well as a politician, is a man with a superstition. On this theory is explained his predilection for the letter that forms the initial of his own name. It will be recalled that "The Celebrity" was his first published book, and that his first great success was "Richard Carvel." Following these came "The Crisis" and "The Crossing." Cornish was his home when he entered politics as a member of the New Hampshire Legislature, where he successfully introduced a bill relating to bridges over the Connecticut. In "Coniston," his latest book, he turns his political experience to good account in the drawing of the principal character, a political boss whose original he found at Croydon. It is this latest book that brought him prominently before the public as a candidate for Governor of New Hampshire, and it is more than possible that when the contest is over Churchill of Cornish will be Churchill of Concord.

Pebbles

Is this really funny? A man went crazy and imagined he was a poached egg. He asked his attendant for a slice of toasted bread, saying he was tired and wanted to sit down and rest.—*Atchison Globe.*

JOHNNY recited one stanza of the "Psalm of Life" to the delight of his proud mamma and amid the plaudits of the company:

"Liza Grape men allry mindus
Weaken maka Liza Blime,
Andy Parting Lee B. Hindus
Footbrin Johnny Sands a time!"

—*Ladies' Home Journal.*

"JAMES," asked the druggist, sternly, "how did you come to lose that sale?"

"We didn't have what the lady wanted, sir."

"Why, you know we carry the most complete line of perfumery, knickknacks, stationery, toilet accessories and fancy articles in the city."

"Yes, sir, but it was medicine she wanted. —*Great Falls Tribune.*

A YOUNG lady started her own banking account, and was very proud of her check book. She used it so well that one day there came a notification that she had overdrawn her account. When she found out what this meant she was full of sorrow for the bank. She wrote a pretty letter of apology and filled up a check for the amount due. "This," she wrote, "will put matters right."—*Ladies' Home Journal.*

PAT was invited to a wedding and arrived faultlessly attired in evening dress, a white chrysanthemum in his buttonhole. The guests assembled were suddenly startled by hearing a commotion. Rushing into the hall they were startled to behold Pat tumbling down the stairs completely dishevelled. "Why, what's the matter?" exclaimed the host. "Shure, and I wint upstairs; and, whin I wint inter the room, I seed a swell young dandy wid a white carnotionarymum in his buttonhole and kid gloves on his hands, an' I sez to him, 'Who's you?' 'Shure,' he sez, 'an' I'm the best man.' And, begorry, he is."—*Ladies' Home Journal.*

MEN are the opposite of women. On this fact is based the dissent of man, and also the dissent of woman.

Chivalry is not dead yet. The other day a man was observed to give up his seat to a lady as he was leaving his 'bus.

"Like as we lie," as the Roman Augurs said with a mutual smile.

The middle-aged should remember that half a loaf is better than no exercise.

Those who recommend the simple life have usually failed at the complex.

Genius is an infinite capacity for taking pleasure.

Life is the only thing worth living.

Society consists of two classes, the upper and the lower. The latter cultivates the dignity of labor, the former the labor of dignity.—*Punch.*

Editorials

The Real Democracy

THERE could be no better proof that Mr. Bryan has taken up the vital question, and that his championship of public ownership is regarded with fear by the beneficiaries of unjust privilege, than the excitement that his Madison Square Garden speech has created among the journalistic organs of the railway and trust interest. Dog-day weather is not conducive to strenuous editorial writing; but it is long since we have seen so much brain force expended in ingenious and otherwise able newspaper argumentation as is now being applied to a demonstration, first, that the Government ownership idea is a crude sort of animism, created by the primitive habit of personifying things in general, and, secondly, that Mr. Bryan can never be elected President of the United States.

Naturally, it is in the columns of the New York *Times* that this sort of writing is seen at its best. Naturally, for two reasons: First, because the New York *Times* employs exceptionally intellectual writers, and secondly, because the *Times* never permits its Democratic traditions to become so tinctured with the spirit of popular radicalism as to be offensive to such distinguished gentlemen of the Old Guard as Mr. August Belmont and Mr. T. F. Ryan. When, therefore, the *Times* interprets the public ownership idea in terms of an animistic or mythical philosophy, and predicts that Mr. Bryan can never attain the object of his political ambitions, we find its discourse both scholarly and finely Bourbonistic in flavor.

We have to confess that we share in a degree the *Times* opinion regarding Mr. Bryan's political future. The forces of capitalism, of privilege and of exploitation—of the money power, in short—have become more tremendous, far more ominous, far more unscrupulous than the rank and file of American voters yet realize; while the voters that should be organized in a great party of the people are at present disorganized, and it certainly looks like an almost superhuman undertaking to attempt to combine them in time for an already impending political campaign. If Mr. Bryan can accomplish this he will show himself to be without exception the greatest political genius in American history. But he can make a beginning, and, in our judgment, he has made it. He has cut loose from those elements in the Democratic party which are masquerading under false colors, elements that are among the most thoroughly plutocratic and corrupt that have ever cursed American political life. And he has put forward an issue that is of the people and for the people; an issue that is democratic thru and thru, one which all men of democratic instincts will recognize as democratic, and about which they sooner or later will rally. Mr. Bryan may never be President of the United States, but he can live thruout all coming time as the political organizer of a real American democracy, purged of the anti-democratic pretenses, humbugs and rascalities of the traditional Democratic party.

The animistic interpretation of the public ownership idea we, of course, do not accept seriously. As a literary creation it is pretty, and as such we can admire it. It is as cleverly constructed as the smoke rings blown by a cigaret fiend, and it has just about as much substance. It is true that European peoples habitually think of the government with a big G, as a paternalistic power, and the American people by no means always remember that governmental expenditures mean taxation. But, for all that, the American people have, from the earliest days, thought of their government—local, State and national—as a mode of co-operation of, by and for themselves, the people. In the New England town meeting, the inhabitants, in voting for roads, bridges and schools, do not think of their town government as a *deus ex machina;* they think of it as a work carried on by themselves, precisely as they think of their Congregational church and its activities as a mutual benefit enterprise. And while not all of the American public has been trained in New England town meeting methods,

the spirit of that method has wonderfully pervaded both our State and Federal governments. On the whole, the American people do not think of their government as a beneficent paternal power above and outside of themselves. They think of it as their own creation, as a mode of their own activity for their own ends.

This practical co-operative idea of government, we advise our scholarly contemporary, was never more vital than it is today. The people are beginning to see that they can make a great deal more of it than they have made hitherto. We are glad that the *Times* has constructed its myth theory, and we hope that it will spend a lot of time and energy in preaching it, for nothing could be more harmless. Let the *Times* cherish it and dream over it while the people get together and begin to do things.

Public ownership is in every particular the exact opposite of paternalistic government. It is the co-operation of the entire people; it is democracy, the real thing.

Dr. Spell

THERE is a familiar rhyme which reads something like this:

"I do not love thee, Dr. Spell;
The reason why I cannot tell,
But this alone, I know full well,
I do not love thee, Dr. Spell."

In the Epigrams of Martial the same thing was said many centuries before:

"Non amo te, Sabidi, nec possum dicere quare,
Hoc tantum possum dicere, non amo te."

This is sometimes said to be the woman's reason, the reason she gives when she does not want to give a reason, or has none to give. It is the reason the German frogs give in their antiphonal question and answer, *"Warum?" "Darum."* It is the reason, and the only reason, which the critics of the simplified spellings and of the President's order give, simply that they do not like it. It is ugly, they say, abominable, ridiculous, absurd; and that is all. Simply they don't like it.

It is the universal experience that reforms are not liked. They set people to thinking, and most people do not like to think. They prefer to take their opinions ready-made for them; to change them is a burden. Even the good is always the enemy of the better. Accordingly not one reason has been presented against the reform—this slight reform—of the spelling of the English language. What is left for the enemy, then, is to fling abuse and ridicule. The highest flight is to select a passage in President Roosevelt's, or some other man's writings, and put it into Josh Billings spelling, and ask how it looks. Of course it looks bad; but if you take that same passage and print it in the spelling which the President has directed the Government Printing Office to use, usually not a single deviation from the usual orthography would be discovered.

The London *Spectator* admirably meets this unreasoning prejudice. It does not ostensibly defend Mr. Roosevelt, but in fact and argument it shows how ignorant is the chorus of maledictions that has come from the English press. It has "no intention of championing Mr. Roosevelt's proposal," but it does it all the same. It recalls that the best authorities in the history of the English language, such as Professor Skeat and Dr. Murray, are with the innovators, who, in most cases, are not innovators at all. It then reminds us that English spelling was not standardized until Dr. Johnson's time; that it was he who added *k* to *musick* and *rhetorick* and *physick;* and he put the intrusive *u* in *labour* and *honour,* which did well enough without it until his time. So Noah Webster simply undid Dr. Johnson's blunder. There was no fixt spelling before Dr. Johnson's Dictionary. Every writer chose his own. Milton would spell *mee* when he wanted to emphasize the pronoun. As to even such spellings as *kist* and *blusht, The Spectator* says they are good enough for poetry, tho they still look awkward in solemn prose. We observe that in this very article *The Spectator* prints "spelt" for *spelled.* It sees no reason why the *a* should not be dropt in *aesthetic* and *aeolian,* when we have got rid of the diphthong in *celestial, penalize* and *Egypt.*

Thus far *The Spectator* can go, but not much further. In certain cases it says the proposed revision is "hideous,"

and it specifies *program* and *catalog*. But why "hideous"? Is not that a mere case of "*Non amo te*"? It says:

> *Catalog* would only be admissible if the cutting off of the *ue* made the word more like the Greek, but it does not."

That is an error, for the spelling *catalog* is exactly the stem of the Greek noun, letter for letter, while neither the *u* nor the *e* is in the Greek stem or case-ending. The shortened form actually restores the word to its original, altho that is no reason for or against the spelling we have adopted. The writer's taste may call it "hideous," but reason goes for it, and taste will follow. As to *program, The Spectator* allows that it is formed on the analogy of *epigram*.

The Spectator suggests an international conference to take up the spelling of the language, and consider advisable improvements. That is going quite as far as the Simplified Spelling Board has gone, and we presume it would welcome the proposal. Indeed, the philological societies of the two nations have already considered the matter, and the leading English philologists are with us. It is the literary men, not the students of words, who make the noisy protest on a subject of which they are hopelessly ignorant.

Exclusion Laws and Practices

It is the chief merit of Socialism, whatever its errors—and they are great—that its purpose is altruistic. It opposes that individualism which would secure the largest amount of personal gain, and it considers only the general welfare, irrespective of special abilities to grasp an individual fortune. Accordingly, Socialists are internationalists. They have no part in national hatreds and wars. French Socialists and German Socialists fraternize. Each nation is ready to help comrades of another nation.

In the same way, but in a narrower range, labor unions are distinctly altruistic. They band men of a trade together to help all, even the weakest, even if the method interferes with the ambition of the abler members. They may fight and hate those not of their union, and denounce them as scabs, but it is because these outsiders refuse to help in the general benefit, and insist on their own individual benefit.

It is a similar sort of limited altruism that nations exhibit in their tariff laws. Those laws are intended to benefit generally the citizens of the one country, even if they injure those of another country. They are a part and portion of the system of international hostility and war, limited by truce, which characterizes the relation of states with each other. It is an altruism that cannot look beyond the national borders. One of these days these tariff walls will be broken down, not because they do not help our people, but more because they injure people not our own. The time is far off, for international altruism is a distant and difficult virtue to cultivate.

We show our narrow altruism in our relation to peoples across the ocean. Beyond all question it would be kind to allow Chinese to enter our country freely; but we enact laws of exclusion and administer them roughly, to our own loss as well as that of the Chinese. We have thus earned the ill will of a nation which, in fifty years, will be the strongest in the world; and American trade with China has been reduced almost to a vanishing point. Similarly, we are trying to set up bars against immigration from Europe, on the ground that every immigrant is a rival to some native producer. This is bad economics, but it is easily accepted. Just now the influx of Russian Jews is becoming more and more immense. If the Russian troubles continue Russia will cease to be the chief home of the Jews, for they are coming to the United States in great numbers. Two thousand a day are said to be pouring into German harbors, most of them bound to the United States. Even so is this country still a harbor of refuge to the oppressed, and the more that come the more will be our product of wealth and prosperity. But the immigration puts a very heavy task on the Hebrew committees in charge of the newcomers, many of whom are women and children whose natural protectors have been killed. We can imagine narrow altruists standing at our ports of entry to shut out the bleeding refugees, afraid that they will take bread out of American

mouths. Much more likely they will make bread.

One of the most vicious forms of limited and exclusive altruism is that which would shut young men out from learning trades, for fear that they will take the jobs from older workmen. There are labor unions which limit the number of apprentices, as if it were not better that boys should grow up learning to work than lying idle. We have a curious case of this in Philadelphia, where an effort is making to prevent the Board of Education from establishing a trades school, out of fear that it will produce a crop of workmen more numerous than the demand will require, and that thus the present workmen will suffer. It seems ridiculous that any workmen will not wish their sons educated to their own work, or other people's sons educated to support themselves. It is a very narrow view, for it is an altruism in behalf of a limited circle, and it becomes co-ordinate with absolute selfishness.

But is not all limited altruism selfish when one looks beyond the limits to which it is confined?

Decentralization

One of our popular authors tells us that he was fifty years of age before he knew the song sparrow's note in distinction from that of the common chipping sparrow. This is not an unusual ignorance, but it is inexcusable for all that. By some failure of home education and school education, the country child has not had his senses brought into training and put to use. He has left the schools without eyes to see or ears to hear, and for this reason he has not known the country sufficiently to be in love with it. He has been willing very readily to leave the birds and the brooks because he practically did not hear them; and so he has been made a part of the herded masses—not knowing his deprivation. The whole burden of child culture should be to enlarge vision, and so to furnish material for broader reasoning.

Daniel Webster was one of the first of New Englanders to undertake to reverse the tide, and to teach the glory of country life. His farm at Marshfield was more to him than his palatial residence in Washington. Horace Greeley insisted upon telling what he knew about farming, and he knew more about it than the people were willing to believe. This country love he believed to be essential to the development of a democratic people. The recent speech of James J. Hill, before the Minnesota State Fair, is a sterling enforcement of this same Jeffersonian doctrine. He tells us that our American dream of conquering the world's markets must eventually fall before Oriental competitors, and this must become a nation of farmers:

> "Agriculture must claim and receive the best intelligence and the highest skill. There must be a national revolt against the worship of manufacture and trade as the only forms of progressive activity."

The Independent has fought this battle for years, and it rejoices to see that country love is waking the people to a new life.

We do not expect to see the end of cities, but cities as degenerative forces we feel sure that we shall see the end of. The country has room for all, without depression, physically or morally. It gives the conditions essential to wholesomeness, as well as comfort and abundance of nourishment for both body and mind. The best insurance policy is a few acres of land; an insurance that not only provides for the family after death but prolongs life as well. If Charles Dudley Warner were alive he would probably rewrite his "Summer in a Garden." His new garden would be a success, and he would find very little amusement in recounting his blunders. Our magazine writers are learning not to make fun of experiments in land tillage.

A 'phone call to the country editor compels him to lay down his pen: "Do you know that we have bought a country place for a home; way out here beyond the reservoir—and it is just grand? Why, man alive! I wouldn't think of such a thing as living once more in the city—only the doctor has to have an office there, and so we keep our house. But since we have had a taste of the country the city feels like a prison. We are not alone in this matter either, but rather with the crowd. Rents are going down on the boulevard. In five years more the fashionable city woman, who has no country place, will be out of the

swim altogether. But what I want of you is not an editorial but a little information. I want to know how you can stop the moles from gnawing apple trees and shrubs."

We have answered this question as well as possible, and have let the questioner into the fine art of putting clasps of tin about the trees, five or six inches wide. But what are these babes in the woods going to do in the country? They do not know mice from moles, for it is the mice that are doing the damage; and that is not the beginning of their ignorance nor the end of it. They will spend more than they get out of their acres, at least for the first five or ten years. Yet it is a sort of education that every person will do well to appreciate. The whole country is a vast schoolhouse. Every tree is a schoolmaster. Asa Gray used to say, as he looked down from his hillside home, that the Oriskany Valley was his university, and the plants were his professors.

Suggesting to our friend of the 'phone that she must not expect to become an expert at once, or to grow all her own strawberries the first year, she replied:

"We can learn, can't we? Going to school in this way is better than going to pink teas and giving chrysanthemum dinners. Out here we have got our own real pinks, and chrysanthemums of our own growing—lots of them. The fact is, we were amazingly ignorant, and likely to remain so for life. You may laugh at women's clubs, but I tell you they have done one thing, they have waked us up; and now the clubs themselves don't satisfy us. We are going into the country, where nature-study is something that we cannot help. The city is well enough for business; but we are beginning to understand what home means. Just think of it! We own seven acres of land, instead of a fifty-foot front city lot. We have room enough to turn around in, to learn a lot of lessons in, and dig a lot of good things out of. You should see our lima beans and our sweet corn. The children are just happy."

The city editor recently visited one of these come-outers, and saw the new country woman at her work. She was canning Flemish Beauty pears. "See here, now," she said, "sit down in that chair, right here in the kitchen. I am too busy now for parlors, and I do not care to be in one any way. Now that we are out of the city it seems like being born again. I don't see how we could have stood that conventionalism as long as we did. Just look in there!" and she swung open a door into a big closet, full of glasses of jelly and cans of fruit. "Every one put up by myself. And that is not all. I planted the bushes on which the currants and berries grew—that is I helped to plant them. I would have done it alone, only our fellow John charged me with burying them instead of planting. And with the help of Jack and Nelly I picked the currants and the raspberries, and now we are canning them."

"Do your children enjoy this sort of life?" I asked,

"Enjoy it? I should say so! Why, I thought at first that it was necessary to send them into the city, each morning, to school; and we did that for the first year. But this summer we are sending them to the town school, and it is really the better school. These country people have got about every privilege that we had in the city, and ten times more that we did not have. Their schools take splendid care of the children, and are supplied with first-class teachers. I begin to think that the whole country is a schoolhouse and very bush and every daisy a teacher."

No problem can be of more importance than this of decentralizing our population. Its tendency is to minify the advantages of wealth and the glorification of capital. Country life tends toward equality and freedom, and so becomes the very bulwark of democracy. With the modern knowledge of natural resources, and with scientific methods of production, we may safely distribute our whole population over our enormous national domain, and feel sure that there is enough of wealth in the soil for the whole of them. But we may fully agree with Mr. Hill that the problem is rapidly changing into one of economic necessity. He tells us:

"By 1950 America will have to solve the problem of supporting two hundred millions of inhabitants. Wasteful distribution of the public lands has already absorbed much of our

national heritage. But the improvident use of the lands is the chief difficulty before us. Agriculture in the most intelligent meaning of the term is almost unknown in the United States."

Those who are coming out to us from the cities will take possession of the land, for the most part, under the system of intensive farming, and with the full blaze of scientific investigation on their work.

Artificial Rubber

If any ambitious young man would like to earn $10,000,000 next year he has a chance. The world will gladly pay him that or even more if he will show how to make India rubber cheaply. He will find much of the preliminary work already done; only one link is lacking in the chemical process. All he has to do is to reverse a well known chemical reaction. Any freshman chemist can do it —on paper. This is all there is to it:

$$2C_5H_8 = C_{10}H_{16}$$
Isoprene Caoutchouc.

But it is easier to tear down than to build up, as sociologists as well as chemists have found. It has been known for over sixty years that heating caoutchouc gave isoprene, but nobody knows how to reverse the process. It is not impossible. In fact it has been done on a small scale, for isoprene, allowed to stand a long time in the laboratory, has spontaneously changed into caoutchouc. If, then, one could accelerate and complete the process, this doubling up, or polymerization, as it is called, the main difficulty would be overcome, for isoprene can be made from turpentine. Then the rubber industry would be transferred from the forests of Brazil to our own pine woods. Provided, of course, the manufacture were cheap enough. Chemists can do a great many things that they do not do because it does not pay. They can manufacture quinine artificially, but the process is too expensive to be profitable. On the other hand, Germany has snatched from India an industry worth many millions a year by the discovery of an economical process for the manufacture of indigo. It is cheaper and better to make it than to raise it.

Such will probably be the case with rubber, altho its present high price is not likely to last much longer. The jump in price came from the sudden demand made by by many new uses. The natives of Brazil could keep us in gum shoes and raincoats by their slow process of tapping the trees, catching the juice in little clay cups and boiling it down over a wood fire, but when we began to use it for the tires of bicycles, and then buggies, and later automobiles, and when electrical machinery used it on an enormous scale for insulation, their primitive industry broke down under the pressure. Now the world is using 60,000 tons of rubber a year, and is calling for more. All sorts of expedients were practiced. Rubber goods were weighted and adulterated until they cracked and crumbled at a touch. Old rubber was carefully collected and reworked, but it never could be made to regain its youthful elasticity and vigor. To make the matter worse the game of golf came in and gutta-percha, which is the next thing to rubber, was sown over our fields and forests by brassie slices.

The increased demand was partially met in a variety of ways; by the discovery of new fields and new sources, by improving the yield and by the cultivation of rubber trees. The Bolivian forests became a rival to the Brazilian. It was found that nearly all plants with milky juice, such as the poppy, contained caoutchouc, at least in small quantities, and from some of them it could be profitably extracted. Instead of waiting for the caoutchouc to rise slowly, like cream, from the milky juice, or collecting it by rude and dirty methods of coagulation, the centrifugal separator was introduced, and a much purer product quickly obtained. Countries possessing suitable tropical colonies established extensive rubber plantations. The Para rubber tree begins to yield when six or seven years old, and already the cultivated rubber is becoming an important factor. Within seven years it is expected that the product of the trees now planted in Ceylon and the Malay States will reach between 10,000,000 and 15,000,000 pounds a year, and in double that time will be five times as great, or as much as is now yielded by the Amazon forests.

Still there is no danger of glutting the

market, for as the price falls the uses of rubber become more numerous. One can think of a thousand ways in which rubber could be used if it were only cheap enough. In the form of pads and springs and tires it would do much to render traffic noiseless. Even the elevated railroad and the subway might be opened to conversation, and the city made habitable for mild voiced and gentle folk. It would make one's step sure, noiseless and springy, whether it was used individualistically as rubber heels or collectivistically as carpeting and paving. In roofing and siding and paint it would make our buildings warmer and more durable. It would reduce the cost and permit the extension of electrical appliances of almost all kinds. In short, there is hardly any other material whose abundance would contribute more to our comfort and convenience, and it is greatly to be hoped that the solution of the problem of synthetic rubber on which chemists have been working diligently and unselfishly for a half century will not be delayed many more years. The subject has its altruistic side, for the enslavement of the Kongo is due to the rise in the price of rubber and synthetic rubber would do more for the natives than philanthrophy.

Replies to Goldwin Smith

When we publish an article that we expect will antagonize some people we do not always solicit replies; indeed, we do not always or usually expect to admit replies. Sometimes we express dissent editorially, if we think a view is so ably presented that it is likely to do an injury if not immediately met. But usually, and particularly when the known position of THE INDEPENDENT is such that our readers are not likely to be misled, we think it just as well to let the enemy say his say unprotested. It was so when we published some weeks ago an article by Prof. Goldwin Smith in which he said some uncomplimentary things about the Jews, speaking of them as a "parasitic" race. That was not courteous, and we think not just, and we simply indicated as much. Then the replies came in thick and fast and hot, for Jews can write. They are said to have quite a mortgage on journalism. These writers told us, with figures and facts *in extenso*, that the Jews are not parasitic, that the overwhelming majority of them in Russia or here are not speculators or money lenders, but are honest workers with their hands, employed in factories, creators of wealth, just like other people. But we, as in many other cases, did not think it necessary or wise to make THE INDEPENDENT the arena for conflicts between correspondents, and we returned the articles, suggesting that they be sent to Jewish journals. And there they are appearing with denunciations of our unfairness in not publishing them. So be it; we are sorry that we cannot print all the replies that every one wants to write, but we must use our own judgment. Editorial judgment may be fallible, but it must in the nature of the case be final, with or without reason assigned. Pages are limited, and writers and topics are numerous. Let it be understood that publication of an article does not mean approval of its positions; that we trust a good deal to the ability of our readers to separate wheat from chaff, and that there must be chaff with wheat; and finally that while we are always glad to receive and read replies, for our own information and as a guide to our judgment, it is not often that they can be printed.

A "Correction"

Professor Goldwin Smith sends us the following note, which is purely literary and classical:

In my article on the Jewish question, arguing that the feeling against the Jew had not been exclusively Christian, I said:

"Tacitus speaks of the Jew as an enemy of all races but his own, and Juvenal describes him as one who would not show a wayfarer his road or guide a thirsty man to a spring if they were not of his own faith." (See Tacitus, *Hist.* v. 5; Juvenal, *Sat. xiv.* 103.)

Mr. Gotthard Deutsch in *The American Israelite*, challenges the accuracy of my reference to Tacitus, seeming to think that I referred to the passage in the Annals (xx, 44), which clearly refers to the Christians. Nothing can be more certain or clear than that the passage in the Histories refers to the Jews, and that I was guilty of no "inaccuracy of statement in historical matters" when I cited it in that connection.

Girls' Colleges

A correspondent of no little experience and knowledge of the subject writes us:

Having been connected for many years with a college of nearly one thousand girls, I feel called on to object in their behalf to the implication contained in the closing paragraph of that interesting article in THE INDEPENDENT of August 30, entitled, "Our Grandmothers' Schools." The author says: "I would not deny that this training was serious, if not ascetic, and in its scales the soul weighed more than the body; but before we sneer at the old-fashioned 'female seminary' let us recall the women of noble aim and unselfish life who exemplified its teaching. It may even be pertinent to ask which is the fairer sight, a seminary girl studying the constitutions of States under the eye of a cultured Christian woman, or a company of college girls smoking cigarets and playing 'bridge' for money." As far as my experience goes there is no ground for such an imputation on the girls' schools of today. The average girl who is *sent* to college nowadays is doubtless not so seriously inclined and has no such thirst for the knowledge of books or ethics as characterized their "fem. sem." grandmothers. For in those days opportunities for higher education were comparatively few and were sought by those of special attainments or purpose. Irrespective of their studies our college girls expect to have and do have, in one way or another, "a good time."

While admitting that teachers do not always know what students are about, I recall one particular case in point. A popular, breezy girl, who was in things generally and had a normal taste and opportunity for "larks" while in college, told me last spring how horrified she was to see, for the first time in her life, and some years after graduation, a woman smoking a cigaret!

As for "bridge"—our girls play cards but little. Not because they do not know how or do not like the games, but because they haven't time. Life is too full. There are a hundred things more interesting which claim attention, and for those who must have mere amusement there are athletics, including the perennially fascinating basket-ball. They may grow here and there, but as a rule the soil in girls' colleges is too well cultivated for the weeds of smoking and gaming to flourish.

Glow Light

The fire-flies are still in advance of mankind in the matter of economical light producing. The phosphorescent glow which they and many marine animals give off is nearly pure light, very little of the energy is wasted in heat, while in the case of all the forms of lighting devised by man more power is used up in producing heat which is usually not wanted than is converted into visible light. The nearest we have yet come to following the fire-flies is the mercury-vapor light developed by American inventors, which, in the form of long, glowing tubes, have been seen in our shop windows as advertisements for two years or more. They produce more light at less cost than any other practical method of illumination, and would be extensively used if it were not for the color of the light. It contains no red rays, but is strongest in the violet end of the spectrum, extending far beyond the limits of visibility in that direction, and including an abundance of rays that we can photograph, but cannot see. This mercury glow light has made the "while-you-wait photography" of the pleasure parks a possibility, but it is too ghastly for common use. It would turn a parlor into a morgue or a seance-room. But recently it is reported that German chemists have overcome this difficulty by putting into the electrodes other metals besides mercury, which, being volatilized in the vacuum tube by the electric current, change the character of the light by introducing the yellow and red elements, so making it approach the light of common day. Zinc with ten per cent. of bismuth and a trace of sodium is used for this purpose. If this proves practical we shall have our houses cheaply lit by softly glowing tubes arranged in all sorts of artistic designs on the walls and ceilings instead of one or more points of light too bright to look at directly.

Ten Women of Ancona

A somewhat unexpected extension of the suffrage to women in Italy comes from the admission of the names of ten women to the registration lists. For the purpose of securing an interpretation of the wording of the Constitution on their electoral rights, ten women of Ancona demanded the right of registration. This was permitted, and the question taken to the provincial Court of Appeals, which decided that it had no power to annul the registration. The decision turned on the interpretation of the word *regnicoli,* inhabitants of the kingdom, on whom the electoral rights were conferred in Articles 24, 26, 27 and 28 of the *Statuto*

or Constitution, and this, the Court holds, includes both men and women, and both are therefore eligible to vote and hold office. A similar test case from Florence was decided in the opposite sense by another Court of Appeals, so the ultimate decision will have to be made by the Court of Cassation, corresponding to our Supreme Court. If the women of Italy fail in this attempt to secure their rights by judicial interpretation, direct efforts to change the law will be made. The greatest positive gain to the cause of woman suffrage during the year has been in Finland, where, under the new constitution forced from the Czar, more than a million women will vote at the next election. In the elections of the Australian Commonwealth women now vote, but not in all the States; as, for example, in Victoria, where the Legislative Council has just rejected women's suffrage for the fourteenth time.

The Sultan's Illness

There are three rulers of Europe whose death might bring on a revolutionary war. One is the Emperor of Austria-Hungary; another the Czar of Russia, and the third is the Sultan of Turkey. There are sinister reports in circulation as to the Sultan's health. The circumstances are peculiar, owing to national jealousies, which might cause disturbances on the death of Francis Joseph, for Austria and Hungary are held together by a rotten thread. But the Austrian Empire has a reasonably free constitution, and the principle of freedom might secure peace even in the event of the Emperor's death. But it is different with Russia and Turkey. They are tyrannies. The people have no voice in their government. Much depends on the wisdom and strength of the tyrant in control, and when he dies there is the greatest danger of rebellion and revolt. When the Sultan dies who shall succeed him? Then will young Turkey attempt to rule? Then will the Armenians rise? Then will the European Powers intervene to preserve the peace? These are serious questions which will turn all eyes toward Turkey, even as of late they have been turned to Russia. The Sultan's illness may not be serious, but denials deserve no evidence when they come from the palace.

They have in Pennsylvania a Dairy and Food Commission, under the charge of Dr. B. H. Warren, which is an example to the country. It actually enforces the laws. The milk supply of the State is of the finest, and the chemist's reports indicate that the percentage of adulteration is diminishing. The improper cold storage of eggs has been successfully dealt with, as has the improper use of chemical preservatives. The department has become self supporting. Its receipts for the last year were $82,467, coming mainly from fines, as there were 1,085 prosecutions in 1905. In a single late case, that against impure glucose used for making candy, the manufacturing company was forced to destroy 8,000 barrels of glucose and pay fines aggregating $25,000.

It is the business of *The British Navy League Journal* to persuade the British people that a big navy is a big blessing. It mentions the complaint that the expense of maintaining the army and navy has increased $170,000,000 in forty-five years; but it replies that the property liable to the income tax in the United Kingdom has increased $2,660,000,000 in the same period. That sounds large, but the increase in the annual tax to support the army and navy is thus six and four-tenths per cent. of the increase in wealth. That is by no means an insignificant increase; it is a burdensome one. And yet the military journals are abusing the British Premier because he looks longingly forward for the abolition of war.

Perhaps the weakest expression of prejudice against the President's action as to reformed spelling is that of a very dignified journal of this city, which says that it is "extremely unfortunate, as indicating a lack of care in maintaining the true dignity of the highest political office in the world," that the President's name has been linked in the public mind, not with the names of Professor Mathews or Mr. Gilder, but with those of Artemus Ward and Josh Billings. We are glad the President is not so sensitive as to his

dignity. He was greatly amused when, on the late naval review, he saw the legend, "Pres Bot" displayed by the boat which carried the representatives of the press. Since when have our Presidents been concerned about caricatures and jokes?

Some Republican rainbow-chasers will have it that the Democrats are already retiring from the Presidential campaign before it has begun, because Mr. Bryan has "queered" the fight with his public ownership of railroads. But that is all nonsense. In the first place, the proposition will not be in the Democratic platform. Mr. Bryan has already made it clear that he does not expect it to be. Further, his approval of State or national ownership will help him as much as it will hurt him in the Northern States, while in all but a few Southern States it makes no difference what are the private views of the candidates or the platform of the party—they will go Democratic anyhow.

We were right in supposing that the action of the trustees of the Leland Stanford University in taking the power of removing professors out of the sole hands of the President and giving it finally to the trustees was not in the least intended as any slight to President Jordan, but was due to the change in conditions related to the death of the founder, and was done at the desire of the President. We have received a copy of the action taken, under which, in case it seems necessary to remove a professor, the matter shall be presented to the board by the President, with the recommendation of the advisory board of the faculty. This very properly unites all departments of government and instruction in the action taken.

It would be very unfortunate to have a war begun between Bulgaria and Turkey, and yet it is threatened. The Turks are good fighters, and have the larger population, and their soldiers do not expect much pay. But the sympathy if not the aid of Greece would go with Turkey, strange to say, while that of Rumania would go with Bulgaria, and Servia might keep her hands off. Were the victory in such a war to go to Bulgaria, the Turk would be driven to the Bosporus, and some European ambitions, as of Austria and Italy, would be disappointed. The ideal would be one great free and independent Balkan state.

One of the saddest of sights is the fighting in Macedonia, great districts reduced to wastes by fighting. And it cannot be said that this is the fault of Turks, for it is not. It is Greeks and Bulgarians, Christian sects and peoples in the deepest hostility, with warlike bands destroying each other's villages and fields. Why cannot they fight a common foe, for liberty, if fight they must? It is like the disgraceful conflicts between Christian sects in Jerusalem for control of the holy places, while the Moslem guards look on and laugh or keep the peace.

The Russian revolution cannot be hurried. There must be time for resistance, that the victory may be more complete in the end. For the present the naval outbreak has been suppressed, and the premature strike is a failure. But the autumn is coming, when the crops will be in, and the real revolution will probably have to begin in the provinces, where the army is not so massed as in St. Petersburg and Moscow.

Those who were kiting speculative schemes called Hipple the "religious financier," and to the naked eye such he was. It was a part of his stock in trade, after he had fallen into the net, just as one villain puts on priest's garments, or another blacks his face. The fact that the cloak of religion helps a swindler is to the credit of the cloak.

One of the best things about the new law in New South Wales against gambling, is that section which prohibits newspapers from publishing racing odds. It is strange that honest and decent papers here in this country should publish such news, the only effect of which is to encourage gambling; they ought to be interdicted here.

Financial

"Call Money" and the Government

A CIRCULAR letter issued by Secretary Shaw and addressed to all national bank depositaries takes the ground that public moneys are for use in communities where they are deposited, and that such funds should not be loaned at high rates for speculative purposes. The Secretary requests the depositary banks to return to the Treasury of the United States all money which is not normally absorbed. The circular letter has been widely discussed, and the consensus of opinion regarding it is that the Secretary of the Treasury lacks the power to dictate in such matters, and that all he is able to do is to advise banks against such practices as would advance the rate on call loans to an unnecessarily high level. The text of the Shaw circular letter is as follows:

"I am advised that many banks, scattered thruout the country, are loaning their surplus funds thru brokers and others in New York on call at high rates of interest. Money loaned on call is well nigh universally for speculative purposes. I recognize the right of any individual to speculate in stocks or in lands, and the legal right of any bank to loan money at appropriate rates of interest, at home or abroad, on ample security, even with knowledge that it is being used for speculative purposes. I am not willing, however, that Government money shall be enticed away from the locality where it has been deposited for the purpose of being used in this way. Public deposits are made in aid of legitimate business as distinguished from speculation, whatever its nature. Depositary city banks are expected to loan at regular rates or not at all and they must not be tempted to act as agents instead of correspondents for other depositary banks in making call loans at high rates.

"If you have more money than your community can appropriately absorb please return it to the Treasury, for it can be promptly placed where it will do much good. This does not apply to banks with large reserves regularly on deposit with city correspondents."

The Real Estate Trust Company of Philadelphia

FOLLOWING closely in the footsteps of the broken Milwaukee Avenue State Bank in Chicago, to which reference was made in our issue of August 16th, comes the case of the Real Estate Trust Company of Philadelphia, which was wrecked by its president, Frank K. Hipple, who committed suicide when he realized that discovery of his unsound and criminal management was close at hand. The Real Estate Trust Company, it appears from the investigations made since the institution passed into the receiver's hands, was notoriously a one-man bank. Mr. Hipple was high in social and religious circles. His connections were such that every one trusted him. His fellow officers followed blindly where he led, and the directors, instead of directing, took the president's word for everything he did. Even the Banking Department took things for granted and made no examinations of this good man's bank for something like two years. He made loans on worthless securities; he juggled with collateral; he permitted overdrafts on the part of the promoter Segal notwithstanding the fact that Hipple's colleagues mistrusted Segal and spoke of him as "the Devil's Deputy"; he overdrew his own accounts and did other things that he knew were opposed to the principles of sound banking, until he had piled up a shortage of $7,000,000. When he saw that he had reached the end of his rope he took his own life and left to others the sad task of adjusting the great financial wrongs to 6,000 odd depositors, of which he had been guilty. It would be charitable to think that some of Mr. Hipple's lapses arose because of the breaking down of the financier thru the softening of his brain or because of malign hypnotic influence, but it must be confessed that not much evidence of any such causes can be adduced. Some have suggested that the Doctor of Laws was money mad. Possibly the directors were under a similar influence, and it may be that the two lawyer-directors who are said to have profited to the extent of $750,000 for passing upon the worth of the securities that figured in the transactions between Hipple and Segal were similarly tainted. The wisdom that suggests reforms after the fact would have saved wide-reaching losses if it had been applied before the fact.

Insurance

Causes of New York Fires

In the recently published report of the New York Fire Commissioner, the total number of reported fires for 1905 in the City of New York is given as 7,750. This was an increase over the preceding year of 201. The total estimated loss amounted to $5,271,955, which is an average loss of $680.25 per fire. Of the whole number of fires, 3,337, or 43 per cent., were for losses less than $10. The following causes were tabulated by the Fire Marshal:

	Fires.
Carelessness with matches	757
Children playing with matches	244
Carelessness in the use of lit cigars, cigarets, etc.	404
Overheated stoves, stove pipes, etc.	444
Chimney fires, defective flues, etc.	439
Bonfires and brush fires	476
Carelessness in use of candles, tapers, etc.	256
Gas lights in contact with curtains, etc.	217
Kerosene oil lamps, etc., upsetting, exploding, etc.	165
Fires from causes which could not be ascertained	2,681

It will be observed that children may be trusted to play with matches or fire with double the safety that smokers may do the same.

The International Policy-Holders' Committee

Bishop Charles C. McCabe, of the Methodist Episcopal Church, and one of the members of the International Policy-holders' Committee, of which Samuel Untermyer is active as manager, followed the example set by Seymour Eaton and resigned last week. In his letter of resignation addressed to Judge A. B. Parker, the Bishop claims to have misunderstood the purposes of the International Committee and objects with much vigor to the address, signed with his name without his permission, which was recently sent to the policy-holders. He further protests against the continued expression in the name of the Committee of opinions and accusations with which he has no sympathy and which he is now convinced have no sufficient justification in fact. The Bishop incidentally paid high tribute to those recently named on the two administration tickets. The reply of the International Policy-holders' Committee took the form of "reading out" the good Bishop in a set of caustic resolutions, and he was promptly "relieved from further service" in the Committee, whose meetings, it is claimed, he did not attend, altho repeatedly requested to do so.

The campaign promises to be lively from now on. Charges and countercharges receive almost daily publication, and the campaign literature proper constantly increases in volume.

The subject of discussion at the eleventh annual convention of the Kentucky Association of Fire Insurance Agents, held at Louisville, Ky., last June, was "How to Prevent Fire Loss." The matter is referred to at this late date in order to illustrate the futility of attempting to absolutely prevent fire loss when, to the known hazard of mice, cats are newly added. The cat hazard recently arose when two of these animals overturned a lighted kerosene lamp that stood on the top of a refrigerator at Harrisburg, Pa. In addition to the property loss which resulted the householder was painfully burned while engaged in extinguishing the flames, and he sustained cuts on his foot because of the broken glass of the lamp. It is exceedingly doubtful if a hazard of this kind was considered at all at the Louisville convention.

We are pleased to announce that 80 per cent. of the loss, amounting to about $500,000, suffered by the New Hampshire Fire Insurance Company, of which Frank W. Sargeant is president, in the San Francisco disaster, has been adjusted, and it is expected that the balance of the claims, $100,000, will be settled in a short time.

....Dividends announced:

Am. Graphophone Co. (Common), quarterly, 1¼ per cent., payable September 15th.

Am. Can Co. (Preferred), quarterly, 1¼ per cent., payable October 1st.

Am. Car & Fdry. Co. (Preferred) 1¾ per cent., payable October 1st.

Interborough-Metrop. Co. (Preferred), quarterly, 1¼ per cent., payable October 1st.

Manhattan Rway Co., quarterly, 1¾ per cent., payable October 1st.

J. G. White & Co., Inc. (Preferred), quarterly, 1½ per cent., payable October 1st.

The Independent

VOL. LXI. NEW YORK, THURSDAY, SEPTEMBER 20, 1906 No. 3016

Survey of the World

Mr. Bryan and the Democracy

The Democratic drift toward Mr. Bryan has manifestly declined during the past week. The Connecticut Democratic Convention nominated Mayor Thayer, of Norwich, for Governor, but the platform was concerned solely with State issues, and no mention of Mr. Bryan was made in it or in the speeches. Similarly, the Democratic Convention of California, from which State Mr. Hearst came to New York, nominated Theodore A. Bell for Governor, who in his speech of acceptance said: "Let us reject the man who attempts to dominate the Democratic party of California, William R. Hearst." The platform was strong against railroad rule and against Mr. Hearst's special designs, and endorsed Mr. Bryan and favored public ownership of public utilities. In the Democratic Convention of Colorado the main questions were local. The platform denounced the Republican party for stealing the State, and the Supreme Court, with the Democratic Chief Justice, for helping the Republicans do it. Alva Adams, who has three times served as Governor, was nominated, and the platform promises that he shall be seated, if necessary by force, if elected. There will be an independent Democratic ticket and also a Labor ticket in the field. The platform endorsed Mr. Bryan.——In the Southern field Senator Bacon, of Georgia, has joined Senator Bailey, of Texas, and Senator Morgan, of Alabama, in opposition to Mr. Bryan's public ownership of railroads. He says it would be impracticable for the Government to maintain and operate 220,000 miles of railroads economically and honestly, and build the new lines which would be required as well. It would present the most inviting and unlimited field for graft and thievery the world ever saw. He says the railroad business of the United States is, in its magnitude, scope, intricacies and difficulties, one hundred times greater than that of the Post Office Department, and that government ownership would constitute a political machine the reach and resistless power of which cannot be realized or conceived. The control of passenger transportation in the several States by a political party or political machine would render conditions in some parts of the country absolutely intolerable; while it would be quite impracticable that the general Government shall own the trunk lines and that the States shall own the local lines, so that business with some railroads in a State shall be controlled exclusively by laws enacted by Congress, while the same kind of business with other railroads in the same State is to be controlled by laws enacted by the Legislature of that State. Mr. Bryan is on an extended tour of the Southern States, making speeches every day of the week, but is not likely to visit Ohio, where the Democratic candidates for Congress, at a meeting together, voted that it was not wise to ask him to visit the State.

Republican Conventions

The Ohio Republican Convention was dominated by Senators Dick and Foraker. Congressman Burton, in a speech several weeks ago, had sharply criticized boss rule, and had said that at the coming convention the two Senators should not be endorsed equally with the President. This stirred up the leaders and office-

holders. Mr. Burton's criticism of Senator Foraker brought him to the support of Senator Dick, who has been for fifteen years chairman of the State Executive Committee, and against whom Mr. Burton's attack was chiefly directed. Altho Mr. Burton had obtained the control of eighteen out of the twenty-one districts of the State, the fusion of the two Senators and their control of the offices enabled them to rescue their cause, and Mr. Dick was re-elected chairman of the State Committee by a vote of 573 to 285. When Senator Foraker appealed to Mr. Burton to move to make the election unanimous he refused. The convention heartily endorsed President Roosevelt, and the two Senators with equal approval. Senator Foraker made an eloquent speech, in which he declared for independence even of the President. There was a clash on the floor of the convention between Senator Foraker and ex-Governor Herrick, who was defeated in the Gubernatorial election last year owing to the rising against boss rule. There was also contention over the question of the nomination and practical election of the United States Senators by the people. Mr. Burton announces that this is not the end of the contest. The platform favored primary election reform, popular voice in the election of Senators, and correction of tariff abuses. In the Cincinnati district convention Mr. Longworth was unanimously renominated.——The Republican Convention of Colorado has nominated Philip H. Stewart for Governor. Mr. Stewart is a friend of the President, and the platform praises the Democratic Chief Justice, Gubbert, for his honesty in punishing election frauds and seating Republicans honestly elected, and congratulates the State on its prosperity and peace since the punishment of the dynamiters. Chief-Justice Gubbert, tho a Democrat, was renominated for his present position.

The Hearst Independence League

While the Independence League is now well organized in this State under the control of Mr. Hearst, it is not yet legally recognized as a political party which has the right to have its candidates named on the official ticket to be voted for. That will have to come later by petition, as in the case of Mr. Jerome's election. The Independence League's convention last week in this city was a most exciting one. It was held on two successive evenings in Carnegie Hall, which was otherwise occupied during the day. It was the clue of the leaders, and was so indicated in Mr. Hearst's own papers, that the convention should simply nominate Mr. Hearst for Governor, and then leave the rest of the ticket open for a dicker with the regular Democratic convention if it should nominate Mr. Hearst. But on the first evening the large, noisy and enthusiastic convention got away from the leaders. The members from all over the State were suspicious of any arrangement with the Democrats for the benefit of Mr. Hearst alone, and indicated an intention to go alone with an entire State ticket. On the second evening the leaders found themselves forced to yield to the overwhelming majority. Mr. Hearst was nominated with the wildest enthusiasm, and the ticket completed. But the next day, George A. Fuller, president of the State Grange, the candidate for State Treasurer, declared he would not stand, having apparently been selected without his consent for this purpose, and it is generally understood that if occasion calls for it others will resign so as to make some fusion with the Democrats. Later Mr. Fuller said that his relation to the State Grange would not allow him to enter partisan politics. The platform was against boss rule and the control of wealth and all class legislation. Of the other candidates, Lewis S. Chanler, for Lieutenant-Governor, is one of the Astor descendants.

Labor's Appeal to the President

In the *American Federationist,* the official magazine of the American Federation of Labor, is published what is called "Labor's Bill of Grievances," addressed to President Roosevelt, Senator Frye and Speaker Cannon, and presented to them on March 21st. It presents ten grievances which it says Labor has against the President and Congress for their neglect to secure desired

legislation. These grievances are as follows: 1. The ineffective eight-hour law has not been extended so as to cover all work done by the Government, and especially the labor of digging the Panama Canal. 2. Competition of convict labor with free labor has not been prevented. 3. Congress fails to enact laws urged for excluding induced and undesirable immigration. 4. The Chinese exclusion law is flagrantly violated, and effort is made to reverse the policy. 5. Legislation to protect seamen is withheld. 6. Legislation requiring vessels to be suitably manned fails to pass. 7. The anti-trust and interstate commerce laws have been perverted, so far as laborers are concerned, so as to invade their personal liberty. 8. The writ of injunction has been perverted so as to attack and destroy personal freedom, and so as to hold that the employer has property rights in the labor of workmen. 9. The Committee on Labor of the House has been composed of members opposed to the interests of labor. 10. The right of petition has been forbidden Government employees on pain of instant dismissal. These grievances are signed and presented by President Gompers and nine other members of the Executive Council of the Federation of Labor. In April a copy of these grievances was sent to each member of Congress and he was asked for his attitude on the subject. The *Federationist* publishes answers from about 120 Congressmen, most of whom express agreement with the demands of labor as indicated in the bill of grievances.

Mrs. Longworth at Columbus

At Columbus, O., where Mrs. Longworth had gone to take part in unveiling the monument to President McKinley, 50,000 people were packed in a mass before the stand, and there was so great danger of loss of life among the women and children that Dr. Washington Gladden, who was offering the invocation, had to stop in his prayer, and joined with those in charge in attempting to make the crowds stand back; but to no avail. Then Mrs. Longworth, without ceremony, stept forward to pull the ribbon which went to the monument and was to unveil the statue. The crowd paused and shouted, as soon as she was recognized; but as soon as she had unveiled the statue the crowd made a wild rush for the ribbon and tore it into shreds, and seized the rings, thru which it had past, and it was with the greatest difficulty that the police held back the mob. The crowd would not go when Mrs. Longworth came forward and bowed. Women fainted, and again Mrs. Longworth went forward and waved her hand to the people, who shouted, "Goodby, Alice!" It was impossible to go on with the program, and the speeches were postponed till evening. In the attempt to leave the crush was so great that Mrs. Longworth was compelled to take refuge in an office building, so many in the crowd tried to touch her. Mrs. Longworth said it was the worst of all the crowds she had seen all over the world. Scores of women fainted away at the stand. Justice Day and Senator Daniel delivered their orations in the evening.

President Roosevelt's Letter to Cuba

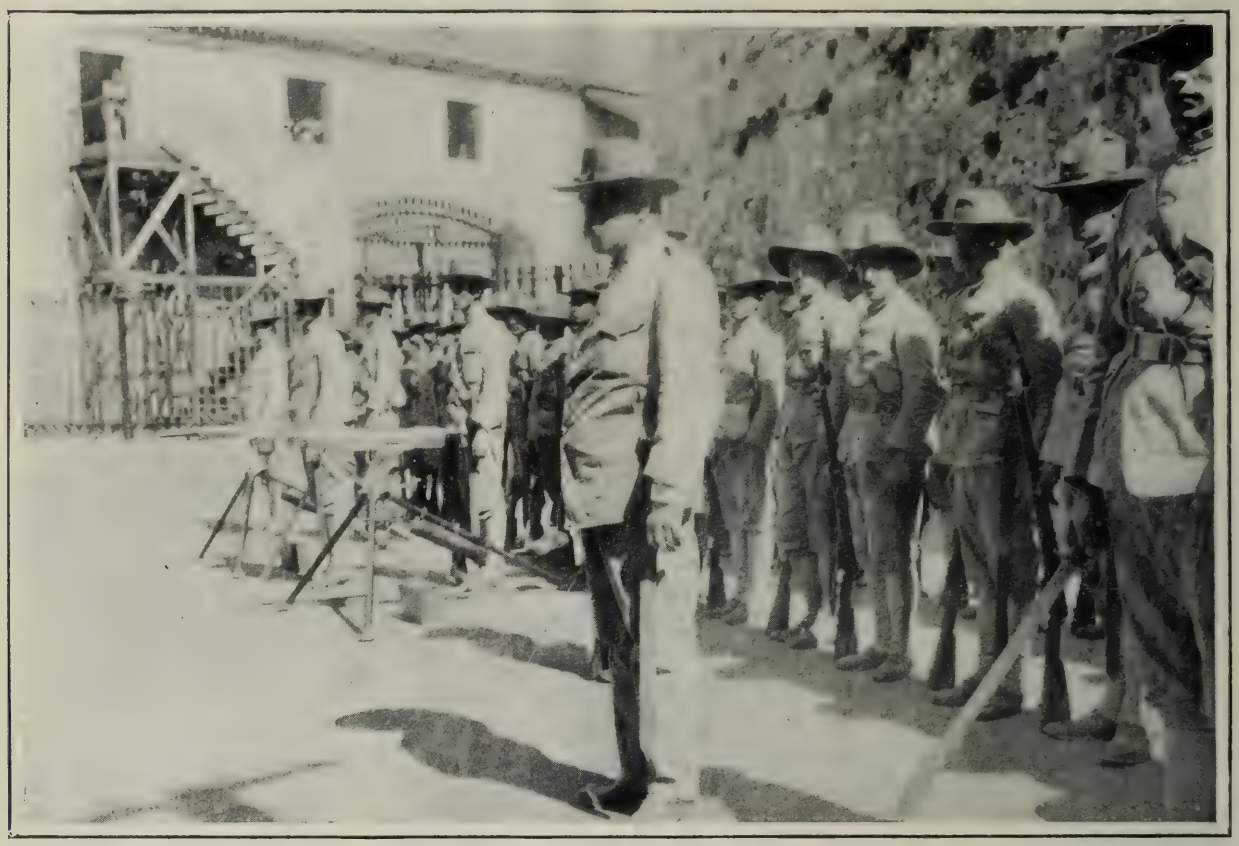
Last week Thursday, at the special request of President Palma, of Cuba, a detachment of bluejackets from the cruiser "Denver" was landed at Havana to protect American interests. No sooner, however, had this landing been reported at Washington than instructions were telegraphed back to have the troops withdrawn to the ships, as it was feared their presence in Havana might tend to involve the United States in the controversy. On the following day a six hours' conference took place at Oyster Bay between the President, Secretary Taft, Secretary Bonaparte and Acting Secretary Bacon, where it was decided that Secretaries Taft and Bacon should proceed immediately to Havana, to make a thoro investigation of the situation, and, if possible, bring about permanent peace. At the same time President Roosevelt issued an open letter to Señor Quesada, the Cuban Minister at Washington, from which we quote as follows:

"I desire now thru you to say a word of solemn warning to your people, whose earnest well wisher I am. For seven years Cuba has been in a condition of profound peace and of

steadily growing prosperity. For four years this peace and prosperity have obtained under her own independent government. Her peace, prosperity, and independence are now menaced; for of all possible evils that can befall Cuba, the worst is the evil of anarchy into which civil war and revolutionary disturbances will assuredly throw her.

"Whoever is responsible for armed revolt and outrage, whoever is responsible in any way for the condition of affairs that now obtains is an enemy of Cuba; and doubly heavy is the responsibility of the man who, affecting to be the especial champion of Cuban independence, takes any step which will jeopardize that independence. For there is just one way in which Cuban independence can be jeopardized, and that is for the Cuban people to show their inability to continue in their path of peaceful and orderly progress.

"This nation asks nothing of Cuba save that it shall continue to develop as it has developed during the past seven years, that it shall know and practice the orderly liberty which will assuredly bring an ever increasing measure of peace and prosperity to the beautiful Queen of the Antilles.



"Our intervention in Cuban affairs will only come if Cuba herself shows that she has fallen into the insurrectionary habit, that she lacks the self-restraint necessary to peaceful self-government, and that her contending factions have plunged the country into anarchy.

"I solemnly adjure all Cuban patriots to band together, to sink all differences and personal ambitions, and to remember that the only way that they can preserve the independence of their republic is to prevent the necessity of outside interference, by rescuing it from the anarchy of civil war. I earnestly hope that this word of adjuration of mine, given in the name of the American people, the stanchest friends and well wishers of Cuba that there are in all the world, will be taken as it is meant, will be seriously considered, and will be acted upon, and if so acted upon Cuba's permanent independence, her permanent success as a republic, are assured.

"Under the treaty with your Government I, as President of the United States, have a duty in this matter which I cannot shirk. The third article of that treaty explicitly confers upon the United States the right to intervene for the maintenance in Cuba of a Government adequate for the protection of life, property, and individual liberty.

"The treaty conferring this right is the supreme law of the land, and furnishes me with the right and the means of fulfilling the obligation that I am under to protect American interests. The information at hand shows that the social bonds thruout the island have been so relaxed that life, property, and individual liberty are no longer safe.

"I have received authentic information of injury to and destruction of American property. It is in my judgment imperative for the sake of Cuba that there shall be an immediate cessation of hostilities, and some arrangement which will secure the permanent pacification of the island."

Cuban Government Troops. Drilled by an American, Captain Webster. Photo by Underwood & Underwood.

The General Situation

This letter has naturally produced a profound impression, not only in Cuba and the United States, but thruout the world. In America and Europe public opinion gives it almost unqualified endorsement, and even in Cuba it seems to have been received in the best spirit by both factions. President Palma immediately issued an order suspending active hostilities, and confining military operations to the defensive, while he forthwith opened up negotiations with the insurgents. The latter have signified their willingness to cease hostilities pending the arrival of Secretaries Taft and Bacon, but they aver that they will not entertain any plans for permanent peace without President Palma's resignation and a guarantee of a new election. Despite these promises on both sides to hold the peace, there has been considerable petty fighting during the week, and at least 3,000 rebels are said to be within 15 miles of Havana. The Cuban Congress has reconvened and adopted all the measures asked for by President Palma. Secretary Taft and Secretary Bacon are expected to arrive at Havana this week Wednesday and remain about ten days. If their report shows that President Palma has been running a machine which has not even made the pretense of letting the other side vote, it is difficult to see how Palma can hold office any longer nor a new election be prevented. If, however, Palma is sustained and the rebels refuse to quit fighting, then intervention under the Platt Amendment would seem to be the only alternative. In the meantime the Navy Department is converging an array of warships on Cuba who can put 2,000 men ashore at a moment's notice, and a cruiser is waiting at Colon to carry Secretary Root from the Isthmus to Havana should his services be needed by Secretary Taft.

Insurgents under Gen. Franc Manicol Leaving the Barracks of Castilla de la Punta, Cuba.

Latin America

Last week, Monday, Secretary Root and his party reached Lima, Peru, where his welcome was no whit less generous

than at the other South American capitals. As he drove from the station the streets were lined with crowds, who cheered him at every opportunity, and when he reached the town hall he and his party were presented with gold badges upon which were stamped the arms of the city of Lima. In the evening he was entertained by President Pardo at the Presidential palace. His next stop is at the Isthmus of Panama, where he will make a complete study of the situation, unless he proceeds directly to Cuba to help Secretary Taft straighten out affairs.—— From Venezuela reports come that President Castro is suffering from continued bad health, which may necessitate his relinquishing partly and perhaps entirely the reins of government. At the same time, General Hernandes (El Mucho), the idol of the Venezuelan populace, who was recently Castro's Minister to Washington, is reported to be at the head of a revolution in one of the outlying provinces, and already on his way to Caracas, to oust Castro from the Presidency.—— From Colombia comes the charge that there is on foot a movement in two of the provinces contiguous to Panama, whereby they shall secede from Colombia and join Panama. The Colombians accuse President Amador, of Panama, of being at the bottom of the plot.

German Colonial Scandals

The disclosures of an extensive system of graft in the management of the German colonial affairs have led to an unprecedented action by the Emperor William—that is, the replacement of a princely bureaucrat by a young Jewish banker. The hereditary Prince of Hohenlohe-Langenburg has filled the office of Director of the Colonial Department only a short time, and it is explained in the semi-official organ of Chancellor Bülow that his failure is due to the fact that conditions in the Colonial Office are "not normal," and require a man more familiar with business matters. The new appointee, Bernhard Dernburg, is Jewish by race and not by faith. He is forty-one years old and the son of the editor of the *National Zeitung*, of Berlin. He was educated in the Berlin gymnasium and prepared for a commercial career, in which he has been very successful. His special interests have been South African mining enterprises. For several years he was employed in a German bank in New York City. On assuming office he severed all his business connections, giving up an income of $62,500 a year for a salary of $3,750. The Emperor hopes to induce the Reichstag to raise the office of Colonial Director to the rank of Secretary of State. The first task of Herr Dernburg will be to settle the question of General von Podbielski, whose resignation has been demanded by the Chancellor because it has been discovered that his wife was largely interested in the firm of Tippelskirch, which has a monopoly for providing the equipment of the colonial forces. Herr Dernburg is fiercely attacked by the Conservative and anti-Semitic organs, one of the charges brought against him being the taint of "Americanism."

General Trepoff's Death

Gen. Dmitri Feodorovitch Trepoff, commandant of the Imperial Palace and the head of the Russian police system, died at his villa in Peterhof on the evening of September 15th. No man was more hated by the Liberals and Revolutionists, because he was regarded as the strongest agent of the autocracy in carrying out its present policy of repression. His assassination often had been threatened and many times attempted by the Terrorists, yet he died a natural death from heart disease, of which he had long been a sufferer. It is probable, however, that his end was hastened by the severe nervous strain and responsibility of the last two years, during which the maintenance of order thruout the Empire has been his duty. Seven times he narrowly escaped being murdered. At one time two of his nieces, one a baroness, the wife of a guard officer, and the other Mlle. Leontieff, shot at him in his own cabinet. Both women escaped. The baroness committed suicide by throwing herself under a train. Mlle. Leontieff took poison, but her life was saved and she was shut up in an insane asylum. The first of this month, at Interlaken, Switzerland, she killed a Frenchman by mistake, thinking he was

Durnovo, former Minister of the Interior. Last June, a lady, representing herself as Princess Marishkin, entered Trepoff's office and attempted to shoot him. Just a month ago General Kozloff, of the Headquarters Staff, was shot while walking in the park at Peterhof by a Terrorist, who mistook him for Trepoff. On hearing of this General Trepoff remarked: "They really need not give themselves the trouble; the end will come quickly enough without that." Trepoff came into favor with Grand Duke Sergius by the ruthlessness and efficiency with which he carried out the orders of the Prince, then Governor-General of Moscow. He dispersed the meetings of the university students by having them flogged by Cossacks and sent to Siberia. When the Grand Duke Sergius was assassinated in January, 1905, Trepoff took his place as Governor-General of Moscow, and was soon after called to St. Petersburg, where by his energetic and unscrupulous measures and strategic management of the troops, he succeeded in restoring the semblance of order in the capital. Since he has been in power there have been no extensive strikes, riots or general revolutionary movements possible in St. Petersburg. Trepoff was trained in the police work by his father, who crushed the Nihilist conspiracies after the death of Alexander II. It is on account of his brutality against the students in 1897 that he was shot and wounded by Vera Sassoulich, whose public trial and acquittal is one of the best known incidents of the Russian revolutionary movement. His ancestry is unknown, as he was a foundling and received his name (Trepp-hof, door-step) because as a baby he was found one morning on the door-step of a German family. He worked his way up to the head of the police system by his personal energy and ability.

Russian Disorder and Repression

As further details of the massacre at Siedlce are published, it becomes evident that the responsibility for the *pogrom* rested largely upon the authorities, as was the case at Kishineff, Odessa and Bialystok. In fact, the Libau Regiment, which took an active part in the Bialystok movement, was brought to Siedlce just before the outbreak, apparently for the purpose of doing the same sort of work. The signal for the massacre is said to have been given by a red lantern displayed on the tower of the City Hall. The acting Military Governor of Siedlce was a violent anti-Semite, and for three days the soldiers were allowed to hunt the Jews and to loot their shops without restraint. A deputation of prominent Jewish and Christian citizens, headed by a rabbi, went to beseech him to stop the carnage. He replied that he would not stop it unless they would promise to turn over to him the members of the Bund, the Jewish Socialist organization. This they were not able to do. Many of the Jews saved their lives by buying off the soldiers by the payment of $25. The Jewish hospital was among the buildings bombarded by the artillery. Some 200 Jews were arrested in Siedlce and will be tried by the new court martials, which have unrestricted powers of executing their own sentences. Similar *pogroms* have been anticipated in Warsaw, Odessa and other places, but have so far been averted.——Zenaide Konoplianikovo, the girl who assassinated General Min at Peterhof, was taken from the fortress of St. Peter and St. Paul on the morning of September 11th and hanged, in accordance with the sentence of the court martial. Her last words were, "Long live the Socialist Revolution: Land and Liberty." She gave her photograph to her sister with the inscription, "My life was all I had to give."——Premier Stolypin has prohibited the proposed meeting of the Constitutional Democratic party, telling them that he regarded Constitutional Democrats as more dangerous than the Group of Toil, because their sedition was cloaked under respectability. The party will probably hold their meeting in Finland. The Government has met the Viborg Manifesto of the ex-members of the Duma, calling upon the people to refuse to serve in the army, by issuing an imperial decree announcing that any persons refusing to serve their time in the army would be liable to the loss of civil rights and from four to six years' service in the disciplinary battalions or penal servitude. The police captured Vladimir

Mazury, the young man who was leader of the Moscow section of the Flying Group of Terrorists, and he was immediately tried by court martial and executed.

Reforms in China

Reform is the order of the day in China. Since the publication of the imperial edict committing the Government to the policy of modernizing the laws, officials of all grades have been seized with the desire to suppress abuses. The chief of police of the Inner City at Pekin has prohibited the forecasting by lot in all the temples. He threatens to demolish any temple in which this method of divination is practiced ten days after the publication of his order. Viceroy Yuan Shih-Kai has ordered the cessation of the celebration of the Haulu festival, on the ground that it is foolish and extravagant. A memorial has been presented to the Empress Dowager from the head of the commission which recently visited this country and Europe, petitioning her to remove the eunuchs from the palace, on account of their evil influence. The edict issued by the Emperor, which was really the work of the Empress Dowager, begins with the following words:

"Since the beginning of our dynasty there have been wise Emperors who have made laws suited to the times. Now that China has intercourse with all nations, our laws and political system have become antiquated and our country is always in trouble. Therefore, it is necessary for us to gather more knowledge and draw up a new code of laws; otherwise we shall be unworthy of the trust of our forefathers and the people."

Immediate financial and administrative reforms are promised, and a large number of prominent officials are appointed to suggest needed changes. Whenever the people are prepared for it, a constitutional government is to be established. A revival of the Boxer movement is reported in the province of Shansi. A party of Boxers got control of the city of Tsoyun-Sien, and the missionaries and native Christians might have been massacred if a German lieutenant traveling thru the country had not placed himself at the head of the Chinese troops and drove out the Boxers, killing twelve, including the leader.

A Typhoon at Hong Kong

The shipping in the harbor of Hong Kong was severely damaged by a hurricane which sprang up suddenly at 10 o'clock in the morning of September 18th and lasted two hours. The British steamer "Fatshan," of the Hong Kong, Canton and Macao Line, foundered, and the purser and the mate were the only members of the crew to escape. She was a vessel of 1,425 tons, 280 feet long. The steamer "Monteagle," of 3,492 tons, 445 feet long, belonging to the Canadian Pacific Railroad Company, went ashore. The German steamer "Johanne," from Java, and the British steamer "San Cheung" were also sunk. The loss of life is unknown, but is probably several hundred.

The Esperanto Congress

The Esperantist Congress, held at Geneva this month, was a great success. There were over a thousand delegates present representing all nations, and in spite of the fact that most of them had learned the language from books, there was no difficulty in understanding the speakers and in conducting the business of the sessions, and very little divergence of accent was observed. Dr. Zamenhof, the inventor of this universal language, in his address to the congress, urged them to bear in mind that the most important object of the movement was the promotion of the feeling of human fraternity and international peace. At the conclusion of his address M. Paul Loyson, a son of Père Hyacinthe Loyson, recited an ode in Esperanto, and the whole audience rose and sang the Esperantist hymn, *"En la mondon venis nova sento"* (A new sentiment has come into the world). A central committee of one hundred members of twenty-five different nationalities was appointed to settle questions of usage, authorize new words and maintain the unity of the language. Special sessions were held of groups of scientists, Socialists, Catholics, Protestants, Anarchists, musicians, doctors, Freemasons, lawyers, and promoters of peace, to utilize the new language for their interests and to found international journals. Several plays were given in Esperanto by actors of different nationalities.

The Cuban Government's Side

BY CAPTAIN M. CARRILLO ALDAMA

[Captain Aldama is the second chief of the customs division of the Treasury Department of Cuba. He is now in New York on special service for his Government.—EDITOR.]

THE claim is made by the insurgents that they have thirty thousand men in the field. So far from this being the case, I am satisfied that thruout all Cuba there are less than 10 per cent. of this number in arms against the Government, and of these not more than fifteen hundred are provided with as much as twenty-five rounds of ammunition each. Generally speaking, the rebel forces are composed of the lower strata of Cubans—Spanish laborers, negroes, disgruntled and discontented office seekers and others who prefer the excitement of an insurrection to honest work. Hardly a single person of standing or ability is identified with the movement.

The present trouble is practically confined to three provinces—Havana, Pinar del Rio and Santa Clara, Eastern Cuba being practically unaffected by the movement.

Much has been said concerning the causes leading up to the insurrection that has been distorted or absolutely untrue. The essential facts can be stated in a few words. The refusal of the defeated minority to abide by the will of the majority as expressed at the polls is the keynote to the whole situation.

General José Miguel Gomez, the former Governor of Santa Clara Province, was offered the Vice-Presidency under President Palma. This was refused by Gomez and his followers, as they believed that they would be able to elect him President. When they learned that Gomez did not have a sufficient following to insure his election they refused to vote. In other words, they sulked, and a short time later began to lay plans for an insurrection against the Palma Government. As early as last January the Government learned of these plots, and it is a striking refutation of the charge that President Palma is dictatorial or tyrannical that these instigators of rebellion were not arrested or otherwise molested.

When President Palma took over the reins of government from the Americans, in 1902, there was $600,000 in the Cuban treasury; today the same treasury holds a surplus of $18,000,000, while the customs receipts frequently reach as much as $1,500,000 monthly, or 50 per cent. more than was collected at any time during American administration of island affairs.

During the past four years millions of dollars have been expended in public works, roads have been built, public buildings have been erected and Havana has been made one of the most beautiful capitals in the world.

Can this be taken as evidence of a lack of public spirit? Let us take the matter of public instruction. Not a village in Cuba but has its public school; indeed, the law declares that a public school must be provided for every place where there are twenty-five school children of school age. A bill is now before the Cuban Congress providing for "traveling pedagogs," in order to reach the isolated country districts.

Does this look like a disregard of the people's welfare? The banks, the railroads and the large commercial interests of Cuba are supporters of President Palma and his administration. Were his administration aught save clean and efficient would it enjoy their confidence and support?

It has been charged that President Palma has summarily removed office-holders from their positions. He has—both Liberals and members of his own party alike. President Roosevelt has also removed grafting officials; nor has any word of criticism been heard on that score. The cases are analogous.

Summing up the whole situation, I should say that the insurrection is a desperate attempt on the part of a discontented few to overthrow a government in which inefficiency or grafting propensities meet with scant reward. The attempt will fail.

NEW YORK CITY.

A Struggle for Cuban Liberty

BY COLONEL CHARLES M. AGUIRRE

[Colonel Aguirre is the delegate to the United States of the Cuban Revolutionary Committee, and chief of the Cuban Revolutionary Junta in the United States. Prior to the present trouble he was one of the leading real estate dealers in Havana. During the insurrection against Spain he was a colonel of insurgent troops and was chief of Staff in Havana Province under General Gomez. He was recognized as one of the most influential and valuable men by the American authorities, and after American occupation was made chief of police of Havana by General Ludlow. After holding that position for about six months he resigned to accept the position of superintendent of the sanitary department, where he rendered valuable service. He resigned that position on the installation of the Palma Government, and has since devoted his time and energies to business.—EDITOR.]

SINCE President Palma has been in office he has continually trampled on the constitution, one of his first official acts being the suppression of the constitutional office of Commissioner of Public Schools.

He has suppressed or created offices of every kind, according to his own convenience and that of his unscrupulous advisers, and has encouraged "caciquisimo" or political bossism, this latter as a means to perpetuate his tyrannical dictatorship of our country.

For Congress President Palma has always shown the greatest contempt, as indeed at the present time he should. Should a Senator or Congressman not prove subservient to his will, he has been arbitrarily removed, and the position has been filled by one of the Palma followers.

Mr. Palma does not hold office by the will of the Cubans as expressed at the ballot boxes. The election of September, 1905, would have been farcical had it not been tragic, and presents the spectacle of a political party containing a majority of the voters of the island, intimidated and kept away from the polls by the armed followers of Palma.

Murder was resorted to by the political ruffians against whom we are now making armed revolt. Colonel Enrique Villuendas, former secretary to the Constitutional Convention and afterward secretary of the House of Representatives, was assassinated at Cienfuegos, and the men who committed the crime were rewarded.

It was in this way that Don Thomas Estrada Palma was re-elected President of Cuba for a second term. Armed forces of the Government were employed to assault the political clubs of the Liberals and restrain them from the ballot boxes. By means of the grossest coercion they protected the fraudulent filling of the ballot boxes, and the aftermath was what might have been expected.

Immediately after his so-called election, President Palma proceeded arbitrarily and without warrant of law to dismiss every Liberal from office.

Numerous Senators and Representatives, altho elected by a popular vote, were removed from office and their positions filled by Palma adherents—in some cases by men who had never even lived in the Province they were supposed to represent.

And now comes the question—What do we want? In the first place, the statements made by the Palma faction that the revolution is actuated by a desire for office is as untrue as it is unjust. We have no candidate for the Presidency or any other office; our only desire is to have an honest government—one in which the whole people shall have a voice.

To this end we demand the retirement of Estrada Palma and the other officers from positions which they hold by fraud and intimidation.

That the Liberals who were honestly elected to office, both in the general government and in the municipalities, and who were without just cause removed from office by President Palma, shall be restored to the offices to which they were elected, and that they be allowed to hold office until the next general election.

We demand that a new general election be held at the earliest possible moment, at which the will of the people shall be determined, and, given an honest count, we promise faithfully to abide by the result of such election, be it in favor of the Liberal party or otherwise.

NEW YORK CITY.

Mr. Root's Visit to South America

BY GEORGE AGNEW CHAMBERLAIN

[Our readers will remember a former article we published by Mr. Chamberlain, when he was in our Consular service in Brazil, on the threatened German invasion of Brazil. We consider ourselves fortunate that Mr. Chamberlain has consented to act as our special correspondent on Secretary Root's trip to South America, for no one is better fitted by experience and study than he to write of South American affairs.—EDITOR.]

THE full significance and possibilities of Mr. Root's visit to Brazil and South America in general were, until after its partial consummation, appreciated in the United States by but a limited few. To most Americans it seemed that the Secretary was merely embarking upon a restful summer cruise, but to the Secretary himself and to those who were even slightly acquainted with the true state of public opinion and sentiment thruout South America, the expedition was at one and the same time the exposition and test of a far-seeing policy.

Only a few months ago we were in high disfavor in the three principal South American republics, not so much thru any aggression on our part as thru our passive neglect of South American opinion.

In Chile and the Argentine this ill feeling found an open vent in the newspapers, which freely attacked what they termed our usurpation of suzerainty. In Brazil, while only the most chauvinistic of the papers took this stand, the rest of the press tacitly concurred by limiting its news from the United States to accounts of lynchings, disasters and such national scandals as would show us in a bad light.

Still, thruout what may be termed the anti-American movement, Brazil, as in all her foreign policy, proved more conservative than her neighboring republics. Her Government never gave its sanction to

The Palace Monroe as it Was During the Conference.

Mr. Root, accomp nied by Ambassador Nabuco Baroy Rio Branco and Ambassaaor Griscom at the students' mass meeting on steps of Abrantes Palace.

any attack, open or otherwise, upon the Monroe Doctrine, as did the Argentine when she tried, in 1902, to force the principle of the Drago Doctrine; and the wisdom of Brazil's policy became evident at the first rumor of Mr. Root's visit to South America.

Looking back to her continued forbearance under what her people considered a slight to their national dignity, one sees that Brazil has been waiting with admirable patience to be shown the courtesy, if not of consultation, at least of a direct and official effort toward elucidation of our South American policy, as embodied in the Monroe Doctrine and its corollaries. When her opportunity came she seized it with a sure hand, and lent a significance and finish to the occasion which is a monument to her statesmanship.

The tact of Ambassador Nabuco and the shrewd judgment of Baron Rio Branco, Minister of Foreign Affairs in Brazil, combined to grasp every possibility which the visit of the Secretary of State offered them, not only for swinging popular opinion in favor of the United States, but also for establishing in the mind of the Secretary, in his capacity as representative of his people, a high opinion of the stability and worth of the greatest of the South American republics.

The coincidence of Mr. Root's presence with the sessions of the Third Pan-American Conference offered an occasion for the settling of many disputed questions and unreasonable fears by the words delivered officially from the mouth of the American Secretary of State, such as which could not be equaled in any of the countries subsequently visited.

To say at present that these questions and fears have been settled for all South America would be premature, but it is firmly believed, not only here, but also in many neighboring republics, that the bond of friendship and approximation realized thru Mr. Root's visit to Rio de Janeiro constitutes between the United States and Brazil, above any other country visited, the working basis for a permanent *entente cordiale*, from which both countries will reap material results.

In the words of *La Nacion*, of Montevideo, referring to the Third Pan-American Congress, "Brazil and the United States get all the benefits; we come in for the embraces." There was more truth than good feeling in this pithy comment, and that it was realized in other South American countries is evidenced by the fact that part of the Chilean press counseled its Government to make no such lavish expenditure for the entertainment of Mr. Root as did Rio de Janeiro and Buenos Aires.

With Buenos Aires the case was complicated. While the Argentine has consistently frowned upon what she has termed our interference in South American affairs, the extraordinary and many-sided rivalry of long standing between her capital and that of Brazil bound her to the course of eclipsing in every particular the regal reception which made Mr. Root's stay in Rio a continuous pageant. This rivalry has long been paramount in the relations between the two countries, and that it should outweigh national issues was no surprise to those familiar with the tale of the two capital cities.

Even so, opinion was not unanimous in according the most cordial welcome to the Secretary to Buenos Aires, for *El Diario*, following the lead of *El Tiempo*, a few days before Mr. Root's departure from Brazil, scored the Government for making such extraordinary preparations to receive the Secretary of State who, thru his speeches, had done what he could to establish the supremacy of Brazil in South America.

When Mr. Root undertook the management of the Department of State he could not fail to realize that he was at the beginning of a new chapter in our diplomacy. Mr. Hay's premature death did not find him in the midst of an accomplishment, but at its consummation. Trained in the school of European diplomacy, upon becoming the exponent of our foreign affairs he turned naturally toward Europe, and owing to a remarkable sequence of circumstances which transformed our sphere of influence

Banquet offered at Abrantes Palace, the secretary's temporary residence in Rio, by Mr. Root to political, literary and official celebrities.

found the occasion ripe for the establishment of American diplomacy upon a new and far broader basis. He undertook the task of formally seating the United States in the tribunal of the world's first Powers, and before his death won the general recognition which is the reward of final accomplishment.

To Mr. Root fell the work of sustaining the high standard set by his predecessor in the treatment of European affairs; but the sustaining of a policy already established by a master in diplomacy necessarily became, to a certain extent, a matter of routine and precedent, and left the new Secretary to concentrate his powers upon the conquest of new fields.

As Mr. Hay was the exponent of all that is best and highest in American relations with Europe and the East, so is Mr. Root the personification of the best Americanism at home today — a man who, as the associate and advisor of our greatest financiers, recognizes the dignity and scope of our national commercialism in the best sense of the word.

So we see him plunging into the work of consular reform with an interest so deep that he was not satisfied merely to present his recommendations to Congress, but was willing to appear before committees at the Capitol in defense of the projects whose passage were essential to the success of the work he had undertaken. Whosever the bill for consular reform, the credit for the results attained thru that measure belong indubitably to Mr. Root.

Mr. Root organized the Third Pan-American Conference, and after many a battle in Washington gave it a program so carefully edited as to practically insure the meeting against discord. Having gathered together leading men from nineteen of the twenty-one American Republics in Rio de Janeiro, which he later called the "Heart of South America," he traveled five thousand miles to deliver thru them the message of the United States to every American Republic—a message which has already done more to dispel misunderstandings and allay suspicions than all the declarations of our Presidents and press in regard to our relations with the Latin Republics.

There can be no question that the main object of Mr. Root's visit to South America was the delivery of his speech of July 31st, but his mission did not end in Brazil. He still had to visit many South American capitals, carrying to each always the same message of "helpful friendship."

In Mr. Root's trip and his many speeches we can see the symmetrical development of a complete and broad policy covering three cardinal points in our relations with South America. First, the official allaying of all fears and suspicions by a frank and open disavowal of imperialism; second, the winning of popular sympathy and co-operation thru personal contact; third, the gaining of knowledge at first hand of the advancement, progress and aspirations of a score of sister republics whose ideals and the obstacles to their attainment are much the same as confronted our own country half a century ago.

These three lines of effort converge in what is today the object of all friendly international relations—commercial prosperity. And even now it is not premature to say that Mr. Root's efforts toward approximation not only of the United States to Latin America, but also of the Latin Republics to each other, have been crowned with extraordinary and unexpected success—a success in no small measure due to the personality of a man who, tho speaking in a language unintelligible to the majority of his hearers, so impressed them with the earnestness of his appeal for friendship that they understood him thru the very sympathy which he aroused.

Rio de Janeiro, Brazil.

The Political Crisis in Persia

BY OUR PERSIAN CORRESPONDENT

[The announcement that the Shah of Persia had granted a constitutional and representative government to his people came to the average reader like a clap of thunder from a clear sky. Few of us were well enough informed on the internal politics of Persia to understand the causes of this peaceful and successful revolution. The following article, the first news we have been able to obtain from a thoroly competent observer on the spot, gives the condition of affairs immediately preceding the fall of the conservative Grand Vizier and the proclamation of the Shah.—EDITOR.]

THE Persian Government has not had to meet a political crisis such as now presents itself within two generations past. There have been changes in the Ministry and various grand viziers have had to leave the capital, but the affairs of state went quietly forward. Since the early nineties, when the English Tobacco Monopoly failed, the people had settled down to the belief that come what may their ultimate destiny was bound up with that of Russia, and that Allah had decreed that the northern part of this ancient empire must rest under the shadow of the Czar.

Russian officials and merchants were not displeased at this view of the situation. The Russian Bank in Teheran was organized and financed by the Russian Government. Large sums, no one knows how much, were loaned to merchants in the bazars, some of whom are financially responsible and some who are little better than bankrupts. Mortgages were taken, and the merchant became the agent of the bank. A pawnshop was an important feature of this strange institution, where money was loaned to servants and the poorer classes, and these were taught to believe that the destiny of the world was in the hands of St. Petersburg and Moscow. They started a small hospital and dispensary, which gave them an opportunity of saying that their purpose in Persia was only benevolent. It must be said to their credit, however, that wherever they have gone they have built good roads and in many ways improved the country.

Their political security in Persia has proven a dream. When they thought the matter fully settled, there came rumors of trouble in far-away Korea and Manchuria, and the *Public News*, printed in English, told of Japanese victories. It could not be true, the Russians said, and they printed for a time their own *Public News*. This did not solve the problem, for the European and American newspapers generally agreed with the English telegrams, and their publication stopped long before the war did.

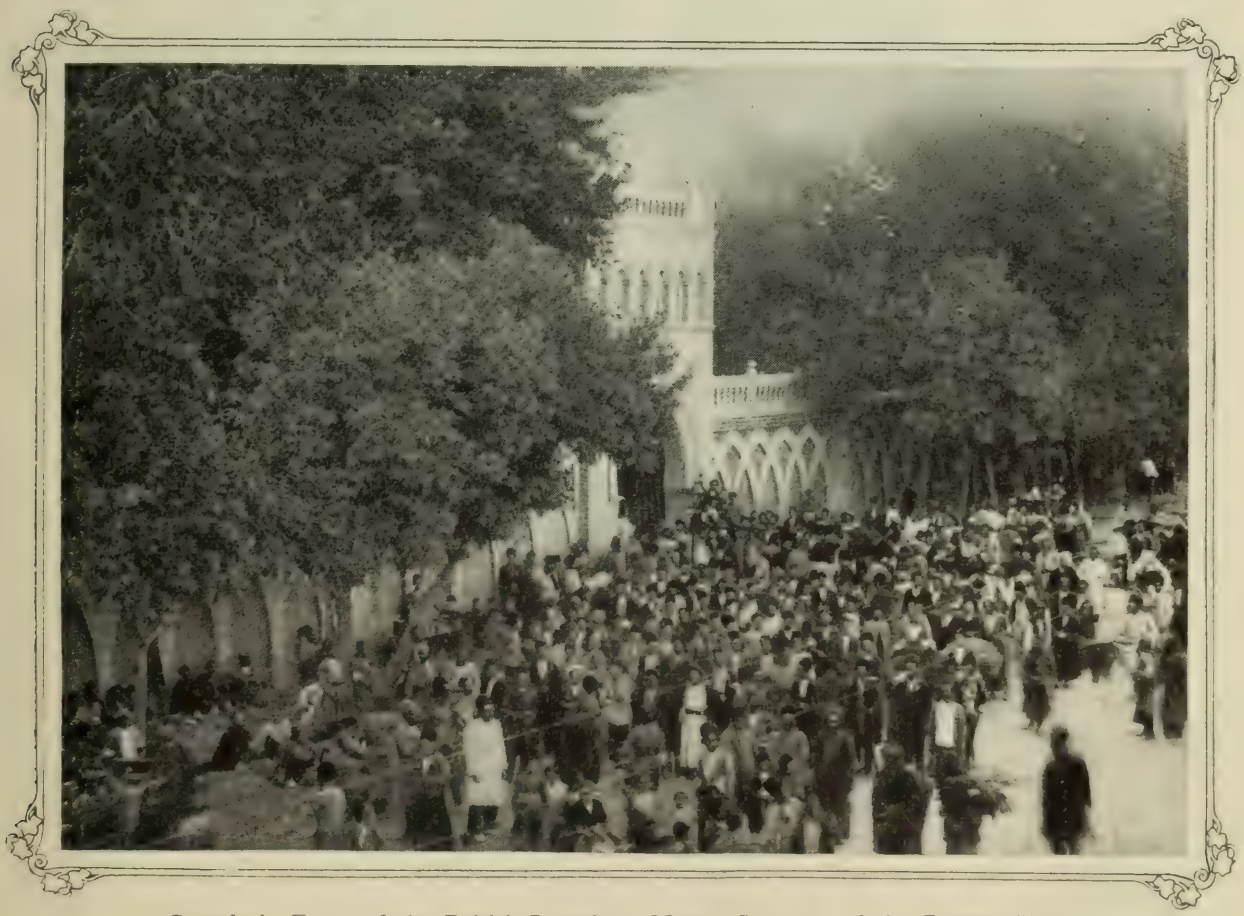
When the war was over the people were told that Russia was preparing to advance to the Persian Gulf. But instead of this advance there came stories of dreadful riots in the Caucasus, and Baku, the gateway to Persia, knew what fire and sword meant. The price of sugar and coal oil steadily advanced, and when the people began to wonder at the impotence of the powers at St. Petersburg to stop these disturbances, they were told that it was always that way after a great war, and that it would soon be settled. The well-to-do Persian no longer fears Russia, but he does fear lest the reign of terror that has spread all over that empire find its way across the Caspian. In the meantime the merchant with nothing to pay, deeply in debt to the Russian Bank, naturally does not care what happens so he escapes the obligations he has contracted. Russia's stock has not been as low in Persia in twenty years as it is today. In the minds of the people Allah no longer favors the Great Bear.

Coincidently with the culmination of all these things, reports were circulated by some one that The Imperial Bank of Persia, an English institution, was unable to redeem its outstanding paper currency. Being the national bank in Persia, it alone had the right to issue banknotes. No sooner had the report gotten into the bazar than the merchant closed his shop and hastened with his paper bills to the bank for coin. The able manager of the English bank quietly

Entrance to the Grounds of the British Legation, Teheran.

met the demand of the panic stricken by detailing practically his entire force as paying tellers, and every man that presented a banknote was paid in full in silver. Bank hours were forgotten, and from early in the morning until late in the evening the crowds had the coin counted out to them in large bagfuls. After a few days confidence was more than fully restored, and the stock of England went up.

But popularity always has a price. In Persia there is the strange custom, known as *bast*. It simply means that any one having a grievance, by taking refuge on the premises of a nobleman, may demand that the nobleman take up his cause as tho the *bastee* were one of his own household. There seems to be no limit to the custom, for the petty criminal often takes refuge or *bast* in a mosque, where he is safe, if his friends are allowed to feed him. If the police want him they must starve him out. There was a man who sat for eight years in one of the legations here patiently awaiting a settlement of a small claim that he had against the Persian Government. Ministers came and went, but he staid on. At last his claim was paid, and he died celebrating his victory! Few legations here would have the courage to put a man out, as it would bring down no small amount of opprobrium upon them.



The other day every shop in the great bazar in Teheran closed, and between five and six thousand men, merchants, artisans and some priests, went into the English Legation and informed the acting Minister, who was away at his country seat, that they were there to remain until the English Government took up their case with the Persian Government. Fortunately the grounds are large, but at best great damage must be done to the beautiful gardens by the five thousand and more men camping on them. A short time ago these people would have gone to the Russian Legation, but today it is past by and forgotten, while the streets surrounding the British Legation are filled with crowds, who do not hesitate to say that England can have the country if she wants it. The whole city seems to be on a strike. Only the mails, butcher and baker have not been interfered with. A half-ton of bread daily is required to feed those within the Legation compound. All day long the

Koran is read and Allah is appealed to for help. A long-suffering and downtrodden people have surprised the world by suddenly awakening.

The grievances that these people have are not new, but it is new for them to come forward and present them. They demand that the Government shall appoint a *mejlis,* or, in other words, a representative council, and thru this council the business and the ecclesiastical interests shall have a voice in the affairs of state. Those with whom I have talked deny the charge that they want a parliament elected by popular suffrage. They wisely say that Persia is not ready for that advanced step. They also demand freedom of speech and press, and that their priests sent by the Government to Kerbela and other places shall be allowed to return. They further demand that something be done to lower the price of bread and meat, and suggest as the first step toward this that there be less graft in public office. A great deal of the grain is bought up by the rich and held at famine prices. There being no railroads in Persia it is easy to get a corner on grain.

A few days ago, the officials undertook to arrest a Mohammedan priest, who did not hesitate to proclaim his political views, but who very unwisely, in his public remarks, attacked certain high officials instead of the system that made misgovernment possible. When the officers came to arrest him, his followers resisted the police and rescued him from them. The soldiers were then called in, and in the riot that followed a number of citizens were killed, among them a sayid. This greatly aroused the people, and the bloody shirt of the sayid was carried thru the streets, but the Government, having matters well in hand, prevented further bloodshed.

The bazars were then closed and the people adopted the plan of taking *bast* in the British Legation, a sort of passive resistance. What the immediate outcome will be no man can say, but that is hardly the great question with which the Government is brought face to face. Money and concessions, including a change in the Ministry, may pacify the leaders for a time, but the trouble is with the people, who are inquiring what has made other lands prosperous and happy.

Crowds in Front of the British Legation. Mostly Servants of the Bastees Inside.

This general awakening thruout all Asia is a hopeful sign. The people in Persia have not had a worse government than many other Asiatic countries. Oppression is less severe in Persia than in Asiatic Turkey, which may not be saying very much. The Shah is a man with the best intentions for his people, but he is hopelessly ill and unable to carry out many things that he desires for them. The outlook is hopeful because it looks to the change of the whole system, ultimately. The natural resources of the country are not great, but they are as good as in many parts of some of our Western States. Indeed, the country around Teheran is not unlike some parts of California. Under a good government and a limited mileage of railway, the country could be made to sustain a much larger population. It is a great thing that the people have awakened to

Artisans, merchants, priests, etc., numbering over 5,000 entering British Legation seeking English Protection.

their opportunities. They have done well to put their case in the hands of the British.

On the other hand, if for any reason England should fail to meet the expectations of the people it may be as disastrous to her Persian interests as was the failure of The Tobacco Monopoly. It is a wonderful opportunity that she is having. The question is, Will the Liberal Party seize it? The question is a far-reaching one, and there have come rumors from very reliable sources that even the Crown Prince, who lives in Tabriz, has failed to find in Russia the ally that he desires, and that he has turned to Britain to help him cut loose from his neighbor on the north.

If England fails, what then? Germany is on the ground, and if one can judge from appearances, she is here to stay. She has a fine property for her legation in town, and quite recently she purchased a fine tract of land in the nearby hills and erected thereon the finest and most elaborate country seat owned by any foreign government represented here. She has secured the control of the Persian Government Hospital, and has also secured a concession for a school where the German language is to be taught. Commercial agents are to be established thruout the country, and already the drug trade is in their hands. They have been insisting that a German doctor be appointed one of the court physicians. They will succeed with their plans if they are willing to loan the Persians the money they must have to bridge over the present crisis. Should they gain a strong footing here they could, with the Bagdad railroad, prove a very formidable commercial rival to any Power seeking the trade of the Mohammedan world. The bitter feeling existing between Turkey and Persia at this time is going to make it hard for her to be the friend of both Powers at the same time. It may be, however, that the Kaiser thinks we are living in the last days of the empire, and he is going to be ready to meet these conditions. There were some lessons taught by Morocco; possibly some understanding about Persia was reached of which the outside world is not expected to know.

While all this is going on, Russia can hardly be expected to sit idly by and see her immense commercial interests here swept from her. Some plan will be attempted to regain her lost prestige and the first step will be to try to prevent the British Legation from meeting the expectations of the people at this time. Russia's hopes for political ascendancy in Persia are, since the ill-advised war with Japan, all in the future. With her large commercial interests here to protect she can justly claim a voice in the settlement of affairs. It may turn out that she saw this storm coming, and the "friendly understanding concerning Persia," announced a short time ago from St. Petersburg and London, was only a little game of diplomacy on her part to tie the hands of England and prevent another Egypt being established. I am quite sure that the British colony here are quite as much surprised at what has happened as anybody else. The fact that their Minister is in England would seem to indicate that they were caught napping. It will be a great loss to Persia if her people are deprived of Britain's help in their first endeavor to secure the reforms that are so badly needed here.

TEHERAN, PERSIA.

Messengers

"Your thoughts of me are like birds in my sky."—SIDNEY LANIER.

THE tender thoughts you think of me
Flutter like wings against my breast,
As birds for which my heart shall be
The waiting nest.

I feel them in the air above
Like the soft touch of living wings,
And one, that bears your deepest love,
Alights and sings.

O, Birds, my Birds—I go my way,
And by your flood of soundless song
Thru the long spaces of the day
My soul grows strong.

PAWTUCKET, R. I.

Some New Adjustments for Women

BY SIMON N. PATTEN, Ph.D.

[Our readers will remember a novel article we printed by Professor Patten some time ago entitled "Young Wives in Industry." That article excited so much interest that we have asked Professor Patten to discuss some other phases of the woman question and he has done so in the following article. Professor Patten holds the chair of Political Economy in the University of Pennsylvania and is the author of many books on economics.—EDITOR.]

MY recent article on the social value of married women in industry called forth a number of letters from women in evident alarm lest discussion should expose the home-making class to dangerous modifications. The protests were surprising, because of the personal emotion in them, and because they were aimed at some subjective terror wide of my mark. It had been far from my purpose to invade any field now visible in the social landscape; my intention was the simple one of pointing out how the formal sanction of the place married women are taking in work would not be a revolutionary step, but a helpful recognition that energy must transmute itself in order that the parts may remain pliant in the growing social organism.

I pointed to the familiar parallelism between the women of a past era who succeeded in being well-homed by working for their board, and the women of certain groups in this epoch, who will only succeed in housing themselves properly if they know how to work for wages. It was claimed that the evil of a growing celibate class would be reduced if its youthful members, who are now intimidated by the heavy expenses of marriage, were encouraged by public opinion to pay its cost from a joint income earned by the production of commodities. The services of the young wife would then be as clearly focussed as those of the pioneer bride of agricultural days when she undertook home and farm industries. Emphasis was laid upon the bad ethics of a situation in which new forces are ineffectively marshaled under standards which must induce deceit, waste and the jar of maladjustments between the ideals of rural America and the antipodal necessities of the tenement-house population. The increasing numbers of unmarried workers tend to hold wages near the level of subsistence for single people, so that employers will not be forced by lack of supply to pay rates which will maintain families. In conclusion it was suggested that the emerging civilization of the un-American factory and tenement world might be hastened more soundly by giving it immediate access to air, light, good food and simple esthetics in the home than by removing the young wife from her paid work and returning her to the semi-idleness of a constricted dwelling already largely de-industrialized. A final tentative assumption fixed an income of $20 a week, earned by the husband, as the level whereon the wife might profitably withdraw from industry; she would have scope there to exercise judgment, and a decent opportunity to rear children without besetting fears.

It was evident, however, that some women readers were affronted, shocked and confused. The discussion became, in some way, a personal affair, and they found in it a tacit criticism of the conduct of their own lives which they countered with the story of individual circumstances and a half-contemptuous, half-satirical, query how they themselves could be molded to such a theory of function. They made a passionate defense of individual status, and in consequence failed to give the wider application to other times and classes than their own. This was due in part to the natural tendency to interpret a general tenet in terms of personal experience; in part to the vague feeling that strange men have no right to intrude upon that which is withdrawn from world concern, as they instinctively regard their wifely and motherly relations to be; and in part to the clear sight of irreducible obstacles around which great numbers of contemporary women can never find a way.

The situation itself gives abundant cause for such emotional and logical confusion; for while it may be theoretically apparent that old modes of energy cannot continue to do the new kinds of work, and while it is granted that imperfect adaptations are already wasting valuable material in the form of the supported leisure woman, yet it is equally true that the direct application of the general fact to the typical instances cited by the stirred letter-writers brings forth blunder, misapprehension and fruitless discontent. There is added error, in fitting the advantages of paid work, which are manifest when applied to the women of one group, to those of quite a different economic order. But the critics failed to find in their own blurring of directions, one of the roads to the *impasse* where they ended, and from which they impugned the author's motives, good faith and knowledge.

The field might be summarily cleared for discussion, however, by broadly fixing the economic distinctions between the three kinds of women in America. One is the leisure woman, who can pay from some other person's purse for the routine services of daily life; one is the hard-working mother of American descent moved by New England traditions; and the third is the alien tenement dweller unable to conform to type or to create it, because the conditions which molded the old have gone, and the new are still amorphous. The surplus energy of the leisure woman of the past genera-

Simon N. Patten.

tion channeled her home; she moved about in it, her useless white apron a mark of established opulence, packing it with preserved foods and superfluous needlework. She exists everywhere today, but she has ceased to be the chief exponent of full-blooded vitality seeking a merely enjoyable outlet. The fancy apron is discarded as a badge of aristocracy; and the pent strength of the lady which it symbolized turns to courses that flow away from the mechanical administration of the home. In a more frankly physical and pleasure-seeking form, the currents of vigor give fresh distinction to the wide-ranging, out-of-door "selfish" woman; or they stimulate to the altruism of direct civic interests and those political occupations which have hitherto been assumed by the Primrose women of English nobility.

In America a spirit that may be called cosmopolitan, in contrast with that which exhausts itself within the four walls of home, animates the well-nourished, successful class. Housekeeping must become a matter of wards and precincts if it is to satisfy the craving for motion. The dominant woman is athletic, and seeks prestige in following sports like automobiling, golf, riding and walking; often she indulges in the half sentimental pleasures of handicrafts that belonged to medieval Italy or aboriginal Mexico, and the practice of a mild esthetics that relieves idle muscles. These women are highly co-ordinated, with a developed sense of beauty and an ability to perform fine and varied, but not heavy tasks. Industry, with today's rude surroundings, opens no avenue to the exercise of their delicate and nervous powers; nor could the factory process reawaken their powerful motives or redirect their primitive zest of life, now obscured by the sudden phenomena of leisure. Their new vehicles for ancient energies will be found in philanthropy, politics, municipal government, child saving—in that social work for the furtherance of which these women are so rapidly multiplying associations and clubs.

The failure to consider this class quite apart from the second group is at the base of the general reluctance to grant that the admission of married women to industry is either ethical or practical, and it serves also to explain the particular rancor which induced the letter writers variously to sign themselves "A Leisure Woman" with five children, or other clinching duties sarcastically itemized in a note of challenge. They plainly belonged, however, to the large majority of middle-aged and elderly wives and mothers of families striving to maintain American standards on incomes bounded loosely by $900 and $1,500; who continue to be regarded, from the vantage of numbers and the sanction of tradition, as the embodiment of the genius of home, altho they have a lessening influence upon the affairs of the republic. They cherish as ardently as the pioneer village woman who was nurse, seamstress, midwife, garden maker and watcher with the dead, the conviction that their spiritual values to their dependents lie in service-altruism. The end they seek is the influence for good which they may acquire over husband and children by performing with their own hands—which are at the same time both dedicated and amateur—the unsalaried functions of cook, laundress and dressmaker. These home-maker's tasks have been coincident so long with the woman's exercise of spiritual authority that she cherishes them as the very medium of it, without which it could not be made potent. The wife trembles to grant that she practices her service-altruism for the sake of the concrete product it brings forth; whether she is producer, consumer or distributor of goods is of small moment to her even when she becomes too burdened and bewildered by the inert mass of her product to hold aloft its symbol. Yet she reconciles herself afresh to ill-conditioned work for the sake of its high mission, and rejoices that her willingness to sacrifice herself without complaint or query will benefit her family more truly than could her administration of income earned by specialized and more expert labor.

The contrast between income-altruism and service-altruism can mean little, however, to the middle-aged mother of the present, for her situation robs it of its pith; her lot is irrevocably fixed in the field bounded by the latter, and she cannot rearrange her activities, even if she should conceive that her income-values might exceed her sacrifice utility. "Here

am I, placed so and so; what can you do about it?" she seems to say, with an angry loyalty to her estate. One can do nothing. Her influence must continue to be won in ways so painfully laborious that they entail self-subordination and destroy self-expression. She must be cheered to continue, in the face of the truth that her kind of home building becomes less and less effective when it is compared with efficiency in other departments of world's work. As agencies outside her home begin to do her work better than she can, her methods, in the natural course of events, become obsolete, and she struggles for her successes with tools which command less respect from her group than they did when their use impressed husband and children with her competence and mastery of resource. Thru her working years she must apparently continue to be "tired and miserable," as many of the letter-writers admitted themselves chronically to be. In a word, she is good, unflagging, idealistic, maintaining the influence that is her highest aspiration with increasing disadvantages from which it is well nigh impossible to disentangle any given individual.

Her affairs are frequently complicated further by her husband, who is likely to belong to the class that pours forth enormous numbers of half equipped, half energized men. Her typical mate is of the economic rank between those of the day laborer and the business man of initiative and independent movement—the grade recruited with clerks, stenographers and salesmen — indifferently trained, perfunctory people, absent-mindedly following routine ways. Task for task, they are inferior to their wives, for they do not steadily care to maintain high traditions, to gauge themselves at the last notch of their engine. They are slovenly when neatness would increase their value, and wastefully careless in execution when precision would follow concentration of thought. Industrial shiftlessness condemns the wife to a hopeless round of harder work than the man will ever do.

It may have been such a pair who despatched a letter written by the wife in a firm, smooth hand, soundly taking me to task for advocating a course which apparently necessitated leaving the breakfast dishes unwashed for some homes, serving cold lunches to the children, and "supplementing a college course with factory work." A man who would suggest these possibilities must be, she concluded, not only an absolute ignoramus upon the subject of women's duties, but a woman-hater as well. Energy, anger and a first-hand knowledge of hard work breathed from her pages, but she signed herself "A Leisure Woman." Beneath her clear, characterful signature was written in a vague and crooked chirography: "I agree with the opinion of A Leisure Woman. A Hard-working Man." Nevertheless we suspect that not the least of the adverse circumstances binding this explicit person to a static lot is her corroboratory husband.

We cannot answer the detailed questions of the woman who may be called one of the closed records of her times; but it is possible to plant within her mind the idea that the necessity of income in establishing a capacious, expansive home will loom larger in her daughter's life than it has in her own. The dynamic impulse of the family centers about the children; and when it is shown to the mother that service-altruism will not command light, air and pure water, the new cost of which has deprived many homes of them, she will concede that securing them by one means, when another fails, is a wife and mother function. An advance is made if the "old-fashioned mother" will project her daughter into the future: a genuine educational success is registered when she is willing that the parallel ideals of service-altruism and income-altruism should be presented to her girl's mind as equally dignified and admirable phases of endeavor. It is bare justice to the young woman born into this era of open doors, of franchises, of industry eased by the public vigilance over human rights, to be given an opportunity to measure the values to her group of the two courses. It should be an experiment in ethics to guide her when her marriage has made her the nucleus of a new family.

Will the daughter of a $1,200 clerk carry the family standard farther forward if she helps her mother with the

washing and cooking, or if she earns $5 a week, and what will be the differing effects upon her character? At the end of six months which essay will have netted the greatest general satisfaction? Diverse considerations, separated points of view, will make the judgment difficult; but all education is an affair of indeterminate quantities, and the manual training of the public school, or the business course of the university boy, is no more susceptible of exact estimate than are the comparative benefits of a year divided experimentally between domestic and industrial practices. As some parents latterly are giving freedom of choice among religious denominations to their maturing children, so might others rear their daughters with the option of income or of service-altruism. Within the framework of a judgment thus built to hold riper years, the married woman at least will be released from the fears of unwomanly conduct in the exercise of wifely and motherly love.

There are, in fact, a large number of girls who are now working in factories and giving their pay envelopes to their mothers without raising the issue of their own prior rights therein; but the vital point of difference between this general course among the girls of the patriarchal tradition—like the Jews—and the educational idea, is that the girl ceases to do industrial work when she marries, as unquestioningly as she gave her income to her parents to the very eve of her wedding. It does not occur to her that she can cross the bridge and follow the usages of one set of obligations into another country, the general features of which are not at first markedly different from those she left. Custom, on the one hand, gives her excellent standing as an unmarried producer who forfeits thereby none of the sacred family bonds, because necessity of livelihood, convenience and the obvious rewards have wrought out a course of action suitable to the industrial circumstance of the day; but, on the other hand, custom, molded by totally unlike conditions of yesterday, becomes all at once potent to arrest this evolution by artificial and extraneous means. The daughter of a man who earns $10 a week may help him with the commodity he needs most—money; she is, in fact, expected to help him, and is thought a trifler if she shirks; but the bride of a man who earns $10 must cease to forward him in the same way. The women actually so placed are overcoming obstacles with the cordial appreciation of their neighbors and without loosening any of the powerful and beautiful ties formed by centuries of family tradition. It may be safe to say, moreover, that the family organization of such a group is subjected to less strain than that in which the unspecializing mother tries to maintain her daughters as non-productive consumers.

The over-developed altruist repeats her familiar abnegations of self: "I want my girls to have a good time while they are young," and "They will never have another chance to enjoy themselves, so I intend they shall do it now." She toils, therefore, at the tasks which, by implication, become drudgeries to be evaded until marriage compels them. Sequences are broken, and in the end insidious differences of motives arise, germinating unhappiness. A girl in an Iowa village, twenty years ago, was "shielded" from formal occupations by such a mother. In lieu of it she neither handled money nor exercised judgment in determining the flow of income for family ends. Her upbringing was but the amiable expression of a mother's half-conscious revolt, ending badly when the moment of the daughter's constructive activity approached. After two years of her own married life, she reproached her mother for a course that had placed her, too, in the bottomless plight. The older woman was deeply grieved at the ingratitude which forgot her own weary excesses in toil, and the breach was long in closing. The futility of sacrifice which does not undermine the causes that produced it, is evident in this commonplace incident, as well as the fact that the moral education of the girl was subordinated to the overmoralization of the mother.

An ethical training with core and purpose must take cognizance of tomorrow's outlook, and project the girl's course there instead of tracing it by yesterday's record; and she may be taught to be as nobly unselfish in the devotion of her earnings to the family progress as she has been in the consecration of her hands. With the idea of ampler comforts and

culture as fundamental necessities in the home—not to be offset by extra household labor by the wife—women will be less likely than they are at present to submit to low levels by marrying inefficient men. She will demand of her mate the competence that gives access to the lavish resources of the world, for she will perceive that the successive divisions of labor in society make it less and less worth while for her to help by rendering varied services in kind.

The first class of women defined here is being molded by a certain dynamics—a force that ranges forward toward emerging goals; the second is held by a static power—more static than that which has long enveloped the poor below, for it is immobilized both by its conditions and its principles of being; it is in the third class that the old ideal lies, because its roots were left in Europe, and it is there also that new conditions are inchoate because they are the ferment of economic changes. The wage earner, rigidly environed by factory and tenement walls, is ripe and plastic material for extra-class influences to work upon. The youthful foreigner is not only less tenacious of ideas than the rooted middle-class man, but he can be lifted more rapidly by the revolutionary productive processes of which he is the essential tool. Should he be molded to the customs of the distributing classes above him, which are in turn imitative of the aristocracies, and must his wife conform to the sacred traditions of the Pilgrim mothers in order to be virtuous and profitable? There is a matter-of-course opinion that the new American ought to be governed by a code she does not understand, and that it is possible for her to live as productively in a three-room flat as the Puritan lived in a cabin. What exits of energy has she there? Mechanisms are closing those of household labor, unless she makes herself active by failing to use them; public education and organized recreation are taking away her children. It is true that she performs her home-making tasks with deplorable inefficiency and time-devouring lack of system, but when she has been taught to do them well she will have more hours, more strength and more intelligence for twentieth century exertions.

One of the critical letters referred to the danger of hasty breakfasts and delicatessen foods if married women should "leave home." The writer does not know that poverty has prevented the general custom of gathering about a spread table, and that the immigrant's breakfast is a bowl full of poor tea or coffee, with bread and briny fish or oily stew. The American breakfast of hot breads, meat and potatoes is one which the industrialist would not adopt if he could afford it. It is too laboriously prepared. At an increased cost over the present it is possible, however, to establish a standard meal of prepared cereals and a variety of factory cooked foods which would be a gain for the consumer. Yet that advance is slight in comparison with the recent proposals of boards of education to feed school children by skilled processes, at a minimum price. It will be difficult indeed for the individual mother to serve her children as adequately in the tenement as the socialized school can in its sanitary restaurant.

We cannot turn toward the past. The tenement pioneer will not make her children's clothes, or nurse them in illness, or play with them in their kindergarten years, or direct their leisure and their mental unfolding; nor would we reinvest her with these functions—the American city performs them with facility incomparably greater than her own. If she was a skilful craftsman in Europe, as is frequently the case, it is unlikely that she can bequeath her art to her children here. A rarely fortunate circumstance may enable her to, but the total gain from her instruction is not commensurate with the impressive results obtained, for instance, last summer by the vacation schools of Chicago. The mother cannot give such brilliant, solid training; she can earn it for them by repaying to society the cost of the child in the hospital, where he can be most safely born; in the day nursery, where he can be wisely fed; in the kindergarten, where his hands are most scientifically directed, and so on to the upper grades of education, for which we no longer hold the mother directly responsible.

As she exists in this generation, two courses of constructive activity are open to her whereby she can render a slight

return for these services. They are the sweat shop and the factory, thru whose doors she is pouring without intelligible directions and that protection for the lack of which she works almost as badly there as she does at home, paying a heavy price in vitality and *morale*. In the sweat shop she is shamefully exploited; in the factory she is overworked for the want of organization and a social principle. But none of the raw and glaring evils about her is yet classed with those time-honored, respected maladjustments from which we argue that nobility of character is to be extracted. The novel pains of these spring from a faulty transition to new forms rather than from the decay of the old, and they may be immediately eased by social supervision over the rights of the industrially weak. The manufacture of goods at home, if it ever benefited any but the exploiting manufacturers, ought now to be abolished on the charge that by its nature it must encroach upon the light, air and space of home, and that control of leisure which it is the very purpose of the woman to secure as the return for her work. Home labor is sweat-shop labor. It defeats the end of the woman's work and robs it of reward, becoming a dangerous and disintegrating form thru which a higher standard of living cannot be attained. She must move into the factory—the factory regarded as a public utility and regulated for the general welfare as the streets are cleaned for the city's healthfulness. The industrial plant governed by law—which shall tend toward greater strictness—is the first and most broadly inclusive means of co-ordinating the elementary economic virtues in adult men and women. Drill in the habits of order, punctuality and cleanliness brings them forth ultimately as acquired qualities that result in a crude homogeneity, a rough approximation to type. Finally, the large group becomes standardized by the extension of the simple, primary virtues to the home life and their practice in the community. It is the immediate and practicable duty of social morality to supervise the areas of production, to federalize them if need be, to bulwark the citizens of an industrial republic. Radical provisions will undoubtedly be necessary to safeguard the hard-won rights of the swelling numbers of women in factories, but fresh protection to any class is customarily decried as dangerous without proving so.

Mrs. Florence Kelley has admirably discussed the new universal "right to leisure," but I would go further and extend it especially to the married woman. Her leisure must be even more carefully preserved than that of men, by processes of exclusion like those which surround the school child licensed to work for a few hours a day. We should clearly recognize that her home periods must be as long as those of her children, longer than her husband's, and that she must have a store of energy left with which to accomplish her home duties. The importance of her leisure, after she has attained a quota of managerial ability, is second only to that of the child, for morality is made by the right use of non-working time more effectively than by the narrow routine of toil. The woman as producer in her home has only disorganized the leisure of her trade; as outside producer she will do much toward organizing it, because her presence will hasten society's recognition of its inherent right to fix the hours of factory work by legislative enactment. Mrs. Kelley has drawn a list of minimum requirements that should be the basis of a national labor law. Some one else should outline on as sound an economic basis, a structure wherein women may utilize themselves under guarantees of liberty and health. The factory day and the school day ought to be coincident, the number of working days should be less than that of men, and, in general, their peculiar functions in nature should be as accurately observed in the broad field of production as are the aptitudes of the human hand in determining the shape of a machine designed for a particular corner of it.

The removal of children from industry and the protection of women at work are both methods of raising their planes of citizenship and of preserving the threatened home by a series of adjustments. It is not possible to adapt a stalwart, surging civilization like ours to any institution; if the institution does not follow it must disappear. The home ideal of the tenement wage-earner cries alone

for rehabilitation, the exigencies of men having blurred and dimmed it. Yet, like the concept of liberty, realized thru a body of law fixing the political rights of the citizen as voter, the concept of home may be made expressive thru a code defining the industrial rights of the citizen as worker. Public opinion alone is necessary to secure a charter for the feeblest producer; neither the divine prerogative of kings nor the "individual liberty of private contract" between a corporation and an illiterate Slav woman can stand against a mobilized public opinion cohering into law.

A change of function naturally accompanies an extension of franchise either to the political man or the industrial woman. The latter may effect a simple co-operation in housework with her neighbor in the next flat, or a few families may gravitate into a labor-saving alliance which will free more members for alternative occupations. The administrative unit is not likely much longer to remain one woman to one tub and one cookstove. However that may prove to be, public opinion must be pliant to the truths that the peasant woman of the hills feels herself poorly homed in the city tenement, and that her instrument of renovation is not her ancient distaff or hoe or a sole service in kind, but paid labor, specialized, socialized, and an integral part of the evolving civilization of the machine tender—the basal and primitive type upon which at present industrial America depends.

PHILADELPHIA, PA.

My Fight Against the Ring

BY WILLIAM W. ROSE

[The following article gives in his own words the narrative of the events by which the Mayor of Kansas City, Kans., was twice deposed from his office by the Supreme Court of the State. Last week, just after this article was mailed us, Mayor Rose resigned his office and the contempt proceedings against him will be dropt.—EDITOR.]

KANSAS CITY, Kansas, comprising eleven square miles of territory and ninety thousand people, is the metropolis of the State of Kansas and the seventh city in the United States in importance as a maunfacturing center. The principal industry is that of meat packing, in which it is second only to Chicago.

Kansas City, Kansas, is separated from Kansas City, Missouri, only by the imaginary State line. The envy, jealousy and hatred of a powerful Kansas City, Missouri, newspaper at our threatening commercial supremacy, together with the desire for revenge on Kansas City, Missouri, brewers, has been a prolific source of the difficulties encountered in our attempts at local betterments.

Altho Kansas is most prolific of the cereal products that enter into the manufacture of stimulating beverages of any State in the Union, yet we maintain a prohibitory liquor law (a constitutional amendment) to prevent the manufacture and sale of the finished product, the raw material for which is its staple agricultural production. The result is that brewers and distillers in adjoining States are anxious to perpetuate the prohibitory law to prevent competition within the State; and thus is built up what is known as "the rum power in politics."

The Prohibitory Law was passed in Kansas in 1880 by a majority of eight thousand votes, altho there were twenty-four thousand votes cast for the President that year that did not vote at all on the prohibition amendment. With the exception of one or two spasmodic spurts at the instance of those who thoughtlessly think it a province of government to make men good, there has been little or no effort to enforce the prohibitory law in this or any other city of the State.

For years our city has been growing

at an exceedingly rapid rate, and the system of fining saloons periodically (ostensibly in compliance with a city ordinance) was a fixed policy for a period of twenty-five years previous to my election, but the methods by which the prohibitory law was evaded were well designed and richly sufficient to admit of corruption. The fines imposed for violating City Ordinance No. 5773 (a measure constructed with the express purpose of affording a means of evading instead of enforcing the State law) were collected at irregular intervals in such a way that no one, except the Chief of Police, or a trusted lieutenant, knew just when a saloon may have opened nor when it closed. This, of course, gave an opportunity to favor some at the expense of others, and my administration immediately established the system of obliging all forfeitures of bonds (or fines) to be paid on the same day and allowing delinquents but three days' grace; thus each month the police judge's record would show the exact number in operation and paying fines. The public could thus know the number operating, and in this way the possibility of favoritism and the corruption inseparable from it was prevented; grafting was thus eliminated from the department, and the revenues were materially increased.

The following is the record of my official career:

1905.

April 4th—Elected Mayor of Kansas City, Kan.

April 12th—Assumed duties of office.

Sept. 26th—Served with notice of ouster proceedings instituted against me because I failed to enforce the anti-liquor law.

1906.

April 3d—Resigned from office of Mayor.

April 6th—Supreme Court of State issued judgment ousting me.

April 12—Renominated to fill my own unexpired term.

April 19—Opened second campaign.

May 8th—Elected on "wide open" ticket.

May 11th—Took seat as Mayor.

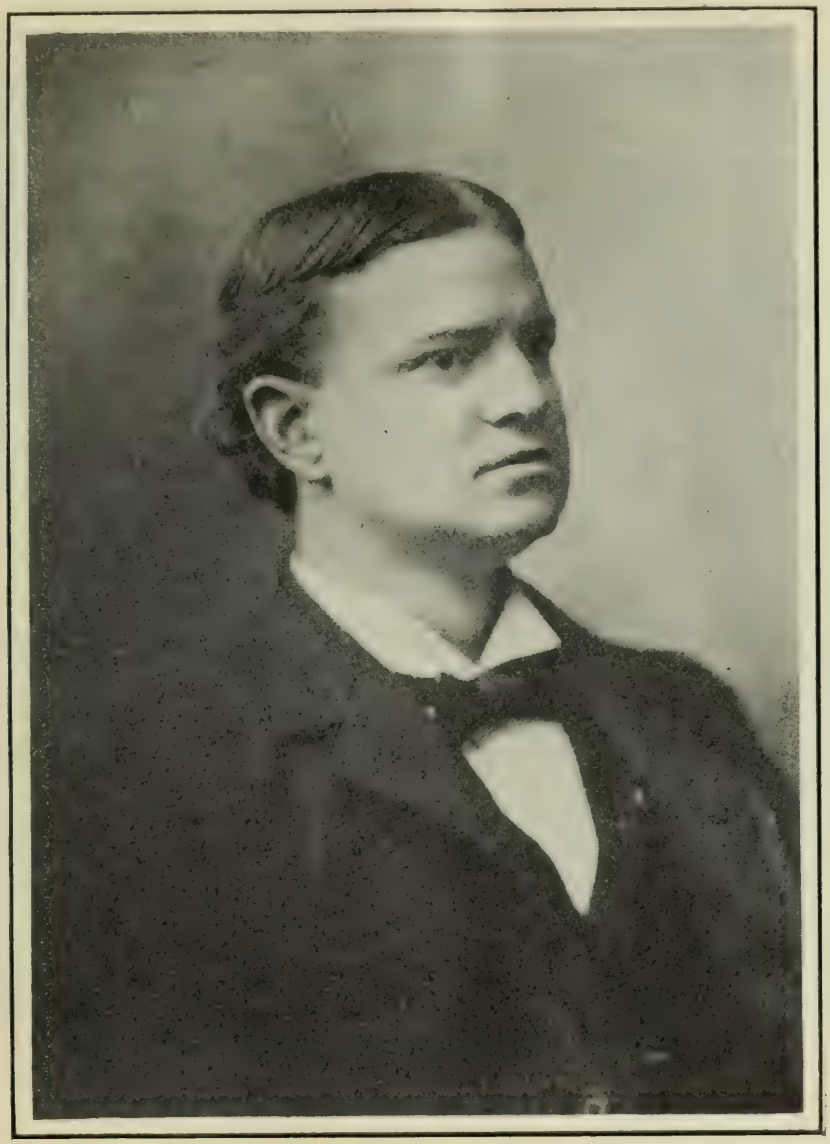
May 14th—Cited for contempt of State Supreme Court.

July 6th—State Supreme Court a second time ordered me to quit the office and fined me $1,000 for contempt.

July 9th—United States Supreme Court granted writ of error and stay of execution.

July 20th—Second contempt proceeding begun against me, set for October 3d.

Readers must bear in mind that my reelection, with a State Supreme Court judgment of ouster hanging over me, by a majority of sixteen hundred in a total vote of twelve thousand four hundred is proof positive that the prohibitory law cannot be enforced permanently in this city except by military power and in opposition to popular will, the basic principle of all law. I have assumed, with the authority vested in me by the people of Kansas City, Kansas, that home rule with administrative repression of the liquor traffic is preferable to State prohibition unsupported by local sentiment; in other words, the problem is not what we should do, but what we can do under the law. I recognize that it is not the prerogative of a Mayor to determine what laws are good or bad, but having lived in this city during two former crusades, at a time when the police department was under the direction of State instead of city authorities, and with a full knowledge and recollection of the result, I do not believe that the prohibitory law can be enforced when the majority of people do not want it enforced. All attempts to enforce it here, and in other cities of the State have proved worse than folly. Shall we overlook and ignore entirely the experience and lessons of the past?



In common with Tom L. Johnson, Mayor of Cleveland, O., I believe the policy of administrative restraint is preferable to any other known means of handling vice. I do not claim that it is not subject to abuse, but that this method admits of less corrupting influence than official sufferance which is utterly demoralizing, or attempted suppression, the results of which are little if any more successful.

On assuming the management of our city affairs we applied this policy of repression, and the fact remains that open gambling, policy, games and slot machines have been abolished in this city, in a way hitherto unknown; and if there are any poker games conducted it is in close secrecy. No money is paid or collected from any such source to the administration nor will there be. Therefore, there is no basis for corruption and there are no favorites nor privileges for distribution. There were over six hundred slot machines in operation here dur-

ing the previous administration. These ceased to operate April 15th, 1905. Policy wheels have been destroyed by the police department; wine rooms in saloons have been abolished; dance halls connected with saloons have been forced to close either one or the other, and in some instances both, and there are no such combinations now.

A comparison of conditions in this city with those of others of equal or even less population, within or outside this State, will prove this city to be a paragon of perfection.

Realizing, as I do, that a greater degree of industrial freedom must exist before the lesser evils that afflict our body politic can be eliminated, I have refused

William W. Rose.

This city has always been remarkably free from disorderly houses, and we have not had much of this evil to contend with; but such places as have needed surveillance have been subjected to a wholesome discipline. With one exception Kansas City, Kansas, is enjoying today a freedom from vice and law-breaking it never knew before, and but for the prohibitory law there would be no exception.

to be diverted from my purpose and effort to solve some of the weightier problems of city affairs, since these also embrace a solution of the lesser.

I was elected on a platform of pure water, cheap gas, no graft and the public ownership of public utilities. A great and powerful water company is seeking a renewal of its franchise. It is my purpose to accomplish city ownership of the water plant without additional taxes to

the already overburdened taxpayers. We now have natural gas at twenty-five cents per thousand, and less for manufacturing purposes.

Our assessed valuation of property has been raised from $52,000,000 last year to $65,000,000 this year, and the corporations will pay more nearly their fair share of the public expense, and those who criticise this administration must admit that in point of honesty and efficiency it is a success.

It is conservatively estimated that the trade and business of this city would suffer to the extent of $2,000,000 per annum by the continuation of the agitation of the liquor question, and that Kansas City, Mo., would profit by that much increase of business, and that the general fund out of which the current running expenses of the city are paid will be curtailed $100,000. The tax rate on a twenty-five per cent. valuation is six per cent., and the general fund is limited to a six-mill levy, while the running expenses of the city is $225,000 per year. The six-mill levy, $78,000, augmented by police court fines, occupation and dog taxes, constitutes the general fund and will not aggregate $112,000, while the city is enjoined from exceeding its general fund, yet must pay $225,000 of running expenses with $112,000 without violating a court injunction or the prohibitory law.

A pretty hard proposition to handle and not get into difficulties, but there is more civic pride and genuine public interest in the affairs of our city than ever existed before, and I am sure that the ultimate outcome of the turmoil thru which we are passing must culminate in a deep and earnest consideration of our own material and ethical welfare.

What may happen to myself can make but little difference. If the end is as I hope it will be I shall be compensated for the enemies I have made; let the record read: "He tried to do something for those who work for a living and did his best."

KANSAS CITY, KANSAS.

A Most Encouraging Convention

BY BOOKER T. WASHINGTON, LL.D.

PRINCIPAL OF THE TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE.

IF I were asked to name what, in my opinion, was the most interesting and encouraging body of negroes that I have seen assembled in the last twenty years, I think I should be tempted strongly to name the National Negro Bankers' Association, which held its first meeting in Atlanta a few days ago, in connection with the annual meeting of the National Negro Business League. I confess that I had never expected to live to see the day when such a strong, stable, intelligent body of men representing what these men do, should assemble in our Southern States. At the meeting referred to there were present fourteen bank officials, most of them being either the cashiers or the presidents of negro banks.

The growth of the negro in commercial and business directions is indicated by the growth of banks under the control of negroes. It will surprise, I think, the most of your readers to note the rapidity with which these banks have increased. So far as I can get the facts, fifteen years ago there were only two banks in America under the control of negroes—one in Richmond, Va., and one in Birmingham, Ala. At the present time there are thirty-one banks operated and controlled by negroes, and others are being organized each year.

There have been very few failures of negro banks; in fact, I only know of the failure of one.

Up until our last meeting, the bankers had been meeting in connection with the regular session of the National Negro Business League. This year it was

thought advisable that, while retaining their membership in the National Negro Business League, they should have a separate organization within the League, which was readily consented to.

An entire session of the League meeting was devoted to hearing reports from these bank officials, and I wish that every white man in America, especially those that doubt the capacity and honesty of the negro, might have been present to have heard these simple, strong statements, describing the struggles and successes of these men, who, in many cases, had worked themselves up from slavery and poverty to the point where they were either presidents or cashiers or directors in a negro bank.

First Session of the National Negro Bankers' Association, held in connection with the National Negro Business League, Atlanta, Ga., August 30th, 1906.

Of the thirty-one banks, fourteen were represented at the Atlanta meeting. It may sound strange, but nevertheless it is true, that eleven of these banks are in the State of Mississippi, and practically all of them have been organized since Governor Vardaman became Governor.

Your readers will likely recall the stir that was created some months ago because President Roosevelt sought to retain a colored woman, Mrs. Minnie Cox, as postmistress at Indianola, Miss. So much disturbance was created that the President finally closed the post office and Mrs. Cox withdrew from the office. In the meantime, her husband, Mr. W. W. Cox, was a railway postal clerk. Because of the disturbance Mr. Cox later gave up his position on the railroad, and for a while both of them lived out of Indianola. Some months ago, however, Mr. Cox determined to open a negro bank in Indianola, and I can indicate the progress and success of this bank in no better manner than to quote the following sentences which have just come to me from a reliable business man in Mississippi:

"Now with reference to Mr. W. W. Cox, of

Indianola, Miss., I beg to advise that no man of color is as highly regarded and respected by the white people of his town and county as he. It is true that he organized and is cashier of the Delta Penny Savings Bank, domiciled there. I visited Indianola during the spring of 1905 and was very much surprised to note the esteem in which he was held by the bankers and business men (white) of that place. He is a good, clean man and above the average in intelligence, and knows how to handle the typical southern white man. In the last statement furnished by his bank to the State Auditor, his bank showed total resources of $46,000. He owns and lives in one of the best resident houses in Indianola, regardless of race, and located in a part of the town where other colored men seem to be not desired."

Not only this, a bank has recently been organized in Greenwood, Governor Vardaman's own home. In telling about their experiences and struggles, in nearly every case these men gave examples of how the white bank officials in their communities had been of service to them and worked in hearty co-operation with them. The president of the bank in Birmingham, Ala., told how, when his bank building burned some months ago, two of the white banks, without any suggestion on his part, fearing that the safe could not be opened in time for business next morning, sent messages to the effect that if cash was wanted with which to begin business, the colored banker had only to call on the white bankers for assistance.

I think it will be of further interest to note that one of the directors of the bank in Mound Bayou, Miss., at one time was a slave of Jefferson Davis, and at the present time Mrs. Davis, the widow of the former President of the Southern Confederacy, looks upon him as being one of the most faithful of men.

In closing his address, the president of the American Trust and Savings Bank in Jackson, Miss., called attention to the fact that it was the habit about forty years ago in Mississippi for white people to use slaves as security when borrowing money from a bank, and at the present time in Mississippi this property which was once used as security is now itself engaged in the banking business.

I think without exception it was reported that each one of these banks had a few white depositors, and each one reported that they had white borrowers also.

It was also interesting and encouraging to hear the evidence that these bankers gave in the direction of showing that the colored people are learning to save their nickels and dimes as well as dollars in a larger degree where these banks are located. Further than that, the existence of these banks shows that the colored people have an increasing degree of confidence in members of their own race in the direction of trusting them in financial matters.

TUSKEGEE, ALA.

Time's Light-Keepers

BY FRANK WALCOTT HUTT

OH, let it not in any port be said
  By watchful pilots that some light of thine
  Failed on a certain stormy night to shine
Beside the harbor head.

Life's seamen, by whatever coasts they fare,
  Call out to one another, passing by:
  "Trim, trim the lamps, raise every beacon high—
There are no lights to spare."

ASBURY GROVE, MASS.

One Community Where Christianity Is Practiced

BY W. D. P. BLISS

Author of "The Encyclopedia of Social Reform," Etc.

WE only know one community in the world where, in any large way and to any large degree. Christ's will is much more than talked about—where it is actually done. There are, indeed, scattered thru the modern world, devoted Christlike lives, but we only know one community where for the whole community, for thousands of associated lives forming together one great family, Christ's law is the supreme law and His commands the daily actual deed. This is the marvelous colony, or group of colonies, which has grown up on the outskirts of Bielefeld, in Westphalia, Germany, under the wise care of Pastor von Bodelschwingh. Here the Golden Rule is literally followed and the rule of gold not followed. The colony even seems to violate every accepted dictum of this world's wisdom, and yet beyond all question is now, and has been ever since its start, now nearly forty years ago, a marked and an assured success. If one should undertake to establish a colony and should begin by inviting to it the unfortunate, the incapable, the illiterate, the poor, the destitute, the inebriate, the debauchee, the feeble-minded, the idiotic, the epileptic, the paralytic—if he should do this without capital and without backing of financial responsibility, he might be following the literal teachings of Christ; he could not be accused of following the first principle of ordinary prudence. Yet this is what was done and is still being done, day after day, month after month, year after year, in this unique community, and with the most remarkable results. The claim of being in trouble is the one key that will unlock the doors of the community at Bielefeld, and with that key one is never turned away. "I never employ a man who has been unfortunate," the great Rothschild is said to have once given as the secret of his success; the opposite is the law at Bielefeld.

The colony began with epileptics, tho now it embraces all classes of misfortune, bodily and otherwise. It was in 1867 that a few Westphalian pastors and laymen, following the example of Pasteur Bost at La Force, in Dordogne, France, met, and decided that the Church had a duty toward the epileptic. A single farmhouse near Bielefeld was bought; a few epileptics came; and the colony was called Ebenezer—"the stone of help." It was the beginning. Two years later a home for deaconesses was planted close by to train workers, and was called Sarepta—"the place of purifying metal." The names are important because they meant for the colony a christening grace of faith, of reliance upon God, of old-fashioned Bible trust.

It was three years after this that there came to take charge of the growing plant—then having twenty-six epileptics—a German pastor and his wife, Pastor and Frau von Bodelschwingh, henceforth to be what they are still today, the very soul and life and genius of the place.

They were but a pastor and his wife, and yet they were "vons," each brought up in an aristocratic mansion in Berlin, and belonging to the highest in the land. Pastor von Bodelschwingh's father was Minister of Finance and later Prime Minister of Prussia. The wife's father was also in the Prussian Cabinet. The genius that these fathers applied to ruling Prussia the son and daughter applied to ordering the lives and home of twenty-six epileptics. The present colony is the result. It has affected and changed all Germany, tho Pastor and Frau Bodelschwingh would say that it was the result, not of their genius, but of faith, of walking with God. They call the colony Bethel—"the house of God."

Today instead of one building there are over one hundred and fifty. In place of epileptics alone, Bethel now receives every class of unfortunates. Its branches

and ramifications spread over all Germany, and even across the sea to other continents and other shores. The main branches of the colony, however, are five —The Home for Epileptics, or Bethel proper; Sarepta, the Mother House for training nurses; Nazareth, the Brotherhood for training deacons; Wilhelmsdorf, the colony for vagrants and the unemployed; the Workmen's Home Association, an organization for providing homes of their own for the working classes of Germany.

But these are by no means the only branches of the work. Among its one hundred and fifty buildings there is place for virtually any ill. Bethel has a large idiot colony, nearly one-third her inmates being among this class. It has two orphanages called "The Good Shepherd" and *Kinderheim,* "the Children's Home." For inebriates there is the *Friedrichshutte,* "Frederick's Cot," named for the late German Emperor, and opened just after his demise. One remarkable spot on the colony grounds is the *Eickhof,* where wealthy voluntary patients, who have made shipwreck of life, thru drink or fast living, may come, and, among equals of their own class and surrounded by physical comforts, be compelled nevertheless to labor with their own hands, and be taught by experience the nobility of service. Bethel is thus for the poor rich as well as for the enriching of the poor. All classes, all ages, all sexes, have their place. One remarkable house in Bethel welcomes those who can find no opening elsewhere, because they have been convicted of theft or embezzlement or dishonesty of some kind. It is called Ephratah, "the place of fruit," and bears much fruit. Such are some of the wide charities of this unique colony.

What do the colonists do? They work and pray and sing and pray and sing and work. This is their daily life. The whole atmosphere of the place is religious, tho religion is forced upon none. Yet without it Pastor von Bodelschwingh would say Bethel could not live. The singing and praying are necessary to the work. But the colonists do work—even the epileptic children and the noblemen's sons. It is the genius of Pastor von Bodelschwingh which finds work which each can do, even to the palsied hand and the clouded brain. Among the varieties of sufferers, for whatever needs to be done, there is sure to be found some head or hand which can do it.

Almost all that Bethel uses Bethel makes — houses, furniture, clothing, food; almost everything. Walking thru the colony, one will find forty carpenters busily at work building or repairing. Appropriately they live for the most part in a house called Little Nazareth, from the home of the Great Carpenter. Near this is the tailor's home, Peniel, "the face of God"; not far away are "Horeb," the shoemaker's house; "Gilgal," the blacksmith's shop; "Sharon," the seedsman's store. There are bookbinding, book printing and book selling. Books are sold from Bethel over Germany. The book store is called Bethphage, "the house of figs." You will find also in Bethel saddlers, basket-makers and other trades. At Bethlehem, "the house of bread," there is the bakery. "Hebron" is the farmhouse of the colony, as practical and clean as any in the world. They also make bricks in Bethel, turning out 4,000,000 bricks per year.

But perhaps the most important work in the colony is what Pastor von Bodelschwingh has done and is doing, not for those afflicted with bodily ailment, but for unfortunate workingmen, the unemployed and the unemployable. This work at least is affecting and transforming the whole empire.

The year 1881 was a hard one in Germany. Band after band of poor men arrived at Bethel, starving, in rags, willing to work, but unable to find work to do. Pastor von Bodelschwingh found them work. He set them to building a wall. Out of that wall grew Wilhelmsdorf, the colony for the unemployed. The colony marks an epoch in Germany, if not in the world. It is solving the problem of the vagrant and the tramp. Bodelschwingh said: "Bring me your unemployed and I will save you money and, above all, I will save men." He estimated that the tramps cost Germany some $10,000,000 annually, mainly begged by the tramps from house to house, and spent by them mainly at the dram shop. Bodelschwingh bought some land, considered worthless, and set

the men to reclaiming it and developing a farm. He made it a training colony, to teach the men how to work and to make money instead of begging it. To-day he has well-nigh rid Germany of tramps. But this is only because Wilhelmsdorf has been so successful that thirty-two other colonies like it have been started in the empire. Bodelschwingh does not believe in large institutions, but in multiplying small ones, where men can live in little groups or families and have each the personal touch and the personal feeling of a member of a home. Over each home he would have a head brother trained in his Home for Deacons. By this personal touch, and with loving care, Bodelschwingh leads—he does not drive—his tramps to work. It is real work, however, not coddling. The rules are strict and strictly enforced. The colony is called "Wilhelmsdorf" from the Emperor Frederick William, who stood sponsor for it. During the first fourteen months about 1,200 men were admitted. Only about 42, or 3½ per cent., ran away (there is no compulsion to remain); 966 left for regular employment, 830 having been placed by a labor bureau in connection with the colony. More recently the results have not been quite so favorable, mainly because the most employable men have been already placed, and those who now come to the colony are the residue and less employable. Still, the thirty-three colonies in Germany shelter nightly some 3,700 men, and are steadily qualifying men for work.

Nor is this all. Largely thru Bodelschwingh's lead, and today welded into one complete system, there have sprung up over Germany some 2,000 *"natural Verplegung-stationen,"* workingmen's lodging-houses, where workingmen traveling in search of work can find shelter for the night by doing a little work. In connection with each station is an employment bureau that makes it its business to be in telephonic communication with all the other stations and to learn from all over the empire where there is work to be had and where workmen should apply. These stations, therefore, aid men in finding work, and shelter them till it is found; those who cannot find work are sent to one of the colonies like Wilhelmsdorf. The system covers Germany, and the stations are carefully planted within walking distance of each other, so that a man can go in any direction over the empire and look for work, secure of shelter till he find it.

Nor is even this all. Bethel remembers the efficient as well as the inefficient. It is better to help a man to be and stay independent than to rescue him after he has fallen and become dependent. One important part of the colony, therefore, is the Workman's Home Association, which makes loans to workingmen, on security of land and house, and so enables them to own their homes and a little land. Some skilled epileptics are the architects, and skilled epileptics were the first builders of these houses, tho today the work is spreading to different portions of the empire.

How is Bethel supported? It largely supports itself by the work done by its members. Little or no pay is given even to those who give the skilled work of overseeing or directing. They are assured a home and livelihood; in case of sickness or need they know that they and theirs will be provided for with loving care; what they need they can have; what need have they, then, for money? Out from the training homes, therefore, pour men and women, who, with no question of pay, give trained effort that guides the multitudinous activities of the colony, and sends out even foreign missionaries to carry on similar efforts in Africa and in other climes. The labor of superintendence, houses, food, clothing being thus largely produced by the colony, money expenses are small; yet money is made in many ways. Into one busy house in the colony come cast-off clothing or articles of any nature sent from all over Germany, to go out in most cases renewed and fit for use by somebody in the colony, or to be sold at low price to the peasants in the vicinity. A poor woman in Germany collected from her friends and neighbors a garret full of old *corks* and sent them to Bielefeld. Today the traffic in old corks fills several houses at the colony, employs forty clerks, and brings in $10,000 per year. A wealthy patient arrived at Bielefeld who did not know how to do anything except collect postage stamps.

Bodelschwingh set him to doing this. Today the postage stamp bazaar of the colony occupies a house, employs many clerks, and brings in considerable revenue. Children collect used stamps and send them to the colony from all over Germany. So with the little comical clippings which children collect from the cigarets of their fathers and elders; they are sent to Bethel and are then cleaned and prepared and sold to a cigar factory for "blend." There is a "fragment man" at the colony who is a "fragment king"; he has a genius for turning into use and money the fragments which other people throw away. In more ordinary lines of trade, Bethel puts up and sells over the world pure bromide, for which epileptics have such continual need and which it is difficult to get pure. In the last ten years over 10,000 epileptics have been thus supplied in Germany alone.

Bethel is not, however, wholly self-supporting. It needs gifts and receives them. The Royal House of Prussia takes great interest in it and gives it favors and gifts. The wealthy aid, especially when new branches of the work are to be opened. But more particularly does Bethel rely upon the interest and gifts of the simple-minded Westphalian farmers who live in the district. The colony is wisely planted in the midst of a quiet and God-fearing rural community, trained to give to missions, and Bethel is its especial pet. To it the farmers bring their *pfennigs* and the produce of their farms. Pastor von Bodelschwingh is a skilled beggar. Once he asked all German parents to give him a *pfennig* for each sound and healthy child, for him to spend on the maimed and unfortunate. At present about $7,500 per year comes from the school children of Germany. Some $50,000 per year is collected for the colony by sixty regular collectors. The neighboring provinces appropriate to its use $15,300 per year. Altogether Bethel has and spends, apart from the labor colony, about $300,000 per year. It always has it, tho often the pastor does not know where the money will come from, the day before a bill must be met. But he knows that it will come, and the credit of Bethel stands secure with a property valued at $1,250,000. Here surely is a magnificent success, wrought from and by the unsuccessful. The watchword of Bethel is "Work and Pray." Pastor von Bodelschwingh would not for a moment dream of conducting his colony without both labor and prayer. It is in the marvelous union of the two, in the fact that this colony of unlimited mercy, actually does what Christ says, that it can break every dictum of this world's wisdom, and from the waste materials of civilization build up this home of joy and usefulness and success.

AMITYVILLE, LONG ISLAND.

"A Little White Hand"

BY MARY CROWELL WELLES

MR. HENRY JAMES'S recent comparison of Newport to a "little white hand" recalls a conversation once held between an American lady and a Japanese gentleman. The lady asked the Japanese gentleman, who chanced to speak the English language well, if anything in it struck him as odd or unique. He replied that one popular figure of speech, so common among us that it appeared to have lost its figurative sense, struck him with fresh force at every repetition and never agreeably. The figure to which he referred is the comparison of objects in nature with parts of the human body. We speak of the mouth of a river, an arm of the sea, the bosom of the lake, the foot of a mountain, the limb of a tree, a neck of land, the brow of a hill, the shoulder of a hill, the head of a lake or river, a bellying sail, the leg of a triangle. So far have

some of these expressions lost their figurative meaning with us, and become mere names, that no synonyms of them exist in common use, as in the case of "the mouth of a river" and "the foot of a mountain." This fact attests their antiquity and their original popularity.

In the ancient cognate languages, Greek, Latin and Sanskrit, the same usage is prevalent and in a less refined form. In Greek, μαστός the breast, is used of a rounded hill; κόλπος, the bosom, of a rounded hollow and of a bay or gulf of the sea; Calypso's isle is called by Homer ὀμφαλὸς θαλάσσης, the navel of the sea. Slightly different, tho along the same line, is Antigone's affectionate address to her sister, "head of Ismene," Ἰσμήνης κάρα, with which may be compared our own term of endearment, "dear heart" and our compound "sweetheart." In like manner Horace calls Quinctilius "so dear a head," *tam cari capitis.* Some of these figures in Latin, particularly as they appear in Plautus, are too objectionable to be noticed here. In Sanskrit the same kind of figure is used; *añka,* the bend at the hip where an Indian mother carries her baby, means also a hook.

To Japanese feeling, delicate, fastidious or prudish, as you will, this Indo-European figure is not beautiful. The opposite kind of comparison, that of parts of the human body with natural objects is pleasing. We may speak of waving hair, starry eyes, the snowy locks of age without offending any canons of taste. That our Japanese friends should condemn Aeschylus's beautiful figure, "the multitudinous laughter of the sea," or Homer's famous line, "The rosy-fingered Dawn, the child of morn, arose from her couch," or Wordsworth's poem upon the daffodils "tossing their heads in sprightly dance," or even such expressions as whispering leaves and murmuring brooks, is not quite believable, and probably is carrying the Japanese criticism too far, since these figures are comparisons with attributes or powers of living beings, not parts of the human body.

Our own sensitiveness to any new figure of the kind in our language is being demonstrated today in the attempt of orange-growers and grocers to introduce the expression "navel oranges" and the repugnance of housewives to the word, who almost always ask for seedless or California oranges.

It is possible that the popularity of this particular kind of comparison had its origin in the ancient belief that every stream was the abode of a river god who gave it motion and power, and every tree the home of a wood nymph to whom it owed its growth and beauty. With such a belief in nature, such personifications would be natural and spontaneous.

It is easy to understand the Japanese repugnance, and it may not be difficult to analyze it. It might express itself in this way: the world of color, light and form is beautiful; the human body, made up of bone, muscle, flesh and blood, when regarded as a whole, inspired with vital force, a living soul with angelic powers, is a majestic and beautiful thing, and comparisons of inanimate objects with it ennoble thought and language; in its parts it is suggestive merely of form, as in the case of "a neck of land," or of function, as in the case of "the mouth of a river," or simply location, as in the case of "the foot of a mountain," and when the figure is felt in its full force, as we feel μαστός, κόλπος and ὀμφαλός, it is suggestive of much more, of the animal, of the flesh.

That this figure is no more common and no more gross than it is in English, and so largely an inheritance from a distant past, bespeaks the innate refinement of our people, for there is no more perfect mirror of the taste and feeling of a people than the language which they unconsciously develop and make their most common and most perfect medium of expression.

Newington, Conn.

Literature

Hauptmann's Latest Play

In the latest and not least curious of his plays, *Und Pippa Tanzt,** Gerhart Hauptman—by long odds the most notable German dramatist of the day—has attempted the extraordinary task of combining uncompromising realism with equally uncompromising fantasy. Nor is this all. He has (this time beyond doubt or question) made use of both plot and characters in his "glassworks fable" (as he calls his play) to suggest certain under-meanings, as unquestionably clear to himself as they will, to the multitude, seem veiled.

By comparison with *Und Pippa Tanzt,* the symbolism of that exquisite fairy play, "Die versunkene Glocke," of which the English adaptation is shortly to be revived here, seems positively transparent. And *that* has puzzled many learned critics. No wonder that the excellent Berliners are still groping for the key to what is, on the whole, the most bewildering work that has yet come from Hauptmann's pen. The scenes are laid amid the snow-clad mountains of Silesia. There Hauptmann is at home. There he was born. And there he wrote some of his earlier plays, among them more particularly "Vor Sonnenaufgang," of which his newest drama sometimes reminds one, and "Die Waber," which, up to the present, remains his masterpiece. The desolate and remote environment of Silesia is brought wonderfully near to the spectator—and to the reader—in the opening of the play. We are transported to a rude mountain inn, where workmen from a neighboring glassworks sit at midnight drinking and gambling. The old innkeeper, like his guests, is drawn with marvelous power, and, even in reading the scenes which succeed each other, one feels the unwholesome warmth of the interior, and hears the coarse chatter of the players as they wrangle over their cards. Of the characters introduced in the first act the most vivid are a scoundrelly Italian glassblower, named Tagliazoni; old Huhn, a brutal and sinister workman; Pippa, the fancifully conceived heroine, Tagliazoni's daughter; and Michel Hellriegel, a wandering and, according to ordinary dramatic standards, an impossible youth, wandering thru the wastes and wildernesses of the world in search of a fair City of Dreams, which is Venice. Pippa will seem fully as impossible, if one regards her literally. She is a daughter of the sunny south, drifted, Heaven knows how, to the northern solitudes, where by her grace and by the poetry of her dances she wins every heart and arouses the brute passion of old Huhn. On the surface the drama is largely constructed out of a long struggle between Huhn and Michel Hillriegel for the possession, in the one case material and in the other merely ideal, of Pippa. In the last of the four acts, when Pippa has apparently been saved from Huhn, she dies—dies as she dances. For, tho a mysterious savant, named Wann, who shelters her and Michel in their flight from the monstrous old workman, has warned Michel not to allow Pippa to dance, she cannot resist the impulse when it comes to her. Then Huhn dies, too, and Michel, suddenly struck blind, goes out into the mountain wastes in quest of Venice, unconscious of his affliction, and cheered, thru the magical suggestion of the mysterious Wann, by the presence of an imaginary Pippa. For Michel has the strange and inner vision of the world's poet-dreamers.

What is the meaning of Hauptmann's fable? The answers of the erudite critics who past judgment on the play in Germany are distractingly various. In most instances, too, they are ridiculous. It may seem fully as absurd to some to put forward the vague hint that Michel is meant to be a symbol or a type of youth that dreams, errs and aspires, aiming at the conquest of wonderful castles in the air, the scaling of inaccessible hights, the possession of intangible beauty. Pippa, according to this theory, is merely the bubble, the rare, golden fantasy of happiness which dances before

* Und Pippa Tanzt. A play in four acts. *By Gerhart Hauptmann.* S. Fisher, Verlag, Berlin.

all men, young and old, and quickly dies. In Wann, perhaps, the poet wished to symbolize the serene wisdom and experience of life; while Huhn, the bestial, miserable, and yet painfully human creature who pursues Pippa, may, without straining, be accepted as Hauptmann's embodiment of life's low and obsessing materiality. To ascribe clear meanings to the other characters in the play might puzzle the most skilled interpreter of symbolic riddles. That Hauptmann intended us to look beneath the externals in *Und Pippa Tanzt* is manifest from the deliberation with which he has in many episodes defied all the apparent realities of both life and drama. Taken literally, the speeches and indeed the actions of Michel Hillriegel would be insane; Huhn would be merely a gross satyr, and Pippa a vague dancing doll. Heaven help the reader and the audience that sees only the surface of things. And yet—and yet—it is not by his latest work, beautiful and powerful tho it is in many ways, that Hauptmann will be remembered a century hence, when the Clyde Fitches and the Henry Arthur Joneses have been forgotten, but by his greater and more fathomable plays, "Die Waber," "Die versunkene Glocke," "Der arme Heinrich," "Fuhrmann Henschel," and by that marvel of psychological and poetical analysis, "Hannele."

A New Statement of Socialist Ideas

WHETHER the Socialist movement is regarded as the coming danger or the coming hope, it is now admitted to be so important that every intelligent man must wish to understand its principles and purposes. The candid seeker for knowledge has heretofore found the literature of the subject far from satisfactory. Among the many outsiders who have written about Socialism there is not one who has succeeded in thoroly understanding it and presenting it adequately and impartially. Ely and Kirkup are fair, but they are superficial and sometimes inaccurate; Cathrein is more thoro, but he is often grossly unfair. In the great mass of Socialist works, on the other hand, there are many which treat special parts or phases of the subject in an admirable manner; there are well written propaganda pamphlets; but until now there has not been any one book from which the inquirer could get a clear idea of the subject as a whole.

This want Mr. Spargo* has well supplied. His book is enjoyable as well as instructive, being comparatively free from the peculiar terminology which makes many Socialist works unpalatable to the average reader, yet not sacrificing accuracy to popularity of expression. The author's experience as a propagandist in the movement has made him familiar with the common objections and misunderstandings, as well as with Socialist theory itself, and he preserves an excellent sense of proportion. Whether his readers accept or reject Socialism, they will at least know what it is.

In the opening chapters, Robert Owen and Karl Marx are taken as representative of the "Utopian" and the "scientific" stages in the history of the movement, and the biographical element leads up to and helps to illuminate the theoretical. The two chief phases of Socialist doctrine—the historico-philosophical and the economic—are then set forth in due order and at some length. Quite rightly the author devotes more space to elucidating the "materialistic conception of history" and the idea of the class struggle than to the theory of value and wages and surplus-value, for the former is both more important and less generally understood.

The best part of the book, however, and the only portion for which the author would probably claim more than verbal originality, is the closing chapter, "Outlines of the Socialist State," in which he makes "the attempt to state Socialism constructively without Utopian romanticism"; that is, to sketch the future social system which Socialists think they foresee, not as an ideal paradise evolved from the inner consciousness of generous or crazy dreamers, but as an outgrowth from now existing conditions and forces. This chapter is, we believe, a genuine and lasting contribution to the literature of social science. Whether or not the reader believes that

* SOCIALISM. A Summary and Interpretation of Socialist Principles. *By John Spargo.* New York: The Macmillan Co. $1.50.

the forecast is correct, and whether or not he finds the prospect a pleasing one, he must agree that Mr. Spargo has endeavored to put Herbert Spencer's "Coming Slavery" upon the shelf. The Utopian nightmare goes the way of the Utopian beatific vision, and another beatific vision is offered in its place.

Contemporary France

COMPARED with Justin McCarthy's popular "History of Our Own Times," this volume by Hanotaux, the second in his contemplated series,* is less picturesque, less witty, more solid, more detailed and more given to philosophising. In the main it is written in short staccato sentences; but occasionally the eloquence offends an Anglo-Saxon taste by becoming turgid and obscure.

But this defect is offset by brilliant characterizations, vignettes sharply drawn and ruthlessly touched in. As an instance take this paragraph-picture of M. Jules Grèvy:

"His cool common sense, his full and firm language, his commanding tone, and something of a middle class and austere morality, lent character to his physiognomy even beside M. Thiers and the brilliant orators of the Left. As an orator he was well known, chiefly by his deliberate silence. He was a very shrewd *Franc-Comtois,* with the manners of a Methodist pastor. His toneless voice never warmed, his pale face never relaxed; his thoughts were minted in formulas, adages and sentences."

As his first volume had demonstrated the ability, industry and conscience that he gave to his task, M. Hanotaux was readily granted the help of private papers and of personal recollections of actors still living. These have enabled him to make this volume an authoritative history of the two cabinets of the Duc de Broglie (May, 1873, to May, 1874) and of the double failure to restore the monarchy. For the general reader there is too minute a study of the debates, committee meetings, intrigues and runnings to and fro that ended so happily in the destruction of the hopes of royal pretenders. But, bloodless as was the victory, doubtless to a Frenchman its importance justifies microscopic examination. Consider the circumstances. France was bleeding and on her knees. Her rulers, in whom she had blindly trusted, had brought her within touch of Death. By an effort almost superhuman she was throwing off the burden of the war indemnity and ridding her soil of the invader in less than the allotted time. Her vanity (a marked national characteristic, as our author allows) was cruelly wounded; her fear of unprovoked attacks acute. The fires of the Commune had been extinguished in the blood of Frenchmen. Order, precious order, had cost ruthless executions. The government of M. Thiers, which had piloted the State thru critical months, had succumbed in May, 1873, when it attempted to frame a constitution. Marshal MacMahon, the man of the sword, had been immediately elected his successor. But the question "Republic or Monarchy?" was still unanswered. In the Assembly there was a clear majority of Monarchists. Why, then, did they establish a republic? First, because the Royalist factions could not combine, and their titular "king," the Comte de Chambord, had no political pliancy. At the critical moment he obstinately refused to accept the tricolor flag. With a sense of honor entirely misplaced and stupid, but comprehensible in a Bourbon, he published a letter that insisted on the adoption of the white flag of the Bourbons. This declaration tore away the fine net of friendly intrigue in which he was being enmeshed, but, to his naïve surprise, it also carried down his own chances of being seated on the throne. This result depended no longer upon the few thousand of the nobility and bourgeoisie. Their day of power, as M. Hanotaux shows in one of his best chapters, had already expired. Universal suffrage, a mockery before the war, was now a saving reality. The blouse was no more to bow to the frock coat; a college degree would no longer be a patent of political leadership. In the vineyards, orchards, meadows, factories and workshops the plodding Frenchmen who were redeeming by their industry what their leaders had lost by their stupidity had now determined to control their national affairs themselves. They wanted no more monarchs, and events therefore compelled a majority of

* CONTEMPORARY FRANCE. *By M. Gabriel Hanotaux, formerly Minister of Foreign Affairs.* New York: G. P. Putnam's Sons. $3.75.

Royalists to establish the republic. Only this year has France demonstrated that her determination was final. The Church, which fought republican institutions, has been disestablished, the religious orders have been expelled, the lords of the army have been smartly shown their subordination to the civil power. The way is now clear for France, with her warm enthusiasm and her preference for logical political systems, to make pioneer roads thru the industrial wilderness and to extend her republican institutions into new sections of national life. That she means to do this the recent Parliamentary duel between Jaurès and Clémenceau clearly indicates.

The Philippine Historical Series

THE last volumes issued in 1905 of the Blair and Robertson series of translations from the documentary sources and from rare published works on Philippine history* were occupied mainly with Philippine ecclesiastical history, without regard to the strict chronological order. In volume twenty-eight the editors furnished us with an "ecclesiastical appendix," a valuable compilation of royal decrees, religious and population statistics in the Philippines, data on education and charitable institutions, and foreign travelers' observations upon the friar-priests, covering the entire period of Spanish rule. It is, of course, not a complete compilation, for these are matters constantly coming to the front in every period of Spanish-Philippine history and in every volume of this series; but it is a very useful piece of editorial work, and the selections from the travelers LeGentil (French), De Mas (Spanish) and Jagor (German) are especially valuable.

Two-thirds of volume thirty and all of volumes thirty-one and thirty-two are given up to a translation (partly in synopsis) of the chronicles of the Dominican order in the Philippines by Friar Diego Aduarte (1640). Father Aduarte is less tedious and gives more information of real historical value than the other friar-chroniclers of early Philippine history do as a rule; but the material of real importance to the student of Philippine history could have been boiled down to perhaps one-third of the space here used. There is also a good deal of space taken by the chronicles of other friars of the various orders in volumes thirty-five to thirty-eight which could have been saved. Where the worthy fathers tell us about the people of the early missions, about the contests over the question of secularization, or give us data that has value for comparative purposes—*e. g.*, with regard to population in the missionary districts as they were entered, the extracts from these early published works (most of them now available in but few libraries) are of distinct value. But tedious biographies of departed fathers and the repeated details of uneventful chapter-sessions scarcely have any vital bearing upon Philippine history.

Volume thirty-three and a part of volume thirty-four are occupied with Antonio Pigafetta's relation of the first voyage around the world, 1519-1522 (which has also been separately issued by the publishers in a handsome limited edition of two volumes and an index separately bound). Pigafetta's account of the great expedition under Magellan is not only the most authoritative source of information upon that eventful voyage, but is one of the most valuable and interesting documents of the sort that we have. Unfortunately, both early and late printed versions and extracts from this relation (as well as the data abstracted from it by historical writers) have been drawn from the less exact and complete of the early manuscripts, and this is especially true of the printed versions in English, including that of the Hakluyt Society. Consequently no little credit is due to Mr. Robertson for giving us this first complete and authentic English version drawn from the manuscript in the Ambrosian Library at Milan (with the Italian text of the manuscript presented page for page alongside). More than that, he has given us, with his copious annotations and comparisons of the various texts, his well-made bibliography and his elaborate index to the whole, the most complete and valuable edition of Pigafetta ever put forth in any language. His la-

* THE PHILIPPINE ISLANDS, 1493-1898. *Edited by Emma Helen Blair* and *James A. Robertson.* Vols. 28-38. Cleveland: The Arthur H. Clark Co. 1905-1906.

bor has been thoro and most painstaking. Aside from a few documents in volumes twenty-eight and thirty, the chronological record of the seventeenth century is only carried forward again when we reach volume thirty-five, and miscellaneous documents cover the history from 1638 to 1683 in that and the three succeeding volumes issued this year. Volume thirty-four was made fat with a collection of documents, just recently obtained from Seville, on the years 1565 to 1605 in the Philippines, and with a chapter on the Philippines from the work of the Chinese geographer Chao-Yu-Kua (thirteenth century), the earliest mention of the Philippines yet brought to light in any language.

The Plutocrat Foiled. From "The Lion and the Mouse." Dillingham.

Selections From the Poetry of John Payne. By Tracy and Lucy Robinson, with an Introduction by Lucy Robinson. New York: John Lane Co. $2.50.

In the matter of poetry there are two sorts of readers and critics—those who believe that nothing is of concern which is not the very best, and those who think that there is much that is worth while in poetry of a second or even of a still inferior order. It is only the latter class that is likely to be particularly interested in Mr. Payne's work. His gifts, indeed,

tho considerable, are by no means of the highest rank. In England and France he has already won a *succes d'estime;* but he lacks the genius which imposes upon literature a new vision of life and wins for its possessor a unique and permanent place in the poetic canon. Were his work destroyed tomorrow, the loss, while to be regretted, would not be irreparable, as the originals would still exist. It is this fact, no doubt—the derivative character of his inspiration—which accounts for the bulk of his translations, of which the Villon Society has published twenty-seven volumes. In fact, he is, if anything, better known for his rendering of the "Arabian Nights" and of Villon than for his 30,000 lines or so of original verse. Generically, Mr. Payne is a romanticist. One of the best pieces in the collection is a dedication to Richard Wagner, which will serve in a measure to orientate the reader with regard to his muse. Another indication of his bent is his fondness for the ballad, which species of verse he manages very well in its more sophisticated form. *The Rime of Redemption, or Isobel,* for instance, is a singularly ingenious *künstelei* or artistic medley of German romanticism and pre-Raphaelism in the well-known medieval taste. Most remarkable of his poetic qualities are fluency and facility. The ampler the subject, the more complicated the stanza, the better he comes off. To be sure, most of his inspiration seems to have filtered to him thru books and to be already partly poetized, like the light of stained glass windows. But for the literary and cultivated this is but an added attraction, and for them will always constitute his strongest charm.

The Lion and The Mouse. By Charles Klein. A Story of American Life, Novelized from the Play by Arthur Hornblow. New York: G. W. Dillingham Company. $1.50.

We often hear nowadays the opinion expressed that the novel has reached the hight of its popularity and the perfection of its form, and that it will before long give way to some new form of literature, probably to the drama. If it is true that the drama is a more advanced product of the evolution of literary art than the novel then an effort such as this is a case of reversion. The dramatization of novels has often been accomplished successfully. We have got many of our best plays that way. But the reverse process has been rarely attempted, and never with much success. The present instance does not seem to us an exception to this rule. It would have been better to have published it as a play with such expanded and readable stage directions as Bernard Shaw uses. The American public is beginning to read plays, and this is one of the few American plays worth reading. It ran all last winter in New York, kept the theater filled far into the summer, and began its second season early with four companies. There were two reasons for its popularity; it was presented by a very even and competent cast and it deals with a paramount political issue. Its central figure is a well-sketched portrait of the multi-millionaire, bound to rule or ruin his business rivals and his family. But he is foiled by a young woman whose father he is trying to crush. She, like the late Frank Norris, has written a novel on the "Octopus," in which the plutocrat finds a surprisingly truthful and very unflattering portrait of himself and he attempts to win her over, with the result that he himself is won. The process of novelization as Mr. Hornblow practises it, consists chiefly of dilution. In comparison with the rapid action and terse dialog of the play, the novel seems long-winded and tedious, but perhaps to one who reads it merely as a novel it will not appear so. It certainly raises the question whether the average novelist does not underestimate the intelligence of the reader by thinking it necessary to do so much talking about his characters instead of letting them speak for themselves.

Miss Frances Baird, Detective. By R. W. Kauffman. Boston: L. C. Page & Company. $1.25.

There is no reason why a woman should not make a good detective; in fact, there are many women in private life wasting on village gossip talents that would make them famous as Sherlock Holmes in petticoats. *Miss Frances Baird, Detective,* is the lively story of a pretty young woman who chose a wider

field for her gifts of intuition and diplomacy in the "Watkins Private Detective Agency" than in the usual occupations open to a poor girl in New York. Her chief assures her in the first chapter: "You have most of the requirements for a first-rate woman detective. You are not afraid of a mouse; you're quick-witted; you know how to behave among the best sort of people; you're young and you're pretty." Thus armed Miss Baird goes down to a wedding in the country, where there is a diamond necklace of fabulous value to be guarded during the festivities. This commonplace assignment develops unexpected and tragical complications, and the untried detective finds herself with a murder mystery on her hands, complicated by the fact that the one person to whom the incriminating evidence points she cannot believe guilty, as she has lost her heart to him at sight. She follows many clews in the desperate hope of saving him at last, in spite of the scorn of other detectives at work upon the confused case, which puzzles the reader quite as he usually desires to be puzzled until the last page is reached, and a most unexpected denouement proves that Miss Frances Baird, in spite of having followed some false trails, has been justified in her main contention, and that she has demonstrated her ability as a qualified woman detective.

Moon-Face, and Other Stories. By Jack London. New York: The Macmillan Company. $1.50.

Jack London is a great disappointment. His earlier short stories had snap, virility and suggestiveness which aroused in us high hopes and exaggerated expectations. But the quality of these stories indicates either a decline in power or disposition to live on the unearned increment of his former reputation, a shocking ethical fault in the apostle of the proletariat. "Planchette" is a commonplace ghost story of the kind that *Blackwoods* has published for two generations. "The Shadow and the Flash" is based on the same theme as Wells's "Invisible Man," but is entirely lacking in the dramatic power and moral insight that make the latter worth while. "Local Color" is a close imitation in style of Kipling's Pyecroft stories. The other stories of the volume are horrible without being thrilling.

Hearts and Creeds. By Anna Chapin Ray, Boston: Little, Brown & Co. $1.50.

Hearts and creeds are the same the world over, the first erratic and the latter dogmatic, but in the happy marital course of nature where two hearts beat as one, a creed more or less matters little. And doubtless this would have been the way of things for the English Protestant who marries the French Catholic in this book, if the author had not interfered to mar life and make a tale. The scenes are laid in Quebec, and they are flanked by all the polite society of the old city and all the politics in Canada. But this cannot be avoided. Novels of English life everywhere have to be thumbscrewed to the times with whatever social and political issues that happen to be current. These things are the beef extract of English life, so to speak, and the extract is very well served in this book. But the author has gone a step further and introduced the eighteenth-century atmosphere of villainy and intrigue. Now there is what may be called the psychology of the times as well as of the individual, and any work of art, particularly literary art, is "out of drawing" when the artist transgresses this fact. Thus the character of St. Just in this story belongs to Dumas and the Diamond Necklace period of witty, pilfering vice. He is too Machiavellian, too serpentine to fit the modern ideal of villainy. And the lady he tempts is also too far-fetched in her contempt. When a man makes advances to another man's wife these days she does not draw herself up in a "rising rage" and talk back at him about "the great white soul" of her husband; she either listens brazenly or calls a policeman. The incident has been bereft of its romantic features and ought, therefore, to be omitted from stories of modern life. And, finally, the author misses her cue in the denouement. Nothing short of smallpox is required to bring the alienated husband and wife together. Virulent diseases have also gone out of fashion in fiction. A lady may still sprain her ankle if the exigencies of the situation absolutely require it, but it is no longer good form for

her to go into a consumption, and it is positively inelegant for the hero to have smallpox when the same effect could have been produced, say by his getting his leg broken in a wind storm while passing the desired lady's residence. However, for readers whose imaginations are not abreast with the times this is a good story, and it is exceedingly well delivered.

The Collected Poems of Wilfred Campbell. New York: Fleming H. Revell Co. $1.50.

The work of Wilfred Campbell, the Canadian poet, of whose lyrical verse this volume is offered as a definitive edition, is marked neither by exquisite craft nor by great imaginative power. It is no more the work of the literary gold-beater than of the inspired prophet. And those who look for a revel of sensibility or an exhibition of curious artistry will be equally disappointed. It is rather the product of a balanced spirit, with a considerable sense for fact and something of an attachment for life as it actually is, with no nonsense or extravagance and with comparatively little dread of a conventional phrase or a commonplace, who takes a quiet satisfaction in putting his observations and reflections into verse which shares the general moderation of its author's character. His gift is hardly classical, certainly not romantic; in both these kinds of theme he is not particularly successful. What he needs, apparently, is something local and timely, which touches him immediately—familiar scenes and faces, names and by-words, daily history in the making; and with such topics he is at his best.

"Man, the Social Creator." By Henry Demarest Lloyd: Doubleday, Page & Co., $2.00.

To a multitude of friends in Europe, America and the antipodes, Mr. Henry D. Lloyd was known to be one of the rarest, loveliest products of our age—a member of the choice company of modern knights whose chivalrous manners, charming culture and everyday nobility are rooted in a deep and wide sympathy with all classes of mankind and an understanding of the temptations and oppressions of modern life. He did not live to finish "Man, the Social Creator," for a critical municipal campaign caused him, with fine indiscretion, to put his life to the hazard—and Death won the stake. The book reveals the secret springs of his conduct, the religion of man that consoled him with the promise of human redemption even while he was viewing "East London, which is hell without a fire." It is reported that Robert Louis Stevenson said that Mr. Lloyd was the greatest master of English prose among American writers. Many passages in this book might be quoted in defense of that judgment, but they are too long. Epigrams are sprinkled on every page. "Eternal love is the love we are living—here and now." "Poverty is the greatest weapon today in the armory of tyranny." "Civilization is simply applied conscience." "Man, who evolved his body out of the dust in the image of the Good, is evolving the body politic, and is now about to take another step forward in the task of its creation." The forms of that creation, the far-seen evidences of its coming and a pean of exultation over its sure arrival, are the subject of the chapters. Their tone and outlook are shown in the following passages:

"Men need luxury, splendour, beauty and magnificence—palaces, parks, galleries, colour, music, refulgence. They will have them; kings and aristocracies are not too high a price to pay for them in their primitive days, but civilised man must get with them the greatest luxury of all—democratic self-respect."

"The spectacle of a new religion in the making we can see to-day. In the co-operative literature, in the speeches of strike leaders and new party men, the lectures of scholars, the sermons of the clergy on the mount, in the Church and outside, in the trades-union and socialistic press, in the magazines, . . . a new theory and practice of life are being worked out."

Sandy From the Sierras. By Richard Barry. New York: Moffat, Yard & Co. $1.50.

The hero of this story belongs to that innumerable host who have "come up from the bottom" in fiction. Naturally, he began by selling newspapers, because this kind always do in novels. In real life they sometimes begin by sawing wood; but no matter how they start, they all end by getting to be the political boss of something and by marrying the judge's daughter. Sandy is no exception to the rule, but the author has neglected to dramatize the process of

growth. It is not clear to the reader as to how he passed from one phase of development to another. The incidents which go to make up the tale are placed like stepping-stones beneath his feet by the author, because he had to be raised to the sixteenth power of heroism by main force of the latter's imagination, which, of course, is a very crude way to jack up a hero. But the book contains one remarkable feature—that is the beauty of the only love scene. "Oh, Malcomb!" the girl says, and presumably she falls into the sublimated Sandy's arms, but we shall never know for certain.

Literary Notes.

....*Papyrus*, Michael Monahan's lively and erratic "magazine of individuality" has gone the way of most of the other periodicals of the "Chapbook" type. The cause of its untimely decease is, as the editor and author frankly explains, lack of money.

....The *North American Review* was issued last week for the first time as a fortnightly magazine. A new department in it is devoted to the criticism of current literature. The *Review* was first published ninety-one years ago as a quarterly. By successive changes it became a bi-monthly and then for a generation a monthly of the highest class. Its innovation as to dates of publication is a decided novelty.

....Students and general readers will be interested in the appearance of two new volumes of Crowell's excellent "First Folio" Shakespeare, edited by Charlotte Porter and Helen A. Clarke—namely, *King Lear* and *Twelfth Night*. Besides reprinting the original text of the folio this edition, as may be remembered, registers also, at the foot of the page, such variations and emendations from the other folios, the quartos, or later editions, as have come to constitute a part of the modern Shakespeare, and in addition supplies an appendix of literary illustrations and selected criticism. In view of the importance of the first folio in any study of Shakespeare, to say nothing of the convenience of these well-made volumes, the edition is a very desirable one for intelligent readers.

....The metamorphoses of magazines are peculiar. What was once *Frank Leslie's Monthly* and distinguished for pretty colored pictures and trashy romances, now appears as a periodical with a Purpose. It is popularly known as "The Muck-Rakers' Magazine," altho its official title is *The American Magazine*. It is edited by a congenial group of modern political pathologists. Ida M. Tarbell, who has snatched Rockefeller bald-headed; Lincoln Steffens, who has exposed the shame of our great cities; William Allen White, who has told what is the matter with Kansas and also with prominent statesmen; F. P. Dunne, *alias* Mr. Dooley, who has a wit so keen that, like the Arabian executioner, he can cut off a man's head without its hurting him, and Ray Stannard Baker, who can do anything that anybody else can and nearly as well.

Pebbles

If a body meet a body
Comin' thru the rye,
He should always greet a body
With a slice of pie.

—*Baltimore Sun.*

"Mr. Gidsmore," began the young man, "when you proposed to your wife—or to the estimable lady who is now Mrs. Gidsmore—did she tell you to ask her father?"

"She did, my boy," affably replied Mr. Gidsmore.

"And did you try to shirk the job?"

"Well, come to think of it, I did. I—I believe I tried to get her to do the asking, 'pon my soul. Ha, ha!"

"And when you did ask him—of course, you had to speak to him finally"——

"Of course, I did. Of course."

"And when you did ask him, did your knees shake, and was your tongue dry, and did you have stage fright generally?"

"I was scared to death."

"Well, that's the way I feel. I told Gladys I knew I could find some mutual bond of sympathy between us when I came to tell you that she has promised to marry me."—*The Country Gentleman.*

The little mermaids are blinking their eyes,
The catfish is purring away;
The moonfish is slowly beginning to rise
And the dogfish commencing to bay.
The starfishes twinkle far down in the deep,
The seahorse has gone to his stall;
So sleep you, my baby, oh, slumber and sleep,
For drowsiness covers us all.

Oh, down in the sea all the shadows now creep,
And the shadowy shad will supply us with more;
And the drumfish is muffled in dream drummings deep,
And the oyster reclines on his oystermoor.
The sea-cow is mooing out over the bars,
The whale has been whaling its child
For asking the garfish to smoke some cigars
And waxing the seal till 'twas wild.
The porpoise is poising itsself for a drift,
The skate is up north on the ice;

So sleep you, my baby, while wavelets will lift
Your cradle in swaying so nice.
Oh, down in the sea all the haddock have had
With the herring a hair-raising romp on the floor,
And they sleep in the shade of the shadowy shad.
While the oyster reclines on his oystermoor.

—*Judge.*

Editorials

Cuba and the United States

If ever the people of the United States have had occasion to feel proud of their President it was when they read his message to Cuba, which took the form of a letter to the Cuban Minister Quesada, but which was really addressed to the Cubans on both sides of the present unfortunate conflict, to President Palma and the leaders of the insurrection, and so was immediately published by President Roosevelt. The letter was perfect in its tone and its utterance, a letter which allowed no equivocation, which expressed the desire of the President and the American people that the experiment of Cuban independence might succeed, their unwillingness to intervene, and yet the duty and the necessity that we should intervene if disorder interrupted peaceful communication and destroyed American property. We had given Cuba her independence. President Roosevelt had, himself, withdrawn the American army and given over the government to the Cuban people, to their chosen President and Congress; but by the Cuban Constitution itself we have the right to intervene when necessary to save the people of Cuba from the habit of ruinous revolution. Mr. Roosevelt's whole letter is affectionate in its tone, but yet utters a "solemn warning" to the people of Cuba that they must stop their fighting or their independence will be jeopardized. For seven years they have had profound peace and growing prosperity, under their own chosen rulers. Now he adjures them not to overthrow their independence, but to sink their personal ambitions and immediately end this cruel strife. So he tells them that civil war must stop, and that he is sending his Secretary of War and Assistant Secretary of State to Cuba to represent our Government and to give any aid that may be necessary to bring together the warring factions. No language could be clearer, no purpose and action more admirable.

The President does not try to distribute blame for this unhappy conflict. He simply says that "whoever is responsible in any way for the condition of affairs that now obtains is an enemy of Cuba," and is jeopardizing its independence. That may mean President Palma; it may mean the rebel leaders: it may mean, and we believe does mean, both. So far as it is possible to judge from the conflicting testimony—and we publish this week the defenses of both sides—in the late Cuban election President Palma's Government was guilty of maintaining its power by illegal interference with the rights of the voting people. The elections seem to have been decided by constraint rather than by the free suffrage of the people. It is strange, if this is so, that President Palma should have followed the usual habit in the minor republics of Latin American instead of the example which he had seen in his long residence in the United States. On the other hand, those who were defeated resorted to war instead of submitting, with long patience, to the forms of law, even when unjust, until they could legally secure their rights; even as the supporters of Mr. Tilden yielded when they believed that he had been elected President rather than Mr. Hayes, and as the Democrats of Colorado submitted when they believed their Governor had been unjustly deprived of the office to which he was elected.

It is not to the interest of free Cuba that this insurrection should continue. It is of interest mainly to a few people in the United States, to those Americans who own vast Cuban properties in sugar and tobacco, and who, with their agents and employees, seem to have been fomenting this insurrection. Neither of the two parties in Cuba, of the real Cuban people, wants annexation to the United States; they want independence. But the sugar magnates and the tobacco magnates would like it if Cuba belonged to the United States, and for two reasons —it would assure security against insurrection and the destruction of their property; and it would bring their raw sugar and their tobacco into this country free, or nearly free of duty—free of duty if, as they desire, Cuba should come in as

a State of the Union. We can well imagine that our Southern States do not desire this. As growers of these products their interests are with the retention of the present tariff on Cuban products.

The President's solemn warning was immediately effective. President Palma was quick to see that it was addressed to him. Immediately he withdrew his declaration that the war must go on and that amnesty would no longer be given, and ordered all military movements to cease, with a view to an agreement with those in insurrection. He is wisely hastening to bring peace before Secretary Taft reaches Havana. And they can bring peace, or at least the cessation of hostilities, but it will be impossible to arrange terms of permanent peace before Mr. Taft's arrival. Then the desire will be to ask him to act as mediator, with his tremendous power and prestige, and that will mean delay and full investigation, and, very likely, American representation, to see that the terms of peace are fulfilled. We should not like to see American officers set to watch the local elections in order to see to it that they are fairly conducted; and yet this is quite possible, and even may be necessary. When once we are in it will be difficult to get out; but we hope that the Cuban people, and especially President Palma, will take warning.

Evolution Working Backward

Once farmers planted the nubbins of their corn and the potatoes that were too small to sell. Now they know better. They cut up their finest potatoes to plant, and every grain of their seed corn is pedigreed as carefully as a Colonial Dame. The result is seen in the doubled yield; in potatoes richer in starch and corn richer in protein. Modern agriculture is fertilized by science.

The most backward branch of biology is the infant science of sociology. It is only just beginning to get its eyes open, to see things; in time, perhaps, it will be able to do things, like the older sciences. But there is need of haste. The age of instinct is passing, the reign of reason has not come. Man has been pushed up to his present position. He has succeeded in slackening the pressure. Will he go forward rationally, of his own free will, or sink back until again he falls under the sway of the blind and merciless forces of the struggle for existence?

Once those who were handicapped in the race for life were left behind. Now the rapid runners stop to help the halt. The deaf, the blind, the infirm, the defective in body and mind are tenderly cared for, when formerly they perished from exposure, neglect and brutal treatment. This new philanthropy, this instinct of altruism being born in the human race, is in itself the consummate flower of evolution. It must not be checked or impaired, whatever else is sacrificed. But, unaccompanied by positive corrective measures, charity may defeat its own objects. Alleviating the pain is a good thing, but it does not always check the disease. Helping the individual is a good thing, but it is futile if it is done in such a way as to impair the race.

One of the triumphs of modern philanthropy is the treatment of the insane. Instead of being imprisoned, beaten and put to death, as they were in the past, they are now cared for at public expense, and in a large and increasing proportion of cases restored to the world cured. Cured as individuals, but by being cured, transmitting to their descendants in many instances the unstable mental structure which showed itself in the temporary derangement. That this is one cause of the alarming increase of insanity in recent years can hardly be questioned, and it is not surprising that some should hold that it is mainly responsible for it. According to the sixtieth report of the British Lunacy Commissioners, a quarter of the cases of insanity can be clearly traced to heredity. More than a third of those who return to ordinary life after having been discharged cured have to be ultimately sent back to the asylums.

In 1845 the number of insane persons of all ranks discovered in England and Wales by a careful official inquiry was 21,788, or about 1 in 761 of the population. In 1906 the number was 221,979, or 1 in 283 of the population. That is, the number of insane has increased fivefold in sixty years, while the population has doubled. If the number of insane and the population should continue to increase at the same ratios for the next

sixty years there would be 1 per cent. of the people of England and Wales in the insane asylums by 1966. Ultimately the system would break down because the burden of support would become too great for the productive population to bear.

But the curve is too short to enable us to prophesy its projection with such definiteness. Besides, the statistics are themselves not beyond criticism; the increase is probably not so great as appears, because the official registration is more exact now than sixty years ago; insanity is more quickly recognized as a disease and people are more willing to entrust their relatives to an asylum, because they hope for cure.

On the other hand, if the increase in insanity may not be expected to continue at the present rate, the population certainly will not. The marriage rate in Great Britain has fallen 19 per cent. in the last thirty-five years. The birth rate shows a sharp decline from 1895, and in the last report, that of 1904, it was 27.9 per thousand, the lowest on record in that country. It is obvious that this is not due to a decrease in natural fertility of the race. The propaganda of the Neo-Malthusians has been all too successful.

A decrease in the birth rate is not necessarily a misfortune to a country. Very likely the British Isles have now all the population they can support in comfort under present economic conditions. The alarming thing about it is that the breeding is from the poorest stock instead of the best. Whatever objective standard one may take this is true. Sir James Crichton-Browne, in his recent presidential address before the congress of sanitary inspectors, showed that in the districts where there was the most overcrowding, the cheapest type of labor, the lowest degree of culture and education, the highest percentage of pauperism and lunacy, the greatest criminality and the highest death rate from tuberculosis and infantile diseases, there the number of children were greatest in proportion to the possibly productive wives. It is a clear case of the survival of the unfittest, the reversal of evolution. No race can maintain its efficiency and virility against such reactive forces.

The future of a country depends ultimately upon the character and ability of its people. Increase of wealth, advance of science, improvement in education, discoveries in sanitation, juster social conditions, all the achievements and hopes of present age will be of little benefit to posterity if there is a decline in the native quality of the race. It would be disastrous to hand over a perfected and complicated governmental machine to inferior engineers. One-seventh of the present generation will be the parents of one-half of the next. Therefore, two generations of selection, natural or designed, would completely transform the character of a nation. Is this seventh composed of the best men and women that we have? This is what is going to determine whether civilization shall advance or retrograde. Galton's ideal of eugenics may be too much in advance of the age to be practical, but at least something could be done to awaken the people to the imminent dangers of dysgenics.

Criminal Trial by Newspaper

At the annual meeting of the National Prison Association, at Albany, the other day, Attorney-General Mayer, of this State, spoke forcibly and wisely upon the great abuse that has grown up in America, of the freedom of the press in dealing with cases of serious crime. Practically every important case nowadays is made a newspaper sensation, and long before it is given to the jury public belief has been crystallized by newspaper "enterprise," and often in a false verdict, which results in grave injustice. In one instance which the Attorney-General quoted, a newspaper poll has been taken upon the question of the guilt or innocence of a man accused of a capital crime, altho he has not yet been brought to trial.

For a long time past the most reputable members of the bench and bar have been seriously disturbed by this practice, and many of them have been warning the public, as Attorney-General Mayer has done, that unless we work out by some means or other a substantial reform, the consequences are likely to be extremely serious. Of all the achievements of civilization, few can be compared in impor-

tance with the establishment of a fair, calm and rational procedure in the trial of persons accused of crime. In a savage or barbarian population mere accusation is tantamount to conviction. There is no patient sifting of evidence, no barring out of fanatical belief or irrelevant suggestion. In a somewhat more advanced stage of social evolution, systematic procedure is introduced, but the methods are those of superstition. The ordeal, or appeal to heaven, is the main dependence. If the accused can thrust his arm to the bottom of a cauldron of boiling water without pain or subsequent suppuration of the scalded flesh, he is innocent. Or if he can walk blindfolded along a path strewn at irregular intervals with bars of hot iron without stepping on them with his bare feet, he is vouched for by the divine omniscience. It took centuries of increasing enlightenment to substitute for this sort of thing the scientific procedure of weighing and sifting objective evidence and arriving thereby, thru a true induction from facts, at verdicts presumably in accordance with truth.

A moment's reflection should convince any intelligent mind that the difficulty of adhering to a scientific and reasonable procedure is enormously increased when all circumstantial evidence is raked over, with more or less of inevitable alteration or tampering with it, by newspaper reporters, in advance of the court proceedings, and when every potential witness is repeatedly interviewed for newspaper publicity. Inevitably the witness unconsciously undergoes a change of mental attitude when, long before his appearance on the stand, he knows the substance of the testimony of all other witnesses, and sees how his own story looks in print. He is prepared to hedge and to color. And this mental change in him is dangerous to the cause of truth exactly in proportion to his own unconsciousness of it. The more unaware he is of the influence exerted upon his memory and imagination by the newspaper, the more difficult it is for the bar and the court to bring out that part of his testimony which corresponds to his original sight or hearing of the facts, and to eliminate that part which is the product of his subsequent ruminations.

In addition to this very serious danger and evil, the practice of trial by newspaper is unquestionably an education of the public in feeling the emotions, thinking the thoughts and willing the decisions of the lynching mob. An actual lynching is the product of a certain way of feeling about and thinking about a case of actual or supposed wrongdoing. That way of thinking and feeling may exist—it does, in fact, exist—in thousands of instances where no actual lynching occurs. But the more prevalent it is, the larger is the proportion of cases terminating in actual violence. The chief factor in this mental phenomenon is the creation of belief, produced by suggestion, appeal to prejudice, impressive assertion and repetition, in place of a purely intellectual or scientific judgment, arrived at by a critical, dispassionate scrutiny of evidence. In the nature of things, trial by newspaper cannot be the scientific procedure. It is bound to be the creation of a purely dogmatic belief, which may be absolutely false as a verdict of fact.

We have said before, and we must repeat it, that no greater danger threatens American life than this unfortunate phenomenon of the swift creation—in most instances by newspaper enterprise—of widespread popular beliefs, which prove, upon examination, to be absolutely unfounded—mere products of impressive and repeated assertion, suggestion and prejudice. We have been interested to observe that recent European visitors to America have been more impressed by this characteristic of American life than by almost any other. Thus Mr. H. G. Wells, writing in *Harper's Weekly* of the factors in our national development which arrested his attention, speaks very gravely of this habit of ours of surrendering ourselves to unfounded and unjust popular beliefs affecting the reputation of individuals. He specifies as amazing examples of injustice the treatment of the alleged anarchist, McQueen; of Maxim Gorky, and of the negroes of the South. He says that he cannot understand, and therefore will not attempt to interpret, this ominous phase of American life.

Ominous it is, but it is not mysterious. It is the natural and inevitable product of evil habits, into which we have insensibly

fallen. Every man who aids and abets the creation of belief that is either unfounded or unsubstantiated is injuring his fellow men, and is guilty of a wrong against his country. All serious-minded citizens should aid in creating that public opinion to which Mr. Mayer appeals, and to which we must ultimately look to put an end to the threatening practice of trial and conviction by newspaper assertion.

Old Age Pensions

THE recent Trades Union Congress at Liverpool, among other definitive resolutions, adopted one endorsing pensions for old age. The Congress contended that money necessary for pensions can easily be raised by taxing land values, and that they should be granted to all people beyond the age of sixty. With the general principle there is a growing inclination among all civilized nations to accord; with the age limit and the methods of raising the money there is a great diversity of opinion. In fact, England has for some time past been practically in favor of the system, and has failed to enact a pension law simply because her statesmen have found it nearly impossible to agree upon how to frame it.

One year ago the French Government committed itself to the same principle, and its Assurance Committee presented plans, none of which proved satisfactory. The obligatory insurance plan, operative in Germany, is most in favor. The proposition is that the working man and his employer shall pay regularly equal sums into a governmental insurance service, the Government in turn furnishing a high enough rate of interest to make its annuities practical. There was a certainty from the outset that a scheme for pensioning old age would get at least a thoro discussion by the Gallic people, as well as Gallic statesmen. So far it is only discussion.

The argument needs very little elaboration. In no country has old age received anything like the consideration that has been bestowed upon the children, and yet both extremes of life are equally helpless. Any possible argument for a pension to any class applies with equal force to that class which is always present, and to whom our relation is most intimate. Endowment of old age is defined by Booth as a sum granted to all old people from a common purse. He argues in favor of raising the needed sum by taxation which will fall upon all, according to their means.

The period at which the pension should begin Mr. Booth would fix at sixty-five years. He considers this the proper period for the English people. It certainly is early enough for a pension to begin in the United States. If an earlier age were fixed upon it would be likely to interfere with the spirit of self-support and breed pauperism, while at the same time it would tend to reduce wages. The same authority fixes upon five shillings a week as an adequate provision, so far as the State is concerned; that is, about $5 a month in American coin. This, of course, would barely maintain the recipient, who is supposed, in almost all cases, to be able to add somewhat to his income by his own efforts, and in many cases to receive more or less assistance from other quarters. The object of the pension is to remove positive suffering and eliminate the terrors of old age.

To provide pensions for England, Mr. Booth estimates would require about $80,000,000 annually. But such a general system would, of course, cover a large number of persons who are now receiving from the poor rates and from eleemosynary institutions. In such cases there would be a large decrease in public expenses—probably amounting to one-fifth, or possibly one-fourth, of the whole sum required to be raised by pensions. And here comes in the difficulty that English statesmen have not been able to agree in what way to raise the balance required. The Salvation Army has done a vast amount in the way of practical experiment, but it has not solved the problem. The German system provides what is required by taxing the wages of the recipient during his working years, but in England the compulsory insurance plan has found very little favor. In the United States it would be a practical impossibility.

The objections to State aid are that those who do not reach the limit of sixty-five may be miserably wretched, and possibly die before they touch the relief

fund. The answer is the simple one, that our object is not to relieve poverty, but to pension old age. It is the pitiful appeal of worked-out human beings—the mothers and fathers of humanity—to whom we desire to respond. Other phases of helplessness, or of poverty depending on vice or sickness, the State is already considering in other ways. It may fairly be said that civilization everywhere involves an adequate mechanism for the relief of every class of sufferers except the old. These are left, disabled, largely at the mercy of a competitive age, and to the care, which is often stinted and ungenerous, of children. The poorhouse is a disgrace, the shelter of which will be received only as a last resort. Homes for old men and women, among the noblest institutions of America, can barely touch the rim of the difficulty.

Another objection has been urged, that, instead of relieving pauperism, we shall only increase it by pensioning old age; that, instead of encouraging independence and thrift, we shall increase spendthriftness and waste. But the wholesome influence that comes from a desire to provide for the future cannot be largely decreased by a prospective pittance, for that is about all that the pension amounts to. The law now, among our poorer people, is to spend on a free scale so long as anything is in hand. This certainly would affect prospective sums of a large size. Still, we should very much prefer to see a pension system correlated with safeguards—especially in the way of postal savings banks and industrial education. The people cannot be cured of wastefulness by compelling them to face misery. That has been tried; but it can be accomplished by educating them to easy economic methods, and by tempting them to save their wages. A man possessed of a bank book is sure to desire to increase his prevision and provision.

The effect of State relief on the independence, character and self-reliance of the recipient is, however, something apt to be overlooked. We do not believe that pensions, as a rule, constitute a healthy social expedient. They should be used certainly with the utmost care as to their abuse. But in the case of old age we are dealing with a class that can be easily defined, and that has already passed beyond a period for fraud. We are dealing with a class actually in need, and with people who have done their fair work by the world, and are no longer tempted to shirk and cheat.

It should not, however, be understood that we propose to extend charity, any more than when we are giving free schools to the young people. It is a part of our general political and social life. At a fixed age all are entitled to draw from a fund which is the result of our common industry. It will, of course, be desirable if, by compulsory insurance, or some other method, every person shall be led to understand that he is a partner of the State, and not a pauper, any more than when he drops a letter into a post office, furnished by the State. Canon Blackley, who is held to be the father of the pension movement in England, insisted that the pinch in old age was matched in most lives by lavish expenditure in youth. He would have a small sum collected from each young person, which should be invested to furnish the pension for old age. His proposition was to collect the whole sum between the ages of eighteen and twenty-one. But this he later modified into a compulsory scheme covering all the working years of a man's life. Whatever may be the final decision as to method, it is evident that France and England will soon join Germany in the establishing of pensions; and it is equally certain that the question has to be frankly discussed in the United States.

The French Tangle

In a country cursed with an established Church, ecclesiastical and political affairs cannot be kept apart. We have peace with the Church here; in England and in France there is turmoil.

Altho quite willing to discover tyranny in the law of December 9th, 1905, which puts an end, after a term of years, to the support and control of the Church by the State, we have been quite unable to see anything serious which is particularly different from what is familiar in this country. It is the establishment of "cultual" associations (from *cultus,* worship) against which the bishops protest, and which the Pope denounces in his encyclical *"Vehementer Nos,"* and later in his

"*Gravissimo.*" But these associations, or trustees, are provided for in the Baltimore Council and our Catholic churches have them. Nor does the law put upon them any but reasonable requisitions, and they are allowed all reasonable latitude in the performance of their duties; and it would seem that they are well guarded against diverting church funds or property from the legitimate religious purpose.

That we are not wrong in our somewhat careful study of this Separation Law may be gathered from the plan, approved by a majority of the French bishops and presented to them at their late conference by the Archbishop of Besançon and the Bishop of Luçon, who had been appointed a committee to investigate and submit a plan for organizing cultual associations. Their report is very interesting and enlightening, approved as it was by the bishops, who by a considerable majority approved the effort to organize under the law, and then unanimously approved of the plan presented. But since then the Pope has refused to allow cultual associations under any form, and the matter is referred back to the several bishops for their individual action in the premises, apparently looking to a modification of the law by the Government; but no such modification is likely.

Let us now look for a moment at the plan of cultual associations approved by the bishops, but rejected by the Pope.

The title which they propose is "*Associations fabriciennes,*" that is, church property associations. They are to be organized in each parish precisely in accord with the law; and their object is to administer, "in accordance with the general rules of the Roman Catholic worship," the various buildings and property of the parish, and support "Catholic worship in agreement with the laws of the Roman Church," and "in submission to the authority of the Pope and the bishop." The French law purposely and liberally avoids all regulation as to how the members of these cultual associations shall be appointed. There is no indication that they must be elected; and the bishops' proposal is that they shall be nominated by the pastor in charge, the number of their members following the French law and appointed by the bishop. The members must be of legal age, communicants and paying attendants, submissive to the teaching of the Church and to its ecclesiastical authorities. More particularly, they must formally agree to abstain from any condemned secret society, to give Christian education to their children, to accept Christian marriage for themselves and their children, and religious rites for their dead. These are very nearly the same restrictions as are laid down by the Plenary Council of Baltimore, which says (Sections 285 and 287) that no layman can have any part in the management of the secular affairs of the Catholic churches in this country as a matter of right, but solely as a matter of privilege, and that they are appointed by authority of the bishop and removable at his will. The conditions are that they must (1) be communicants; (2) must have a regular seat in the church and pay church dues; (3) must have their children taught in Catholic schools; and (4) must not be members of any secret or other forbidden society. The French bishops refer to this American rule, and seem to have copied it. These cultual associations will be represented by an executive committee, or administrative council, of five or seven members, of which the parish priest will be the chairman.

We do not need to go furtner into the administration of these associations. They are defined by the law, and are further limited by this project, which puts them under the full control of the bishop. But this appears to be quite legal. One would think that worship might very well be carried on and supported under this provision; but the Pope has absolutely rejected the plan which the majority of the French bishops—seventy-four in all—in council approved in principle, and all approved as a possible plan.

How is this rejection by the Pope of the advice of the bishops to be accounted for? An answer seems to be suggested in a most remarkable protest to the Pope signed by some hundreds of leading and loyal French Catholics.

It is a long and very frank and bold letter which they have written him. They express great surprise that the Pope has listened to the advice of German, Italian and Spanish prelates, and rejected the ad-

vice of the French episcopate. They tell him that it is perfectly futile to imagine that the French law will be modified. On the contrary, it will be carried out to the letter, and the property of those churches which refuse to establish cultual associations will revert to the State to do what it pleases with it. They tell the Pope that the loss to the Church will be most terrible, and that in these days of liberty it is not safe or wise to set the French people any further against the Church. They inform him that the great majority of intelligent French Catholics, lawyers, physicians, engineers, merchants and educated men, lament his *non possumus,* and that it is the Monarchists, Imperialists and anti-Semitists that have received it with acclamation; and they tell him, with some sharpness, if it be true that when he heard that the majority of the bishops had voted in favor of accepting the law, he said, "They have voted like Frenchmen," that they had the intelligence of the Church with them.

This letter will make a tremendous stir in the French Church. Its language is not respectful, but its meaning is made most plain. It tells the Pope that he was badly advised, and that the welfare of the Church in France requires that he withdraw his action. We believe he will do it—not definitely, but that he will leave the bishops free to use their own judgment, and they will accept the law, and the aid it gives, for some years yet, to the support of the clergy. Otherwise there will be—not civil war, but much confusion, and much loss to the Church.

What Shall We Do With City Schools?

THIS did not seem to be a serious problem until recently. The ideal school consisted of rooms enough to house a crowd of children, with books and teachers adequate to study. Then came a reform, by way of better ventilation, better seats, better desks; but the children were still left indoors for five or six hours of the day, while at home there was no relief, especially for those living in the denser parts of our cities.

Physicians and experts still found myopia, crooked spines, malformed chests, shattered nerves and other forms of degeneration somehow coincident with school life. It was absolutely forced upon parents and teachers to recognize the fact that there was a deeper fundamental blunder in our educational system. School, covering the growing years of a child's life, made it plainly necessary that he should not be confined indoors—certainly not in a sitting position. Some of our ablest educators began to speak of our schools as prison houses. A step farther came when the subject matter to be studied was recognized to be, not books, but Nature. Nature study rose in its demands, until it required original investigation as the principal aim of school work. This was a reversal of the old idea that the mind was to be packed with facts. It equally reversed, or, rather, ignored, the idea that education is mental training—for future use. It set the mind at once at work. Just as the body is set at work, so the intellectual faculties were to be exercised, expecting them to grow by the exercise.

Then came such outcroppings (natural evolutions) as school gardening. Out of doors, was the cry; at least half a day out of doors, allowing the other half for class room studies. Not only must the pupil come in contact with Nature, and use the things about him as object lessons, but he must apply every idea or fact, as taught. Withal the child must be led to examine and test every statement made by a book, and use his judgment always. This was easily applied to our country schools, altho the work of application and reformation has been altogether too slow.

But what about city schools? City teachers could possibly get outings once a week—possibly could take their children with them into the country. This would in many cases amount to little more than a picnic. Others could get Nature's twigs and flowers and buds to use in the school room. Some fine work along this line has been done by teachers who have had unusual training. Even potted plants have served meagerly; but the masses of the children have not been supplied even with these. Some of the German cities have opened their parks to the schools on special days; in some cases even allowing a limited cutting of flowers or twigs. The problem of the city school still remains; huge buildings, surrounded

by solid blocks of housings—the environment bettered, but not changed.

A proposition has been bruited, with considerable zeal, to plant our city schools in the parks. This proposition we need not discuss at length. It is not different from saying, We must at all cost have school parks; we must have, in a city, not only land to look at, parks to walk about in, but we must have land to cultivate and plant—to study. It certainly is a new idea, and an advanced one. A school in a park where nothing could be used would give pleasant surroundings, good suggestions and better air. Good so far; but it would not be going far enough. Professor Jackman, of the University of Chicago, has another idea, and it seems rational. He tells us that we ought to build our schools—that is, all of our city schools—in the suburbs. "The schools of today are trying to grow children under conditions never thought of in connection with the cultivation of vegetables or the rearing of beasts." He would have every schoolhouse surrounded by not less than five acres of grounds. Every child should have his own portion of soil, where he can work out his own individuality to an extent, at the same time getting the combined training of teachers and Nature. The difficulty of transporting children, in some cases many miles, he thinks can be overcome by the rapid transit consequent to electrical appliances. He considers a municipal ownership of street railways of great value along this line, as permitting school trains; possibly car lines belonging strictly to the children, and without fares. These car lines should radiate away from the business sections, and have no sort of relation to business affairs. There certainly are difficulties here of a sort large enough to stagger cowardice; but the American people are beginning to realize that our new education will require new efforts and new material problems.

We entirely agree with Professor Jackman when he argues that this movement would almost entirely change the attitude of children toward schooling, and, for that matter, toward learning. He thinks justly that the truant officer could be dispensed with, and after a few years the very name of this functionary could be stricken from the dictionary. It would give the children daily everything that is now involved in our open-air excursions, with the addition of teaching them how to use themselves in contact with Nature. Industrial education is the development of power for self-government; is training for efficient citizenship, and placing labor in its right light in relation to learning. If, as Dr. Alfred Gordon urges, purposeless lying is a disease, it can only be overcome by purposeful truthtelling. It is just this new sort of education that teaches the child exactness of investigation and precision of statement, that will reverse this tendency toward falsehood. By a continued practice of seeing accurately and reporting precisely, the child gets into a habit of loving the truth. Education with Nature also gives the pupil a center for thinking and feeling outside of himself. His whims are less important; his duties are more important. We are not inclined, however, to follow Professor Jackman and others in their general argument. What particularly interests us now is how to get at this great reform. Why not plant our city schools in the suburbs?

Helium in Kansas

Thus far helium, the gas which was first found spectroscopically in the sun, and so named from the sun before it was found in the earth, the gas which escapes from radium, has proved, like argon, of no practical use, because, like argon and the other inert constituents of the air, it makes no combinations. But it has been so difficult to get a supply of it that chemists had very little chance to work with it; but now Kansas offers a quite abundant supply. Professors Cady and McFarland, of the University of Kansas, report that the strong flow of natural gas at Dexter contains 1.84 per cent. of helium. Here is an opportunity to secure an apparently unlimited supply of helium for chemical investigation, and, if possible, liquefaction. This will make Kansas the source for helium as Bohemia is for radium. And can it be that far below the surface in Kansas there is a supply of radium that is giving off this helium? The Kansas people have talked much of their ozone, but it is their helium that explains their radio-activity.

Death of General Trepoff

It is not strange that the Terrorists should claim that the death of General Trepoff was by poison administered by their agents secretly in his own home. They tell now of a warning that he should thus die in his bed. But this does not agree with the efforts to assassinate him which have resulted in the death of officers who resembled him in appearance. Fighting with poison is allowed under no rules of war; and while it may be claimed that a state of war is going on in Russia, this is not one of the recognized methods of any sort of war. General Trepoff's death must be a most serious loss to the Czar and his reactionary advisers, who found him ever energetic and faithful to their purpose, absolutely courageous, and heedless of the repeated threats of assassination. The revolutionists themselves, however much they hated him, could not but respect his bravery and devotion to a bad cause. There are few left who can take his place, and his death is of distinct advantage to the cause against which he fought. Meanwhile, horrible slaughters of Jews and killing of police go on, and the peasantry are not appeased, but are in serious danger of famine and will revolt, while the army of repression has to be massed in Poland and Eastern Russia, and the region of the Caucasus is almost lost to the Government at St. Petersburg.

Teachers' Clothes

It is a long legal quarrel which was settled some time ago, but which those aggrieved refused to let stay settled, that of the clothes of the teachers in Lima, N. Y. They were members of a religious sisterhood, and they wore its very peculiar uniform. State Superintendent Draper, and after him, Superintendent Skinner, said, that as they were, by their dress, calling attention to their chosen religion they could not teach in the public schools of the State, and he forbade them to teach in such a garb. They paid no attention to it, and he refused to pay them. Then they appealed to the courts, and the case went against them to the highest court. That might seem to end the matter, but it does not, and much complaint is made. It seems to us that this difficulty might be relieved. Evidently it is not the religion of these ladies that is objected to, but their way of obtruding it on the pupils. Could they not get a dispensation allowing them to dress like other ladies; or, if not, why can there not be a teaching order established for the purpose, whose members, like the Jesuits, would have no special habit, but might be indistinguishable from the rest of the community?

The case of Mr. Hipple, the "religious financier," as he was called in the real estate boards, is extraordinary past all comparison in our American financial history. This church elder, this treasurer of the Presbyterian Assembly's Trustees, this trusted custodian of so many Presbyterian and other religious and benevolent organizations, had for several years been so money-mad, so lacking in business prudence, and yet so abnormally cunning, and then so tragically ended his life, that one is almost inclined to suspect that he was suffering from incipient paresis, like another distinguished railroad financier whose unsuspected brain trouble nearly wrecked a railroad and crippled Johns Hopkins University. Receiver Earle makes the good suggestion that such a trust company should not have its directors all of one Church, but they should include Presbyterians, Baptists, Catholics, Episcopalians, and a good respectable atheist, etc.—men that will watch either.

Another college president, Benjamin Ide Wheeler, of the University of California, has joined President Eliot in opposing the inconsiderable simplified spellings approved by President Roosevelt, and ordered for use in the documents under his control. President Wheeler has a new argument, that the change promises loss and waste in intercourse and culture with other English-speaking countries. But already, in the case of half the words, the practice in England differs from that in America, and it causes no slightest loss of intercourse; and we expect that other English-speaking countries will follow our slow advance. But President Wheeler may take it out with his neighbor, President Jordan, of Leland Stanford University, who is on the Simplified Spelling Board.

Insurance

The Policy-Holders' Protective Association of the Mutual Life Insurance Company

LAST week twenty-eight policy-holders of the Mutual Life Insurance Company, responding to a call sent out by James C. Colgate in the interest of the Peabody management of that institution, met at the Waldorf-Astoria, and the result was the formation of the Policy-holders' Protective Association of the Mutual Life Insurance Company. Mr. Colgate was chosen president of the new committee, and William F. Harrity, of Philadelphia, former chairman of the Democratic National Committee, was made chairman of the Executive Committee which is to be appointed. Charles Bulkley Hubbell, who was active in what was known as the Crimmins Committee of the Equitable Life policy-holders, organized during the differences that existed in that society which preceded the great insurance upheaval, to strengthen the arms of the Alexander faction in the body, was made treasurer and Henry Siegel was made temporary secretary. The meeting first adopted resolutions declaring it wise that the policy-holders organize "to promote the interests of the policy-holders of the company," and then appointed a committee on resolutions, which reported the following:

Whereas, An organization known as the International Policy-Holders' Association, largely composed of persons who are not policy-holders in the Mutual Life Insurance Company of New York has appealed to the policy-holders of this company for their support, with the avowed object of obtaining control of the management of such company and of its vast resources; and

Whereas, It is the avowed purpose of the said organization to oppose the election of any person nominated by the present Board of Trustees, however well qualified, and to replace the present Trustees by persons of its own selection; and

Whereas, In the course of its efforts to obtain control and possession of the said the Mutual Life Insurance Company of New York, the said organization has, through its counsel, made false and unfounded accusations against certain of the present Trustees and officers of the said company, to the detriment of said company and its policy-holders, and has unjustifiably represented that the present Board of Trustees and the candidates nominated by them are committed to the continuance of abuses found to exist under former officers of the company;

Resolved, That it is the sense of this meeting that, although there have been grave abuses in the past management of the company, the present executive officers and trustees are, in the opinion of the Policy-Holders' Protective Association of the Mutual Life Insurance Company of New York, faithful to its interests, and that their administration of its affairs has been and is efficient, economical and beneficial to the policy-holders.

The resolutions then call on the policy-holders to vote the administration ticket.

The Fifth International Congress of Insurance Actuaries was held at Berlin from September 10th to 15th. More than 350 delegates were in attendance, and the leading companies in America, Europe and Japan were represented. Professor Gore, of the Department of Commerce and Labor, was present on behalf of the United States Government. Others who attended from the United States and Canada were Mr. T. B. Macaulay, Sun Life of Canada; Frederick L. Hoffman, Prudential; Sidney N. Ogden, Mutual Benefit, and Mr. Buttolph, of the Indiana Insurance Department. Statistician Hoffman, of the Prudential, spoke in German.

The Surveyor Insurance Directory of the States of New York and New Jersey for 1906 has just been issued. The volume contains the names and addresses of insurance companies, agents with companies represented and brokers in the above-named States, also county and local underwriters' organizations with names of officers and committees, and population of each city and kind of fire department. The volume is published by A. G. Hall, 58 Pine street, New York City ($1).

....Dividends announced:

N. Y. & Harlem R.R. (Preferred), 2 per cent., payable October 1st.

N. Y. & Harlem R.R. (Common), 2 per cent., payable October 1st.

Atch., Top. & S. F. R'way, Coupons (Gen. Mort. 4s), payable October 1st.

San Francisco & San Joaquin Vall. R.R., Coupons (1st Mort. 5s), payable October 1st.

Mergenthaler Lino. Co. (quarterly), 2½ per cent., payable Sept. 29th.

Otis Elevator Co. (Preferred, quarterly), $1.50 per share, payable October 15th.

Am. Locomotive Co. (Preferred, quarterly), 1¾ per cent., payable October 22d.

Financial

Identification at "All Night" Banks

With the very recent establishment of "all-night" banks came the necessity of new methods of identification. The old way consisted in the dealer's introduction to the cashier of the bank and to its tellers, and the deed was done. Obviously such a method would be inadequate where three shifts of bank officials work successively. Paying teller No. 1 might know a given dealer very well, but Paying teller No. 2 might not know him at all, and if the dealer's check was not promptly honored by any of the three tellers he would feel aggrieved, and an aggrieved dealer is hard to conciliate. To overcome the identification problem the Bertillon method, or perhaps a modification of it, has been introduced, and the innovation works extremely well. The identification card system, originated in this city and used by the "all-night" banks here, is very thoro. It has to be. The name, age, weight, hight, business, telephone number and address of each depositor is carefully noted on his particular card, as well as the color of his eyes, the shade of his hair, and a brief description of his face. If a teller has the smallest doubt an immediate reference to the identification card is made and doubts are confirmed or dispelled. Sharpers are foiled who count on the success of fraud because of three shifts, and a simple business method has quickly become a mighty protection to these all-night institutions. The Bertillon system has been installed in the Third National Bank of Baltimore, which recently adopted the plan of continuous business during the entire twenty-four hours of the day. An application of the new system of identification will presently be inaugurated, both in Chicago and in Pittsburg.

Lean Year for Bank Thieves

According to the annual report of the Pinkerton Detective Agency to the Protective Committee of the American Bankers' Association covering the period from September 1, 1905, to September 1, 1906, there were ninety-three forgers and swindlers arrested during that time. Sixty-six burglars also fell into the hands of the Pinkertons during this term. Of the banks attacked during the twelve months covered by the Pinkerton report, seventy-one were non-members of the American Bankers' Association. Their total loss was $99,415.20. The seventeen banks attacked who were members of the association lost $4,217.03. The American Bankers' Association has the reputation of relentlessly pursuing criminals offending against its members, and it would seem from the report just published that much success had crowned the efforts of the association working with the Pinkertons to bring those who prey upon the banking community to justice. Reference is made in the report to the losses sustained by certain New York banks thru the operations of Thomas J. McCarthy, Charles Muntwyler, Irene Brown and Thomas J. Shad.

....A new trust company is about to be organized in this city, to be called the New Netherlands Trust Company. Among those who are interested in the organization are: W. H. Porter, president of the Chemical National Bank; Albert H. Wiggin, vice-president of the Chase National Bank; Ben Altman, the dry goods man; Edgar L. Marston, president of the Farmers' Loan & Trust Company, and Gates W. McGarrah, president of the Mechanics' National Bank.

....The Otis Elevator Company has decided to issue 6,095 shares of preferred stock, which will be offered to shareholders in the proportion of one share for every twenty shares held by a stockholder. The regular quarterly dividend of 1½ per cent. on the preferred stock has been declared October 15th.

....The American Chicle Co. has not only declared the usual monthly dividend of one per cent. on the common stock, as announced by us September 6th, but also an extra dividend of one per cent., both payable September 20th.

....The quarterly report of the Western Unoin Telegraph shows a surplus, after all appropriations, of $17,299,018.38. A dividend of 1¼ per cent. is declared.

VOL. LXI. NEW YORK, THURSDAY, SEPTEMBER 27, 1906 No. 3017

Survey of the World

In Defense of the Uniform

Chief Yeoman F. J. Buenzle, of the Naval Training Station at Newport, has sued the Newport Amusement Company to recover $500 in damages because he was excluded from a dance hall for the sole reason that he was wearing the uniform of the United States Navy. It is said that half of the expense of this suit is borne by Rear-Admiral Thomas, commandant at the Station. The President has given to the public the following letter, addressed by him to the Rear-Admiral on the 21st inst., and accompanying his contribution of $100 to be used in paying a part of the cost of this appeal to the courts:

"Dear Admiral Thomas: I enclose $100 to be used in that suit, which thanks to you has been so wisely undertaken, to test the legality of excluding any man from any public place of entertainment because he wears the United States uniform. I feel that it is the duty of every good citizen to endeavor in every shape and way to make it plain that he regards the uniform of the United States army and navy, just as much when worn by an enlisted man as when worn by an officer, as a badge of honor and therefore entitling the wearer to honor so long as he behaves decently. There is no finer body of men in all our country than the enlisted men of the army and navy of the United States, and I cannot sufficiently express my indignation and contempt for any men who treat their uniform save with the respect to which it is entitled. If a man misbehaves himself then, no matter what uniform he wears, he should be dealt with accordingly; but the fact of wearing the United States uniform should be accepted as presumptive evidence that the man who wears it is all right; and any discrimination against the uniform as such is more than presumptive evidence that the man thus discriminating is all wrong."

Race Riots and Murders in Atlanta

On the night of the 22d there were race riots of an alarming character in Atlanta. Before order was restored at least ten negroes were killed and many were seriously injured. On the 24th there were on duty in the city 1,700 infantry of the militia, a battery of artillery and a squadron of cavalry. These had been ordered into service there by the Governor. It is asserted in the news reports that within the last nine weeks thirteen white women living in or near the city have been attacked by negroes. These assaults have been the subject of sensational articles in at least one of the newspapers, which has openly suggested and commended lynching. This paper, the *News*, has published special editions relating to the assaults, and such editions, with inflammatory headlines, were on the streets Saturday evening, referring to four attempted assaults reported on that day. The riots appear to have been precipitated Saturday evening by a controversy on the street, a white woman asserting that a negro had pushed her from the sidewalk. A few minutes later a mob was at work, attacking all negroes who were in sight. Two were seen in a street car. The mob pulled them out and killed them. Two negro barbers at work by their chairs within a stone's throw of the post office were killed. Their mutilated bodies were dragged across the street and left in front of the Grady monument. There another was found and put to death. Negro porters found in a Pullman car at the railway station were beaten until they were unconscious. These were samples of the crimes committed in many parts of the city. The police were unable to cope with the rioters, several thousand of whom were in the streets. By order of Mayor Woodward the entire Fire Department was brought into service, and in several instances the mob was restrained by streams of water from the fire hose. Governor Terrell, who was asleep at his home, was not awakened until about 11 p. m., an hour after the beginning of the disturb-

ance. Ten negroes had been killed. He promptly ordered into service all the available militia, and by 2 a. m. eight companies were on duty. At about that hour a heavy rain set in. This checked the madness of the mob, but when morning came the rain had not washed away from the pavement on Peachtree street and other thorofares the blood of those whom the rioters had slain. In nearly all cases the attacks upon negroes had been marked by almost incredible brutality and fierceness. Good character and orderly behavior were no protection. With the mob, the question was one of race and color, not one of guilt. On Sunday, the 23d, negroes were fleeing from the city. Carriage drivers, ice men, waiters and domestic servants of all kind had disappeared. It was necessary in the homes of many well-to-do white citizens for hands unaccustomed to cooking to prepare the daily meals. In the afternoon a negro named Henry Moore was lynched while on his way to jail. With another negro he had been arrested for attempting an assault upon a white woman. This other man escaped. Moore was pronounced innocent by the woman herself, but this did not save his life. On Monday the body of a negro named Zeb Long was found hanging from a tree in the outskirts of the city. He had been arrested for disorderly conduct. The mob had taken him from jail and lynched him. With nearly 2,000 soldiers on guard, order in the city had been restored. The saloons were closed by the Mayor's order. There were no extra editions of the papers on Monday. A suppression of such issues had been requested at a meeting of prominent citizens on Sunday afternoon, a meeting at which it was declared that sensational "extras" with inflammatory headlines had been the immediate cause of the riots.

Reports From Adjacent Places

Reports published on Tuesday morning showed that in the suburbs of Atlanta the negroes had retaliated for the attacks upon them in the city itself. In South Atlanta, also called Pittsburg, two officers of the county police, named Heard and Jordan, together with three negroes, were killed in a fight following a police raid upon a meeting of negroes. At Howell's Station, the white railroad operator was killed. Two negroes were shot to death by a mob at 1 a. m. on Tuesday in the heart of the city. Mrs. Thompson, a white woman, saw this crime committed, and was so affected that she died of shock. The entire number of negroes killed on Tuesday was eleven.——In response to an inquiry for his views, Mayor Woodward telegraphed the following:

"As to the duty of the hour in repressing race riots, it is a difficult problem. Each outbreak demands its own solution. The best way to prevent a race riot depends entirely upon the cause. As to the present trouble in Atlanta, I would say the only remedy is to remove the cause. So long as black brutes attempt assaults upon our white women, just so long will they be unceremoniously dealt with."

In the course of an address before a Hebrew congregation in New York, on the 23d, Maurice B. Blumenthal, Sheriff's Counsel, remarked that the movement to cause intervention by the United States in behalf of the persecuted Jews of Russia must be injuriously affected by these lynchings in Atlanta. "When we contemplate America's toleration of negro lynching in the South," said he, "it savors much of hypocrisy for the American public to profess horror at the massacre of Jews in Russia." At Cape Girardeau, Mo., on the 21st, Charles M. Smith, his son, and five of their tenants, who had acted as guards on the Smith farm in New Madrid County, were found guilty of peonage. Smith was sentenced to be imprisoned three years and a half and to pay a fine of $5,000; his son goes to prison for two years and a half and pays $5,000; the prison terms of the guards are from one to two years.

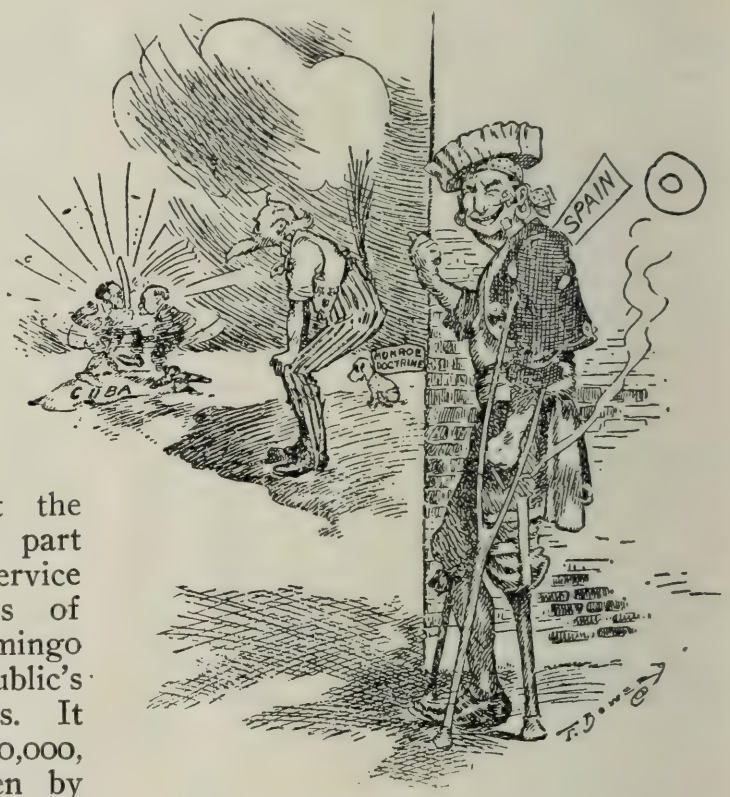
Coal and Railways in the West

Continuing its inquiry concerning the coal interests of railroad companies, the Interstate Commerce Commission is making an investigation in the West. According to the testimony of D. O. Clark, vice-president of the Union Pacific Coal Company and superintendent of the Union Pacific Railroad Company's coal business, this coal company's stock and bonds ($10,000,000) is owned by the railroad company. Mr. Clark is also vice-president of the Supe-

rior Coal Company, which is controlled by the Union Pacific. This railroad company has obtained possession of several sections of Government land containing coal, and Arthur H. Doane, sales agent for the Union Pacific Coal Company, testified that he received $250 for filing a claim on a quarter section and transferring title to Clark, altho he had never seen the land. The Sioux City and Rock Springs Coal Company owns mines in Wyoming which are on the line of the Union Pacific. This company's president, Warwick Saunders, testified that Clark refused to give him a spur track. Clark admitted this, asserting that the coal in question was of an inferior quality, and explaining that he was unwilling that it should be put on the market as Rock Springs coal, which has a fine reputation. He also admitted that his own company had bought land adjoining the Sioux City Company's land to prevent the latter from obtaining an outlet. Saunders told the Commission that the Union Pacific demanded the right to fix the selling price of his coal, and had forced him to coerce one Abbott into transferring Abbott's coal holdings to himself, in order that the railroad company might obtain possession of them. For this service Saunders was to have a spur track to his own mines, but after Abbott's coal lands had past to the railroad company Saunders could get no spur track. H. T. Lemist, of Omaha, testified in corroboration of this. Randall Brown, who owns coal lands at a place in Wyoming where the railroad has three mines, said that he could get no shipping facilities. Clark testified that it was the intention of his coal company (the Union Pacific) to obtain all the valuable coal lands in the Horse Thief Cañon district and other adjoining lands, in order that no other interest should have an outlet from that district to the railroad. G. W. Megrath, formerly manager of the Union Pacific Coal Company, testified that when the railroad sought to obtain possession of three prosperous mines in Wyoming it raised coal freight rates to a high point and reduced the selling price of coal. This closed the mines in question. Then the railroad company bought them and restored the old freight rates. At Salt Lake City, he asserted, the Union Pacific, the Rio Grande and two so-called independent companies owned by prominent stockholders of the Union Pacific maintained a coal pool, suppressing competition and dividing profits.——At New York, the New York Central and two of its officers, recently indicted in the Sugar Trust rebate cases, have entered a plea of not guilty. The trial will begin on October 10th.——The Commission has decided that "nothing but money can lawfully be received or accepted in payment for transportation" on interstate railways.

Mr. Bryan's Railway Plan

In a letter to Governor Vardaman, Mr. Bryan says it was corruption in politics, due to private ownership, that led him to believe in Government ownership of the railroads. He would prefer private ownership if he could think that it was "consistent with pure politics and with justice to the public." "It is impossible," he adds, "to say at this time how far public opinion will support the suggestion I have made." In recent speeches at Raleigh and other Southern cities he has insisted that his dual plan would give the benefit of public ownership without the danger of centralization. It would be impossible, he asserted, to get relief from the new Rate law, on account of the corrupting influence of the railroads. There might be, he continued, some good business men in the South who felt almost ready to go over to the Republican party because, as they said, they were afraid of Socialism. But the Republican party was responsible for Socialism, and it had made more Anarchists by discriminating in the punishment of the rich and the poor than had ever been made by all the speeches in support of anarchy. Ex-Senator James K. Jones, chairman of the Democratic committee in both of the Bryan campaigns, has written to Mr. Bryan, earnestly advising him to drop the subject of Government ownership of railroads and stand firmly for the enforcement of existing laws. The latest prominent Democratic opponent of Mr. Bryan's plan is Senator Bacon, of Georgia, whose argument against it we mentioned last week. He believes that the American people will overthrow any party by which Government ownership of the railways is



advocated. In the recent speeches of Secretary Shaw, Senator Lodge and other Republicans, much space has been given to criticism of Mr. Bryan's plan. Vice-President Fairbanks, speaking at Chicago last week, said that Government ownership would be a long step toward dangerous centralization of power and toward Socialism. To resort to Socialism, even in a modified form, would be to strike down the best political system yet devised by the genius of man, and to undermine and overthrow the last hope of republican government in this world.

New Agreement With Santo Domingo

A new treaty with Santo Domingo is to be negotiated, and it is thought at Washington that the Senate will ratify it. This new agreement will include a debt-settlement plan which has been proposed by Señor Velasquez, Santo Domingo's Minister of Finance, and is approved by our State Department. It will not provide that the United States shall adjudicate the debt and act as paymaster. Santo Domingo will undertake these tasks by means of a new issue of bonds designed to cover all the claims. But it is intended that representatives of the United States shall continue to collect the customs revenue, setting aside a part which is to be applied to the service of the new loan, the proceeds of which will be used by Santo Domingo in adjusting and settling the republic's obligations upon a reasonable basis. It is said that this loan will be $20,000,000, and that the bonds will be taken by Kuhn, Loeb & Co., of New York. The present treaty cannot be ratified; in the new one several features of the existing convention which were objectionable to many Senators will be eliminated.

The Situation in Cuba

Secretary Taft and Assistant Secretary Bacon arrived at Havana on the 19th, and at once began to hold conferences with representatives of the opposing forces, their aim being to become thoroly familiar with the situation before attempting to make a settlement of the controversy. At the end of last week the outlook was somewhat discouraging, but on Monday last the situation was much improved, and Mr. Taft said he hoped a conclusion would be reached on Tuesday night. He had been in conference not only with Señor Zayas, the Liberal leader, but also with several of the imprisoned Liberals, whom the Government released temporarily for this purpose. Señor Zayas telegraphed to the insurgent commanders in the field that there was a prospect that peace terms satisfactory to them would be signed. According to one report, it had been proposed that the President and Vice-President should remain in office, but that last year's elections of members of the Senate

Spain's Turn to Smile.
From a Cartoon in the *Pilgrim*.

and the House should be annulled. It was understood that unexpected concessions had been made by the Government, but some said that the insurgents in the field would not be satisfied with anything short of the resignation of Palma and Capote, and a new general election for executive as well as for legislative officers. Mr. Taft said, on the 22d, that there must be "some resignations," to

show the good faith of the Government, before the insurgents would consent to lay down their arms. When it became known that there was a prospect of an agreement, regret was expressed by some representatives of business interests who had hoped for forcible intervention, followed by annexation, having no confidence in the permanence of an adjustment procured by the proposed mutual concessions. It was understood, however, that Mr. Taft (and President Roosevelt) earnestly desired that Cuba should have another chance. During the conferences, the strength of Guerra's forces appeared to be increasing. At the end of the last week he had, it was said, 5,300 men encamped within twenty miles of Havana, and a small party had taken a position only twelve miles from the city. There were in Cuban waters ten vessels of our navy, from which, in case of necessity, 4,000 men could be landed. Unwilling to cause disturbance by ordering any of them to the shore, Mr. Taft by letter requested the insurgent commanders to provide guards for the protection of the property of Americans. General Funston started from Washington for Cuba on the 22d, having been ordered to report to Mr. Taft at Havana.

Weekly Day of Rest in France

The law providing that all workingmen and employees in industrial and commercial establishments shall have one complete day of rest each week went partially into effect on September 2d, and each of the three Sundays since have shown such a rapid extension of its action that the "Continental Sabbath" is not likely to keep its proverbial significance. In fact, the cessation of industry on Sunday is now more complete in some French than in some American cities. The motive force of the movement is economic, not religious. The legislation was demanded by the trades unions, and they are to a considerable extent taking its enforcement into their own hands, often using unjustifiable means of coercion against recalcitrant employers. On September 23d large bodies of workingmen went about the streets, entering the stores that kept open and demanding that they be closed. Mr. Leprêtre, the aged proprietor of a store in the Rue Ménilmontant, who personally was in favor of the law, but kept open because his competitors did, was so frightened at the demonstration that he fell dead. At this the Store Employees' Union stopped further manifestations. The law provides for three cases: Whenever possible the establishment is to be closed on Sunday; in industries where this would work hardship the establishment may by authorization of the Government close some other day of the week than Sunday; if the establishment is such that it cannot in the opinion of the Government, be closed any day without detriment to the interests of the public, the employees must be given one day's rest a week in rotation. The difficulty of equitably adjusting the law to various industries and of securing the additional competent assistance for the third category has necessitated the temporary suspension of its enforcement in many cases. The employees have generally demanded complete Sunday closing, even of bakeries, and have generally enforced it by strikes or the threat of strikes. The law expressly exempted the railroads and other transportation companies from the requirement of a weekly day of rest, but the forces back of the movement were so strong that the six leading railroads of France have announced that their employees, 280,000 in all, will be granted a weekly rest day in rotation.

Spain and the Vatican

Some sort of a peace has been patched up between the Spanish Government and the Vatican. The former has agreed not to disturb the Concordat of 1851, and the latter to allow the civil authorities a free hand in the regulation of matters not covered by that treaty. No drastic action is to be taken against the religious orders that have been expelled from France and taken refuge in Spain. The present *modus vivendi* in regard to them is to continue. The Vatican will accept a new Spanish Ambassador, and diplomatic relations will be restored. Thus a crisis which might have led to a rupture like that of France has been averted or postponed. Apparently the Spanish Government has gone more than half way in coming to this agreement, for the Pre-

mier, Marshal Lopez Dominguez, had announced that a bill to bring the religious orders under the control of the State, as France has done, would be introduced at the opening of the Cortes. The energetic Minister of Justice, Count Romanones, had stated that he would not be satisfied with checking the increasing power of the clergy; the State must get back the rights it had allowed to be usurped by the Church if it was to progress like other European nations. The clergy, he said, were the only class which had not suffered from the war with the United States and the loss of the colonies, and it was necessary, as a measure of economy, to reduce the excessive number of archbishops, bishops and clergy. The Royal Order in regard to civil marriage was to be only the beginning of the movement against the Church. It was this Order, issued by Count Romanones without consulting the Vatican, that precipitated the conflict. The Civil Code places civil marriage on the same footing as religious marriages. The Catholic hierarchy attempted to nullify this by refusing burial in the cemeteries of persons married only by the civil authorities. When the Minister of Justice launched against this his Royal Order, the bishops retorted by issuing pastoral letters violently attacking the Minister. The Archbishop of Zaragoza and the Bishops of Baza, Tortosa and Tuy declared that civil marriage was merely legal concubinage. These ecclesiastics will, under the new agreement with the Vatican, be prosecuted in the courts for their insubordination. One of the factors which has brought the Liberal Cabinet to modify its aggressive attitude against the Church is probably the threat of a Carlist rising. There have been attempts to start a movement in favor of the pretender in several localities, and the danger of an outbreak was thought so great that the army maneuvers are to be postponed until it is suppressed. There appears to be a good deal of money back of the agitation, to judge from the number of paid agents, and from the concealed arms discovered by the police. This money, the anti-clericals allege, comes from the religious orders, and especially the Jesuits, and it is suspected that the present Pope would look with more favor on a Carlist rebellion than did Leo XIII, for Pius X when Patriarch of Venice is said to have been intimate with Don Carlos, whose son, Don Jaime, is now seeking the Spanish throne.

Professor Miliukov on the Russian Revolution

It is so difficult now to get a sane and competent view of the situation in Russia that Professor Miliukov's opinions, as expressed by him in an interview and in an address at a banquet given in his honor in London September 12th, are worth quoting at some length. His words command especial confidence in this country, where he is well known thru his lectures at the University of Chicago and his book on "Russia and Its Crisis." He is leader of the Constitutional Democrats, the dominant party in the late Duma, and is editor of its official organ. Miliukov says that the situation can be summed up in these words: "It is an impotent revolution under an incapable government." The strongest sentiment now prevailing in Russia is the desire for public tranquillity. People are tired of the three years of strife; they want a truce. They are frightened at the development that political events have taken. They feel not only tired, but unsafe. There is no security anywhere. The most peaceable have to arm themselves in their own defense. Bourgeois timidity has suppressed civic valor. This contra-revolutionary sentiment is strengthened by the feeling that the conquest of political liberty is accomplished. Have not the people representation in the Duma? Has not the press so much liberty that it is abused? Are not public meetings held without authorization, at which revolutionary songs are sung under the red flag? The bourgeois are beginning to think that there is too much liberty already; it is degenerating into license. If the Government had been wise it would have been able to check the revolution long ago, but the action of the Government makes it the chief ally of the revolution. Its vacillating policy and faithlessness to its promises have been so great that no one now believes in its good intentions or will accept its concessions.

That is why a new period of warfare marked its *coup d'etat*—the closing of the Duma. The most moderate party, the Octobrists, submitted. The great majority of the Duma did not accept the dissolution as a constitutional act, and proclaimed passive resistance, like that of the British Non-Conformists, who refused to pay the school tax under the

The Grand Duke Alexis, the only son of Nicholas II, now two years old, who in case the Terrorists succeed in assassinating the Czar, will become Emperor of All the Russias.

Balfour law. If the passive resistance had been well organized it could have forced the Government to immediate concessions by its collective and constitutional attitude. But, unhappily, we in Russia are far from the degree of political conscience which would permit of the organization of a collective protest without giving it a revolutionary form. But the revolutionist movement lacks organization and must ultimately fail. But, whatever are the differences of opinion and of tactics existing between the Russian parties struggling for freedom, there is a certain feeling of unity and solidarity that permeates all these parties. This will continue until the first and great aim of the movement, the political principle, is definitely won. The Russian Government reminds one of the man in the story who never mended the thatched roof of his cottage because when it rained it was too late to mend it, and when it was fine it was unnecessary to do so. So the Russian Government always said they were prevented from bringing about political reform because there was a revolution, and in the rare intervals when they succeeded in stopping the revolution they thought there was no necessity for bringing about political reform at all. Every party in Russia is a revolutionary party now. The fault does not lie with the people, but rather with the Government. They are revolutionary in their aims because the whole of Russia is revolutionary, because Russia wants to be suddenly changed and to make up for lost time. They are revolutionary in their methods in the measure in which peaceful means are refused to them. In the twentieth century it is impossible to admit that a Government can remain which, in order to exterminate throwing bombs, can think of no other means than that of exterminating the population by dint of a regular army which throws bullets. It is a shame, a dishonor to civilization, and is no longer to be admitted.

The Transformation of Persia

Apparently Persia is not to be changed from an absolute to a constitutional monarchy in such an easy and peaceable manner as at first might have been hoped. The people, having learned how to make their power effective, are disposed to resort to the weapons of passive resistance and the strike on the slightest provocation. The present revolution, like most of those recorded in history, had its origin in financial difficulties. The Shah was so handsomely treated in his first visit to Paris and London that he developed a fondness for living in European capitals, where he spent money freely in high living and fantastic purchases. This extravagance, coinciding with the

withdrawal of the subsidies which Russia had, before the war, been lavishly employing to increase her influence at the Persian court, necessitated heavy taxation and hard times. The higher clergy or Mujteheds, who in the Shiah sect of the Mohammedans dominant in Persia constitute a hierarchy having judicial as well as religious functions, took the side of the people against the Court. They were especially incensed at the killing of a sayid, or descendant of the Prophet, by the soldiers, and on this took sanctuary in a mosque, and on July 15th left the city in a body on the pretext of a pilgrimage to the Tomb of Ali, the son-in-law of Mohammed. The merchants and artisans of Teheran to the number of 15,000 likewise struck, closing the bazars and seeking sanctuary in the gardens of the British Legation. The whole affair was admirably managed. The refugees, during the three weeks they tented on the British lawns, were regularly supplied with food by the rich merchants of Teheran. A kitchen was established on the grounds and the rations distributed among the eighty guilds. On August 3d the Shah surrendered and issued a decree calling for a national advisory assembly. The Grand Vizier, Ain-ed-Dowleh, who was held responsible for all the woes of the country, was dismissed, and Mushir-ed-Dowleh appointed in his place. But the Mujteheds when they returned to Teheran were not satisfied with the scheme, and submitted a more liberal constitution of their own, and demanded the exile of the late Vizier, who still retained his influence at court. On September 6th a mass meeting was held which declared lack of confidence in the Government, and decided on stopping the business of Teheran again until their conditions were agreed to. Again the bazars were closed and gardens of the British embassy were filled with merchants of the capital, but after three days the Shah signed decrees banishing the late Vizier, and accepting the new plans for the National Council. Persia is to be divided into eleven electoral districts, having altogether about 200 representatives, and any persons between the ages of thirty and seventy who can read and write are eligible for election. The latest reports indicate that another commercial strike is now on, but its cause is not stated.

China Advances

China is moving with marvelous rapidity in the direction of national power and a reform of antiquated abuses. Yuan Shih-Kai, Viceroy of the province of Chili and the leader of the nationalist movement, is still in the ascendant. He has been transferred to Pekin and placed at the head of the reorganized Chinese army, of which a nucleus is formed by the regiments which he has drilled and equipped according to modern methods in his own province. The arsenals of the empire will be under the control of the Army Council at Pekin, instead of being managed by the several viceroys. The prohibition movement among the Chinese for the abolition of opium continues to acquire force and has now been sanctioned by an imperial edict ordering the total abolition of the use of opium thruout the empire within ten years, and placing upon the Council of State the duty of drafting the necessary regulations. The Emperor states that the use of opium is responsible for much of the poverty of the people and the weakness of the nation. Similar edicts have been issued many times in the past without effect, but now, with the strong prohibition party behind it, which in several places has taken things into its own hands and destroyed opium stores, something may be accomplished. If the prohibition is effectual it will seriously disarrange the finances of India, for China has been the chief market for the Indian opium ever since the Chinese were forced by British arms to open their ports to the drug.——The typhoon at Hong Kong proves to have been much more disastrous than was first reported, altho accurate details are still strangely lacking. Consul-General Wilder telegraphed the State Department from Hong Kong that 5,000 lives were lost and property damaged to the extent of $20,000,000. Thirty steamers were destroyed and twenty others damaged. The storm arose with such suddenness that none of the vessels could take shelter or prepare for it, and the junks, sampans and other native vessels were sunk by hundreds or cast up on the shore. The Observatory failed to issue any warning of the coming storm, because it was not indicated by any change on the barometer.

The Statesman's Job

BY LUCIUS F. C. GARVIN

Ex-Governor of Rhode Island.

EVERY job has its peculiarities. Some vocations are chiefly physical, others mainly mental. One makes the strongest demand upon this faculty, another upon that. And every kind of work may be done well or ill. The statesman's job, in order to be performed with any degree of credit, calls for a knowledge of what has already been accomplished in the business, and also for a constructive imagination.

In some important respects statesmanship requires the exercise of those faculties which equip the successful inventor. With their thoughts diverted into the other channel, Jefferson might have been an inventor and Edison a statesman. In fact, Franklin was both.

A very important difference between the two careers is this: The inventor needs to convince but a few, sometimes only one person other than himself, that his patent will prove a success; the statesman, on the other hand, must convert a large number of obtuse individuals to a belief in the worth and practicability of his plan before it can be applied.

Statesmanship is uncommon. Some men are called statesmen who are nothing but politicians; just as, in common parlance, tradesmen have been dubbed merchants who are merely peddlers.

Statute books are full of laws which are the result of compromise and the product of pettifoggers. The common law abounds in principles which only a statesman could originate.

A large share of the local codes of the States and no small proportion of the national statutes are restrictive in character. The great bulk of such laws are temporary and crude, mere makeshifts, without a hint of statesmanship. They fail of their ostensible purpose, just as the wind in the fable vainly strove to blow the cloak from the traveler's shoulders.

Even reformers, who, unlike the legislator, are not forced by circumstances to compromise, usually ask for legislation which, if enacted, would accomplish little or nothing of the object they have in view.

"Thou shalt not" had its place, but the Golden Rule was a momentous advance. The attempts so long made by law to restrain great evils certainly have not been brilliantly successful. Prohibition Maine still has her army of liquor dealers paying license fees to the United States Government. The curbing of the trusts and the control of the railroads by the Interstate Commerce Commission has done little to prevent those monopolies from despoiling the people. Nor is much to be expected from any railway rate law.

Corrupt practices in elections; "graft" in public office, and looting of the public by law-created corporations, are steadily on the increase, notwithstanding the enactments against them.

As a consequence of the failure of the restrictive measures devised by legislators, State and national, a widespread despondency and discontent exist. Manifestly, the advent of the statesman is needed—"the field is ripe for the harvest."

John Stuart Mill remarked that a little reform does, not merely a little good, but no good at all. The slight benefit is offset by some remote bad effect. Preeminently does this wise saying of the philosophic Mill apply to the statesman's job. While the statesman must not lose sight of the practicable, he must at all times be radical, be bold. Anything less is futile.

If restrictive and punitive laws have signally failed to reduce intemperance, to protect the public from trust and railroad extortions, to purify politics, or to foster happiness and contentment thruout the community, what other course can legislation take?

The statesman, I take it, would find out the causes of these chronic ailments of the body politic and address his legislation to their removal.

The evils arising from alcoholic bever-

ages are most rife among the poor and the idle rich. The great middle class is distinguished for its sobriety.

If, therefore, the extraordinarily unequal distribution of wealth were to cease, if the social extremes were merged and lost in a greater middle class, then drunkenness would fall to a minimum.

Why is it that a few have so much of wealth and the many so little? It is because the laws have been so framed as to lay the burden of taxation upon the masses, at the same time that they have granted to a few the right of private taxation. Law-made monopoly is nothing else than a privilege given to the few to take toll of some kind from all the rest of the people. The "unearned increment" of the monopolist is taken from the earnings of those who produce wealth.

For illustration: In any large city, the full service rendered by street railways is paid for by a fare of 2 or 3 cents. Consequently, the rest of the fare is a toll or private tax, which the law allows the corporation to exact. Now, 2 cents, paid by a family for one round trip daily upon a street railway, for 300 days in the year, amounts to $12 per annum. And this is but one of hundreds of monopolies which are thus taking toll of the people. In almost every city additional private taxes are laid by a gas company, an electric lighting company and a telephone company; and, extending beyond the limits of the city, toll is paid to steam railroad corporations and to a telegraph monopoly. Similar assessments, on an enormous scale, are paid to the monopolistic trusts which fix the price to the consumer of such necessities as coal, food, oil, iron and copper. To these must be added the excessive cost of houses, furniture, vehicles, live stock, clothing, and, indeed, almost every necessary of life, due to the obstruction placed in the way of foreign competition by national taxes upon imported articles.

To these almost endless exactions must be added the greatest burden of all, namely, the payment of community earnings, which are stored up in ground rental values, to private owners of land.

The result of all this toll-taking by private monopolies is that, in nine cases out of ten, at least one-half of what is earned by the laborer is transferred from the earner to law-made monopolists.

The most promising method of promoting temperate habits among the people, as well as of removing the greater part of the vices and crimes which halt civilization, is to double the income of the average American citizen by allowing him to keep what he earns.

This can be brought about by the very simple process of inaugurating a just system of municipal, State and national taxation. Such system should provide that all public revenue be derived from the payment of ground rent into the public treasury. That would take the royalties of mines, quarries and forests; the rent of wharves; of streets in so far as monopolized by railways and other franchises; of the strips of land which allow rails and electric wires to extend from city to city; and, in fine, all land values.

A necessary part of the passage of such laws is the repeal of "all acts and parts of acts inconsistent therewith." That means, of course, the abolition of all taxes upon imports, and of all internal taxes, levied by nation, State and municipality, upon the products of labor. Relief from these unjust and burdensome taxes will of itself go far toward so improving the material conditions of the people as to bring about sobriety.

The payment of ground rent into the public treasury, on the other hand, is no burden at all; it is merely a *quid pro quo* given by the possessor of land for value received. The purchase price of land is but future rent capitalized. If ground rental values went annually for public purposes land would fall to a price merely nominal. As has been well said, instead of paying, as now, ground rent *and* taxes, we should pay ground rent *as* taxes. That is, the burden of taxation would be lifted completely.

The railroads of the country and other quasi-public corporations have never been good servants of the people when in private hands. The German Government (which owns its railroads) is quoted as saying: "Whoever controls the transportation service of a country controls that country."

We have found it so in the United States. Notoriously, this has been the

case in Pennsylvania, New Jersey, California and many other States. It comes very nearly being the situation in this country as a whole.

All attempts to restrict these quasi-public corporations so that justice might be done to all investors in them, to all shippers by them, to all patrons of them, and to the producers and consumers who are dependent upon them, have been in vain.

No doubt the levy of a heavy tax upon the enormous land values to be found in the right of way and terminals of the steam roads will tend to reduce their power to take toll of patrons and dependents; but the ability to discriminate between persons and places, the granting of rebates and the indulgence in other extortions will continue, because the services rendered are in their nature not competitive, but monopolistic.

Every European country except England and France has found it necessary to own and operate its railroads, and in England itself the drift is strongly in the direction of public ownership of all public utilities.

Perhaps the conclusive argument for public ownership of public utilities is, as Mayor Tom L. Johnson has strongly emphasized, that private ownership has the effect of converting our leading citizens, those who naturally would be most influential for good, into foes of the community, since, by the possession of monopolies, their pecuniary interests are antagonistic to those of the public, and since, owing to the inferiority of legislative bodies, the special privileges are secured by corrupt methods, the large owners in quasi-public corporations find themselves arrayed against almost every reform demanded by justice and by public sentiment.

Now the only way to convert these influential enemies of good government into its friends and supporters is thru the public ownership of public utilities.

With these, the richest and ablest members of the community, devoting their great powers to the gaining of more wealth thru legislation, it is not strange that bribery and fraud should dominate popular elections; that public officials should be turned, by the inducements offered, from serving their constituents, and that government by the people should become a name only and not a reality.

The one argument advanced against public ownership and operation is that elective officials cannot be trusted to carry on such great business enterprises economically and in the interest of all.

This objection, which is harped upon continually, and has great weight in many quarters, brings us to the third count in the statesman's job.

The incompetence, and too often the actual venality, of public officials, both elective and appointive, constitute one of the most serious evils of the day.

Hence it was that corrupt practice acts were enacted in Great Britain and in some of our States, and that, at the present session, bills calling for publicity of campaign expenses have been introduced into both houses of Congress. Hence, likewise, the innumerable investigations into the official acts of United States Senators, State legislators, city councilmen and appointed officials of every kind.

It is scarcely necessary to state that all of these restrictive and punitive efforts have been of little avail. The transgressors gain in shrewdness and chicanery faster than the laws are improved, so that, in spite of all that has been done, greater corruption and more malfeasance in office exists today than ever before.

This deplorable situation is not because the people themselves are upon a lower moral plane, but is due solely to our antiquated machinery of election.

The Legislature is the political power underlying all other departments of government, the elective and appointive alike. And legislatures, municipal, State and national, are chosen almost universally by the so-called majority vote. In nearly every instance, individual legislators are elected from single districts, the candidate receiving the largest number of votes getting the office.

If these legislative bodies are to be constructed, possessing the will and the ability to correct the evils in other branches of the government and at the same time to act wisely and honestly themselves, better machinery of elections must be provided.

Fortunately, such mechanism has been

invented, and is now in operation, in a partial way, in Switzerland, Belgium and Japan.

The new machinery is very simple. All (or at least a considerable number) of the members are voted for and chosen upon one general ticket. From the numerous candidates each voter selects his first choice. Then, when the polls are closed, such candidates of the several parties as receive the highest number of votes are declared elected.

The effect of this improved machinery is to give to every political opinion in a community its due representation. A small political party, or other group of electors voting together, would, if sufficiently numerous, be represented proportionately to a large party. Thus a group casting ten per cent. of the total number of votes would have ten per cent. of the members of the legislative body; a party casting forty per cent. of the votes would have forty per cent. of the representatives, and so on.

This simple change in the ballot solves a great many difficulties, and so manifestly that I will but enumerate them.

It would do away with the tyranny of the caucus; it would render unnecessary and unprofitable corrupt methods at elections; it would make the legislators wholly independent of bosses and party committees; and, as a consequence, it would give us a legislative body made up of the most capable men in the community—a board of experts who could carry on successfully any kind of business committed to their charge. It frees the people as well as their representatives.

A Legislature so chosen would inevitably and speedily see to it, if need be thru a change in the methods of choosing executive and judicial officers, that every office were filled by persons fitted to perform its duties. By means of such an improved system, what restriction has utterly failed to accomplish, a wise and statesmanlike reform will quickly bring about.

Altho genuine representation in legislative bodies is mentioned here as third in the list of needed reforms, in logical order it should precede the other two.

The fourth ominous sign of the times is the widespread popular pessimism and discontent. Very many persons in the United States believe that government by the people is a failure. Occasionally one of them goes so far as to assert in private conversation that a hereditary ruler is preferable to an elective President. The dominant party of the country almost invariably acts upon the assumption that the people cannot be trusted, that the few must guide and direct, else folly and disorder would become ascendant. The second party, too, in many of its actions shows an unwillingness to repose confidence in its own rank and file.

Whenever the prevailing discontent shows itself in an organized manner, as in a strike, the corrective proposed is a restrictive one: The judicial injunction; the arrest of the most outspoken leaders; the calling out of the police, of the militia, or, as a last resort, of the United States troops.

This class of remedies is not improving matters. The present is called a period of unprecedented prosperity, yet discontent, individual and collective, is continually manifesting itself. Strikes abound, controversies between employer and employee are the order of the day. The great middle class, the hope of the nation, feels that it is being worsted in its attempts to compete with the trusts and the magnates who conduct the vast enterprises.

Under these threatening conditions what would the statesman do? What step can he take which will remove the discontent and render wholly unnecessary, uncalled for and practically impossible the injunction and the application of military force?

Would not just taxation, the abolition of monopoly and the making of all legislative bodies truly representative remove the chief causes of discontent?

If so, there is just one thing more to include in the statesman's job of the present day, and that is to point out a practicable way by which the three reforms indicated may be brought about.

It is highly desirable that the fundamental reform, which is to open the way for all other reforms, should be in full accord with the principles of government established by the founders of our States and nation.

As a part, and an essential part, of our republican form of government, we find the written constitution. Concerning that portion of our scheme of government George Washington wrote: "The basis of our political systems is the right of the people to make and alter their constitutions of government."

If that basis had not been departed from the dangers and abuses which threaten the stability of our institutions would never have arisen. The statesman's work, therefore, is to apply that dictum of the Father of his Country.

This has been done in a somewhat imperfect and complex way in the State of Oregon. It is now possible there for eight per cent. of the voters to propose an amendment to the Constitution of the State and have it submitted to the qualified electors for acceptance or rejection by majority vote. Not only is it possible, but the thing is actually in process of being done. At the State election on June 3d, 1906, the electorate voted to amend, or refuse to amend, the State Constitution upon a matter proposed for their action by more than 7,000 of the legal voters,

The people of Oregon have found the key. They have unlocked the closed door which confined them and confines us all. Henceforth her people are free to effect any reform which the majority desires. Discontent, so far as State matters are concerned, will soon be a thing of the past. A careful progress will mark her future. Some statesman has arisen there in the coming center of the world.

To other States I would say: Go thou and do likewise.

LONSDALE, R. I.

Panislamism

BY ARMINIUS VAMBERY

[Professor Vambery holds a chair in the University of Budapest, and is considered the first living authority on near Eastern questions.—EDITOR.]

THE recent shooting expedition of the British officers to the district of Tantah, and the accident which occurred near the village of Denshardi has again brought the bogey of Panislamism to the front. By my using the word bogey the reader will guess at once that I do not lend to this fraternal unity of Mohammedans the importance generally attributed to it. But the reader may ask why I take this view. Well, it is because I am not a stranger to Islam. I do not look upon matters there in the same light as European politicians and newspaper correspondents, who study foreign lands while their ship is coaling, and who indulge in far-reaching prophecies about countries and nations whose language, history and religion they hardly know. Under the disguise of a native I have traveled and resided in various parts of Mohammedan Asia without being recognized as an outsider, and having thus been able to penetrate into the very heart of society, my experience is not based on surface impressions, but is drawn from the innermost life of the Mohammedan world. Owing to this circumstance, my opinions do not always agree with those of other travelers in those parts, and hence it is that I do not share the generally accepted view concerning Panislamism.

Sensation-mongers declare Panislamism to be a standing menace and occasionally a real danger to the position held by the Western Powers in Asia, because it will bar the way to our modern culture, hinder the development of our trade and industry, and create a general state of things which must ultimately shake the rule of certain European Powers over their Mohammedan subjects. As this result would be decidedly detrimental to the cause of humanity, it behooves us to look deeper into the matter, when, I feel sure, we will be convinced that there is scarcely any possibility, for the present,

at least, of anything practical springing from the proposed association of a religious community, the various component parts of which are living under different climates and social conditions, and whose level of culture and political fitness are far from being adequate to the task imputed to them. It is true that the declaration of the Koran, "All true believers are brothers," has from the very beginning sanctioned Panislamism and made all ethical divisions illusory. But, in spite of all the struggles, all the hardships, all the ill will which Islam has had to endure in the course of the more than thirteen centuries of its existence, there is no record of a single united action in defense of or in sympathy with the often and much attacked Islamic world in its entirety.

It may be said that in the palmy days of the past, when the Mohammedan world had unfurled its victorious banner in many Christian communities, a combined action was superfluous, whereas today, when two-thirds of the Mohammedan population have lost their political individuality and are living under foreign supremacy, the case is totally different, so that this situation speaks strongly in favor of a strict unity. We may freely admit the existence of a desire on the part of Mohammedans to stand shoulder to shoulder against the overwhelming power of the Christian world. But the question must be immediately asked, Have they any chance of success in this effort?

The time has long passed when undrilled and ill-armed masses, heated by religious fanaticism, can pour forth from their desert homes and spread desolation around them. Even the short, victorious career of the Mahdi in the Sudan could hardly have happened if the late General Gordon had not been forsaken by his countrymen and if Hicks Pasha had not been too confident of the superiority of his much too little army. When, overweened by cheap victories in Africa and Asia, we try to conquer and subdue large masses, our self-conceit may now and then receive a shock at the hands of a furious and uncivilized rabble. But, as a rule, our armies, if cautiously led, will never fail in wars of this kind, unless the Asiatics or Africans are commanded by a semi-civilized and organized Power, such as Turkey, for instance, or even Egypt, and are provided with the means for fighting any of the civilized states.

It is fairly well known that the Sultan Abdul Hamid, who is particularly fond of secret machinations, looks upon Panislamism as his main sheet-anchor, and supports quite a number of emissaries, who wander about in all parts of the Moslem world, preaching unity of purpose and proclaiming his spiritual relation to the Khalifa—that is, that the Sultan is the legal successor of Mohammed, the prophet. As far as regards this title or prerogative, there is no doubt that the Sultan is held in high esteem by Turks, Arabs, Central Asians, Tartars, Chinese Mohammedans, Indians, Javanese and Africans, but it is quite another thing whether any of these Moslem nations would feel compelled by the spirit of religious law to obey his orders if he should call upon them for assistance. There is much misconception on this point prevailing thruout the whole of the Christian world, as is clearly shown by this declaration of Newab Mohsin-ul-Mulk, the honorary secretary of the High School of Aligarh, in India. This learned Mohammedan says on this point:

"The Mohammedans who call the Sultan of Turkey a Khalifa may be divided into two classes,—those over whom the Sultan rules and those over whom the Sultan does not rule. Now, if the Turks and other subjects of the Sultan call him a Khalifa in the sense that they owe him obedience in all matters, they are possibly justified in so doing. But when we Mohammedans in India and elsewhere, who are not under the Turkish rule, over whom the Sultan exercises no authority and whom we are not bound in any way to obey, call him a Khalifa, we do so merely to show our respect for the greatest Mussulman King, whose position is rendered still more important by his being the servant of the sacred towns and the Kaaba. It should on no account be understood to mean that we regard him as our ruler in any respect or consider his orders binding on us. We use the word Khalifa merely as a title of honor; nor does it follow that because we do so we are likely to oppose the government under which we actually live. If Mohammedans and Europeans knew the religious views held by the Mohammedan jurists and doctors with regard to the use and application of the word Khalifa, and understood the duties and rights pertaining to that office, there would be no room for misconception."

Thus speaks the Indian scholar. But

the Turks themselves are of a different opinion. They vindicate the right of the Sultan to the Khalifate by his being the legal owner of the holy cities in Arabia and the possessor of the holy relics, viz., the standard of the Prophet, the teeth he lost at the battle of Ohud, his cloak and a portion of his beard. These relics, taken by Sultan Selim at the conquest of Egypt, are guarded in the Old Palace in Stambul and are highly venerated. But, as the learned Indian Mohammedan whom I have just quoted shows, the Sultan Abdul Hamid has neither the right nor the power to put himself at the head of any Panislamitic movement, notwithstanding his fervent desire to do so. There is no doubt, however, that he and eventually his successors will continue in the future, as in the past, secretly to incite the believers in Mohammed to regard the Sultan as the spiritual chief of Islam, and to ask also their support in worldly matters, when occasion calls for it. But, as is seen by the above quotation, he would be leaning on a very frail reed.

Arabi Pasha, the last leader who took arms for the idea, "Egypt for the Egyptians."

The varied interests and the very delicate position of the different Mohammedan countries which still enjoy a certain amount of political independence do not allow a combined action with the Sultan of Turkey. But supposing that Morocco, Persia and Afghanistan were inclined to embrace the cause of the Sultan, would the European Powers that are watching every act of these States permit the junction of such inimical forces for an assault which has been so long meditated? I venture to say, No. Furthermore, if the fighting propensities of the politically independent Moslem countries can be nipt in the bud, the Mohammedans under direct Christian rule will certainly be less able to use Panislamism as a means to regain their former independence and to re-establish Islam in its pristine political power and significance. Of course, strict vigilance and adequate measures of defense are unavoidably necessary to the Christian ruler of Mohammedan communities, when we bear in mind the steadily changing social and culture conditions created by the progress of modern thought and ideas due to our civilizing influence.

We must not forget that Mohammedan society has, during the last fifty years, steadily undergone a considerable change, which still continues, thru the constant contact and pressure from the West. At the time of the Crimean War Turkey, for example, had scarcely felt this transforming influence in government, education and letters. It had but one newspaper, the *Djeridei Hawadis*, with but a very limited number of readers, and I well remember the indignation of some of the public men when a friend of mine had the courage to publish in its columns a leader containing a very mild and reserved criticism of the foreign policy of Ali Pasha. But today there are a goodly number of daily, weekly and monthly publications in Turkey, and, altho they are gagged by a terribly severe government censorship, they are eagerly read and discussed. In India and Egypt the native press has grown to be a still more potent factor than in Turkey, thanks to the liberal rule of Great Britain. Between 1892 and 1900, the 576 dailies and 330 monthlies of India had risen in number to 675 dailies

and 465 monthlies. In Egypt the press shows an extraordinary increase in ultra-liberal views, and the papers print vehement attacks on the English occupation of the country.

I ought to add in passing that the unfriendly attitude of the so-called Egyptian patriots is the blackest ingratitude, for even the most bitter enemy of Great Britain will have to admit that the prosperity, wealth, peace, security and liberty enjoyed by the Egyptians of today under British rule is unprecedented in the annals of the Nile country. But gratitude is very seldom a national virtue, and it would be very unfortunate if the English rulers, giving ear to the cry, Egypt for the Egyptians, should retire and cause this now flourishing country to fall back into its former state of misrule, anarchy and dire despotism. Happily no governmental party on the Thames will ever lend its hand to such a course of political suicide.

If the remarkable statement in the anonymous letter recently received by Lord Cromer has aroused the suspicion of this intelligent and capable statesman with regard to the secret machinations and threatening danger of Panislamism, it would be going too far to assume that this movement affects the whole Moslem world; nor can it be said that the anti-English feeling is entertained by all classes of the Egyptian population. It should be borne in mind that the modern liberal spirit penetrated much sooner into Egypt than into Turkey, and that, owing to the prevalent French influences of earlier times, certain political and social customs are more tolerated on the banks of the Nile than on the shores of the Bosphorus. Old Mehemet Ali gave the impulse to these innovations, and his successors, desirous to show themselves more liberal than the Sultan, eagerly followed his example. Young men from Egypt flocked to the French universities, and, having become imbued with the teachings of an advanced school, now pride themselves on having made Egypt the most modern and civilized nation of the Mohammedan world.

Unfortunately, this revival of old Egypt cannot be taken very seriously, for young Egyptians, like young Turks and Persians, have very rarely followed with heart and soul their studies at the European secondary schools. They have contented themselves with a slight acquaintance with our university instruction, and, returning to their homes with a mere varnish of Western culture, have made much noise, but with very little to show in the shape of results. They naturally began by turning against their former teacher—Europe. It is from the ranks of these young men that have sprung the political exaltados, for the half-modernized Mohammedan is more inimical to our world than his conservative co-religionist who has remained at home. It is the former who are at the head of anti-English papers of Cairo, who preach war to the knife against the British, and who, pointing proudly to the progress made by Egypt during the last twenty-five years, due, as we know to Great Britain, proclaim as their device: Egypt for the Egyptians. In their newspapers, which are tolerated by the English, they continually incite the Egyptians to revolt and to throw off the yoke of the foreign conqueror and teacher. They go even further, and try to win over to their cause England's Mohammedan subjects in India by proposing to them the formation of a formal league and alliance against their common oppressor, as they do not hesitate to style the English.

I have before me, as I write, an Arabic paper issued in Egypt, containing an appeal to the Moslems of India, from which I cull the following sentences:

"Wake, brethren in Mohammed! How much longer shall we suffer the iniquities of the unbelieving foreign ruler? How much longer will the tyrannical Englishmen continue to oppress us? If we unite and make common cause, the unbeliever will disappear like chaff before the wind."

The patience and indulgence of Lord Cromer in the face of such seditious appeals is certainly a mistake and more than should be permitted by the liberal spirit of British rule, for it surely endangers the work of civilization and is opposed to a system whose aim is to prepare the Egyptian people for a better future.

This behavior of the Egyptians must be stigmatized as revolutionary, and it unquestionably denotes a desire to raise up the Mohammedans all over the world against the superior power of Christianity. But the question is and remains,

whether this effort will be crowned with success, and whether the voice of the Egyptian Moslems is strong enough to be heard, and, heard, whether it will be harkened to by their co-religionists abroad? To this question I do not hesitate to give a decidedly negative answer.

The Mohammedan world today is, as I have already said, far from being prepared for a combined action against the Christian nations, and this state of incapacity will last until Moslem society attains the degree of culture necessary to a general revival, or, to speak plainly, until the various communities which constitute Islam are in a position to forge and use material and spiritual arms similar to those with the aid of which the Christian world was able to issue forth and subdue foreign nations and civilizations.

Over-confident Europeans and Americans may doubt the possibility of Islam making such progress as this in the future. But I make no doubt on this point; for, having devoted much attention to the evolution of the Islamic world, and having carefully studied its movements all along the line, I see unmistakable symptoms of a radical change—a change which, proceding gradually, will ultimately produce a rejuvenescence of the seemingly decrepit and decaying body. I refer particularly to those Mohammedan societies which are under the tutelage of Christian rulers, are by them forced into the path of modern civilization, and will reluctantly adopt sooner or later our mode of thinking and acting, our methods, and so ultimately become strong enough to regain their political independence. It is only then and not sooner that there will be the possibility of a Panislamic movement, and we shall be confronted with an opponent that must be reckoned with.

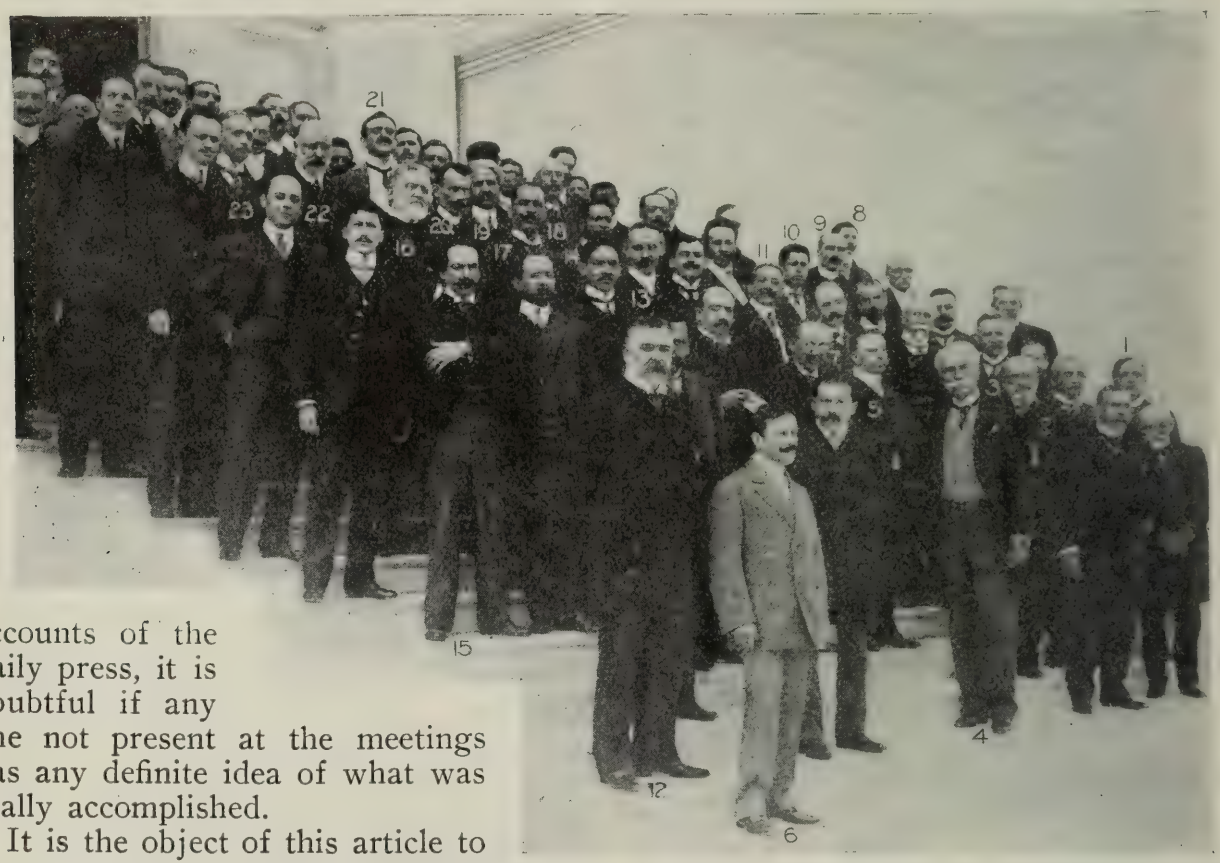
It is for this reason that I look upon the recent event in Egypt in connection with the dove shooting accident as a matter of simple local significance, tho I do not deny the outspoken desire of the Egyptians to rise up and revolutionize their co-religionists. I would even add that the Fellah, whom prosperity and liberty never before enjoyed have made arrogant, may have been acting in this instance under the influence of certain revolutionary circles, and was easily incited to give vent to his hatred of the foreign ruler, whose pastime of shooting doves, the petted bird of Mohammedans, as also of other religions, was by no means the quintessence of wisdom. If these British officers, instead of handing over their guns to their assailants, had assumed a position of defense, the Fellah, a coward and cruel by nature, but overbearing and insolent in the presence of indulgence, would certainly not have ventured to attack them. But after the accident had happened, the British judges could not act otherwise than mete out the severest punishment to the offenders, for leniency and impotence are identical in the eyes of Orientals.

Taken altogether, therefore, this incident contains a real warning to the English in Egypt, who must not be lulled in the sleep of false security and be overconfident in the midst of a nation long since undermined by all kinds of revolutionary influences. Above all, they should not trust a society which is affected on the one hand by the spirit of Western civilization, and on the other by the fervor of religious life, and is consequently subject to constant agitation and excitement.

In conclusion, I would add that it will be a very long time before the bogey of Islamism can be looked upon as a standing menace to Western influence in Moslem Asia, and that for the moment it is much less real than the Yellow Peril, so often used as a scarecrow for political purposes. The exceptional position and faculties of the Japanese cannot be taken as an example for the followers of the Arabian Prophet, whose doctrine, as actually expounded by its priests, does not lead to accelerated action, but, on the contrary, to sluggishness and clumsiness, and is certainly more Asiatic than the religions of the Far East.

BUDAPEST, HUNGARY.

The Pan-American Conference



BY GEORGE AGNEW CHAMBERLAIN

[Last week we published an article by Mr. Chamberlain, our representative at the Pan-American Conference, entitled "Mr. Root's Visit to South America." This article deals exclusively with what was accomplished at the Conference. Mr. Chamberlain was formerly United States Vice-Consul General at Rio de Janeiro, and has been made consul at Pernambuco, Brazil.—EDITOR.]

THE Third Pan-American Conference came to a close on the 27th of last month, and while those especially interested have been able to catch the main points of the deliberations of the convention thru the telegraphic accounts of the daily press, it is doubtful if any one not present at the meetings has any definite idea of what was really accomplished.

DELEGATES TO THE THIRD PAN-AMERICAN CONFERENCE.

1. Buchanan, Chairman of the American Delegation. 2. Larringa. 3. Van Leer Polk. 4. H. Ex. Nabuco, President of the Conference. 5. De la Barra, Chairman of Mexican Delegation. 6. Decoud. 7. Lanusa. 8. Callogeras. 9. Larraburre. 10. Alfaro, son of President of Ecuador, and youngest delegate. 11. Correa. 12. Walker-Matinez, Chairman of the Chilean Delegation. 13. Reinsch, of Wisconsin. 14. Reyes. 15. Quesada, of Cuba. 16. Montouro, Chairman of the Cuban Delegation. 17. Davila. 18. Batres. 19. Brazil, General Secretary. 20. Uribe Uribe. 21. Rowe, of Pennsylvania. 22. Fox, Director Bureau of American Republics. 23. Dean, Secretary of American Delegation.

It is the object of this article to give a concise *résumé* of what was attained by the third meeting of Pan-American states, and, to begin with, it is necessary to explain the nature of these conferences and the extent of the powers granted to the several delegations.

The Pan-American Conference is a purely deliberative body meeting at irregular intervals. It has no legislative powers, and the governments represented are not bound by its resolutions, which, consequently, are nothing more than recommendations. This being the nature of these conferences, often erroneously termed "congresses," the delegates have no potentiary powers, but are simply instructed as to the policy of their several states in regard to matters apt to come up for discussion.

Given these restrictions, it is natural that one should ask, where is the justification for the expenditure of hundreds of thousands of dollars and much trouble on these purely deliberative meetings?

In the case of the first two conferences

circumstances tended to nullify their utility. During the first conference the Brazilian Empire fell, and during the second the Brazilian envoy died, and the Chile-Argentine feud, then at its hight, continually threatened to disrupt the assembly. The third conference, just realized, was, however, more fortunate, and, while it lasted only half as long as its predecessors, accomplished much more in the way of definite agreement and approximation than the two previous meetings.

Nabuco Greeting Mr. and Mrs. Griscom.

The question put above can best be answered by that one word, "approximation." It sums the true spirit of the Pan-American Conferences, whose mission is one of peace, commercial prosperity and closer acquaintance, binding the Western Hemisphere in a union of sympathy.

The resolutions of the Third Pan-American Conference, excepting that which reorganizes the Bureau of American Republics, are better termed "recommendations," and it is as such that they must be considered, in order not to overestimate what has been accomplished, to the detriment of what demands accomplishing in the several national congresses.

The first subject to come up for discussion was arbitration, and while the committee which had it under consideration had to contend with the fanciful demands of certain delegations who were for shouting "compulsory arbitration," the final resolution was a dignified expression of opinion, and at the same time a graceful, tho perhaps not altogether disinterested, compliment to The Hague Conference. Its text is self-explanatory.*

"To ratify adherence to the principle of arbitration; and, in order to render practical so lofty a *desideratum*, recommends the nations here represented that they instruct their delegates to the Second Hague Conference to promote in that assembly of universal character the adoption of a general Arbitration Convention so efficient and definite that, meriting the support of the civilized world, it shall be accepted and put in effect by every nation."

Reading between the lines one sees a second significance in the wording of

* The quotations from the minutes of the Conference in this article are the writer's translation from the Portuguese and Spanish texts, as the official English translation is confused and inaccurate.

Rio Branco and His Beautiful Daughter Descending the Senate Stairs.

this resolution, which renders it of more interest than its face value indicates. This significance is to be found in the deference shown to The Hague Conference, which doubtless will tend to force from that body official recognition of its humbler sister.

The second subject in importance handled by the Conference was the reorganization of the Bureau of American Republics, which has its permanent seat in Washington and which was originated at the First Conference with the aim of establishing a permanent link between the different republics.

According to the new plan the Bureau is expected to compile and distribute commercial information and prepare commercial reports; compile and classify information regarding treaties and conventions between American States and between American and other States; to supply information on educational matters, and assist in obtaining ratification of the resolutions and conventions adopted by the Conferences; to act as a permanent committee of the Pan-American Conferences, recommending topics for programs of future Conferences and communicating such action to the various Governments at least six months before the next Conference. A monthly bulletin is to be published as heretofore and such other publications will be issued as the governing board shall direct. The publications of the Bureau are

henceforth to be distributed gratuitously. In addition to the recommendations presented in the report on the reorganization of the Bureau, the committees on commercial affairs, customs, the Pan-American Railway, future Conferences, and natural resources, all made their demands, thru their resolutions, on the Bureau, not only for the preparation of reports and statistics, but also for seeing that the plans of campaign respectively proposed be followed out.

Such are the main duties assigned to the Bureau of American Republics, and it will be seen by their scope that the Bureau can be made a tremendous instrument for the forwarding of Pan-American commercial, economical and social relations, if only its direction is entrusted to those who have these interests at heart. For the present this good fortune is assured, for the new regulations further provide that the governing board shall be composed of the diplomatic representatives of the Republics accredited to Washington, and that the Secretary of State of the United States shall always be its chairman.

That Mr. Root takes a very deep interest in Pan-American affairs has been amply demonstrated, and there is no doubt that during his tenure of office the Bureau is destined to make a tremendous advance in general utility and become a boon not only to manufacturers and exporters, but to students of South American affairs and social conditions.

Incidentally, it is of interest to know that the appropriation of $200,000 made by the American Congress has been proportionately supplemented by the other Republics, and the Bureau is to erect immediately a fine home in Washington.

In regard to naturalization, the Conference adopted a convention providing that if a citizen, a native of any of the countries represented naturalized in another, shall again take up his residence in his native land manifestly without the intention of returning to the country in which he has been naturalized, he shall be considered as having reassumed his original citizenship to the exclusion of that acquired by naturalization.

A long and detailed convention was adopted by the Conference in regard to patents, copyrights and trade-marks, the main feature of which was a recommendation for the establishment of two bureaus, one at Havana and one at Rio de Janeiro, thru which the protection of industrial and intellectual property can be arranged.

The Conference adopted, in general, the sanitary convention of October, 1905, signed in Washington and further recommended a universal movement toward the scientific sanitation of cities and ports.

Among the minor resolutions, two are of especial interest; one providing for a detailed study of the monetary systems of the republics, giving a history of their fluctuations in exchange; the other calling a Coffee Conference, to meet in the city of Sao Paulo, Brazil, for the discussion of means of combating the crisis which is threatening coffee-producing states.

The first of these propositions, if carried out, will give a starting point for the study and establishment of a universal gold basis. The second will prove of direct benefit to the many coffee-producing republics of Central and South America and Mexico.

Of all the subjects which came up for discussion at the Rio Conference, that which caused most anxiety to those whose daily prayer was for peace, was the so-called Drago Doctrine, which, after all, is nothing but a slightly new expression of the old principle that debts should not be collected by force.

It was in the committee discussion of this subject that the sharpest battle of words was waged, but thanks to the conciliatory efforts of Chairman Buchanan, all ended well, and on the 22d of August the Conference resolved to recommend to the governments represented:

"That they consider the point of inviting the Second Peace Conference at The Hague to study the question of compulsory collection of public debts and, in general, means tending to diminish among nations conflicts of strictly pecuniary origin."

Nothing could be more general and indefinite in the way of an opinion, and the defeat of the Dragists was complete. The victory can justly be termed an American one, for it was of paramount interest to the United States, who had been working successfully for the admittance of the Latin republics in gen-

Secretary Root and His Party on the Peak of Corcorado Overlooking Rio Harbor.

eral to The Hague, that the Rio Conference should not appear to dictate to that body, especially on so delicate a matter as the relation of debtor to creditor.

The characteristic feature of the whole Conference was the absolute lack of discussion in open session, and the despatch with which subjects were handled once the Conference was well under way.

On the whole, the Third Pan-American Conference went thru more solid work and in quicker time than the most hopeful expected, and not the least of its accomplishments was the paving of the way for a still more practical and successful assembly, which is to take place within five years, probably at Buenos Aires.

Rio de Janeiro, September 1.

No Answer

BY NICHOLAS SMITH

Up from the dim hills from the North,
  Across the twilight skies,
Breasting the billowy evening wind,
  A single wild crane flies.
With vows of silent poverty
  It goes, a pilgrim gray,
And beats the air with weary wings,
  Along its lonesome way.

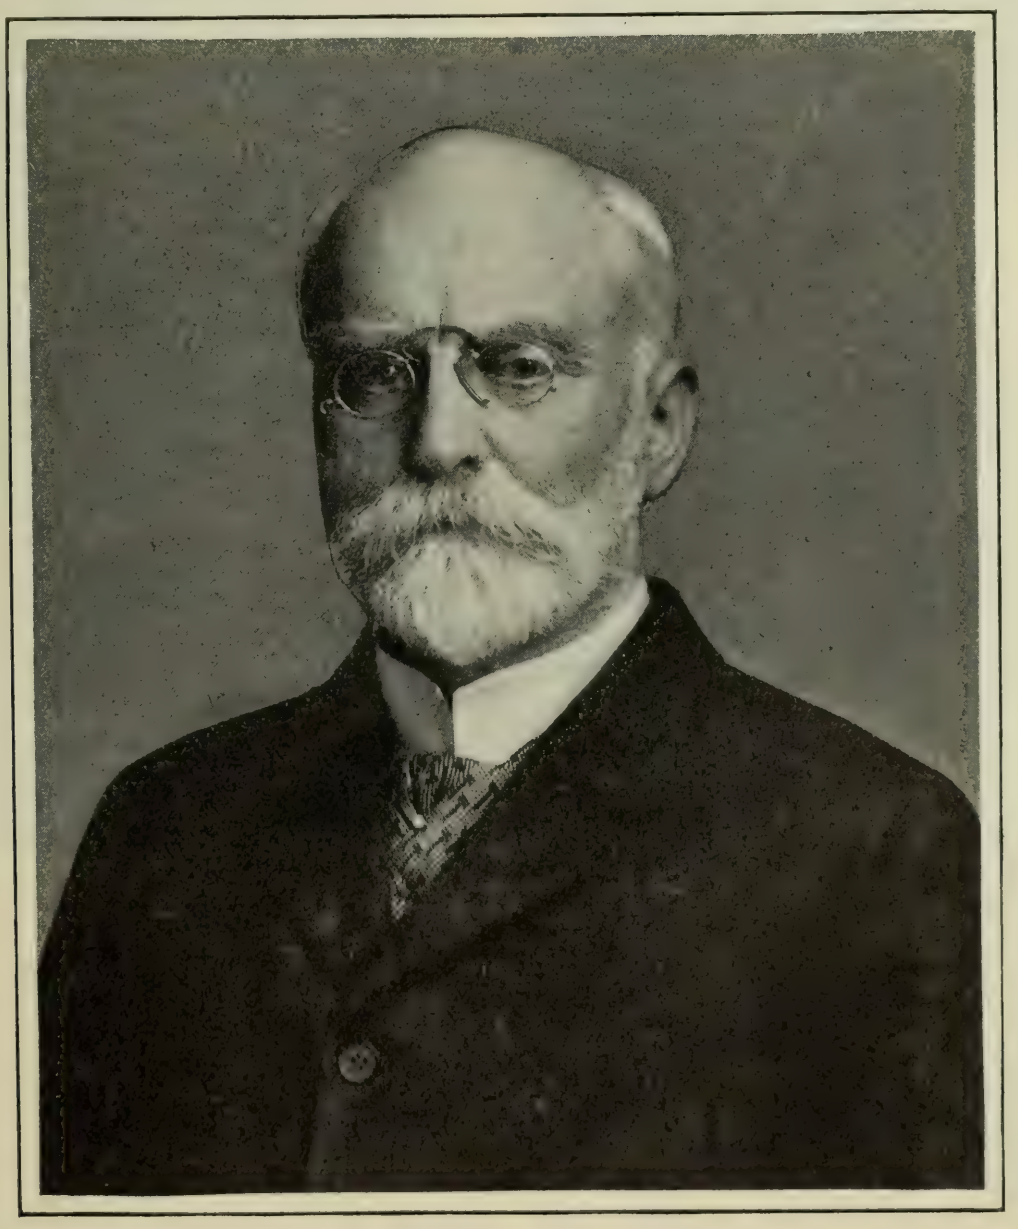
At morn a troop of Argonauts,
  With joyous clangor flew
And cleaved the sky with feathered keel,
  Themselves both ship and crew.
The clarion leader at the prow,
  Cried, "Brothers, follow me,
I know a land of fish and fen,
  Beyond the tropic sea."

But thou, lone bird, Monk of La Trappe,
  That toiling scorns to rest,
And plumes in yonder basking lake,
  Thy storm-disordered breast.
Mute Celibate! with straining eyes,
  I watch thy mournful flight,
Out of the dark, mysterious North,
  Into a starless night.

Spirit of sternest Solitude,
  Whence art thou? Whence am I?
From the unknown, to Heaven knows where,
  We wander forth to die.
And where are they, my loved and lost?
  Have they, too, fled away?
Like thee, into some trackless waste
  Beyond the light of day?

Or do they watch from some fair star
  The flaming of the Sun;
See the seven moons of Saturn wheel,
  The wild-haired Comets run?
But not a word does it vouchsafe,
  In answer to my greeting,
Ah, well, our days are full of grief,
  Of parting and of meeting.

For all the world is but an inn,
  And I must play mine host,
With speed thee, and good morrow,
  To each wayfaring ghost.
With ready smile for friend and foe,
  And not a tear for one.
Be steadfast, O my sorrowing soul,
  And learn to dwell alone!



New York City.

The American Dramatists

BY MONTROSE J. MOSES

[It is easy enough to find out about European dramatists, for biographical and bibliographical literature on the subject is abundant, but it is difficult to gratify what little curiosity we have about the men who are writing our American plays. Therefore, at the opening of the dramatic season this account of them will be worth reading, and, to some, worth filing for reference. Mr. Moses is dramatic critic of one of our popular magazines and the author of a book on American actors.—EDITOR.]

IT has taken us some years to realize that there is such a thing as an American drama. We have talked much about it, we have heard it overdiscussed by others, and all the while we have gone to the theater to witness foreign importations. But the reaction has finally come, and now there is some advantage for the manager to be able, on his posters, to display the type line, "An American Drama." This reaction began, tho we did not know it until now, with Bronson Howard; to him rightfully belongs the title, Dean of the American Dramatists. It cannot be denied that the period of foreign influx benefited our technique in writing for the stage; but that did not awaken us to the fact that we

Bronson Howard.

William Gillette.

could have a drama of our own. It was our national interests that gradually developed in us the desire to see ourselves reflected.

There is a temptation to enter into a detailed survey of this subject. We have a past history, previous to the advent of Mr. Howard. Yet there are many who would deny us even a present history. "Who are the American dramatists?" they ask.

We of the present generation remember many types of distinctive American dramatists. Most of them are living, and it is to these we must turn; however much we should like to discuss the rural dramas of James A. Herne and the plays of Charles Hoyt, space will not permit.

Bronson Howard still occupies an honored position among our playwrights of today. Born in Detroit, Mich., on October 7th, 1842, he received his education at Yale, and began life as a journalist, serving in various capacities on the New York *Evening Mail, Tribune* and *Evening Post,* afterward going over to the London *Pall Mall Gazette.*

During all this time his eye was upon the stage. In 1864 he made his first dramatic attempt, with an episode based upon "Les Miserables," and called "Fantine." Since that time he has produced "Saratoga" (1870), "The Banker's Daughter" (1878), "Young Mrs. Winthrop" (1882), "One of Our Girls" (1885), "Met by Chance" (1887), "The Henrietta" (1887), "Shenandoah" (1889), "Aristocracy" (1892), besides others. These

Clyde Fitch.

are, however, his most familiar pieces—all successes, and characterized by careful workmanship. His last play, "Peter Stuyvesant" (1899), was written in conjunction with Prof. Brander Matthews.

In most of the dramas thus enumerated, Mr. Howard, while seeking his color close at hand, worked on a broad canvas of human interest. He has defined American drama as an offshoot of English drama; he has gone further by affirming that the English itself is but a branch of that larger sphere, where emotions and passions are universal. His plays illustrate that the craftsman has learned that drama spells labor; that ideas expressed in the abstract and penned in a moment of inspirational frenzy must be pruned to fit the require-

ments of the stage. Take his "Young Mrs. Winthrop" and follow its close logic, its absorbing motive of home interests. Mr. Howard balances the primary idea with the essential construction; he was one of the first of our dramatists to look around him and draw material from close range.

Four names stand prominently to the front in a consideration of native drama: William Gillette, Clyde Fitch, Augustus Thomas and David Belasco. One knows the art of refined melodrama, the other has a clever mastery of the feminine viewpoint, the third possesses the quick eye of the newspaper reporter, who grasps the isolated bits of human action and makes use of them for themselves

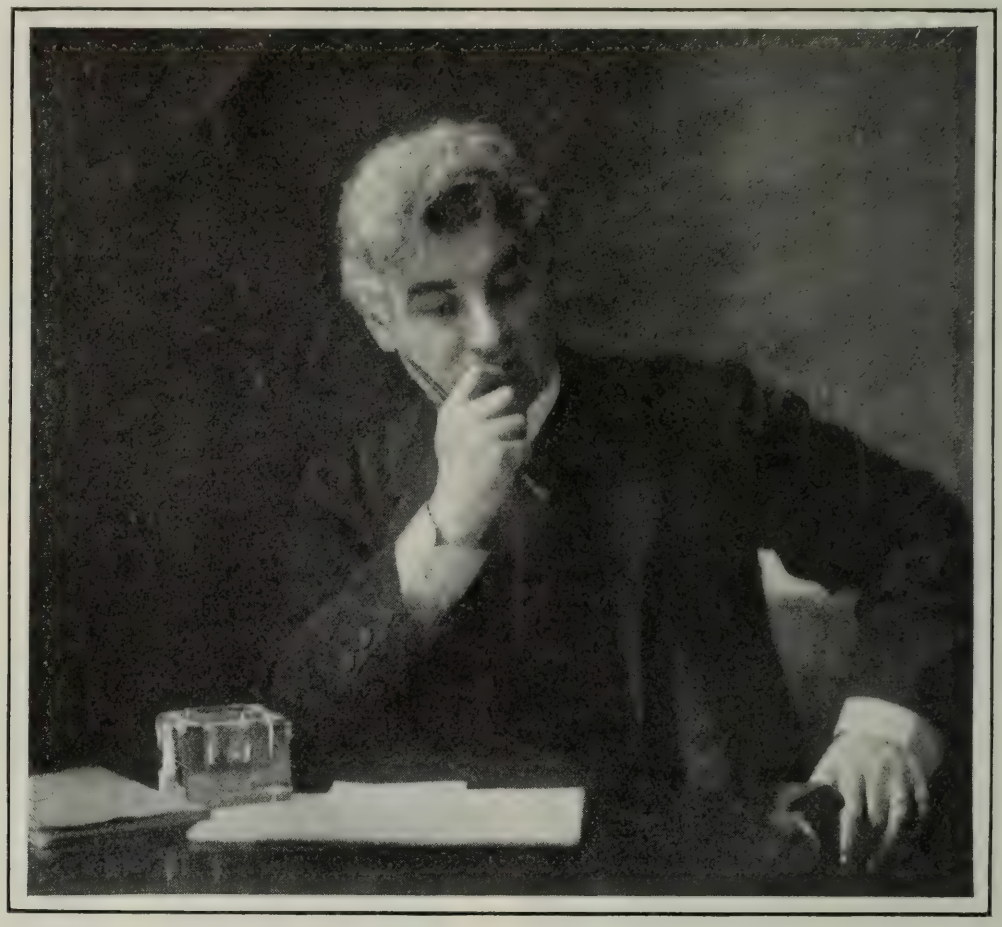
Augustus Thomas.

alone, while the fourth is a type of the adapter in his highest phase, of the stage manager in his most ingenious range. All of them have learned something from Mr. Howard.

William Gillette was born in Hartford, Conn., on July 24th, 1855, his family lineage comprising many noted names. His father was one time United States Senator and a man of keen intellect. Among his relatives he counted Henry Ward Beecher and Charles Dudley Warner. Young Gillette's education was carefully conducted; it seems that as far back as nursery days the boy owned his miniature theater and was quick in his mechanical inventions. Thus equipped, Gillette, as early as 1877, had received his theatrical training in the essentials of the stage. Ten years were thus spent.

His career as playwright began in 1882 with "The Professor," quickly followed by an extensive list of pieces, mostly winning long and popular favor. "The Private Secretary," "Esmeralda," "Held by the Enemy," "Too Much Johnson," "Because She Loved Him So," "Secret Service" and "Sherlock Holmes" are representative of his work. In the framing of dramas in which he is to act, Mr. Gillette constructs in harmony with his method. Upon the stage he is quiet, slow, dignified; his style is one of repression, of dry humor that is incisive and subtle. Such slowness, in the midst of rapid action, of tense situation, is peculiar to this actor alone.

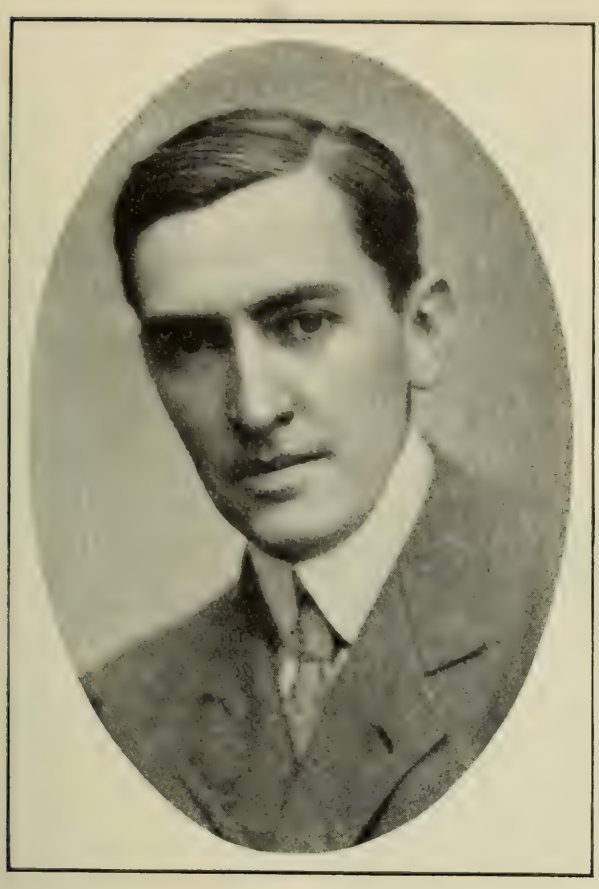
In writing, he aims to grip attention, to



Edwin Milton Royle.

work out a consistent plot logically. There are no problems based upon distorted humanity; he does not disdain melodrama. In his youth Mr. Gillette's interest was centered on history; it served him well when he came to write his "Secret Service," which has all the tone, the color, of Southern feeling during the war. He is a cautious dramatist; his plays are not yearly products; being an actor, his demand exceeds the supply.

This cannot be said of Clyde Fitch; he is a more rapid worker than Pinero, and he spends time on slighter material. A comparatively young man, yet his list of dramas is deplorably large. Born on May 2d, 1865, he comes of New England stock, tho New York is his native city. His education was completed at Amherst College in 1886, and soon after he started on his course, not as a playwright, but as a novelist, publishing "The Knighting of Twins," followed by several other stories.



In 1890, "Beau Brummel," a disputed product, saw the light. Perhaps Richard Mansfield, perhaps Fitch, more probably both together, produced this play, which Mansfield's delicate acting has made one of his most distinct *rôles*.

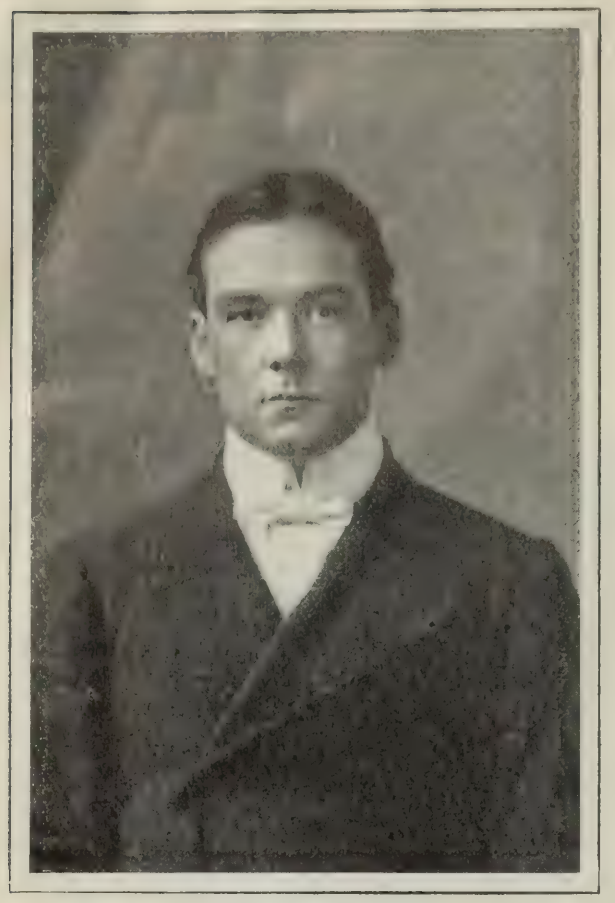
Mr. Fitch has adapted, translated and done much clever and original dialog. One would imagine him keeping a local notebook for the passing vagaries of current conventions. He is the author of "Nathan Hale," "Barbara Frietchie," "Captain Jinks of the Horse Marines," "The Cowboy and the Lady," "The Climbers," "The Way of the World,"

David Belasco.

"The Girl and the Judge" and "The Stubbornness of Geraldine." Each of these has been identified with a particular "star"; no dramatist has had more to say about the casting of his pieces than himself. He can write within the limitations of an actress—an actress, particularly, for Fitch's women are the ones from whom we obtain his most original remarks. More permanent, more substantial in idea are "The Climbers" and "The Girl With the Green Eyes." These have all proven unqualified successes. Often Fitch draws by reputation; were he not such a rapid producer of society dramas, he has it

George Ade.

within him to evolve more lasting plays. His season's contribution may be pleasing, may be filled with the wit that strikes us as familiar at the moment. But Mr. Fitch's idea is not predominant, is not insistent; he has many underlying motives in his plots hidden by the superfluities of feminine detail. If he sacrificed some of these, he could write a searching drama. Play writing is so easy a matter with him that he becomes careless.



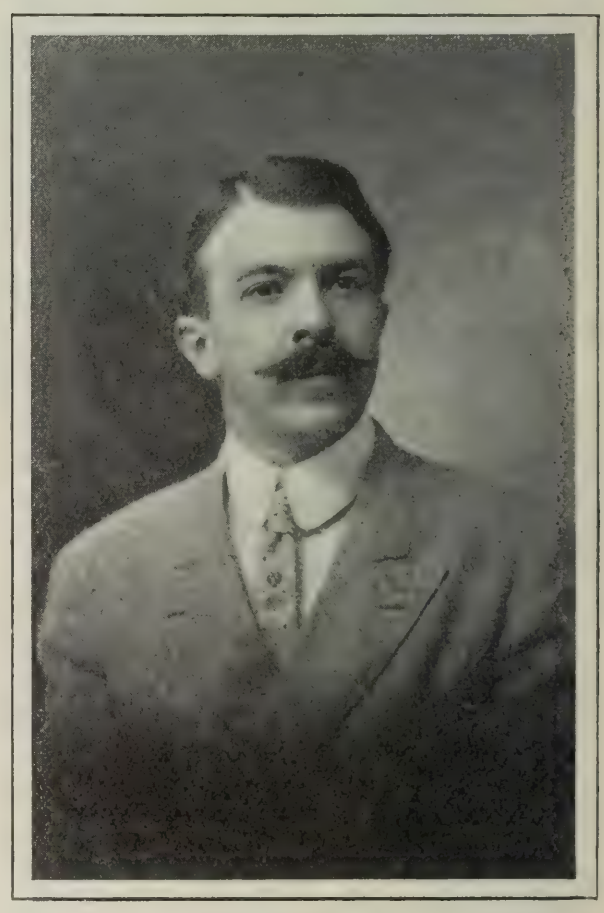
There is a danger in thus writing so readily. Repartee in dialog begins to pall when it leads to nothing, and within a few years Augustus Thomas has subjected himself to this criticism. Fitch is happiest in what might be termed his "boudoir" style. Thomas is the typical reporter dramatized. He began differently, wishing, no doubt, in such of his pieces as "Alabama," "In Missoura" and "Arizona," like Howard in "Shenandoah" and "Saratoga," to reproduce a life quickened by something more than smart environment.

In adopting the French conversational style, Thomas has, in default of the eternal sex question, drawn upon his newspaper observation, and produced bits which are excellent and clever, but which lead to nothing. We doubt whether such a piece as "The Other Girl," with its Broadway jokes and Broadway pugilist, could be understood outside of New York. Most of Mr. Thomas's plots are fragile, useless, slender threads to carry his humor. Such a comedy as "Mrs. Leffingwell's Boots" is an apt example of this. On the other hand, "The Earl of Pawtucket" and "On the Quiet" are farces of an excellent pattern. Meeting success with the former, thru the personal success of Lawrence D'Orsay's *thick* portrayal of an English Dundreary, Thomas produced another play, "The Embassy Ball," scintillating but flimsy, true wit which would have enriched a comic paper, but in no way touched the heart, and unhappily distorted American types.

Mr. Thomas has technique at his finger's end; he can size up character by flashes, yet he has not so far successfully imprinted upon our minds any subtle truth or any dominant type. He knows American life, as a reporter would understand it. Born in St. Louis, Mo., on January 8th, 1859, he was public-school bred; was page boy in Washington during the Forty-first Congress; studied law;

Charles Klein.

Richard Harding Davis.



became writer and illustrator for Kansas and New York papers; then rose to be editor of one of them. Six years were past in the freight department of a railroad, and when, finally, he was equipped with a knowledge of the law, he entered politics. His début as a dramatist was made when, in 1887, he dramatized Mrs. Burnett's "Editha's Burglar"; 1891 found him popular with "Alabama."

David Belasco's ingenuity is of a different order from Thomas's; it is a visualized product—in fact, he sees with the eye of the producer. He has emphasized the partial truth in the old saying: "Plays are not written; they are rewritten." He has learned his trade from beginning to end; following Augustin Daly's favorite advice, he has courted collaboration, with Henry DeMille and John Luther Long. He has not disdained securing plots outside of his own fertile brain.

Belasco's mechanics make possible new effects; in this respect he is like Dion Boucicault; his canvas is large and his pigments are of the latest invention. However much we may criticise the holes in his canvas, he does not work blindly; he is usually sure of his atmosphere. As manager, he has made actresses; he has furnished them with *rôles* to magnify their abilities. And all this work is not due to instinct alone; it is due to vast experience.

Mr. Belasco was born, of English parentage, in San Francisco, on July 25th, 1859, and his education was largely supervised by a Catholic priest. Graduating from college in 1875, the young man, with an early inclination toward the stage and the making of plays, was manager of a theater by 1878, the youngest theatrical potentate on the Pacific Slope. Here he learned his stagecraft; hewed out those rules and principles which were to serve him in his adaptations, dramatizations and translations.

In 1880 he came East, and was soon engaged at the New York Madison Square Theater to whip plays into effective shape. This he showed himself well calculated to do. "May Blossom" (1884) was one of the first substantial successes, and in 1887, after Belasco had joined forces with Daniel Frohman, he and DeMille wrote "Lord Chumley," and there

Rupert Hughes.

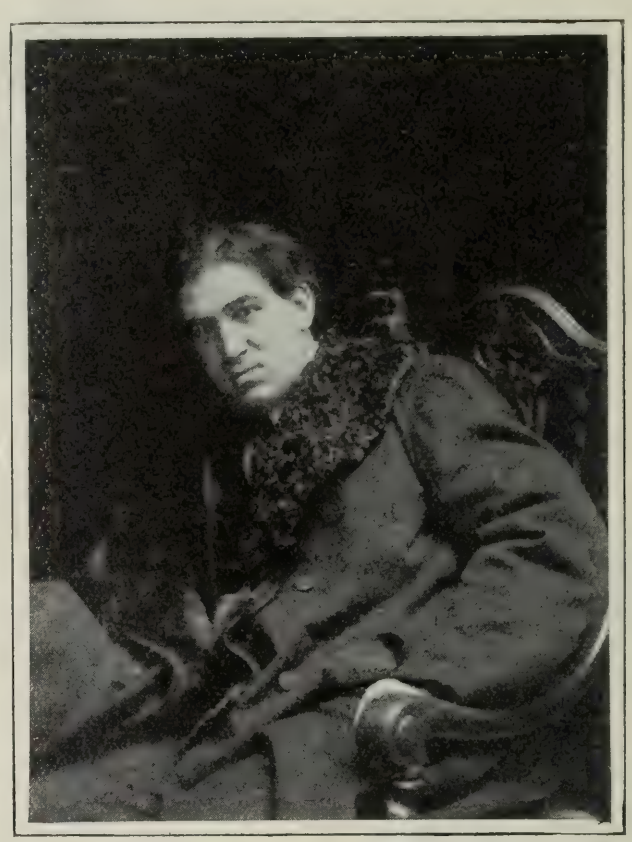
followed "The Wife," "The Charity Ball" and "The Girl I Left Behind Me," in conjunction with Franklin Fyles.

The familiar period of Mr. Belasco's career began with "The Heart of Maryland," and has included his version of "Zaza," his dramatization of Long's "Madam Butterfly," "Du Barry," "The Darling of the Gods" (with Long), "Sweet Kitty Bellairs," "Adrea" (with Long) and "The Girl of the Golden West." There is much melodrama in all of these, but of a picturesque kind. Some time there has been the brutal element, the gross element, the unessential element. He has the art of piquing curiosity, of turning scenic machinery to human account, of lifting one from the street of everyday existence to the mountain tops. He is most brutal, most purposeless, when he deals with emotion, passion of an elemental kind. His originality as an artist is greater than that as a dramatist.

Geo. M. Cohan.

As we turn to Fitch for the feminine, and to Thomas for the epigrammatic, and Belasco for the elaborate, so George Ade has developed a style of humor which, even before he became a playwright, was sufficiently conversational in his books to point the way to the stage. That road, however, came into being by the merest chance in 1902.

Ade was born in Kentland, Ind., on February 9th, 1866, his father being a prominent banker of the town. In 1887 the young man was graduated from Purdue University, and thereupon began his profession of journalism, which was to lead him to authorship. By 1890 he was on the Chicago *Daily News*, associating with Harry B. Smith, the librettist of "Robin Hood" and "Rob Roy"; Peter Finley Dunne, more popularly known as "Mr. Dooley," and Charles B. Dillingham, who, once the personal representative of Miss Julia Marlowe, is now one of the most prominent of the young managers. Ade's strides were determined and rapid. Around 1894 he became a member of the staff of the Chicago *Record*, remaining there seven years and occupying the desk made vacant by the death of Eugene Field. His "Artie" book, his "Fables in Slang," were written during these years. In 1900 he sailed for China, Japan and the Philippines. Thus far, the reporter was seeing life in various hues.



Then, on his return, a young Chicago composer, Mr. Wathall, asked Ade to write the book for a musical score he was preparing for an amateur club. But the actual work had not progressed far when Henry W. Savage appeared upon the scene, and Ade entered as a factor in the American drama with "The Sultan of Sulu." There have followed in quick succession "Peggy from Paris," "The County Chairman," "The Sho-Gun," "The College Widow," "The Bad Samaritan" and "Just Out of College."

All of these plays apply poignantly to American conditions; they constitute a fresh way of forcing the incongruous elements of "news" to act themselves visibly before an audience.

Take, for instance, the predominating object of "The Sho-Gun," which is a Korean opera: "It is meant," explains Mr. Ade, "to be an indirect treatise on the worship of titles, the formation of trusts, the potency of the American 'pull,' Yankee commercial in-

vasion, legal maneuvering, advertising enterprise and other subjects of timely interest."

The saving grace in our strenuous existence is our appreciation of our vagaries; that is why Mr. Ade's comic operas are as stimulating as good cartoons. Besides supplying the sinuous lines of color, they have ideas behind the detail. In this respect Mr. Ade is not so very far removed from Gilbert and Sullivan. He has defined American drama as one in which American characters are dealt with "in such manner as to increase our self-respect and give us a new insight into our characteristics as a people." And these general elements, which must dominate our plays, are a healthy tone, devoid of noise and vulgarity, and a clean story. At the bottom of a letter Mr. Ade once wrote these far-seeing words: "I think we are due to have a revival of melodrama for two or three seasons."

Channing Pollock.

Ade has characterized one of his fellow workers in decisive appreciation. "Just now," he writes, "we have coming along a young man whose Americanism is so rampant and exuberant in all his pieces that he is a delight to playgoers. I refer to George M. Cohan." This young man, whose "Little Johnny Jones," "Forty-five Minutes from Broadway," "George Washington, Jr.," "The Governor's Son" and "Popularity," are filled with colloquialisms, was born on July 4th, 1878, a patriotic day for an American dramatist. Ade's construction is closer; the actions of his plots not so broad. Mr. Cohan is more spirited in a timely fashion. He adheres to American topics for the American stage.

No one realizes more thoroly than Charles Klein, author of "The Auctioneer," "The Music Master" and "The Lion and the Mouse," the importance of the American idea. He sees the trend of our critical judgment, the scrutiny in the midst of our financial storm. With all the popular talk about him, Mr. Klein is not a recent discovery; he has touched upon American conditions before in earlier plays, "The District Attorney" and "The Honorable John Grigsby"; he has solved passably well, by his "El Capitan" and "Red Feather," the problem of making a comic opera entertaining. His apprenticeship has not been a barren one; he has bided his time while public attention has been centered elsewhere. He is now in the advance of that tide of so-called social-economic plays which will probably flood the stage. "The American public," he once said to me, "is guided by instinct along the lines of optimism. We are in process of adjustment with the classes; the very fact that we are finding ourselves constitutes drama."

In "The Lion and the Mouse" Mr. Klein takes a type of the modern capitalist who is ruthless of everything and of every one in his striving for ends. Against this stage Rockefeller he places a girl in love with the magnate's son, and and she it is who faces the lion in his lair. In the capacity of secretary she becomes essential to this octopus, and she soon possesses all of his secrets; this she does to save her father, whom he has crushed in his greed. She turns suddenly upon him; she calls him "blind to justice, . . . deaf to mercy, . . . incapable of human sympathy." "It is your vanity that has tricked you," she

cries. "You lay traps for yourself and walk into them; you compel every one around you to lie to you, to cajole, to praise, to deceive you. . . . I am going to Washington without your aid. I am going to save my father, if I have to go on my knees to every United States Senator at the capital. I'll go to the White House. I'll tell the President what you are."

This may be melodrama, it may be sentiment of a weak sort, but it is human, it is a stand taken—a large, boastful stand—against what every man and woman, with honesty, has thought should be resisted. The American drama must be full of this; it will be understood by us, though others fail to grasp it. England turned a cold shoulder to "The Lion and the Mouse."

Curiously, Klein was born in London, on January 7th, 1867, and received an English training. At one time he was censor of plays for Frohman. In that capacity he probably tested practically his present belief that "mere half-lights, 'shadowgraphs,' will not convince," and that "the denial of a higher truth in drama, as well as in real life, always creates disgust."

These, then, are the men we are apt to turn to when we mention the American dramatist. Has authorship contributed to the playwright's realm, as it has done in England? Richard Harding Davis belongs to the class. He combines the art of the romance writer with the experience of the international reporter. He has written successful novels and turned them into plays; instance, "Soldiers of Fortune" and "Ranson's Folly"; he has conceived good farces, such as "The Dictator" and "The Galloper," and they are all instinct with American humor; they are full of motion, and that is what our American public wants. Because of the care given to technique, we in America need have no fear of our native dramatists; we are learning the use of our tools, and the workmen are increasing every year. Among the women writers may be mentioned Madeleine Lucette Riley, who is the author of "Christopher, Jr.," and "Mice and Men"; Grace Livingston Furness, whose "Mrs. Jack" and "The Man on the Box" have proven popular; Lottie Blair Parker, who conceived "'Way Down East," and Genevieve Haines, with "Hearts Aflame."

Among the younger men of a pronounced talent are Edwin Milton Royle, a graduate of Princeton, and a post-graduate of Edinburgh, who, after many trials, reaped reward with "The Squaw-man"; William DeMille, whose father has already been mentioned, and who, scarcely from Columbia University, produced his "Strongheart," claiming to be the first of the college plays, tho Ade's "College Widow" and Richard Walton Tully's "The Strenuous Life" are rivals for the honor. Channing Pollock, from the realm of reporters, became press representative for a large theatrical firm, and produced his dramatizations of "The Pit," "In the Bishop's Carriage" and an original comedy entitled "The Little Grey Lady." To continue the list: Rupert Hughes, with "The Richest Girl in the World"; Paul Armstrong, with "The Heir to the Hoorah"; Willis Steele, with "The Firm of Cunningham"; Henry Blossom, with "Checkers," and C. M. S. McClellan with "Leah Kleschna."

Playwriting is lucrative, but it flourishes upon disappointment, upon the power of taking infinite pains; it has its many forms, but in each the essential theatrical requirement is construction, and it is this which proves the stumbling block to so many aspirants. But there is the equally important problem—the element which goes hand in hand with construction—Idea. And within the past decade we have been slowly awakening to the fact that the American dramatist will find that Idea in the hopes and passions, the struggles, defeats and victories which constitute American life.

New York City.

Solanum: Another of Our First Families

BY E. P. POWELL

Author of "The Country Home," "Old Farm Days," Etc.

THE potato family, or, as the Botany terms it, the Solanum, is one of five or six without which the human family would find it very difficult to carry forward its present strenuous evolution. These families seem to have been created or evolved at about the same time in biologic history. The whole Solanum genus abounds in plants possessed of toxic properties, but one branch has developed a tuber upon which more human beings are dependent than upon any other vegetable food—at least in the temperate zone. Its exaltation from a demi-poisonous and insignificant condition came about collateral with the first stages of internationalism.

The chronicle of one of the old Spanish travelers, published in 1553, says: "The people of Peru eat a tuberous root which they call papas." The Spaniards took this root to Spain, where it was grown as "the truffle root." The Italians very quickly adopted it into their gardens, and soon after the Dutch were cultivating it with much the same zeal that they displayed for tulips. Of its introduction into England, all that we are sure of is that, in 1586, Sir Walter Raleigh was growing potatoes in his Irish garden. Thomas Hariot, in his account of Virginia, names potatoes among the roots that were found growing there, saying that some of them were as big as a walnut, and others considerably larger. This Virginia potato seems to have been that which is now known as the Irish, while that grown in Peru is more likely to have been a sweet potato. Another writer, describing the esculents of Virginia, says that the potato root is thick, fat and tuberous, not differing much in shape from the sweet potato, except that the roots are not so great or long, while some of them are round as a ball, and others are oval, in the egg fashion, "of which the knobbie rootes are fastened with an infinite number of threddie strings."

Early in the seventeenth century Raleigh's plantation of potatoes had been repeated all over Ireland; but the farmers of England, moved by stubborn prejudice, and possibly in part by jealousy, decided that they would have nothing to do with the tuber. Shakespeare makes Falstaff imagine that the heavens are raining potatoes upon him — an imagination which could hardly have been delightful, unless the potatoes retained their original small size. It was as late as the time of Charles II, certainly it was after the Cromwellian episode, before the potato got any fair hold in English soil.

Gilbert White, writing in 1778, says that potatoes had prevailed in his district for about twenty years; and that this had been brought about "only by means of premiums," but that potatoes were then much esteemed by the poorer people, who would scarcely have ventured to taste them in the previous reign. Another writer speaks of them as a rather questionable product — possibly to become human food, "altho rather flatulent and acid for the human stomach." He recommends boiling them with dates, and thinks that such a combination would keep soul and body together, for those who are too poor to get anything better. It is probable that the storage of this esculent was very little understood, and so, being left in the light after digging, they became continuously less and less suitable for food.

The story of the introduction of the potato into France has been often told. The country people were so convinced of the poisonous nature of the tuber that they would not give it a trial. Its friends were actually mobbed for trying to introduce a food that would poison the people. The story goes in two ways. One of these tells us that King Louis XIV. wore potato blossoms in his buttonhole, and had potatoes on his royal table, until they became popular with the aristocratic classes. Another story recounts how a celebrated physician and philan-

thropist planted a field of potatoes, about which he placed a guard, with instructions to allow just as much thieving as possible. The poorer people, believing a vegetable that deserved such watchful care must be of great value, stole nearly the whole of them. In this way their prejudices were overcome, and a valuable esculent added to their dietary. The planting in Ireland went on so extensively that Cobbett declared it was destined to ruin the whole country. The people were turning aside from other articles of food so generally to the culture of the potato that when the rot set in they starved. This rot, which is so very difficult to control even at the present day, spread all over Ireland just before the middle of the nineteenth century. The whole world came to the rescue with shiploads of cereals, and yet it was one of the greatest disasters that ever overwhelmed any nation.

The sweet potato must not be understood as being a close relation of the common potato. It belongs in the morning glory family, which is much more notable for its flowers than for its edible products. Its botanical sub-name is batata, and it certainly glorifies even the gorgeous floral family to which it belongs. The crop in the United States amounts annually to over fifty millions of bushels, and every year it is coming more into general use. Unfortunately it does not adapt itself to that part of the Northern States which is included in the apple belt or the corn belt. It is a curious fact that the same sort of sweet potato is not popular both at the North and the South. In the North a dry and mealy tuber is preferred, but in the Southern States a soft and sugary tuber finds the preference. In Florida the Irish potato is planted in January, while the sweet potato is planted for the Northern market in April, altho it may be planted at any time of the year. It is often left in the ground, to be dug at any time that it is needed for the table. A Mexican species of the batata gives jalap, a medicine of which some of us have vivid recollections. However, the family will be known mainly by its roots of a farinaceous and saccharine sort, and by its splendid array of climbing and flower-bearing plants.

Gerarde, speaking of this esculent, says:

"The potato rootes are, among Italians, Indians, and many other peoples, like common and ordinarie meate, which no doubt are of mightie and nourishing parts, and do strengthen and comfort nature; their nutriment is, as it were, a mean between flesh and fruit."

He adds that from the roots may be made a sort of conserves, of a no less toothsome and wholesome daintiness than can be made of quinces and likewise "those comfortable and delicate meates, called in shops Morselle placentulae, and divers such like." These roots, according to his direction, will serve as a ground or foundation, upon which the "cunning confectioner or sugar baker" may work out and frame a large number of very delicate sweetmeats and other "restoratives." He describes the roasting of sweet potatoes in ashes, and tells us that when they are so roasted they should be infused with wine, poured upon them; while other tubers may be boiled with prunes and eaten with them; and still others may be dressed with oil, vinegar and salt—"but every man to his own taste and liking." Notwithstanding, "howsoever they be dressed, they comfort, nourish and strengthen the human body." The sweet potato used to be called skirwort, a name which belongs to an entirely different root.

Another member of the Solanum family would, I think, be released from our dietary with nearly as much regret as the potato; and the history of the tomato is quite as curious as that of its congener. Gerarde called it the "apple of love," and as love-apple it was known until very near the middle of the nineteenth century. It came originally from tropical America, altho I think that one variety was native of our Middle States. It still requires a warm soil and a sunny, open position, in order to develop its fruit to perfection. It began to enter into consumption rather freely about 1840. It was still looked upon with suspicion on account of its relationship, and for a long while the flavor and the rank odor caused it to get a very doubtful welcome on the dining table. The rank flavor of those days has been cultivated out, while the size and shape have been greatly im-

proved. The ideal tomato is free from wrinkles and from a hard core, which were the special characteristics of the earlier sorts. We should find our civilization very decidedly affected by the entire sweeping out of this delicious vegetable fruit.

Gerarde says:

"The apple of love bringeth forth very long, round stalks or branches, fat and full of ivice, traveling upon the ground, not able to sustaine himselfe upright, by reason of the tendernesse of the stalk, and alsoe the great weight of the leaves and fruit wherewith it is surcharged."

He tells us that among the leaves come yellow flowers, clustering together upon short stems, "where do come into place afire and goodlie apples, uneven and bunched out in many places, of a bright shining red, the bignesse of a goose egg, or a large shining pippin." He adds that the pulp or meat is very full of moisture —soft and reddish and very much of the substance of the plum. He adds that the whole plant is of a rank and stinking flavor.

The yellow tomato was not known until considerably after the red variety, and was known at first as the Ethiopian apple. In England they called it the pomodare. The yellow varieties are of milder flavor than the reds, and recently some varieties have been developed, like the Golden Queen, which are of exquisite fragrance and flavor. Skillful housewives are beginning to find out the delight of this golden apple, especially to use the slices mixed in the dish with those of scarlet flesh. Gerarde speaks of the golden apple, and calls it a "colde herbe, but not fully so colde as mandrake," by which he evidently means that the tomato is a cooling fruit for hot days. In Spain they eat these "apples" prepared and boiled, with pepper, salt and oil. Gerarde insists, however, that the tomato has very little nourishment, and is practically a poison to the human system.

Another Solanum of great value, and bearing its fruit above ground, is the egg plant. Good cooks have devised many ways for making this a delightfully appetizing dish, but with ordinary cooking it has very little value, either as food or as a delicacy. Gerarde seems to have known a good deal about the cooking of the fruit and how easily it could be spoiled. He says that the egg plant, which he calls "Madde or Raging Apples," has a round stalk of about 2 feet in hight and a good deal branched out; that it is set with broad leaves of a dark brownish-green color, among which appear the white flowers, sometimes purple flowers, looking like a star, with what he calls yellow plums in the middle. He tells us that the fruit is about as big as a swan's egg, white or brown, and containing flat seeds of a yellow color.

"The people of Toledo doe eat them with great devotion, being boiled with fat flesh, adding thereto some scraped cheese—which they doe keepe in vinegar, honie, or salt pickle all winter."

In Egypt and Barbary he adds that they eat these fruits after roasting them in ashes, adding oil, vinegar and pepper. He rather wishes that Englishmen should content themselves with meat sauce of their own country, rather than partake of sauce and fruit with such doubtful and mischievous qualities as he thinks belong to these Solanums. With this advice he gives a side thrust at mushrooms as well. On the whole, he would not have the egg plant discarded entirely, but likes to have it in his garden for the beauty of it, and the rareness, rather than "for any vertue or good qualitie yet knowne."

The egg plant is entering more and more into cultivation, and has been so nobly improved that it is likely to be in everybody's garden hereafter. Unfortunately it needs a very long season, and does not like the chilly days which are likely to occur in May. It thrives grandly in our Southern States, but I have not found it even there in very general cultivation. It requires about the same temperature as the tomato, and will grow on almost any soil that is rich and deep. It is hardly worth while to spend time on the plant in heavy and cold clay soil. The tomato never likes to be checked in its growth, and the egg plant is still more particular on this point.

In the real potato family—Solanum or nightshade—there are also flowers conspicuous for their beauty. Louis might well wear the potato flower in his buttonhole, for its prettiness alone. Much resembling this blossom are the purple clusters of the deadly nightshade—which

is also notable for its large clusters of brilliant berries, that are found on the roadside fences in wild ways, and occasionally along our more civilized highways. The dautro, or trumpet flower, is found not only in the Jamestown weed (or jimsonweed), but in many improved sorts, double and single, and very fragrant, brilliant yellows, competing with rich purples. They are grown in our gardens with excellent effect. We should hardly know what to do without another floral member of this family, which we have called the petunia—the old Peruvian name of petun, slightly modified. This glorious flower has proved itself capable of astonishing modifications, in color and in size, with some of the most delicate markings and pencilings to be found in our gardens. Not a few skilled gardeners have been proud to associate their names with improved sorts of this flower.

It is curious to find a close relationship existing between the potato and tobacco. This fragrant weed entered into consumption with almost equal promptness, and has more than kept pace, with the succulent root. Charles Lamb was not the only one among the old English writers to describe its charms, as well as the consequences of indulgence, in classical literature. It is the one plant that has all of logic against it and all of custom in its favor. In an ordinary company of twenty persons the non-users will surely be found in a minority. It fits itself to the strenuous life of Americans as a tonic or sedative. It furnishes no nutrition, but is claimed to calm nervous excitability and to restrain hunger. Nicotine is one of the most powerful of nerve poisons, and after producing convulsions kills the victim by failure of respiration and paralysis. Tobacco smoke, however, contains no nicotine, but does contain other substances producing the same effect. The cigaret victim finds himself subject to giddiness, faintness, and after a while to intense nausea. It seems probable that, as the evils produced by the use of tobacco become better known, and at the same time more pronounced in effect, that it will be eliminated from general use. It certainly is having a marked influence for mischief on the excitable American temperament. I have no room for anything like an adequate story of this pestiferous plant. I have never yet seen a young person who was not damaged by its use, intellectually and morally, as well as physically. My wonder remains that parents and teachers, as well as preachers, can be found who prefer self-indulgence to a manly example.

I have not entirely exhausted the beneficent and malevolent evolutions of this Solanum family. Other families of plants certainly contain a larger number of eatable products; but none contains a wider range of such very diverse products as this nightshade or Solanum—which I have preferred to call the potato family. Some of the more important members of this stock are of such recent development that we are warranted in believing that it contains other fruits or roots, that will in due time become effective agents in the evolution of mankind. Lordly as we assume to be, we are really the products of these other families that offer us their fruits for food or their leaves for healing.

CLINTON, N. Y.

In the Long Fight

BY GRACE SHOUP

ALL ages dead and splendid,
All masters that are past,
All hero figures vast—
By hate and scorn attended,
By Death and Time defended—
As with a bugle blast
Cry out to us, "Stand fast!"
All's well when all is ended!

Across the gulf of ages
We send our answering hail:
"O poets, heroes, sages,
We lift to you a beaker
Filled to the very brim;
The Lord's cause is no weaker
Than when you died for Him;
Though long the battle rages
The victory shall not fail—
Right shall at last prevail!"

INDIANAPOLIS, IND.

Child Labor and Family Disintegration

BY OWEN R. LOVEJOY

Assistant Secretary of the National Child Labor Committee.

WE doubt the efficiency of pity to solve the problem of child labor. A certain value is derived from pictures of the bent shoulders, the contracted lungs, the tired limbs, the sallow faces, the vacant eyes and the dwarfed intellects of those we are banishing from home, playground and schoolroom to the weary tread of our sweat-shops, factories and mines. But not all child laborers are "slaves." Those who denounce the evils of child labor in such generalizations as that "two million little, wan and dwarfed child toilers march in the wage slave ranks of America's industrial army" are a menace to this reform. Intelligent people, seeing many of these two million children who are not "wan" or "dwarfed," and who bear no other visible marks of slavery, discount the whole cry against child labor as sentiment. Many of the two million working children in America are between fifteen and sixteen years of age and are in occupations and laboring under conditions not injurious to themselves or to society. Not all glass houses employ little boys at night. Not all coal breakers are dense with clouds of dry dust. Not all telegraph offices employ little children to carry messages at midnight to houses of vice. Not all children in Southern cotton mills work through a twelve-hour night. Some one tells of seeing a little girl in a Southern cotton mill rudely awakened at night by a dash of cold water in her face. Homilies on child labor followed this incident, abounding in graphic descriptions of numberless little girls cruelly awakened night after night by splashes of cold water.

Nothing is gained by exaggeration; much is lost. It is enough that some of the two million are toiling all night in glass houses; that some coal breakers compel little boys of ten years to work in clouds of dust so dense as to completely hide the light and fill the lungs; that some little girls of eight years toil through a twelve-hour night in Southern cotton mills; that some of the little children of New York are crushed in body and soul in the slavery of sweat-shop labor. The truth is bad enough. Let the picture be drawn with simple accuracy, and we may hope to arouse, instead of sentiments of pity, the sense of social justice; an appreciation of the relation of this system to our social institutions. A demonstration of the loss to society, the injustice to the laborer, and the dwarfing of the progenitors of our coming generations, will be more effective than specific pictures of little children who suffer from the wrong.

The fact that the volume of child labor is increasing in America becomes especially significant when we consider the effect of the system upon that most fundamental of our social institutions—the family.

In the twenty years preceding 1900, while the population of our country increased 50 per cent., the number of boys betwen the ages of ten and fifteen who were placed in our shops and factories increased 100 per cent., and the number of girls between the same ages and in the same occupations increased 150 per cent. We have all reason to believe the increase since 1900 has been more rapid than before. New York official reports show an increase of 38 per cent. between 1898 and 1903. Pennsylvania shows an increase among factory children of 25 per cent. in the single year 1904. The boys working in the hard coal breakers of that State under fourteen years of age number not less than 12,000, and in the soft coal mines under sixteen not less than

10,000, tho thru defects in the State law none of these facts are officially known. Iowa has increased her army of working children 322 per cent. in six years. The census reports of 1900 return 24,000 children in Southern cotton mills. There are estimated today not less than 60,000 —many of them eight and nine years old and many of them working twelve hours at night every alternate week.

Whatever the historical causes of its development, we have come to regard the family—one father, one mother, a group of children to be fed, clothed and educated during the years that precede maturity—as the fundamental institution of our civilization and the glory, thus far, of all social evolution. One of the causes out of which the family grew has direct bearing upon our subject—that to which Professor Fiske called attention as his chief contribution to the evolutionary theory—the lengthened period of infancy. The evolutionary trend has been to prolong infancy and adolescence, and thus to launch upon society better individuals.

The tendency of modern industry is to reverse this process. Up to the time of the introduction of our present industrial system the home was the factory, and men and women shared the manufacture of the articles of the world's consumption. The consumer was then in large part the manufacturer as well. The child undoubtedly shared in the lighter forms of such industries, but the group with which he worked was most often composed of the other members of his own family. While his work had an economic value, even if the article produced was for home consumption, its chief value was that which we regard as accruing from manual training.

Under proper conditions the transfer of manufacturing from the home to the factory should have resulted in incalculable gain to the world, for women—no longer under the necessity of being the textile workers, the fuel gatherers, the soap and candle makers—would have been free to set in motion great influences for the intellectual and ethical development of the race. With the rapid utilization of such mechanical devices as lift the heavier burdens from human shoulders and lay them on shoulders of iron and steel, leaving the human laborer to guide the machine, and increasing the speed of production a hundredfold or more, the father in the family should have found his earning capacity tremendously increased. A rational expectation would have prophesied that he could not only singly provide maintenance and secure leisure for himself and the mother for higher undertakings, but that together they could prolong the years of education for their children, thus sending them into life better trained for social service.

What we actually find is the direct reverse. The ignorant, the weak, the inefficient, the little children are profitably substituted for stalwart men. The wife and the child enter the factory and other wage-earning industries, not to assist the father in earning a livelihood, but rather to compete with him and drag his wages down.

The words of a Southern mother contained a volume of economic philosophy of which she was quite ignorant, as she said to me a few weeks ago, "The cotton mill is a mighty nice thing, 'cause a right little girl can make as much money as a big one." The "much money" referred to was from 18 to 40 cents a day. This mother has six children working in the mill while she works both at factory and home. The father's precarious employment yields only enough to pay for his personal maintenance.

The result of this modern revolution in the problem of wage-earning has been a reduction of individual wages (compared with living expenses) from an amount sufficient to maintain a family as the unit in society to an amount sufficient only to maintain an individual as the unit. Thus we are developing that exaggerated individualism which seeks to destroy even the mutual interdependence of the home and hurls into the face of the baby that ancient edict, "He that will not work neither shall he eat!"

Viewed from the economic point alone we see its seriousness in the tendency to depress wages and dissolve the home into its constituent parts, laying on each the burden of struggle for existence. That many serious-minded laboring people take this view of the situation is evident from the growing reluctance of men

whose trades are being captured by ignorant and inefficient child labor to bring offspring into a world which cannot promise a life of the simplest comforts in reward for hard labor. Here is the real danger of that "race suicide" so vigorously condemned by President Roosevelt; for while the man of virtue and strength is deterred from propagating his kind because of the jeopardy in which his children would stand, the vicious and the ignorant, the physically unfit and the discouraged are not deterred by any such consideration, but, regardless of consequences, continue to propagate their kind and swell the proportion of those who will be from birth to death a heavy liability against society. We may ignore the needs of a single child —or assume that those corrective agencies established to gather up the wrecks from the social sea will care for him—but Nature is not mocked. If we maintain an industrial system which sows to the flesh we shall of the flesh reap corruption. Our danger, then, is a greater suicide of quality, than of quantity.

Both the intellectual and the ethical assets that enrich society—together with such social institutions as conserve and further develop these virtues—are believed to spring directly from the rich soil of the family life. The intimate contact of helpless childhood with tender motherhood and strong fatherhood yields in the parent that passionate devotion which blossoms in the richest fruit of sacrifice, and in the child those qualities of teachableness, obedience and filial love which—extended to social traditions, institutions and laws—can alone explain the accumulated wealth of community and national life.

But the positive benefits of home are not all. The family implies the segregation of a small group of children of somewhat kindred tastes, aptitudes and ideals, away from the distracting influence of larger social groups. Such semi-seclusion of the child is imperative if definite and constructive impressions are to be made on the growing mind. The menace to the intellectual and moral beginnings of childhood from early mingling in promiscuous crowds of people foreign to the home, is obvious. No eminence of industrial attainment can compensate a nation for the loss of the security, the inspiration, and the calm courage of that social institution pictured in "The Cotter's Saturday Night."

Shall we passively tolerate or actively promote an evil which destroys all this? Shall we deny to the parent the right, or excuse him from the obligation, to provide for the nourishment of the bodies and minds of his offspring? Shall we absolve the child from allegiance to the parent, by destroying at once his dependence and his respect, and shall we reduce the "home" to a mere rendezvous for the nightly gathering of bodies numb with weariness and minds drunk for sleep? Shall we deny to the child who must be a wage-earner the years required to prepare himself for even efficient wage earning and commit him for life to forms of occupation still so crude as to offer the most precarious employment, the most meager wages, and the hottest competition? And shall we further place this form of conscript labor in those fields now occupied by man to drive him out by the economic force of lower wages? Shall we say to the man who has gloried in the sweetness and seclusion of his home and in the tender plants of childhood springing up under his protection, "This is a luxury you cannot afford!" There are glass factories in New Jersey and Ohio that virtually refuse employment to men who will not promise to bring small boys to work with them. There are Southern cotton mills in which parents sign contracts to send all their children to work upon reaching a certain age. And there are little cottages in the coal region of Pennsylvania in which daughters—because they cannot work in the mines or breakers—are unwelcome, while the bond between father and sons is hardly more than a relation of economic convenience.

Doubtless many social evils threaten the integrity of the home, but when we remove the economic foundation on which the home stands—the ability of the parents to provide for their children during their growing period—we reverse the evolutionary process in human development and condemn the family to inevitable disintegration. This is what the American people are doing when they promote, or tolerate, the premature employment of children.

New York City.

Literature

Factories and Wage-Earners in America, England and Germany

SINGLE-HANDED and without State aid Dr. Shadwell has made a study of social and industrial conditions in typical districts in America, England and Germany with a thoroness, breadth and impartiality that have seldom been equaled in so large an investigation even by government commissions. The results are presented in two volumes of clear, interesting, forcible writing that are worthy to stand on our shelves alongside the classical works of Bryce and De Tocqueville.[1]

To Americans the main interest of the book is its candid, tho friendly, estimate of our civilization, especially as it affects the workmen in the industries that enter into international competition. The cotton and woolen towns of Massachusetts and the South, Pittsburg and the iron regions, Philadelphia and a few other places Dr. Shadwell compares point by point with the towns of Lancashire and Yorkshire, with the British Black Country and with the industrial centers in Rhineland and Saxony. While recognizing American superiority in richness of natural resources, in enterprise and inventiveness, in restless energy and in advertising skill, he finds some gaping joints in our industrial and social armor.

A chief test of the prosperity of an industrial region is the standard of life enjoyed by the work-people. Americans complacently assume that, judged by that test, their superiority will be evident. "Wages are so much higher here than the 'pauper labor' of Europe receives; our free institutions give so much better scope to the energies of the common citizen than do the 'effete monarchies' of the Old World, that any fair comparison will only set off our advantages." Alas for our patriotic pride, the facts do not justify it. Oddly enough, however, the city of Philadelphia, which has been branded politically as "corrupt and contented," is the banner city in other respects, since there, according to our author, the conditions of industrial life are better than in any other city he has visited.

On the other hand, Pittsburg and its environs, as a spot in which to live and raise a family, receives the following description:

> "Compared with the inferno of Pittsburg and the lesser but still more grimy and dismal hells of the Monongahela Valley—Homestead, Braddock and the rest—Sheffield is clean and Essen a pleasure resort.
>
> "If Pittsburg is hell with the lid off, Homestead is hell with the hatches on. There is nothing but unrelieved gloom and grind on one side of the fuming, groaning works where men sweat at the furnaces and rolling mills twelve hours a day for seven days a week; on the other, rows of wretched hovels where they eat and sleep, having neither time nor energy left for anything else. Only those who worship the god of gold can pay homage to the lord of squalor who sits enthroned on the Monongahela. The money made there carries a taint with it."

Dr. Shadwell does not write so bitingly because he is a sentimentalist; he has no Ruskinian objection to machinery, no thought that a factory chimney is a desecration of the landscape. He is simply estimating the factors that, in the long run, fix the strength and skill of the workman. What money wages can compensate for the workman's life in the Pittsburg inferno?

America has been gaining on Europe for some years in the competing industries mainly because her natural treasures of mine, forest and field are rich and her States are not filled up. Machinery is more ingenious and more usual in America than in Europe; the instinctive opposition of workmen, union and non-union alike, to its introduction has been less marked here on account of the better chance to get another job in place of the one taken by the machine. Factories, however, are not, on the whole, constructed as well nor kept in as good, cleanly order as they are in Germany. Factory laws, those safeguards of humanity against avarice, are more restrictive on the employer in England and more scientific in Germany than in

[1] INDUSTRIAL EFFICIENCY. *By Arthur Shadwell.* Two Vols. New York: Longmans, Green & Co. $7.00.

happy-go-lucky America. Not only are the laws less protective, but they are partially destroyed by "that general contempt for law" which "is astonishing" and "I am inclined to think is the most salient feature of American civilization."

The American wage-earner works longer hours than his English competitor and with more energy, tho much of the vaunted "bustle" is only "bluff." His output is therefore considerably higher. The German in similar industries works almost as many hours as the American (not more, as most men have supposed), but he works more slowly and carefully. His product is therefore less in quantity, but better in finish.

For his harder work and longer hours the American workman, that creature of all birthplaces except the United States, receives higher money wages than either the Englishman or the German; but he cannot buy any more with them than the former. His housing is terribly expensive, as is also the German's; and, while he lives more often than the Englishman in a six-roomed house, his frequent occupation of tenement dwellings more than balances that advantage. Tho British commercial cities hold the dirtiest slums in the world, the long lines of four-roomed cottages that characterize the truly industrial towns are the best dwellings in any country for the industrial proletariat. Then the Englishman's food, on the whole, as the most careful and voluminous comparisons demonstrate, is considerably cheaper than the American's, while his pleasures of sport, music, travel and reading cost much less. Contrary to widespread opinion, he has better free libraries than the American workman. English trade unions are the strongest; and (notable fact) while in Germany and America no employer was met but bitterly complained of the unions, in England their attitude was, almost without exception, friendly. On the whole, he concludes, the British workman with skill and character had better not leave home for the American El Dorado; it will prove a mirage.

Even the German workman, who will gain by coming more in money than he will lose in cost of living, will miss many good things. Poor as it is by nature, Germany has not only kept her place in the industrial march, but has improved it. How?

"The industrial population has not been left to carve out its own destiny, but has been guided and helped at every step. All sections of the community, from the throne to the workhouse have contributed something. *Laisser faire* or *Manchesterthum*, as they say in Germany, is dead; ordered regulation is accepted and applied with infinite pains by the Legislature, Government departments, municipalities and private citizens."

More details of this national, far-sighted organization are given in Mr. Dawson's book.[2] Agencies private, municipal, state, federal; agencies secular and religious; agencies political and non-partisan; agencies voluntary and compulsory; agencies multitudinous, generous, patient and patriotic—all combine to make the German nation a machine in which every living wheel and crank works efficiently. As State benefit in sickness and old age and as compensation for accident alone the wage-earners receive annually some sixty million dollars more than they pay into the funds. A very solid sum which is annually increasing! It contrasts vividly with the uncertain liability for appallingly frequent accidents in our country, where "the position of workmen in regard to compensation for injuries is not yet so advanced as it was in England before the Workmen's Compensation Act. With the position in Germany there is no comparison."

Despite the enormous natural handicap in our favor we shall surely lose our leading place among industrial nations unless we take a lesson from Germany and inaugurate a policy of national organization. "Every man for himself" means chaos; and chaos cannot compete with order.

The Dynamics of Living Matter*

Professor Loeb, formerly of Chicago, now of California, has the rare power of combining daring speculation with careful experimentation. He differs from most scientists of today in not being afraid to reveal his ultimate aims, and

[2] The German Workman. *By W. H. Dawson.* New York: Imported by Scribner's Sons. $1.00.

* The Dynamics of Living Matter. *By Jacques Loeb.* Columbia University Biological Series VIII. New York: The Macmillan Co. $3.00.

thruout his technical papers he scatters intimations of the wider bearings of his experiments. This makes his writings of much greater interest and value to the layman than those of scientists who restrict themselves to the technical description of their researches and the immediate deductions from them, so completely eliminating wider views and practical applications that one suspects sometimes that they have none to reveal. Professor Loeb not only describes his experiments on the effect of acetic acid on the segmentation of the eggs of *Strongylocentrotus lividus,* but shows in what way the results of these experiments may throw light upon the problems of human life, in which we are all intensely interested.

Consequently, the present volume, containing a survey of recent work in biology, may be commended, not to the specialist, for he knows of it already, but to the sociologist or the theologian—to any scholar, in fact, who is interested in the fundamental questions of life, and not afraid of meeting many words that he does not know and cannot find in the dictionary. For Professor Loeb does not write for the general public. Indeed, at times, under the provocation of absurd newspaper exaggeration, he has shown a decided irritability, what he would perhaps call a negative tropism, toward popular science. Nevertheless, he cannot prevent the public from manifesting an unwelcome inquisitiveness about his work, for he has come to be regarded as the leading exponent in this country of the newer theories and newer methods of biological science. It is evident that if he had his way he would reduce botany and zoölogy to branches of physical science. And he has done much toward getting his way by proving that many of the acts of living beings, once thought to be due to "vitalism," or even to consciousness and directive will, are due to physical or chemical causes. The turning or movement of plants or animals toward the light, and their hiding in crevices, he explains as automatic reactions. He never misses an opportunity to hit his two main antipathies—anthropomorphism and teleology. Professor Loeb's work in the fertilization of eggs without spermatozoa by means of chemical reagents has attracted much attention, and this gives an especial interest to the chapters in which he discusses the development of the egg and the new theories of heredity. The question of the determination of sex seems to be on its way toward settlement, largely thru the experiments of McClung and Wilson, who showed that half of the spermatozoa have an element absent in the other half, so sex is determined at a much earlier point than used to be believed. Professor Loeb points out three problems for biologists to work out. First, the artificial transformation of one species of plants or animals into another; second, rejuvenation, or the postponement of death; third, obiogenesis, or the artificial transformation of dead into living matter. The first is now being successfully accomplished; the second he believes can be best studied by experimenting in the fertilization of the egg; the third he not only regards as possible, but points it as a definite goal for "the younger investigators."

European Places and Peoples

THE *Medieval Town Series*[1] is a set of compact little hand-books containing each somewhat of the story of one of the most interesting old European cities. So far twenty of them have been published; some are in their fourth and fifth editions, one in the eighth. They are by English writers and seem to have been designed especially for the English voyager—that intelligent, leisurely individual who goes to spend his holiday at some place where he can have a comfortable inn for the evening and his long walks for exploration in the morning. Consequently the volumes are of good pocket size, with maps and indexes and reference notes, and they have many small pen-and-ink illustrations. A few typographical errors have been left, but otherwise the print, tho small, is easy to read.

The volume about *Paris,* by Mr. Thomas Okey, is a condensation of the same author's handsome larger book, "Paris and Its Story," plus a tourist's itinerary of the guide-book sort. Every

[1] THE MEDIEVAL TOWN SERIES. PARIS. *By Thomas Okey.* CAMBRIDGE. *By Charles W. Stubbs.* BRUSSELS. *By Ernst Gilliat-Smith.* New York: The Macmillan Co. $2.00 each.

city or nation has its central characteristic feature; that which serves for both Paris and the French nation, from Mr. Okey's viewpoint, is the Louvre Palace. In Roman times, when the city was a merchants' distributing station on an island in the Seine, the emperors had their provincial palace on the south bank; but when the French nation began to take form after the Dark Ages, with Paris as its capital, the king built his great fortress-castle just outside the city walls on the north bank, and this became the Louvre. Rebuilt, extended, wrecked at one time and another, it has been in succession the center and symbol of feudalism, of absolute monarchy and of revolution, and finally the show-rooms of democracy. In its history the foreigner reads the story of Paris and of France, and about it he draws his maps for the exploration of the present.

The *Brussels* volume, by Mr. Ernest Gilliat-Smith, is nearly all historical. Modern Belgium is not very attractive for the visitor except for what is left of its picturesque past. The story of Brussels, which draws with it that of Louvain and of the province of Brabant generally, is one phase of the long struggle of the northern merchants and artisans for religious and civil liberty, and the final subjugation of the Belgian states, while those of the Dutch became independent. The debt we owe to these old Netherland cities for our modern free institutions of America and England and France has never been well enough acknowledged. Mr. Gilliat-Smith, in this book and in his former one about Bruges, altho writing for the tourist principally, has summarized the main historical facts and has added some information not before known to the scholars. There are yet to be told the stories of Ghent and Antwerp, of Liège and Mons, and of the Dutch provinces.

The Dean of Ely, in writing about *Cambridge*, has, of course, written altogether about the university. Perhaps one curious in odd facts and scenes could find something else worth attention in the city and shire, but a visitor would not be likely to go far from the college gardens. After three chapters about the very early beginnings, Dr. Stubbs narrates the history of each college in the order of their founding, from Peterhouse, 1281, to the Science Schools, opened in 1904. The book is somewhat dry reading, rather a book of reference. There are maps of ancient and modern Cambridge, coats of arms of the colleges, and lists of college portraits.

The book about *Bruges and West Flanders*[2] is the combined work of artist and author. It is evidently the result of a holiday trip of the two companions in well-loved hunting grounds. Mr. Forestier's pictures—colored half-tone reproductions of water-color paintings—do not illustrate the text, nor does Mr. Omond "write around" the illustrations; the work of the collaborators is calculated rather to show two ways of looking at the same general subject-matter, the character of the Flemish people. "There is no part of Europe more wanting in what is known as 'scenery' than Flanders," says Mr. Omond; yet in the studies of market place and belfry and peasant type Mr. Forestier has found picturesque aspects of human nature to take the place of scenery. His pictures of the Flemish Country Girl, of the Grand Place at Furnes, and of the Quai du Miroir at Bruges, in spite of the limitations of color printing, are very attractive.

Mr. and Mrs. Bell, in their studies of *Picturesque Brittany*,[3] have made the same kind of book—with a difference. Their field has a wealth of natural scenery and of picturesque human nature as well. And in her account of these scenes Mrs. Bell has hit upon a happy style, uniting the description to a slight narrative of their journey around the rugged coast. Where it is possible to explain one's personal viewpoint in this way it always adds charm to the description, especially if one has occasion to express opinions about the character of a people. Mr. Bell's pictures, especially those of the Training Ship at St. Malo and of the Bay of Douarnenez, are quite as successful as are those in the other book.

Kenilworth, Coventry, Stratford-on-Avon, Rugby, Warwick Castle, Birmingham—these are some of the names that

[2] BRUGES AND WEST FLANDERS. Painted by *Amedee Forestier*, described by *W. T. Omond*. New York: The Macmillan Co. $3.00.

[3] PICTURESQUE BRITTANY. *Mrs. Arthur G. Bell*, with illustrations in color by *Arthur G. Bell*. New York: E. P. Dutton & Co. $3.50.

catch the eye as one glances at the sketch-map of the large, handsome volume on *Warwickshire*,[4] and suggest to the most casual reader the wealth of historical, literary and architectural material at the disposal of the author and artist. Good use has been made of it, and, if one gets the impression that everything worth mentioning in English history took place in this shire, he can be corrected by reading the other volumes of this series on English towns and counties. In the present volume there are 75 full-page color-type prints from water-color sketches.

In Tuscany,[5] by Mr. Montgomery Carmichael, has more of the personal element just alluded to; indeed, it is frankly a one-man's view. The author has lived long in the Tuscan cities and has learned to admire the Tuscan character. His book is a series of expositions of that character in various manifestations. First, there are some chapters about the temperament of the people in general; then descriptions of types, such as the priest, the cook and the coachman; then accounts of less-known localities—Portoferraio, Mont La Verna, Orbetello—and of the national sport and the national lottery.

The latest volume of this British *Highways and Byways* series[6] deals with the county of Dorset. The author has a keen eye for picturesque anecdotes and antiquities, and from every town and almost every manor, inn and farmhouse he extracts something of historic or literary interest. But all this archeology is borne up and carried along by an easy, flowing style, so it does not weigh upon the reader, and Pennell's pen-sketches come just at the right time. The literary gleanings of this district have a wide range, extending as they do from King Arthur to Tess of the D'Urbervilles.

The Heart That Knows. By Charles G. D. Roberts. Boston: L. C. Page & Co. $1.50.

The sweetness of lilac blossoms and of honey-laden clover, the beauty of still dawns and sunsets, the uplift of far-flung spaces, the strength of troubled tides, the salt of the sea and of tears—all these the reader will find in Mr. Roberts's new story of the shores of the Bay of Fundy. The characters are as well defined and as lovingly painted as the landscape, and that is much to say of a book whose author is a landscape painter and nature-lover in every fiber of his being. We may be sure of a satisfying background to Mr. Roberts's stories; in the present instance it is intimately appropriate to the moving drama enacted by a group of fisher-folk, farmers and sailors who inhabit the village of Westcock. The story is full of human interest. There was to be a wedding in the little church of Westcock, solemnized by the large-hearted and clear-headed rector. A ship sails out of the bay on a two-years' voyage, carrying the expected bridegroom and leaving a defenseless girl to scandal and disgrace without a word of explanation. Jim's readiness to believe evil of the woman who loved and trusted him, and who had a peculiar claim upon his consideration, would be incredible were it not that, as Coleridge told us,

> "To be wroth with one we love
> Doth work like madness in the brain,"

and we have King Lear and Othello to prove that jealousy and vanity form a rich soil in which treachery may plant dark seeds of mistrust. The female Iago is a slender, red-haired slip of a girl-demon, clever beyond belief. Incredible, too, it seems that a man should give implicit credence to a lie for twenty years and give it up in twenty seconds, with no other proof than the assurance of a "heart that knows." But we forget the improbability in the joy of the workmanship. The slow martyrdom of weary weeks of waiting, when, as poor Luella says, "there is nothing to *do*," has never been portrayed with more fidelity or poignant sympathy. In many primitive communities a betrothal is held as sacred as a marriage, the promise of faithfulness is so seldom broken, that a case like the heroine's in its rarity invites reproach and social ostracism, not so much that she has erred as because she has been deserted. The son's fierce championship of his mother thru his troubled child-

hood, and his quest of vengeance as a man are powerfully told, tho the scenes in far-off countries have neither the quiet charm nor the persuasive truth of the descriptions of the region about the Bay of Fundy.

Power Lot. By Sarah P. McLean Greene. New York: The Baker & Taylor Co. $1.50.

It is strange that in two novels that have come to our table this week, both of which are sure of a wide reading, the central theme is the restitution of a man's better self thru the power of a good woman's love. We have had a surfeit of bad heroines, and this may mark the first incoming wave of a reaction. There is not much else to note in the case of *Power Lot*, save a return to the earlier manner of "Cape Cod Folks," with plenty of very obvious drollery, of the Marietta Holley sort. Yet, in some mysterious way, the characters are real people, and we form a mental picture of them, which is badly caricatured by the cuts which profess to illustrate the book. *Power Lot*, like "The Fighting Chance," by Robert Chambers, has an attractive hero, usually described by the phrase, "his own worst enemy." Each has a charm of face and temperament not to be resisted by the serious-eyed heroines. Girls are so often warned never to marry a man to reform him that we wonder why these authors have disregarded the dictum. To be sure, a recent medical book dares the assertion that "20,000 men yearly die of alcoholism in the United States who might have been saved if doctors only recognized that drunkenness is a mental and not a physical disease." If this be so, the inhibition of the will by the hypnotism of love may not be so incredible a thing as it has seemed. "It is the only anchor that holds," says Mr. Chambers's hero, in "The Fighting Chance." "All the others drag." However the reader may decide the question as to the wisdom of Mary's step, one thing is made most clear—that the sunny temperament, flashing like a golden ray across a somber room, has an unspeakable attraction for the unusually serious. People will wonder why, as they wondered at Dorothea Brooke for falling in love with the slight-natured but sweet-tempered Will Ladislaw. But George Eliot was too careful an observer of human nature to make any essential mistakes, and she recognized, as does Mrs. Greene, the compelling charm sunshine has for a heart that has lain long in the shadow. So much of the psychology of *Power Lot* is true, and not without interest, whether the reformation of the hero be credible or otherwise.

A Whimsey Anthology. Collected by Carolyn Wells. New York: Chas. Scribner's Sons. $1.25.

Miss Wells has followed up her three other anthologies of "Nonsense," "Parody" and "Satire" with the present volume, which is filled with fantastic versification; acrostics, limericks, centones, monorhymes, palindromes and all the other amusing things that can be done with the English language, with the occasional assistance of other tongues. What strikes us most forcibly is the usefulness of the book as an argument for spelling reform. How anybody can read the following poem and not be moved to adopt the "three hundred words" and want to increase them to six hundred, we are unable to comprehend:

"As a farmer was going to plough,
He met a man driving a cough;
They had words which led to a rough,
And the farmer was struck on his brough.

One day when the weather was rough,
An old lady went for some snough,
Which she thoughtlessly placed in her mough,
And it scattered all over her cough.

While a baker was kneading his dough,
A weight fell down on his tough,
When he suddenly exclaimed ough!
Because it had hurt him sough.

There was a hole in the hedge to get through.
It was made by no one knew whough;
In getting through a boy lost his shough,
And was quite at a loss what to dough.

A poor man had a bad cough,
To a doctor he straight went ough,
The doctor did nothing but scough,
And said it was all fancy, his cough."

It is often said that complete phonetic spelling would render ambiguous certain words which are pronounced alike, but now spelled differently. That is true, but it is generally overlooked that it would, on the other hand, assist in distinguishing between others which now are likely to

be confused, owing to the fact that they are spelled alike. Even a moderate spelling reform would prevent such a catastrophe as the following ostensible monorhyme:

"'Now boys,' the farmer said, 'there'll be a row
If you upon the river go to row
When we've so much to do. The Chester sow
Has rooted up the lawn; therein go sow
Some clover seed; then help clear out the mow
In which to put the hay that we shall mow.

"'Tomorrow morn; when that is done I 'low
You may, if then the sun is not too low,
Go hunt and fish.' So to our work we bow;
Which done, we're off, with arrows, rod and bow."

Disenchanted. By Pierre Loti. New York: The Macmillan Co. $1.50.

Pierre Loti goes far afield for his finest effects. "The Icelandic Fisherman" of long ago, "Madame Chrysanthème" from the Island Empire, and now the *Disenchanted*, who are the imprisoned ladies of the Turkish harems. He now, like the author in this novel, returns to the scene of his first romance of 1879, "Aziyadë." Disenchanted is used in its old sense, of being freed from enchantment, of awaking from the long sleep of Islamic seclusion and ignorance without being allowed the freedom for which the awakening calls. No doubt the suffering Loti depicts is real enough and keen enough, yet it lacks poignance to the reader; the figures of the sad little victims of ancient customs and modern enlightenment are too shadowy as they flit thru his pages. Poor little gray ghosts of womanhood, shrouded in *tcharchaf* or *yashmak*, sold like bales of Oriental silks, slaves of the deadly monotony custom has for immemorial ages prescribed for well-born Turkish women! We are sorry for them, but their tragedies do not touch us as they should. Perhaps it is the very gorgeousness of the descriptions in which Pierre Loti has wrapt the forlorn, girlish figures; the picturesque appeals to him, and he cannot forget to note color, costumes, shafts of light on minaret and mosque, even when human destinies hang wavering in the balance and human hearts are bursting with anxious fear. And so we have marvelous pictures of Stamboul, full of wonderful hues, and as rich in woven fancies and arabesques of garlanded sentences as some rare old prayer rug of Khurdistan; but we have no agonizing feeling that we are looking on at a bit of real life torn, raw and bleeding, from actual tragedy. It is sorrow and pain seen thru a veiling *yashmak*, a tragedy in a dream. The beautiful life-prisoners ask very little in spite of their enlightenment and of the fact that they read Renan and Nietzsche in their originals:

"The maximum they claimed was that they should be regarded to a greater extent as thinking, free and responsible beings; that they should be allowed to see certain men in their homes, veiled, if it were insisted on, but to talk to them—especially when there was any question of marriage. 'With no greater concessions than these we would rest satisfied, we and the women after us, for at least half a century, till a more advanced stage of our evolution. . . .

That even so much has been hitherto refused them has made them "creatures of transition and anguish," and leads to many a heart-break and suicide. We wonder at the freedom of thought and of reading which has been allowed the high-born Turkish woman, so that she is today highly cultured. Perhaps their masters feel that if they guard the outward conduct closely it matters little about the free spirit; that if they bar the cage securely, the bird may exercise its wings within the narrow limits, not dreaming or not caring that the wings may beat against the bars until they are broken and torn. Altogether, *Disenchanted* presents a very new view of the Turkish women. To say in how far it is truthful must be left to those who are more familiar with harem life than we. M. Loti, like other sailormen, has, or professes to have, a sweetheart in every port, and he "learns about women from them." But the women of Japan have indignantly repudiated him as the interpreter of their thoughts and feelings, and it may be that the Turkish women, if they gain a voice, would likewise disavow any kinship with Djenan, Zeyneb and Melek. When the story was appearing in the *Revue Des Deux Mondes* it was hailed as "the 'Uncle Tom's Cabin' of the harem"; but there have been many Uncle Tom's Cabins of one thing and another, none of which have accomplished so much toward reforming the

evils they described as did their prototype. Evidently something else is needed to move the world besides a problem and a novel.

The Battles of Labor. By Carroll D. Wright, Former United States Commissioner of Labor. Philadelphia: George W. Jacobs & Co. $1.00.

The chief merit of these four lectures is that accuracy, especially in statistical presentation, which Mr. Wright always attains. But they contain nothing new either in fact or philosophy. In one respect they darken counsel. By classing as labor battles the insurrectionary uprisings of slaves in ancient days and of serfs in the Middle Ages, the author obscures the difference between political and economic struggles. An escaped slave, like Drimakos, who organized a band of outlaws in a mountain stronghold and forced tribute for years from the neighboring country, on condition that he regulated the robbery and suppressed guerrilla thieves, has no point of resemblance of practical value to Samuel Gompers. Rob Roy was not a labor leader. Jack Cade, with his demand that "We will that you make us free forever, ourselves, our lives and our lands," has no family likeness to John Mitchell, with his demand "We will that you bargain with us collectively and fix by mutual agreement the terms upon which we will sell you our labor." In view of Mr. Wright's general conservatism—his partial defense of the Taff Vale decision of the House of Lords, which the House of Commons has already repealed; his somewhat amazing declaration that "Communism is the basic element of all socialism," and his consequent matter-of-fact declaration that socialism is impracticable, and his mildness of objection even to "blanket injunctions"—it is of special interest to notice his allegation that "in some of the great historic strikes the employers themselves have instigated acts of violence"; that manufacturers have deliberately provoked strikes in order to get rid of surplus stock, and that old freight cars have been pushed by employers' agents into incendiary fires during railroad strikes in order to increase both the disorder and the bill for damages. Seldom is so damaging a charge made against employers upon so high authority.

A Handbook to the Works of William Shakespeare. By Morton Luce. New York: The Macmillan Co. $1.75.

Mr. Luce's volume is something more than a handbook; it is a criticism and an esthetic, too. Not only does it contain all the generally accepted facts with regard to Shakespeare, together with the general consensus of critical opinion, but it also propounds a number of original, or at least novel, ideas and dramatic theories of its own. As such may be mentioned the notion of *antitheta*, whereby the opinion of the real Shakespeare is to be caught between the extreme utterances of his characters—a modification of Pascal's doctrine of extremes; and the conception of Shakespearean tragedy as finding its dramatic principle exclusively in "the great law of moral progress." With some of these ideas it is, to be sure, difficult to agree thoroly. Tho usually sound enough where the extravagances of others are concerned—with regard to the metrical tests of the plays, for example, and the purely conventional explanation of the sonnets—yet Mr. Luce is not always so reliable when his own notions are involved. He is disposed to exaggerate Aristotle's and Dr. Bradley's attempt to estheticize and "demoralize" tragedy. And student-like, he is occasionally supersubtle, as in taking every airy echo of classical literature to be an indication of Shakespeare's conscious scholarship. But for this very reason, no doubt, the volume has an interest usually foreign to handbooks. It is suggestive, stimulating, and to the lover of Shakespeare, thoroly readable.

Rahab; a Drama. By Richard Burton. New York: Henry Holt & Co. $1.25.

Dr. Burton's *Rahab* is a pretty enough academic exercise. But it has about as much to do with existing conditions as has the megatherium. They are both extinct, drama of this order and megatherium; and the effort to revive the latter would be hardly more idle than one to revive the former. For, after all, call it tragedy, drama, or what you will, the nearest literary type at which this "play" aims has been dead for a century

or so. And the fact may explain the failure of most of our attempted literary drama, such as Mr. Phillips has been practicing so industriously. It is dead; and the best thing is to let it alone, as the French have done, and try something new.

Lucy of the Stars. By Frederick Palmer. New York: Charles Scribner's Sons. $1.50.

A painful story, as smoothly written as a funeral procession moves, in which the author snatches hope and happiness from every character, and draws the curtain upon his performance only when there is no possibility of any guardian angel's remedying their sad destinies. It is all very well done, but what is the good of doing such a bad thing well? Sensible, normal people will not care for a romance in which sorrows and griefs are the only heroes and heroines.

Literary Notes

IT is an inspiration to a business man merely to look over the September number of *System,* with its 328 pages of illustrated advertising and articles on commercial tactics.

....The Friendship Calendar Co. (New Britain, Conn.) publish a blank day-by-day leaf calendar, which can be filled with pleasant reminders and messages from a wide circle of friends ($1).

....An ingenious little allegory, written for children and profitable for grown-ups, inculcating unselfish giving, is *Thru the Woods,* by Katherine M. Yates. (K. M. Yates & Co., Chicago. 50 cents.)

....A volume of *Selected Lyrical Poems of Algernon Charles Swinburne,* published by Harper & Brothers at $1.50, contains all the poems of his first volume, "Laus Veneris," and thirteen others.

....When you are waiting for a train or have a chance to read aloud for half an hour to a group of friends on a picnic, you will find the Little Comic Masterpieces, published by McClure, Phillips & Co., just the thing, *Pigs is Pigs,* by Ellis Parker Butler; *A Good Samaritan,* by Mary Raymond Shipman Andrews, or *Breezy,* by J. George Frederick; they are all funny enough. (50 cents.)

....*The Pathological Aspects of Religion,* by Josiah Moses, is a dissertation for the doctorate at Clark University, made by a diligent collection of more or less important instances of the perversion of the religious instinct, such as mysticism, fetichism, ritualism, emotionalism, etc. The author has evidently read widely, but there is very little originality perceptible either in his methods or conclusions. (Sold by G. E. Stechert, New York. $1.50.)

....From President Roosevelt's addresses a number of paragraphs have been selected, covering the wide range of topics on which he speaks, and published in a small volume under the title of *A Square Deal,* by the Allendale Press (Allendale, N. J.). Education, race suicide, trusts, labor unions, immigration, the Monroe Doctrine, the negro problem and world peace are a few of the subjects dealt with. It is a convenient book for reading rooms and school libraries.

Pebbles

Oh, hitch your wagon to a star,
As Emerson suggested,
And thus avoid the trolley car
When traffic is congested.

JUSTICE BREWER, in speaking to the Yale alumni the other day said: "Now, Secretary Taft is the politest man alive. I heard that recently he arose in a street car and gave his seat to three women."

—*Baltimore Sun.*

"YES, that girl that was a-visitin' th' Perkinses surely was a good looker," says young Meddergrass.

"You got right well acquainted with her, didn't you?" asked young Corntossel.

"Well, I ain't one to brag. I ain't a Don Jewann or nothin' like that, but I surely had a stand in with that girl. I took her home from singin' school first week she was here, an' kept company with her every Sunday night regular after that. Hadn't been goin' with her more'n a month afore she let me squeeze her hand, an' just about a week afore she went away I hugged her—I sure did—when I was tellin' her good night."

Young Corntossel looks at him admiringly. Meddergrass continues:

"I really believe if I'd 'a' had another week I could 'a' kissed her!"—*Buffalo Evening News.*

THE public-spirited lady met the little boy on the street. Something about his appearance halted her. She stared at him in her near-sighted way.

The Lady—Little boy, haven't you any home?

The Little Boy—Oh, yes'm; I've got a home.

The Lady—And loving parents?

The Little Boy—Yes'm.

The Lady—I'm afraid you do not know what love really is. Do your parents look after your moral welfare?

The Little Boy—Yes'm.

The Lady—Are they bringing you up to be a good and helpful citizen?

The Little Boy—Yes'm.

The Lady—Will you ask your mother to come and hear me talk on "When Does a Mother's Duty to Her Child Begin?" next Saturday afternoon, at three o'clock, at Lyceum Hall?

The Little Boy (explosively)—What's th' matter with you, ma! Don't you know me? I'm your little boy!—*Cleveland Plain Dealer.*

Editorials

The Wind and the Whirlwind

THOSE that sow the wind must reap the whirlwind. We wonder if they like the harvest in Atlanta, Ga.

Those that sowed it were Hoke Smith and Clark Howell. Each wished to be Governor of Georgia, and each controlled a newspaper. A chief claim of their plea for support, which each made with strident tongue and screaming type, was his superior hatred of the negro. "If made Governor," said Hoke Smith, "I will have illiteracy laws past that will shut out every negro from the ballot and let in every white man." "No," said Clark Howell, "we can shut him out in a better way, with taxes; for your law will shut out white men. And did not Hoke Smith," Clark Howell continued, "when Secretary of the Interior under Cleveland, give a six-hundred dollar clerkship to a negro which ought to have gone to a white man?" And John Temple Graves, who had another paper, and would have liked to be Governor of Georgia, joined the chorus, in his own way, damning the negro, each of these three distinguished citizens of the capital city of the South vying with the others in cursing the negro, the freed negro, the negro that was trying to get education and wealth, the negro ambitious to rise and succeed, in the city famous not least for its negro seminaries and colleges.

And the negroes were angered. In one and another conference the cultured, self-respecting negroes of Georgia and the country expressed their indignation and made their demands for equal civil rights. The most peaceful among them, who had gone down from New York to Atlanta to praise the path of peace along which Booker Washington was leading them by the arts of industry and the acquisition of modest wealth, editors and bankers, came back incensed at the insults they had received, and ready to join with DuBois and Trotter in their Niagara movement. One of the best known of the negro bishops, leaving the train at Atlanta, passing out thru the main passageway of the station, was halted by a policeman and told that niggers could not go that way, but must leave by a side door. If intelligent men, accustomed to self-restraint, were thus incensed, what would be the effect on the worthless, reckless negroes whom Atlanta had educated in its dives and saloons, and who had been told that their chief passion was to insult white women? Then came the reports of attempted assaults by black fiends, some true, some imaginary, and the Atlanta *News* called on the white men to rise in Ku-Klux Klans and exterminate the race; and Clark Howell's paper demanded that the laws against vagrancy be applied to every black man that loitered about a saloon, and that he be sent to a convict camp. Indeed, had not one of the other millionaire candidates for Governor got rich out of a negro convict camp?

Then came the whirlwind, well prepared, faithfully sown. Two negroes were arrested on the charge of attempted assault. One escaped; the other, who was certainly innocent, was seized by a mob from the officers and killed. But that was not enough. The passion so carefully incited by vicious journals and eloquent ranters burst forth. The crowd was ready to kill, as their yellow journals had bidden them, offering a thousand dollars reward. So they attacked any negro they could find, riding in his Jim Crow seat in a trolley car, or walking home from work. They even broke into a barber's shop and seized and killed two negroes quietly plying their trade. No one knows how many negroes were killed, a dozen at least, probably a good many more, and they were wounded by the hundred. It was as bad as a massacre of Jews in Russia, as senseless and as barbarous—and we ask our President to protest to the Russian Government against Kishinef, Bialystok and Siedlce!

And this is not the end of it. The disturbances and riots continue. Of course they do. They are provoked. A hundred negroes met Monday night in their lodge room to protest, and they talked bitterly. It was reported to the police, and they came to arrest them, and there

was shooting and killing on both sides. There had been the day before a meeting of white people to protest, and they had not been disturbed by the police; but that negroes should meet and talk was "seditious," and that they should arm themselves in defense was dangerous, altho one shop has sold $16,000 worth of arms and ammunition to white men.

What will be the end of it all? We cannot guess, but we know that to their latest day of life a pall of shame and horror ought to rest on Hoke Smith, Clark Howell, John Temple Graves, and every other man who has stirred up this race hatred, violence and crime, and brought this ringing curse on Atlanta and the disgraced State of Georgia.

A People's Lobby

WHATEVER may come of the "People's Lobby," which Washington dispatches have been telling us about, the idea that it embodies is one of the essentials of a republican system of government. Not only is eternal vigilance the price of liberty, but the vigilance must be systematic and businesslike as well as unremitting. Personal and corporate interests do not leave to chance the legislation or the administrative policies which they happen to care about. And the people that would hold its own against the attempted encroachments of privilege must be as alert and as thoro in both aggression and defense as its enemies at all times are.

There is, however, nothing so very new in the most recent scheme that has been proposed. It is, of course, interesting, if true, that men like Mark Twain, Lincoln Steffens, William Allen White, John Mitchell and Benjamin Ide Wheeler are willing to give time and energy to the work of watching Congress and protesting against the things that ought not to be done. If they really do what their abilities and public reputation qualify them to undertake, they will prevent an enormous amount of evil on the part of the unpatriotic and the greedy economic interests that care nothing for the reputation or the future welfare of the country which harbors and protects them. It is not to be expected, however, that these particular men will in person stand about the corridors of the Capitol, to buttonhole representatives, or to admonish Senators that their "treason" is bringing them to humiliation. They will have to work, if at all, thru some organized machinery, and in so doing they will naturally follow methods already well approved.

For many years past we have had a people's lobby here in the State of New York that has rendered a really splendid public service, which the public ought to be better acquainted with than it is. The State Charities Aid Association, organized to overlook the administration of the various charitable enterprises that are maintained out of the public revenues, long ago discovered that it must constantly watch at Albany against legislation designed to extort boodle for politicians from the provision made for the relief of suffering. Entering upon this undertaking, the association has steadily increased its activity in guarding public interests, and it has received the earnest co-operation of other disinterested public bodies, especially the New York Charity Organization Society. Could a complete record be made and published of the services which these organizations, in their capacity of self-constituted people's lobby, have rendered to the taxpayers and humane citizens of this Empire State, it would be a magnificent showing. A similar work and record have characterized the Indian Rights Association in Washington.

The example which they have set has been widely followed, and it is not too much to say that today the agencies for watching legislation in behalf of the people are extremely well organized and extremely efficient. The various committees of the City Club and of the Citizens' Union are conspicuous examples of these most useful voluntary public functionaries. In other States, the idea and the method have been adopted, and there is every reason to expect that a very few years will see in every commonwealth of the American Union a multitude of efficient organizations for doing this most necessary part of the people's work.

Yet, after all, the people themselves must be, in the last resort, their own watchers of their own interests. They must know what their interests are; they must know what the hostile interests are;

they must know the attitude, the records, the associations of their public men. They must be in a position to make the life of the politician a strenuous one, and circumspect. This means both increasing popular intelligence and increasing popular devotion to the public service.

Increasing popular intelligence here in America we probably can count on. Can we as confidently count on the disinterested public service of each average citizen? It is easy and natural for the man who has no ambition to hold public office to fall into a way of thinking about his own personal relation to public affairs which seems to absolve him from active participation in them. He is likely to feel that if he goes to the polls once a year and casts his vote he has done all that is required of him. But voting is in reality only a very small part of the public duty of every American citizen. A far larger part consists in the obligation to read and to think about public affairs and public men. It is each American's duty to keep himself informed; to know what questions are up; what legislation is proposed; what men are backing it, and why; what legislators will stand for it, and what there is "in it" for them.

We fear that, measured by these requirements, scores of thousands of American citizens are not yet doing their whole public duty. Yet, on the other hand, we see a thousand signs that the popular interest in public affairs is growing day by day. We confidently believe that the number of voters who make the intelligent watching of public affairs as much a part of their daily lives as their business engagements are is destined to grow with wonderful rapidity. And therein lies the hope of our democratic republic.

The Red Devils

THERE has been a week of racing with automobiles; racing over a long course to decide what machines of American make shall try for a prize against foreign machines, and every day has brought its accidents, altho the most skilled chauffeurs were managing the best made machines. Accidents were inevitable. They cannot be helped under the conditions if the machines are made to go over such roads as we have, even the best, at a speed that would be unusual for a locomotive on steel rails from which the flanges will not allow the wheels to escape.

The conditions of racing with automobiles are essentially dangerous. The wheels are of rubber, liable to be pierced at any moment, cut by a bit of glass or sharp stone, in which case the machine will "skid" and run into the most convenient stone wall or side of a house or telegraph pole, and very likely kill the riders. There is a multitude of such cases. Or the machine may actually turn turtle at 50 miles an hour. Not long ago one of the young men of the Gould family, at Lakewood, going at not the most excessive speed, ran one of his wheels into a pile of sand in the road, which suddenly whirled the machine around and over and nearly killed the rider.

Then there is the danger of running over a dog or a man. Whichever it may be, man or dog is killed or seriously maimed, and very likely the machine is broken and the occupants injured. It is not strange that cities and towns forbid such reckless and dangerous speed.

In its proper place the automobile is a magnificent invention. We hope for the time when it will replace horses, at least for city traffic. But the public streets, where men and women and children walk and play, is no place for fast automobiling. And yet men have such a mania for seeing what they can do that they will disobey the law and keep a sharp eye to see what policeman is around, so that they can exceed the legal speed. And very many of them pay no sort of attention to pedestrians crossing the street, but think if they toot a screeching horn they can forge along and the pedestrian must look out for himself. It has been proposed that the horn be forbidden, nuisance that it is, and then the rider will understand that the streets belong to those who walk, and that he must take the responsibility of avoiding them.

The man who rushes his machine at top speed must give his entire attention to it. He must keep eyes and thought at extremest tension. He can enjoy nothing of the scenery; he cannot talk to his companions, whose lives are at his mercy, and who are nearly as anxious as him-

self. He has the automobile face. The only satisfaction he has is the bare conquest of space and time. He has gone at the rate of 40 or 50 miles in an hour, and that is all. He has done, at infinite labor and expense, what a swallow can do with utter ease.

We make no complaint against automobiles, much as those hate them who do not own them. They are bound to revolutionize traffic. They are cleanly and comfortable; the future is with them. But leave speed for its own steel rails, and then let us have no grade crossings. The common roadways are for common people at common rates of travel. We would have automobiles that run on our country roads gaged so that they cannot go at a rate of over 15 miles an hour at the extreme, and probably 12 would be better and safer. The automobile of the future will not be a dangerous machine. The public will get used to it, just as now we are used to the bicycle. We use the bicycle now for business or pleasure, and not for a racing speed. Men do not bend over and rest on low bars, as they did; they ride to enjoy themselves and at a comfortable rate. It will be so with the automobile. Now it is a fad of gilded youths, and they must race. In a few years the fad will pass; everybody will have a machine, and it will be used for business and pleasure; and only on reserved tracks will those race who have to labor to waste their time and money. May the time soon come when those who ride an automobile will be gentlemen, or at least gentlemen enough to understand that they do not own the roads, and that pedestrians have the first right of passage.

Setting up Housekeeping

Now that the brides and grooms are returning from their wedding journeys, a word of advice: Do not keep it up, the journeying pastime. It is all very well for newly married people, but we have too much of the migratory habit in this country when there is no honeymoon aberration to excuse it. Settle down somewhere and stay there. Have a home; do not "board." Boarding is an unnatural, abnormal existence, which tends to make people selfish and exacting. A husband who holds his landlady ruthlessly accountable for his comfort will be more exacting of his wife later on, when they begin to keep house for themselves. He should be taken in hand during the honeymoon period, when it is not his nature to find fault with anything, least of all with the flushed, anxious bride who presides with such charming diffidence over her own culinary imperfections. For once a man gets, say the table-growling habit, the most painstaking wife will find it hard to please him. And "boarding" is attended by many evils for the young wife. In the first place, it deprives her of the right occupations and provides her with leisure for the wrong ones. Now, a woman, even the "advanced," civil-service, hoplite type, is usually overwhelmed with domestic inspirations and aspirations so soon as she is married, and thus normally fitted to life, and these home-making instincts outlive in a boarding house. Besides, if the husband works, the wife should not consent to be idle, like a mere mistress, but she should be his help-mate and home-maker. That is as much her duty as it is his to provide the means.

And, having eschewed "boarding," do not "live with father and mother" when you can avoid doing so. It may be natural for them, but it is not for you. Your particular business is to pitch a separate tent and start a family of your own, not to go on adding to that of your father-in-law. This lazy, shiftless habit of remaining with the old folks when it is unnecessary cannot be too strongly condemned. For one thing, it is discouraging, undignified. The young husband is not entitled to the honors and distinctions of his new state. He cannot even sit at the head of the table, or pay the grocer's bill, or order the plumber out. And why should a young wife wear herself to a nervous frazzle trying to fill her mother-in-law's place, even if she gets the chance to keep house that way? Where is the glory? After all, it is not her place. Again, left to yourselves, you may conceal some old faults from one another till you outgrow them, but in the old home they know them and are ready to proclaim them as a joke any day. But it will not be a joke for John to discover that his sunshining Bessie had the reputa-

tion for being peevish at the breakfast table, nor for Bessie to learn from John's younger sisters that he was wont to come in late of nights before he was married. Thus shorn of the reputation for perfection, they both have less incentive to outgrow old faults. And that is not the worse danger. Parents know little enough about rearing their own children, and they are never disposed to practise even that little upon their grandchildren. They have lost heart for disciplining youth by that time, and for this reason it is important to avoid the enervating effect of their grandparents upon your children.

In short, it is best to keep house, even if you cannot afford one in "the most desirable residence portion of the city." You will find many of the best-bred people there to keep you company. And having begun, there are certain rules to observe in order to keep the whole thing from tumbling about your ears, for many a young couple have started bravely and ended sadly. It may be that the wife appealed too often for admiration in her new adventure and deserved it too little. Women are curiously vain in these ways. And she may have made the mistake of trying to satisfy her husband's appetite with too many delicacies on the table, and not enough homely, substantial food. Men are really very primitive in this particular. You may spoil them, help them acquire critical, epicurean palates by offering them salads, ices and pretty feminine confections, but they can only be satisfied with common, everyday food—bread, meat, beans, etc. When her husband's stomach turns against this kind of dishes well prepared, the young wife may know that there is something the matter either with his morals or training. He is not a normal man. However, she is much more likely to err on the other side—insist upon his eating "lady cabbage" when he has been accustomed all his life to having it seasoned with bacon. And a little bacon does not injure a man. He has no complexion to preserve. Let him have it. And make your points upon more important matters, if you must make points, altho this is itself a bad practice. That man is best governed who does not know that he is governed at all.

And even when every other difficulty has been happily adjusted, sometimes the young couple tire of the home because the evenings are so dull. They are not sufficient company for one another. The husband, wearied by the long day's strain, reads or dozes upon the sofa. The wife is offended at such indifference and the husband is shocked because she cries so easily. Let her cry. The shedding of tears rarely hurts a woman; usually she feels better, refreshed, baptized afterward. Besides, it need not be so dull as it often is. Almost any man will lay down his paper, forego his nap, for a "lark" with his wife. This is an important suggestion. Women are not disposed to go often enough on larks with their husbands. And in case he is even grouchy about it, you have only to propose going alone, and sticking to the adventure, in order to bring him to terms. Bear this in mind and you will have a happy home—that man is a wild animal who can never be wholly domesticated, who is amenable to tact, but not to attack, because the latter awakens his wildness and the former allays it.

But it often happens, even when the domestic arrangements of the home are perfect and the husband and wife companionable, that they still tire of the home. This brings us to the deepest trouble of all. Why did they make it—the nest—finish and line it so prettily? Back of the whole effort lay the subconscious expectation. They did not fully realize the fact, but they were looking to some ultimate, paramount reason for the need of a home. And when the years past without bringing the child, they get the futility of the whole thing. To be sure, they said they did not want children, but they needed them in every selfish hour of their selfish lives, in every primly garnished corner of their lifeless house. Verily, they have had their reward; days and nights of leisure and pleasure which the child's coming would have filled with labor and care. But now the poor thing they made, the house they built, the hearth they brightened with holy fire, has no meaning, is without continuation, a mere matter of dust and ashes made into a certain shape. And so one last solemn word of advice: Do not keep the child out. Else there is no right reason for marriage and no particular

occasion for a home; that is, no lofty, satisfying reason for one.

Proper Names

The Pure Food Law passed by the last Congress placed upon the Secretary of Agriculture an exceedingly difficult and responsible task—that of preparing the definitions and regulations under which food shall be manufactured and marketed in the future. The questions involved are so complicated that the rulings must be more or less arbitrary, and will at the best involve the destruction of valuable trade-marks of many industries, and change the currents of commerce to the extent of millions of dollars a year.

In their desire to do the fair thing the three National Food Commissioners, headed by Dr. H. W. Wiley, have just finished an open hearing in New York City, during which they patiently sat thru a week of sultry days in a room crowded with anxious-hearted manufacturers, importers and dealers of drugs, foods and drinks, but whether the manifold and contradictory advice they received, the complaints they listened to and the hypothetical questions thinly veiling real cases that were presented for their decision, have reduced the burden of their perplexities cannot be told until the revised rules are published.

One of the most difficult points they have to settle is when a proper noun becomes a common noun, a question that grammarians have never been able to agree upon, even when there was not a cent involved in their decision. The Secretary of Agriculture has ruled that geographical names must be used on cans and packages to indicate the place where manufactured, and must not be used to indicate quality or kind. The first requirement is hard enough to comply with, for it interferes with two established customs —branch factories and local labeling. For example, a manufacturing chemist may have distilleries in a dozen places for his essence of peppermint, and the products bottled from the same barrel. If he does keep them separate and label them differently, to his own disadvantage and the advantage of his rivals, nobody can tell by analysis of the product whether the labels are correct. Besides, our friend the druggist on the corner can no longer enjoy the pleasure of seeing his own name as manufacturer on the labels of his bottles.

The second stipulation, prohibiting the use of geographical names as adjectives modifying the name of the product, is still more upsetting. We can no longer speak of "Bologna sausage" unless it is really made in that Italian city. We can only speak of it as "Bologna style sausage." The only legal "Frankfurters" are those from Frankfort, and "Westphalia hams" will henceforth come only from Westphalia. This is about as far as the Commission have gone yet, but it is evident that the principle they have decided upon is far-reaching in its application.

It is hard to tell where this rectification of names will end. Obviously, the baked beans and brown bread that have made Boston famous will have to be confined to that city, altho imitations, so labeled in long primer type, can be made elsewhere. We must go to Saratoga to eat "Saratoga chips," altho our menus can read "chips à la Saratoga." But, of course, they cannot claim to be made from "Irish potatoes," unless there is a certificate of importation. The only safe way will be to call them "spuds."

You may plant "Concord grapes" in the State of Delaware, but if you want to ship them across the State line they must go as Delaware grapes. We must in the future depend upon the city of Concord to supply us with grapes of that name. Sardines must come from Sardinia. The young and frisky herring off the coast of Maine may sport as he will; he is no longer liable to be taken for a sardine. All the "Limburger cheese" at large must go back to Limburg, even if it makes that little city uninhabitable. "Vienna bread" can only come from Austria, and "home-made bread" must be true to name, regardless of bakery laws. "Cologne" must, of course, come from the city which gave it the name; the Commission will probably not venture to decide which of the Farina families is entitled to make it. The little corner of the Arabian peninsula cannot supply all the "Mocha coffee" that the world needs, and there must be a "Greater Little

Neck" if we must get our clams from there. Who knows but purists in language will require us to stop calling our tableware "China," and allude to it as "porcelain, Chinese style." "Worcestershire sauce" is confined to Worcestershire. We must drive back the Hungarian gulash to Hungary, the Welsh rabbits to Wales and the Irish bulls to Ireland. What shall be done with Australian ballots when they are not made in Australia, and with Jeffersonian democracy which is not true to name, must be left to the decision of some future commission.

No misleading pictures can be employed on labels. "Canned chicken," as now ordinarily made, must bear a picture of a calf or none. The beautiful colored prints of grapes, currants and strawberries will disappear from the tumblers of gelatine jelly and casks of apple jam. And doubtless the picture of the devil will be banished from the cans of deviled ham.

In the case of alcoholic liquors, geographical names have been most extensively employed and most completely legitimized by long usage. But henceforth more than the smell of peat smoke will be necessary to authenticate "Irish whisky," and "Scotch whisky" will have to prove its identity, a requirement that would be a blow to literature if extended to Scotch dialect novels. Sauterne and Bordeaux must go to their own place. So must Burgundy, even tho it involves the reconstitution of the extinct dukedom. When it was announced that the sparkling wine made by forcing in carbonic acid gas under pressure must hereafter be labeled "carbonated," and not "champagne," as now, the makers of "champagne" by fermentation in the bottle openly gloated over the discomfiture of their rivals, but their joy was soon turned to grief by the premonition that no "champagne" had a legal right to the name unless it is made in that ancient province. The French law requires this now, and since the yield of its sunny slopes is limited, the result has been that grapes from all parts of the country pour into the province to stay long enough to acquire a residence, just as would-be divorcées flock to Dakota.

But the principle adopted by the Commission is a good one, however difficult it may be to determine the limits of its application. It will have the effect of developing local industries and keeping up the standard of their quality. It will unfortunately also hinder, to some extent, the extension and cheapening of a food product. New synthetic products, rather than be labeled "imitations," will prefer to coin fancy names, as they are doing now, altho that will shut out the small manufacturer, because it requires immense sums spent in advertising to make a new name known. A manufacturer can get his name into Burke's "Peerage" for less money than he can get it into Webster's Dictionary.

Harmony Among Reformers in Turkey

It is almost too good news to be true that the Armenians in Turkey have at last, after centuries of persecution and massacre, learned the lesson it should teach, and are ready to join with other dissatisfied elements in the population for mutual defense against a common danger. The report comes to us that their leaders have decided that they must unite with Greeks and Nestorians, and even the Young Turkey party of Moslems, in favor of the reforms or the revolution that must come, but which their dissensions have so long delayed.

Thus far, during these centuries, the Christian sects in the Turkish Empire have hated each other worse than they hated their common enemy. Greeks and Catholics fight over the Holy Sepulcher at Jerusalem, and Turkish soldiers put a stop to the combat. In Macedonia Greeks and Bulgarians have roving bands to burn each other's villages and massacre their fellow Christians, while the Moslem looks on and is glad. There, where the Christian sects are somewhat evenly divided, the Turk does not so much need now to kill them, as they conveniently kill each other. It is in the districts occupied by Armenians alone, or Jacobites or Nestorians alone, that the Kurds need to reduce them by fire and sword.

Hitherto it has been the suicidal policy of fiery young Armenian revolutionists

to make attacks on the Turks, which shall give excuse for retaliatory massacres, with the hope that the Christian Powers of Europe will intervene and give them their independence, or at least such protection as the Christians have in Syria under European supervision. But the European Powers did nothing. There was too much mutual jealousy among them. England might have been willing to keep her obligation to protect the Christians, but Germany would not allow it. She was afraid—and with good reason—that, once in, England would not get out. And equally Russia was not allowed to intervene, for every one knows that there is no end to Russia's acquisitiveness. At every opportunity she has been adding territory after territory to her empire, until checked by Japan.

So, discouraged at the failure of a mad, mischievous policy, which had resulted only in worse massacres, the Armenian leaders seem to have learned their lesson, and are now trying to unite, instead of dividing, the oppressed and dissatisfied factions. This new policy has always been the only hopeful one. To unite is to conquer. It recognizes that the rule of Turkey is no more to belong to Armenians or Greeks than it is to Turks. The lesson of equal human rights and of liberty for all has, we may hope, at last been learnt. The whole contact of modern civilization has taught it. Every book, every newspaper, every letter from an emigrant to the United States or to France has taught the people that no religion, Mohammedan or Christian, has the right to rule over any other. Even in Turkey, as even in Russia, the two most belated nations of Europe, if not of Asia, the people are beginning to hear what the very winds and rushes whisper. When Persia is seeking a sort of Parliament, and China a new Constitution, Turkey must not lag behind. Perhaps her time is near, for the Sultan is reported ill with a fatal disease.

Science Applied

THE particular duty, and the chiefest achievement, of Luther Burbank has been to bring to the surface and make known to the world the drift of the age. It is not the fact that he has himself accomplished some remarkable evolutions in the plant world that most concerns us, but the fact that Mr. Burbank is only one of a growing class of workers with nature—shall we say with God? This matter of plant breeding and plant creation has been going on for a long while. It has risen into a passion of the age only within the last twenty years. Today there are not less than some thousands of intelligent plant breeders, and the results of their work are revolutionizing our orchards and gardens, as well as our stables, kennels and country life in general.

We are led to say this because the reputation and fame of Mr. Burbank has wakened a spirit of criticism, involving considerable injustice. These criticisms cannot avoid the charge of envy or jealousy, even if they be largely true. It is quite sure that many of the new plants sent out by Mr. Burbank have proved utterly worthless. Some of the fruits have proved to be no better than their predecessors. In a few cases his berries have turned out to be pests in the garden. The strawberry-raspberry and raspberry-blackberry and white blackberry are hardly curiosities. They simply show that these members of the Rosaceae family can be intercrossed. Such products should never have left Mr. Burbank's farm until they had passed the stage of mere curiosities. But we are told by some of the critics that many of Mr. Burbank's so called creations are not his at all. In a few cases there might be a dispute of this sort, without in any way impugning Mr. Burbank's honor; similar disputes arise between authors, and we believe that "Beautiful Snow" has no less than thirteen claimants.

The truth is, so far as the distinguished Californian is concerned, that he is doing, on a large scale, an immense amount of experimenting, and some of his experiments have got away from him before their value has been thoroly tested. Meanwhile the immense breadth of his work has unfortunately called down upon him a cloud of flatterers. He cannot get rid of these by any possible effort; and we are assured that he dislikes them worse than he does an impracticable weed. In their efforts to give him honor they have given him undue

honor. In our orchards we have far better commentators of his work. The Shiro plum, the Sultan and the Climax, these three alone would be sufficient glory for any man that ever lived. But of course this does not include all of the thoroly tested and approved stuff that he has placed in our hands. The first that we ever heard from him was in connection with a new variety of potato, which added millions of dollars to our farm values. He has certainly improved some of the nut trees; and is doing his best to turn wild and degenerate types of plant life into progressive and cultivatable ones. He himself tells us that out of a million efforts not more than one succeeds. It is no simple matter to break up old currents of life, and force them into new channels. It requires not less than ten or twenty years of testing to make sure of many experiments. While he applies science to his work, he still must abide by the doctrine of permutations. President Jordan speaks of him as a sweet, straightforward and unspoiled child of nature; never seeking fame or money or anything else for himself. He classes him with Faraday—a man who went straight to the heart of things, while our noted scholars were "spending their strength on fine points of grammar and hazy conceptions of philosophy." He thinks that Mr. Burbank could have done a great deal more, and touched life at more points, with more wealth at his command; but that he might have lost something of his simple intensity and fine delicacy of touch.

But we are slipping too easily into another clapping of hands and possibly unacceptable praise—which has already awakened unfavorable comment. The recent volume by W. S. Harwood has probably done more harm than good. It has laid emphasis, not on the fact that we are entering a period of great plant and animal evolution, but on the fact that one man has achieved some wonderful results in this field of work. His enumeration of the work accomplished by Mr. Burbank is exaggerated and untruthful. It leaves out of sight also the debt which we owe to other workers in the same field. There is not the slightest notice taken of the fact that, long before Mr. Burbank was heard of, such men as Kirtland, Wilder, Barry were at work in the same field, and gave us new and greatly improved varieties of cherries, grapes, plums, pears and apples. Mr. Rogers, some forty years ago, created over fifty varieties of hybrid grapes, many of which are still the choicest in our vineyards. The strawberry has been undergoing evolution for nearly a century. Bear in mind that we have in our catalogs of high grade fruits hardly a single variety that does not have attached to it such honorable names as Worden, Downing, Davison, Wilder, Cuthbert, Munson. The romance that surrounds many of these names constitutes a chapter in science, as well as in the history of plant life. Science, when properly understood and wisely applied, has always been romantic.

At present the Department of Agriculture, at Washington, is thoroly imbued with this creative and romantic spirit. Secretary Wilson is a man with imagination, and he can see better things ahead. Nearly every experiment station in the United States is working effectively along the same line. It is the application of science to domestic economy. It is a successful effort to enlarge the field of agriculture and increase the wealth of the world. What we need is not novelty, or a larger list of novelties, but real progress. In every class of fruits and vegetables we want better, handsomer and hardier sorts. Most of all we need fruits that will adapt themselves to a wide range of climate. At this point our Washington workers are doing us a service that cannot be too highly commended. We must have apples that thrive in Florida, and we must have oranges that will be hardy at least as far North as the Ohio river. We are well on the road to secure these things. In fact we have but to find out a want, and nature will join hands with us to make it good. Mr. Burbank says that he has in mind always that happy day when, "with better and still better fruits, nuts, grains and flowers, the earth shall be so transformed that man's thoughts will be turned from destructive forces to those that are only productive; and will offer his brother man, not bullets and bayonets, but fairer flowers, richer grains and better fruits."

A Wedding Outfit

We see no obligation resting on rich people to spend money needlessly. We see abundant reason why they should put it to good use, to the advantage of the public, but if their tastes are simple, we do not find any obligation resting on them to spend money simply for display. Take the case of the richest young woman in Germany, Fräulein Bertha Krupp, and her sister, who receives a smaller amount of her late father's wealth. They have been brought up simply, and their mother went with them from Essen to Berlin to buy their trousseaux, and expended $250 for each outfit. They were satisfied and so was their mother, but the shopkeepers thought them stingy. Similarly, the royal family of Denmark have been economical, and it is to their credit, and the daughters have been the most sought after of all the royal marriageable girls. Russell Sage has had a multitude of stories told of his penuriousness, but he always had all the comforts he cared for for himself and his wife; and his willingness to avoid needless expense and display was so far to his credit and to that of Mrs. Sage, whatever may be said of his neglect to use his wealth wisely in other ways.

The Czar Business

They suspect the Czar has fled. And why should he not flee? Could he do a more sensible thing? Is it worth while to rest a throne on the execrations of his subjects? If a king must do what his people do not wish him to do, what they believe to be cruel and unjust, had he not better leave the business? Is it worth while being a king or queen, anyhow? Here is the young Queen of Spain, already weary of the etiquet of royalty. She cannot drop her state; she must sit in her satin dignity all the time, and that is the least of royal troubles. It is far better to be a ruler after the style of a common American citizen, who makes and obeys his own laws. The most fortunate ruler in the world is the King of England, who is no more of a ruler, perhaps less, than the President of the United States, altho some showy rags of ancient form and state hang about him. But, as for the hated Russian Czar, he can do no better than go to Copenhagen and live in private peace with his relatives, as comfortable as Eugenie in her retirement; or we will give him naturalization papers here in this country, and he can buy a Western ranch and run for Congress. He can't be President.

A Turkish Hospital

There are some disadvantages in living in Turkey. The new American hospital in Constantinople conducted by Dr. Carrington caught fire and was totally destroyed. That is not peculiar to Turkey; but in the fire some chloroform and other drugs kept in store exploded, and the Turkish authorities suspected that dynamite had been stored there, perhaps for seditious purposes, and Dr. Carrington was forced to appear and answer the complaint. Fortunately his reputation was such that he was able to do it. Another trouble came when the servants tried to save the instruments and records, but the acute Turkish police thought they might be robbers, and would not allow them to save a single thing, and, of course, did not save anything themselves. There is some insurance, and the trustees here in New York will see, we trust, that the loss, perhaps $10,000, is made up. Those American institutions in Constantinople—this hospital, Robert College and the Girls' College—are among the most notable and useful institutions in the city, and are visited by many American tourists.

Congressman Williams on Railways

We have it plainly from Congressman John Sharp Williams, Democratic leader of the House, what is the chief objection to Mr. Bryan's proposal for public ownership of railroads. In answer to a telegram from the Richmond, Va., *Times-Dispatch*, he said:

> "Bryan is not infallible and does not pretend to be. He is right about so many things, eloquently and greatly right, but absolutely and altogether wrong about this one thing, especially from the standpoint of racial peace and quiet in the South.
>
> "Let us strongly regulate our railroad rates, but not operate railroads."

So it is "especially from the standpoint of racial peace and quiet in the South"

that he is opposed to the Government's operating railroads. What has "racial peace" to do with the matter? Probably when Mr. Bryan first proposed this plan, before his visit abroad, people wondered why he wanted the ownership of railroads generally to be vested in States rather than in the Nation, and it was a great surprise to learn that the purpose was to allow certain States to maintain their Jim Crow legislation as to car service. When Mr. Bryan allowed that the Nation might own and operate certain trunk lines, it became clear that he meant certain trunk lines going west thru the Northern States, and not lines going South. But Mr. Williams sees the danger, for under national law and the Constitution no racial distinction could be made in railroads owned by the Nation. That the South is not absolutely opposed to State ownership is seen in the resolution past by the Georgia Democratic convention the other day, urging that the State-controlled railroads be extended to the sea.

The Future Chinese Church

In the *Chinese Recorder* Bishop F. R. Graves discusses the drift of Chinese Christianity, which we presume will not differ much from Japanese Christianity or any other Oriental development of the Christian Church. The Chinese are an eminently practical people, little given to abstruse speculation, and their religion is chiefly concerned with duties to the family, the state and to ancestors. Yet there is an ideal element in the Chinese nature which has given many examples of self-renunciation, and many martyrs have been produced who were faithful to death. Still the main characteristic is their practical spirit, and it is not strange that custom reigns supreme. The stable quality of the Chinese character makes them law-abiding, tenacious of tradition, so that they change slowly under new conditions. Naturally in religion they emphasize the moral rather than the intellectual or spiritual. Every coolie can talk about filial piety and tell of the five constant virtues. Equally they are social, and no country has organized so many gilds and trade unions. Their secret societies are a plague to the Government. This practical quality, says Bishop Graves, well characterizes their Christianity. It will not be very spiritual, and it will care little for theology. But it will emphasize family life, works of philanthropy and good government. Religious services will tend to be formal and fixt, while the tendency toward the moral side will be likely to depress spiritual impulses. The Chinese Church will be institutional. It will possess countless organizations such as burial clubs, benevolent associations, gilds and the like. This outlook for the Church in China is not very different from the tendency in this country. We are moving in the same way, with less emotion, and are making our religion more ethical. Indeed, it would seem as if human nature were much the same East and West.

In Knoxville, Tenn., the city fathers know the value of good roads, and they put their money into the roads. But they do not know the value of public schools, and the schools for both races are sadly skimped. They prefer roads for their horses' comfort to schools for their children's education. But what shall we here in New York boast over Knoxville, when we are told that on the first day when school opened it was found that there are over 70,000 part-time scholars, because there was not full accommodation for them in the schools? And yet 18,000 new sittings have been provided the past year; but that only keeps up with the normal increase in the number of scholars, and makes no provision for the arrearages.

There is not always that antipathy of Christians to Jews which Prof. Goldwin Smith recognizes. In a mountain village in this State, where many summer visitors gather, the minister of the Methodist church learned that a Jewish rabbi was at one of the hotels; and he called on him and offered him the use of his church for a Jewish service, and it was accepted. A little later the Jewish children arranged a performance and collected about a hundred dollars, which they handed over for the aid of the church.

Insurance

Policy-Holders File Their Tickets

THE policy-holders' tickets under the new insurance law, for trustees of the Mutual and New York life insurance companies, were filed in this city and at Albany on September 18th. No opportunity was afforded to any one to examine the tickets prior to their filing, which was delayed until just before 5 o'clock of the last day fixed by law. The International Committee's ticket was the only one named by policy-holders' in the New York Life. Two tickets were filed, however, for Mutual trustees, one prepared jointly by the International Committee and the Mutual Life Policy-holders' Association, and the other by some 200 individuals, who have appointed a proxy committee, and who are represented by Albert S. Bard, a lawyer of very excellent reputation. The name of Charles E. Hughes appears upon what is called the "Selected Fusion" or Bard ticket, in spite of the statement credited to Mr. Hughes that he would not serve if elected, and that he had not given permission for the use of his name as a candidate.

Well-known names are among those on the "United" ticket in the Mutual and the "International" ticket in the New York Life. Mayor Adam, of Buffalo, heads the alphabetical list of Mutual nominees, and with him, among others, are Col. S. S. McClure, Hermann Sielcken, former Chief Judge Andrews of the Court of Appeals of this State, Cyrus L. Sulzberger and ex-Mayor James D. Phelan, of San Francisco. Among the New York Life nominees are Adolph Lewisohn, Frederic R. Coudert, ex-Ambassador William F. Draper and Mayor Guthrie, of Pittsburg.

The third ticket is puzzling to insurancemen, and the only New Yorker named on the proxy committee, Mr. William A. Duncan, president of the Greenwich Bank, has declared that he knew nothing about the third ticket in which he figures beyond the fact that Mr. Bard, of counsel for the ticket, had asked him to act as a proxy.

The insurance situation, as evidenced by the various tickets now placed in nomination, seems to indicate that a desperate struggle for control is being made. Samuel Untermyer, in an interview cabled from London, is credited with saying:

> The so-called fusion ticket is, of course, a mere trick to divide the policy-holders. I believe it will be a boomerang. The policy-holders are not likely to accept Mr. McClintock, who was so active in trying to kill legislation, or Mr. Dexter, or Mr. Peabody, who has fought efforts to get the lists. Mr. Hughes, of course will repudiate this barefaced attempt to use his name in connection with the movement he opposes, and I do not doubt that Mr. Wanamaker will do the same.
>
> "Every step the men now in management have taken in the effort to hold control of the companies' vast funds exhibits their desperation. I find that they have effectively prevented the European policy-holders from getting copies of the lists. The London policy-holders were told that they were the thirteenth applicants on the list, and that when their turn came they could have only one representative to copy the lists, which means that they would be ready in about two years. The same tactics were used with the Continental policy-holders.
>
> "The men who are opposing the policy-holders in this fashion apparently know that a change of management would mean exposure and restitution."

THE fifteenth annual volume of Hayden's Cyclopedia of Insurance for 1905-1906 has just been issued by the Insurance Journal Company, of Hartford, Conn. It contains the usual mass of insurance information compactly and alphabetically arranged. In some cases the information regarding certain of the insurance companies is not as full and complete as the seeker after information might desire, but the volume is nevertheless a very useful insurance handbook. Prices, $2.50 and $3 per volume, according to binding.

....A young fellow bought 2,000 extra fine cigars and had them insured for their full value, smoked them up and demanded the insurance, claiming that they had been destroyed by fire. The case was taken to the court and the judge decided in favor of the young man. The insurance company then had the young man arrested for setting fire to his own property, and the same judge ordered that he pay a fine and go to jail for three months. —*Higginsville* (Mo.) *Leader*.

Financial

Crops Here and Abroad

THE decline in the price of wheat since the early part of July has been due not only to the unprecedented size of our own crop (estimated to be 759,000,000 bushels), but also to the abundant harvests in Europe. Trustworthy estimates make the output in the importing countries of Europe greater than that of last year by about 90,000,000 bushels. This increase compensates for a shortage of about 90,000,000 in Russia. Large gains are reported in France, Germany and Austria, with smaller increases in Italy, Belgium, Spain and Portugal. The world's crop of wheat this year is the largest ever harvested. Beerbohm's Liverpool report makes it 3,500,000,000 bushels, against 3,366,720,000 in 1905. Our Government's latest report points to a record-breaking corn crop of 2,780,000,000 bushels, and crop authorities whose opinions have weight say that the total will be nearly 3,000,000,000. The cotton crop will probably exceed 12,000,000 bales, and be second only to that of 1904.

....A new high record for the price of memberships in the Boston Stock Exchange has been made by the recent sale of a seat for $37,500.

....An order for 12,400 freight cars, the cost of which will be about $15,000,000, was given a few days ago by the Pennsylvania road, which had already ordered about 22,000 similar cars since the beginning of the year.

....The Corn Products Refining Company, sometimes called the Glucose Trust, has decided to invest $5,000,000 in a new plant at South Chicago, occupying 50 acres of land. This action will be taken on account of the aggressive competition of new independent companies.

....The Cunard steamship "Carmania" brought to New York on the 19th inst. $10,328,500 in gold coin and bars, the largest quantity of gold ever carried across the Atlantic by a single ship. This valuable freight, placed in the specie room on the main deck, was carefully guarded by armed watchmen.

....In a notice concerning the New Netherlands Trust Company, printed last week, we inadvertently referred to Edgar L. Marston, of the banking firm of Blair & Co., who is interested in the organization of the new company, as president of the Farmers Loan and Trust Company. Edwin S. Marston is the president of the Farmers Loan and Trust Company, but he is not interested in the New Netherlands Trust Company.

....Reports of the pig-iron output for the first half of 1906 indicate that the world's output for the entire year will exceed 57,000,000 tons, of which a little more than 25,000,000 will have been produced in the United States, 12,000,000 in Germany, nearly 10,000,000 in Great Britain, and 3,000,000 in France. These figures leave 7,000,000 for all the other producing countries. The world's output has doubled since 1895, owing mainly to the increase in the United States and Germany.

....The Bankers Trust Company, of this city, which has a capital of $1,000,000 and a surplus of $500,000, has just declared a quarterly dividend on the stock of the company of 4 per cent., in place of the 2½ per cent. rate which has hitherto prevailed. This action, if made permanent, will increase the returns from stock in the Bankers Trust to a 16 per cent. basis. E. C. Converse is president, J. F. Thompson vice-president, and T. W. Lamont, second vice-president of the Bankers' Trust Company.

....Dividends announced:

Franklin Trust Co. (Brooklyn), quarterly, 3½ per cent., payable September 29th.

United Fruit Co., quarterly, 1¾ per cent., payable October 15th.

Interboro.-Metrop. Co. (Collateral Trust 4½ per cent.) coupons, payable October 1st.

Colorado & Southern Rway. (1st Preferred), 2 per cent., payable October 1st.

Amer. Woolen Co., Preferred (30th consecutive quarterly), 1¾ per cent., payable October 15th.

N. Y. Cent. & H. R. R. Rd., 1¼ per cent., payable October 15th.

Union Typewriter Co. (1st Preferred), 3½ per cent., payable October 1st.

Union Typewriter Co. (2d Preferred). 4 per cent., payable October 1st.

Union Typewriter Co. (Common), 3 per cent., payable October 1st.

Westinghouse Elect. & Mfg. Co. (Preferred, Assenting and Non-Assenting), 2½ per cent., payable October 10th.

Natl. Park Bank, quarterly, 4 per cent., payable October 1st.

Buff. & Susq. R. R. Co., quarterly, 1¼ per cent., payable October 1st.

The Independent

VOL. LXI. NEW YORK, THURSDAY, OCTOBER 4, 1906 No. 3018

Survey of the World

Secretary Taft Is Governor of Cuba

Secretary Taft established a Provisional Government in Cuba on the 29th ult., with himself at the head of it. All attempts to restore peace had failed. President Palma and Vice-President Mendez Capote had resigned, and Congress had been unable to fill the vacancies thus created. Secretary Taft's proclamation was as follows:

"To the People of Cuba:

"The failure of Congress to act on the irrevocable resignation of the President of the Republic of Cuba or to elect a successor leaves this country without a government at a time when great disorder prevails, and requires that, pursuant to a request of Mr. Palma, the necessary steps be taken, in the name of and by the authority of the President of the United States, to restore order and protect life and property in the island of Cuba and in the islands and keys adjacent thereto, and for this purpose to establish therein a Provisional Government.

The Provisional Government hereby established will be maintained only long enough to restore order and peace and public confidence, by direction of and in the name of the President of the United States, and then to hold such elections as may be necessary to determine those persons upon whom the permanent Government of the Republic should be devolved.

"In so far as is consistent with the nature of a Provisional Government established under the authority of the United States, this will be a Cuban Government, confronting as far as may be with the Constitution of Cuba. The Cuban flag will be hoisted as usual over the Government buildings of the island; all the executive departments and the provincial and municipal governments, including that of the city of Havana, will continue to be administered as under the Cuban Republic; the courts will continue to administer justice; and all laws not in their nature inapplicable by reason of the temporary and emergent character of the Government will be in force.

"President Roosevelt has been most anxious to bring about peace under the constitutional Government of Cuba, and has made every endeavor to avoid the present step. Longer delay, however, would be dangerous, in view of the resignation of the Cabinet.

"Until further notice, the heads of all the departments of the central Government will report to me for instructions, including Gen. Alejandro Rodriguez, in command of the Rural Guard and the other regular Government forces, and Gen. Carlos Roloff, Treasurer of Cuba. Until further notice, the Civil Governors and Alcaldes will also report to me for instructions.

"I ask all citizens and residents of Cuba to assist in the work of restoring order, tranquillity and public confidence.

"WILLIAM H. TAFT,
"Secretary of War of the United States; Provisional Governor of Cuba."

HAVANA, September 29th, 1906.

This was published in the *Official Gazette*, and thousands of copies of it were distributed. The Secretary intends to remain in Havana only a few days. His successor as Provisional Governor will be Beekman Winthrop, now Governor of Porto Rico. By order of President Roosevelt, 6,000 soldiers of our army will at once be sent to the island. On the 30th ult. 450 marines were landed at Havana. They at once proceeded to Cienfuegos. On the following day 750 more were landed. These remain at Havana.

Failure of the Peace Negotiations

Secretary Taft's efforts to restore peace by procuring an agreement of the Government with the revolutionists were not abandoned until there was no longer any hope that such a settlement could be reached. On the night of the 24th, there was some expectation that the terms accepted by the Liberals and insurgents would also be accepted by President Palma and his associates. These terms were that Palma should retain his office, but that the Senators and Representatives elected last year should resign; that there should be a new election on January 1st, 1907, and that new electoral and municipal laws

should be enacted. On the 25th, these terms were rejected by the Government. General Freyre Andrade, Speaker of the House, said that the Americans could give control of the island to the rebels if they desired to do so, but not with the consent of the Government, which would never agree that new elections should be held. After a meeting of the Moderate leaders, held that evening, it was announced that the President, the Vice-President, and all the Moderate Senators and Representatives had decided to resign. A special session of Congress was to be called to receive the resignations of Palma and Mendez Capote, but there was to be no quorum, because the Moderate members had decided not to attend. It was apparent that the Government and the Moderates intended by abdication to force intervention, preferring this to any concession to the Liberals and insurgents. Secretary Taft expressed his disgust, asserting that the Government had not co-operated with the American Commission, but had resorted to every kind of obstruction. He had never known, he said, a more disgusting situation. Investigation had convinced the Commission that the elections had been thoroly rotten. Palma and his advisers had rejected terms of peace which were honorable to them, altho they were a compromise. In the meantime, he added, the insurgent commanders were losing control of their forces. On the 26th, President Palma informed Secretary Taft that his decision to resign was irrevocable, as he regarded the terms proposed as "contrary to his personal dignity and to the prestige of the Government." At a stormy meeting of the Moderates, that night, the Americans were denounced, and some proposed that intervention by European Powers should be forced by a wanton destruction of property. Vice-President Mendez Capote, in statements to the press, remarked that it would be easy to precipitate intervention by Great Britain or Germany by destroying property belonging to British or German subjects. The Americans, he added, were partial to the rebels, and the American warships seemed to be in Cuban waters for the purpose of supporting the rebel cause. At the special session of Congress, on the 28th, there was a quorum at the beginning. The resignations were submitted. By a vote of 47 to 13 a committee was appointed to ask the President to reconsider his action. To this committee President Palma said that he could not change his decision, altho President Roosevelt had urged him to do so. Congress had taken a recess to await the committee's report. When Congress reassembled there was no quorum, for the Moderates refused to attend. And so it was impossible to elect any one to succeed Palma. Therefore it became necessary for Secretary Taft to assume control. He did not establish himself at the Palace, but treated the retiring President with much consideration, offering him the use of a warship for his approaching journey. This was courteously declined. The Secretary released seventy political prisoners, and they hastened to assist him in his dealings with the rebels in arms. A Disarmament Commission, with General Funston at its head, was appointed. Arrangements were made for disarming the rebels and transporting them to their homes. The people generally seemed to regard the new Government with confidence. A good impression was made by the retention of the Cuban flag. Marines were sent to Cienfuegos because of a bitter feeling there between the Government's volunteers and the rebels. At the annual opening of the University of Havana, on the 1st, Secretary Taft was present. He awarded the diplomas and was welcomed with great applause. At the close of a long address, he said:

"It is sad for me to be here, but it was sadder for President Roosevelt that he should have to send me. I am glad of the opportunity to assure you in his name that I am here only to help you on, and, with my arm under your arm, to lift you again to the resumption of the wonderful progress you have made, so that you may once more be able to point with pride to the fact that the United States is not an exploiting nation, but only has such sympathy with progress as to be willing to spend its blood and treasure in spreading progressive government thruout the world."

The Nomination of Mr. Hearst

At Buffalo the Democrats nominated William Randolph Hearst on the first ballot, giving him 309 votes, against 124 for Congressman Sulzer and 17 for John H. Dix.

Mr. Hearst, well known as the owner of newspapers in New York, Boston, Chicago, San Francisco and Los Angeles, had already been nominated by a new party organized in his interest and called the Independence League. For some time before the Democratic Convention it was an interesting question whether he could obtain its support, which he desired. The result would be determined, it was thought, by the action of Charles F. Murphy, leader of the Tammany organization in New York City, who, it was commonly believed, would control the 105 votes of Tammany, the whole number of delegates in the convention being 450. Mr. Hearst had repeatedly, until a few months ago, denounced Murphy in his papers as a highly objectionable boss, and had even pictured him clad in prison stripes. A short time before the convention, however, it was asserted that Mr. Hearst had won Murphy's support. At the beginning of the convention the friends of Mr. Hearst obtained control of the State Committee and of the Committee on Contested Seats. This was done with the aid of Mr. Murphy. The opponents of Mr. Hearst assert that his majority in the latter committee was used unjustly in throwing out about 60 delegates who were entitled to be seated and in putting Hearst contestants in their places. On the first and only ballot Mr. Hearst received 96 of the 105 Tammany votes. During the proceedings there were many bitter attacks upon what was called the Hearst-Murphy alliance and upon the Tammany men to whom prominent positions in the convention had been given. On the Hearst side affidavits were produced to the effect that a bribe of $3,000 had been offered to a delegate named Bennett by a man employed by corporations which Mr. Hearst had attacked. After the nomination there were signs of a considerable revolt in the party. Mayor McClellan said that he would not vote for Mr. Hearst and that he was unalterably opposed to Murphy and everything which Murphy stood for. District Attorney Jerome gave notice that he should strive to secure the election of Hughes. Many less prominent Democrats have publicly declined to vote for Mr. Hearst. Among the bolters are the two Democratic papers of Rochester; several other papers of the party take the same course, and a considerable number give only formal support to the ticket, because it is Democratic. The platform is a very long one. It is not fully in accord with that of the Independence League or with the opinions of Mr. Hearst concerning public utilities, turning toward regulation rather than ownership. Mr. Hearst has since declared that he believes in public ownership of public utilities. This declaration he made at a notable mass meeting in Madison Square Garden, at which he was enthusiastically received by one of the greatest audiences ever assembled in New York.

New York Republican Convention

The nominating conventions of the two great parties in the State of New York were held on the same date, beginning on the 25th ult., the Republican Convention at Saratoga and the Democratic at Buffalo. On the preceding day Governor Higgins, who had been regarded as a candidate for renomination on the Republican side, made known his determination to withdraw from the field, saying that he needed time for rest and for attention to his personal affairs. Altho at that time Charles E. Hughes, who conducted the life insurance investigation last year, had the open support of not many delegates, the movement for his nomination rapidly increased in strength, owing largely to the persistent and effective labors of Congressman Herbert E. Parsons. Eventually it became known that the nomination of Mr. Hughes would be very acceptable to President Roosevelt. It was noticeable that several of the old leaders, by some called bosses, were absent; or, if present, seemed to exert very little influence. Mr. Parsons, chairman of the Republican County Committee of New York City, represented successful opposition to some of them. When the time for voting arrived, Mr. Hughes was nominated for Governor by acclamation. In a brief telegram to one of his supporters he said:

"The Republican party has been called to defend the honor of the State and to represent the common sense of the people and the cause of decent government. I shall accept the nomination without pledge other than to do

my duty according to my conscience. If elected, it will be my ambition to give the State a sane, efficient and honorable administration, free from taint of bossism or of servitude to any private interest."

Mr. Hughes is forty-four years old. Public attention was drawn to him on account of his service, as counsel, in conducting the legislative investigations concerning gas rates and life insurance. The platform adopted at Saratoga commends the national legislation, which Mr. Roosevelt has supported and advocates the regulation of all public utility corporations. The ownership of railway systems by the Federal Government or by the States is emphatically opposed. Pointing to "the alarming growth of mob barbarism engendered by race hatred in our land," it demands the prompt and adequate punishment of all mob instigators and leaders.

The Philippine Islands

Gen. James F. Smith, the new Governor-General of the islands, was inaugurated on September 20th, with appropriate ceremonies. In his address he spoke as follows of a certain class of political agitators: "The men who are inciting disorder should be not only repressed, but suppressed; and they will be, in a lawful manner." Having explained the present relation of the Church to the State, he promised that all religious denominations should be protected and enjoy complete freedom. Speaking of independence, he said:

"Unless it is to be granted immediately, which I do not believe is likely, I think valuable time and energy are being lost, which might be more profitably spent in perfecting the existing government. I personally do not think that independence would prove a panacea. Indeed, if the experience of Russia be observed, the people may be independent and yet unhappy and oppressed. Cuba enjoys independence, but has it given good government or peace? Moreover, if Cuba were at the gateway of China, it is extremely doubtful whether she would be permitted to gather wisdom from further experience."

Judge Magoon, now Governor of the Isthmian Canal Zone, is to be Vice-Governor of the Philippines.——The American papers of Manila, commenting upon the revolt in Cuba, question the wisdom of permitting the election of a Philippine Assembly next year, saying that the Cubans, altho more advanced than the Filipinos and being free to develop a republic, have proved to be incapable of governing themselves in an orderly manner. This had been the attitude of these journals before the outbreak in Cuba. ——Captain Ira Frendenhall, of the Quartermaster's Department, has been brought into court, charged with misappropriation of public funds. This is one result of a long investigation, which is said to have brought to light the padding of payrolls, corruption in connection with the leasing of lighters, and the manufacture of furniture in the Government shops for officers and civilians.——The ladrone leaders who surrendered in July have been tried and convicted. Montalon, Sakay, Villafuertes and Devega have been sentenced by Judge Villamor (a Filipino) to be hanged; Natividad's punishment is thirty years at hard labor, and fourteen other defendants are sent to prison for twenty years. All pleaded guilty. These sentences have been confirmed by the Supreme Court. Dominador Gomez, the agent who induced the convicted men to surrender, asserts that light sentences were promised by the Government. Representatives of the Government deny this.

Passive Resistance in France

In spite of the extensive discussion of all phases of the situation in France, no apparent progress has been made toward breaking the deadlock between the Government and the Church. The pastoral letter adopted by the Bishops in their recent Council and read in all the pulpits of France calls upon the faithful to support the Church in the present crisis. The attitude of the clergy is perhaps best expressed in the words of Cardinal Lecot, Archbishop of Bordeaux:

"The priests will not leave the churches until they are forced by the authorities to do so, when they will say Mass in places which are already being prepared. Seminaries will be transferred to other buildings owned by the church. I personally will leave the palace for a house rented by me. We have appealed to the generosity of the faithful and have gathered together a large amount of money, which I will distribute to the most needy of the priests, and we shall live as best we can. We shall be careful to observe all laws except that of separation of Church and State. That we cannot accept because it tramples

upon the dignity of the Pope and the bishops, not only of France, but of the whole world. The Pope must look at the question as a whole. He cannot abdicate his authority for a moment when the Church is the object of attacks. In other countries, notably Spain, all eyes are watching to see the outcome of the struggle between the government and the Vatican. It is impossible for Pius X to countenance the act which broke off the relations between France and the Vatican, and since he rejects it no arrangement of the matter is possible if the government does not modify its laws."

The Government has announced that any modification of the law cannot be considered, and that no negotiations will be undertaken with the Vatican, but suggestions from the French Bishops will be received at any time. M. Clemenceau, the Minister of the Interior, altho he has been thruout his life an active opponent of clericalism, declares emphatically that while he remains in office not a single church shall be closed or devoted to secular purposes. By the action of the law all the churches and other ecclesiastical buildings will be turned over to local communes or to the State on December 11th, unless the *associations cultuelles* are formed in accordance with the law. There is nothing, however, in the law which obliges the commune or the Government to close the churches to public worship and to dispossess the clergy, and it is probable that in most cases no forcible measures will be taken, as it is the declared policy of the Government to avoid making martyrs. The Government has a strong weapon of enforcing its will, since it can cut off the pensions still allowed to the clergy and deprive them of their exemption from military service. M. Henri des Houx, former secretary to Pope Pius IX., has organized a League of French Catholics for the purpose of establishing in each parish the *associations cultuelle* required by the law. Since this is directly contrary to the Encyclical of the Pope and the action of the French Bishops, it is looked upon as a schismatic movement, which, if it grows, will result in an independent Gallican Catholic Church. In an interview in the *Gaulois*, the clerical organ of France, the Pope states his position in the following language:

"It is not I who condemned the law, but Christ, of whom the Pope is simply the Vicar. The Saviour granted the Church a constitution and a doctrine, against which no human law can prevail. The separation law is contrary to Catholic doctrine and opposed to divine rulings. It is an unjust law, and therefore carries no obligations to obey it. Providence will decide the future and fix the mundane consequences. My resolution was taken in pursuance of the will of God."

In opposition to this may be placed the statement made by Minister Clemenceau, who is equally sure he is right:

"I see the people seek to foresee what action the Government will take. What more simple? Rome has refused the law of privilege made for her profit. She said all or nothing. The time is past when she had all. She ought to be content today with the right of everybody to a *régime* of liberty. We offered privileges. She haughtily refused. We are asked to negotiate. With whom? A foreign power? On what? On the French law. There is no foreign power on French soil. We stand on the French right not to tyrannize, but to liberate. We shall know how to resist all factitious enterprises. We are sure that time and the evolution of the human disposition toward the diffusion of knowledge will work for us. Our force is in the right and the resolution of all France is to maintain it."

Russian News

The long continuance of the Czar's cruise on the imperial yacht "Standart" among the Finnish islands has produced a crop of journalistic surmises, among which it is impossible to distinguish those that may have a basis of truth. There are rumors that the Czar is in hiding in Copenhagen, that he is about to abdicate, and that it has been found impossible to protect him at the Peterhof Palace from Terrorist plots. Among the latter are reported a conspiracy of the Czar's personal servants, a mysterious automobile that dashes thru the iron fences of the palace grounds and away again, and two dirigible balloons, made in America, that are to sail over Peterhof and drop down explosives on the imperial family. So far, few attempts have apparently been made upon the life of the Czar, and revolutionists have not been agreed that his assassination would be an advantage to their cause. But after the execution of Zenaide Konoplianikova, the girl who assasinated General Min, a manifesto was issued attacking the Czar as directly responsible for the wrongs of the people and calling for his destruction. On the whole, there seems to have been a lull in

the strife for the past ten days, comparatively speaking, altho many cases of bomb throwing, estate pillaging and highway robbery are reported. This is probably to be attributed to the success of the police recently in breaking up the Terrorist groups by the arrest of their leaders. The anticipated renewal of the pogroms in Odessa and other cities on the occasion of the celebration of Yom Kippur, the Jewish New Year, did not occur. The Minister of Education has permitted the enrollment of all the Jewish students who have matriculated. It was feared that the 200 Jews arrested at Siedlce would be summarily tried and executed by local court-martial, and the Jewish organization petitioned the Governments of Great Britain and Germany to save them. In reply to a deputation from the Jewish relief organization, headed by Baron Gunsburg, Premier Stolypin stated that he had advised Governor-General Skallon not to resort to martial law. On the same occasion the Premier promised that he would shortly repeal certain of the Jewish disabilities, but a week later it was announced that no extension of civil rights would be granted the Jews, on account of their disloyalty and activity in revolutionary movements. The "League of the Russian People" continues to circulate incendiary literature inciting the people against the Jews. The Czar has made a grant of $12,500 to the League on the recommendation of the Premier. One of the leaders of the League, General Lavroff, last March published a pamphlet entitled "Measures for Outrooting the Evil in Russia," in which he attacked Count Witte, then Premier, and advocated the extermination of the Jews as the only cure for the ills of Russia. The pamphlet was proved to have been printed in the printing office of the Prefecture of Police. Notwithstanding that it was passed by the censor, the author has just been tried for its publication and fined $50. The head of the printing department was suspended for a few months, but has now been restored to his post. The Metropolitan Anthony, the spiritual head of the Orthodox Church, has issued a pastoral letter to all the bishops, urging them to take an active part in the coming elections, to frustrate "the enemies of the Church and the State." He directs that a special sermon be preached in all the churches on the Sunday before election, to make clear who these enemies are. The Government will permit the Constitutional Democrats to hold a National Convention in Finland on October 6, to arrange their electoral program. The Socialists and Laborites, who boycotted the last elections for the Duma, will change their tactics and take an active part in the election. A new party of moderate reform is being organized under the leadership of Count Heyden, who controlled the Right wing of the former Duma. It is rumored that the Czar will not summon the new Duma if it seems likely to be as radical as the old. The session of the Finnish Diet which has just closed is "extraordinary" in more than the technical sense. The Four Estates of Finland voluntarily relinquished all their ancient privileges, and will hereafter be replaced by a single legislative chamber, elected by universal suffrage of men and women. Besides the electoral laws, the Diet passed measures insuring the freedom of the press and of assembly, the right of association and the responsibility of the Government to the Diet.

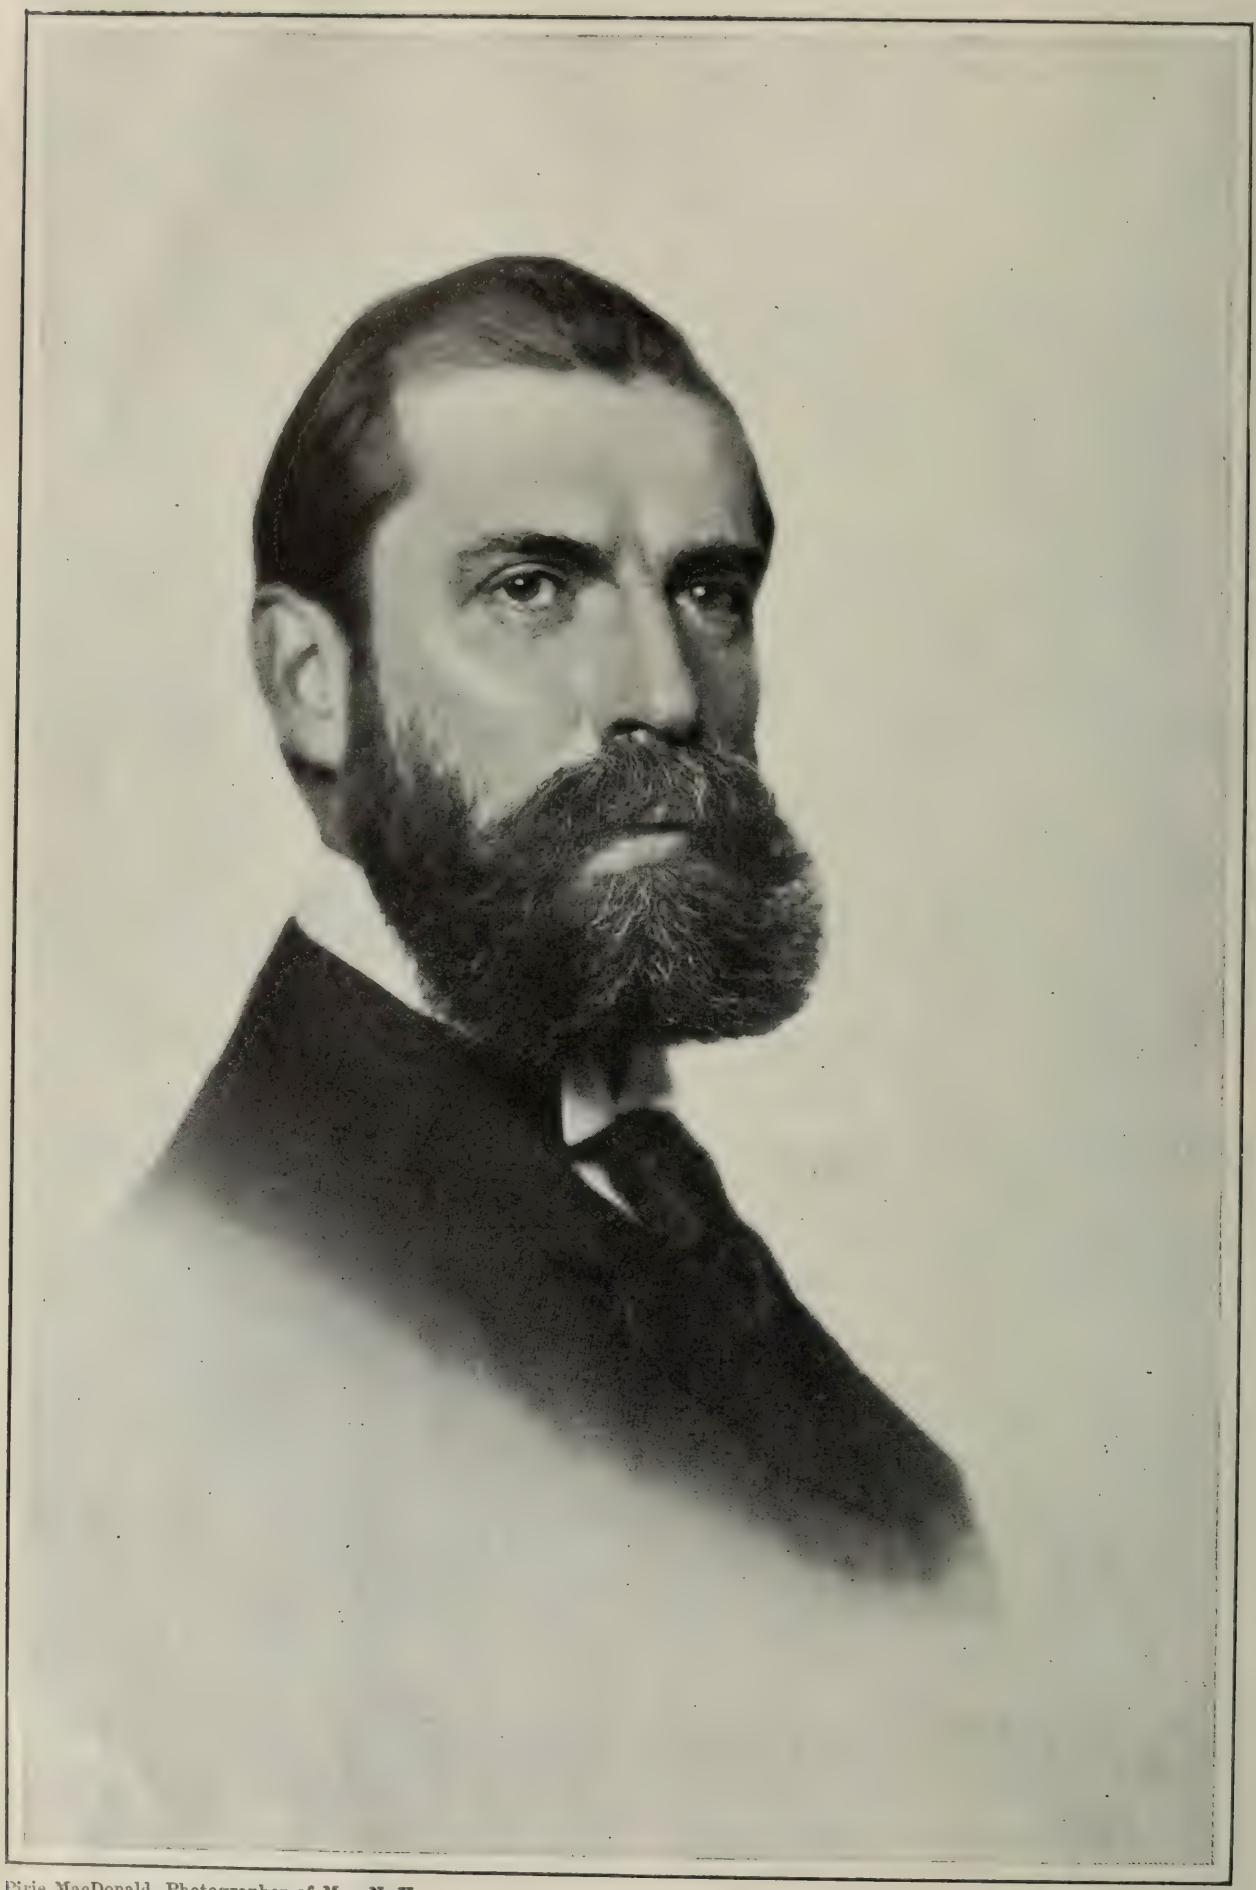
Congresses and Conventions

The Institute of International Law met this year at Ghent, where in 1873 the first meeting of the Institute was held. It is an unofficial body composed of the leading authorities of international law of different countries having for its object the study of questions of arbitration, neutrality, extradition, etc., for the purpose of ultimately formulating a complete scientific code of international law. Two years ago it received the Nobel Prize for its efforts in the promotion of world peace. At this session the Institute adopted a resolution in favor of the right of neutral nations to give asylum to wounded, sick and shipwrecked belligerents and to demand reimbursement from their governments; the Institute declared against the beginning of hostilities before a formal declaration of war or an unequivocal warning.——The International Peace Congress meeting at Milan advised the combination of all local and national peace leagues and

unions into one international world federation.——The annual congress of the Social Democratic party at Mannheim gave the same strong support as formerly to Dr. Bebel, the Socialist leader in the Reichstag. In a speech on the duty of socialists in time of war, he stated that if Germany became involved in war with the United States the German Social Democrats would necessarily communicate with their comrades in this country to arrange for common action. The Congress declared against the advisability of the general strike as a political weapon. A resolution was adopted pledging the party to support their Russian brethren "morally and actively."—— The French Masonic Conference in Paris discussed the attitude of the society in regard to the Government measures for old-age pensions, and income tax, and whether the order should approve of socialism. A long document was issued attacking the Catholic Church on the ground that it attempts to enslave the conscience and stifle human thought.—— The International Conference on Wireless Telegraphy is now meeting in Berlin. Thirty-one governments are represented, each having one vote. There are many novel and difficult questions to be settled as to receiving messages, interferance and transmission of the ether waves thru the area included within national boundaries. The Marconi Company, which has contracts with Great Britain and Italy, refuses to take the messages of any other system. On account of this the United States, in 1904, ordered the Marconi apparatus to be removed from the Nantucket lightship. Germany proposes an international bureau to control wireless telegraphy, in order to insure the exchange of communications, especially of signals from ships in distress.

Charles Evans Hughes

BY GEORGE W. SCHURMAN



[We are most fortunate in being able to give our readers the following intimate and authoritative estimate of the Republican candidate for Governor of New York, by Mr. Schurman, who is one of Mr. Hughes's law partners.—EDITOR.]

THE character and personality of the man recently chosen by the unanimous voice of the Republican Convention at Saratoga as the candidate for Governor of New York are already well known. They have been quite clearly illustrated in his public services during the past year and a half as counsel for the Gas and Insurance Investigating Committees. A brief and perhaps somewhat more intimate sketch is here designed.

Charles Evans Hughes was born at Glens Falls, N. Y., on April 11th, 1862. His father, David Charles Hughes, a native of Wales and of pure Welsh stock, came to New York in 1855, and shortly afterward became a teacher of Latin, Greek and English in the West River Collegiate Institute in Maryland. His thoughts, however, soon turned to the ministry, and in 1860, after supplementing his education abroad by a course at Wesleyan University, Conn., he was ordained a minister of the Baptist Church and at once entered upon his duties as joint pastor of the Glens Falls and Sandy Hill churches. As a citizen, as well as preacher, he did not hesitate to take and declare his position on the burning issues of the early sixties. His fiery speeches, full of loyalty to the land of his adoption, delivered from many a platform in Warren and Washington counties, N. Y., may still perhaps be remembered by some of the older residents.

Shortly prior to his ordination Mr. Hughes married Mary C. Connelly, a native of Delaware County, N. Y. The subject of this sketch is their only child. Miss Connelly's grandfather was a well-known physician of his day and a constituent member of the Medical Society of Ulster County.

Her mother was of pure Holland Dutch stock, while on her father's side Irish, English and Scotch blood are commingled, the former predominating. She is a graduate of Claverack Institute, New York, and while a student there displayed

Pirie MacDonald. Photographer of Men, N. Y.

Charles Evans Hughes, the Republican Nominee for Governor of New York.

an unusual aptitude for mathematics, which has been transmitted to her son. The boy's early education was received almost entirely from his parents. His mother taught him French, German and mathematics, while his father instructed him in the rudiments of the classics. In 1876, at the age of fourteen, he entered Madison, now Colgate University, at Hamilton, N. Y. At the end of two years he became, at the suggestion of his father, a member of the sophomore class at Brown University, from which he graduated in 1881. As a boy he was far from robust, and on more than one occasion his life was almost despaired of. Undersized, it was not until he was sixteen years of age that he really began to grow. But the practice of the simple life which he found exemplified in his father's home seems to have been exactly what he needed, and when he was graduatd from Brown in 1881, at the age of nineteen, he was, tho not athletic looking, almost 6 feet in hight and a rugged, sturdy, wiry youth, capable of the life of toil which has been his part in abundant measure from that time. While in college he was a delighted participant in the pranks of his fellow students, and was in every sense a thoro-going boy, to whom work and play in reasonable proportions were alike agreeable. He was quickly recognized among his fellow students as richly endowed, but they failed to find in him any of the so-called "grind" qualities, and doubtless rejoiced in their failure. His ability to prepare his daily tasks with rapidity left him abundance of time to participate in student affairs and to do a vast amount of general reading besides. On graduation he received many honors. The classical oration at commencement fell to him. He won the Dunn premium in English Literature as well as the Carpenter prize, which was awarded on the basis of character, scholarship and general attainments. His work as a student had previously been recognized by his election to the Phi Beta Kappa Society.

His life at college was one of great personal enjoyment. He liked his work and did it well, but he perhaps found fully as much pleasure in the other advantages which a college course afforded to a morally healthy young man of bright, jovial and hearty disposition, who loved communion with kindred college spirits.

Upon his graduation at the early age of nineteen the serious work of life began. His parents had designed him for the ministry, but the profession of law appealed to him far more. Of natural independence of character, he resolved to earn the means necessary for his further education. Without delay he obtained a position as instructor at Delaware Academy, Delhi, N. Y., where he remained for one year, teaching mathematics, Greek and Latin. From four to nine each afternoon of that year he studied law in the office of Judge Gleason, and his late evenings were given to the preparation of his work as teacher for the following day. In the autumn of 1882 he came to New York and entered the Columbia College Law School, from which he was graduated in 1884, winning the highest honor, known as the Prize Fellowship, which carried with it an appointment as tutor for three years, at a salary of $500 a year. The same year he was admitted to practice at the New York Bar, and obtained a position in the law office of Chamberlain, Carter & Hornblower.

The period from 1884 to 1887 was for him a time of arduous toil. His duties as a law clerk claimed his entire time by day, while as prize tutor at Columbia he was required to instruct the law students for an hour and a half during two evenings in the week. In addition to this he was adding to his income as well as to his legal knowledge by conducting during two other evenings of the week a private "quiz" among law students desiring his assistance.

In 1888 he became a member of the firm of Carter, Hughes & Cravath, which was shortly afterward succeeded by the firm of Carter, Hughes & Kellogg. His rapid promotion, which was the result solely of his own work, carried with it early responsibility, and while this doubtless tended to make him a strong and self-reliant character, the strain of work after a few years began to tell upon his health. This circumstance led to his acceptance in 1891 of the offer of a professorship of law at Cornell University.

Mr. Hughes was married in December, 1888, to Miss Antoinette Carter, the

daughter of his law partner, Walter S. Carter. Mr. Carter, voted the best friend of the Harvard Law School by one of its classes, will be remembered as a man who probably did more for young lawyers than any other man of his time. Mr. Carter's interest was by no means confined to his law business. He had a taste for art as well as for genealogy, his own line being traceable direct to Elder William Brewster. Of generous impulses and broad charity, the close friend of Bishop Charles H. Fowler, he was at once one of the most active and most prominent workers and generous givers in the Methodist Church. Six feet in height and well proportioned, he is also remembered by his friends as a handsome man and a striking personality. His daughter, Mrs. Hughes, combines a winsomeness of person, a grace and charm of manner and a simplicity of taste which admirably fit her for the position to which she seems destined.

At Cornell Mr. Hughes was recognized as an extraordinary teacher and the peer of the best. His resignation in 1893 to return to the practice of law at the earnest solicitation of Mr. Carter caused the greatest regret among his associates there. Since that time he has been continuously engaged in the active practice of law, his present firm of Hughes, Rounds & Schurman being the successor of the firm of Carter, Hughes & Dwight, of which he was for many years a member. His skill as a trial lawyer and his ability in clearly presenting legal arguments in appellate courts have long been the subject of comment. The result has been that his services as counsel have in recent years been more and more in demand by other lawyers.

He is a Republican by inheritance as well as by conviction. His father never failed to cast his ballot on Election Day for the straight ticket. He was fortunate, however, in belonging to a party whose candidates could be supported without offense to the conscience.

Mr. Hughes is a rapid and omnivorous reader, but his interests are by no means limited either to books or to the practice of law. He is a member of the Fifth Avenue Baptist Church and was the founder of its Young Men's Bible Class. Catholic in his views, his sympathies are not confined within the limits of denominational lines. He is an active member of the National Federation of Churches and an earnest endorser of its aims and purposes. His life is an open book. There is nothing in it to palliate or explain. He has lived it in his own way, which means that he has performed each day's task in a whole-hearted manner—following, consciously or unconsciously, the only perfect ideal, but with a total absence of claptrap or ostentation.

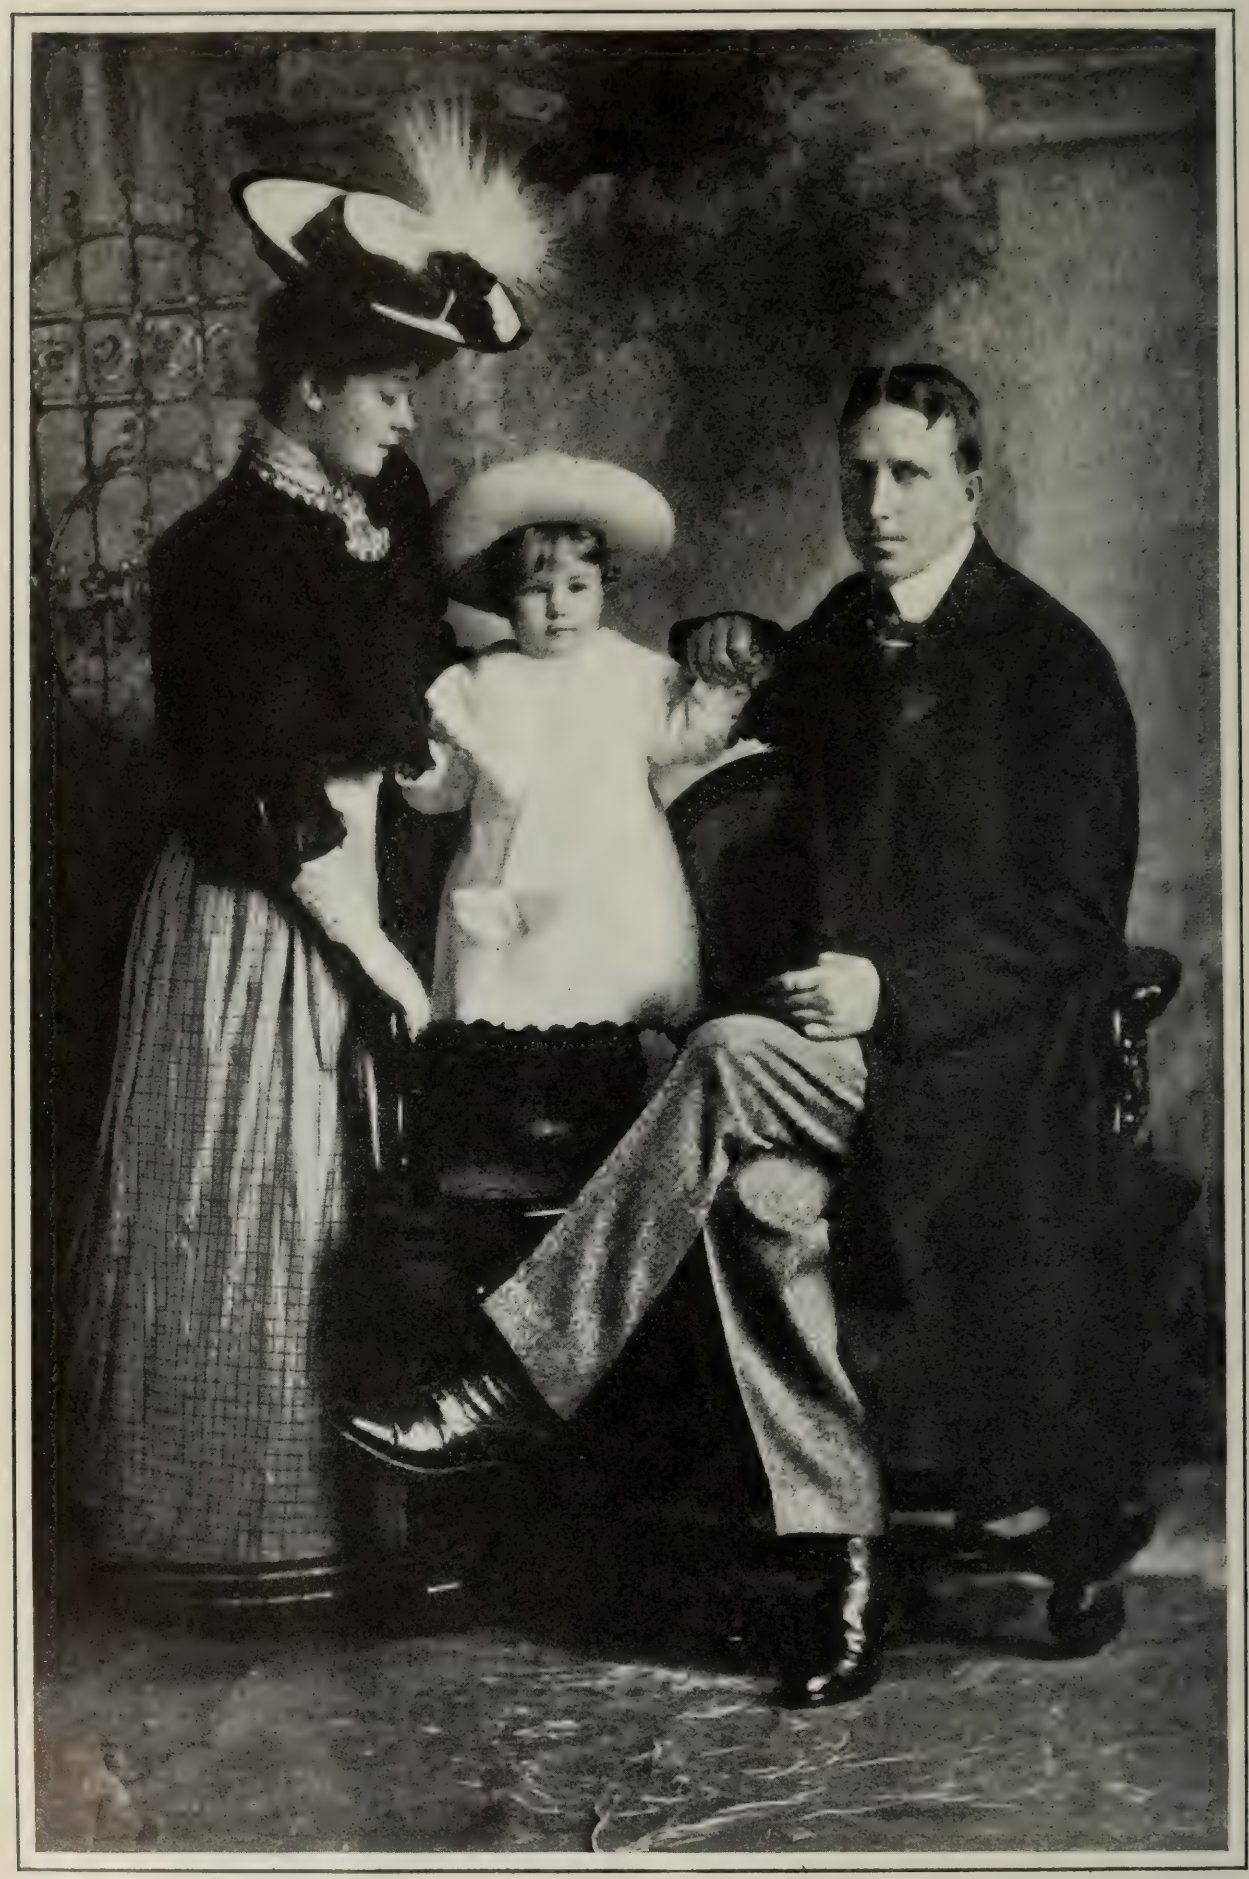
Of joyous and hopeful temperament, a lover of good stories, of which he has an abundant stock, clever at repartee and a good conversationalist, the companionship of Mr. Hughes is a delight, whether it be in the solitude of the Maine woods or among the glories of the Swiss mountains or at the social board at home or elsewhere. With a nervous system and self-control almost perfect, he is able, however engrossing or important the work in hand, to dismiss it from his mind at will.

Courteous to and thoughtful of others he has never met the man to whom he could cringe or the office boy whom he failed to treat with due consideration.

But perhaps no characteristics are more noticeable than his good judgment and common-sense. A moment's reflection will show that his public service was beset with veritable pitfalls. But he escaped them all, and thru all the flattering comment which his work evoked, he never for a moment lost his head or gave the slightest indication that he was likely to do so. Under trying circumstances and in difficult situations he seems, quite unconsciously, to radiate the spirit of calm and quiet confidence.

It is unnecessary to say that Mr. Hughes is a thoroly equipped lawyer. So much is generally conceded. It is also true that few members of the New York Bar possess so wide a knowledge of legal principles. Twenty-five years of study, however engrossing, is not enough to account for his attainments in this respect. Neither is the existence of a retentive memory, even tho it be of the kind, as his is, which enables the possessor to recall as required not only pertinent decisions, but in many cases even the very citations themselves. A closer knowledge of the man will disclose that back of this rich endowment is an intellect at once wholly admirable and unusual. The

elegance and conciseness of his briefs, as well as the clearness and force of his oral and written arguments, have excited the admiration alike of the bench and of the bar. His well trained and ever active mind is of the analytic type, and his ability quickly to grasp a complicated mass of facts and marshal them in logical and convincing order is extraordinary. Something of this gift, which has been the occasion of enthusiastic comment by many a client, was revealed in his conduct of the recent gas and insurance investigations. His breadth of legal knowledge is doubtless attributable in part to the fact that his practice has fallen into general and not special lines. That his clients have not been the great corporations or so-called "trusts" is attested by the fact that after twenty years of active practice, during all of which he has lived never expensively, tho always comfortably, he has not accumulated a fortune; nor has he sought one. But it is in this very generality of his practice that he has always gloried. It meant fidelity to all clients, but subserviency to none. While his professional ideals have always been of the highest, he especially craved and absolutely maintained the independence of the practitioners of the old school. He resolved to be a lawyer whose services might in proper cases be retained, but never bought. General retainers involving his commitment to any and every kind of service required were never accepted by him. He has acted upon the principle that independence both of lawyer and client is essential to the ideal relation between them.



Nor has the practice of law ever been with him a mere money-making occupation. It has rather been an intellectual pursuit, affording him at once the keen enjoyment of mental activity and a means of supporting his family free from the annoyance of petty economies. Alive to the importance of educating his family in the best possible way and of protecting them against the possibility of accident to himself, he has no desire to acquire wealth which would tempt them from the simple style of life to which they are accustomed, and certainly he has no desire to acquire it for its own sake.

The public already know something of his power of concentration, his absolute fearlessness and his thoroughness of method. Whatever he undertakes becomes for the time of first importance. It literally takes possession of him and has at command the best that is in him. To do anything in a half-hearted, slipshod or inaccurate way is absolutely foreign to his nature. By those who know him best his fearlessness and independence have been well understood. As a court lawyer of vast experience he has long been recognized as a hard fighter who knows how to give blows as well as to take them. Once retained to obtain justice for a client there is no such thing as "scaring him off," however distinguished or powerful the parties affected may be. He is steadfast and immovable till the fight is finished. The gas and insurance inquiries afford open proof of this disposition. Any witness whether high or low, rich or poor, who could throw light on the issue,—and Mr. Hughes confined himself to the issue,—was required by him to do so. He never wavered in meeting the obligations implied by his retainer. With his high sense of duty it is little wonder that such a man should have refused a year ago a nomination for Mayor of New York, because the work he had undertaken as counsel in the insurance inquiry had only then been begun. To have expected any other answer was not to know the man. He had put his hand to the plow and would never turn back.

Keen and fearless in detecting and exposing business immorality and wrongdoing, Mr. Hughes has also shown constructive ability of a high order. His work as counsel for the two famous committees by no means ended with the examination of witnesses. It was his to take the leading part in formulating remedial legislation.

The people of the State have in this candidate for Governor a man possessing those qualities in a marked degree which especially fit him for that high office. For proof of this they are not dependent either upon the imagination or the assurances of his personal friends or salaried supporters, but they can turn to his record of public service, which was ably, faithfully and bravely performed under the most trying conditions and in the continuous limelight of publicity.

New York City.

William Randolph Hearst and his family. Mr. Hearst is the nominee of the Democratic Party and the Independence League for Governor of New York.

William Randolph Hearst

BY ARTHUR BRISBANE

[Mr. Brisbane is Mr. Hearst's right hand man in the management of his newspapers, and is the writer of the editorials in the *Evening Journal*. As showing how the times have changed it is often told how Mr. Brisbane's father, Albert Brisbane, in 1842, purchased the right from Horace Greeley to occupy one column daily on the front page of *The Tribune* to preach Fourierism. Now, within one generation, Mr. Arthur Brisbane the son, is paid the highest salary of any editor in America to teach the same doctrines for which his father could not get a hearing except at advertising rates. Mr. Arthur Brisbane reaches a wider audience every day than any other writer in the world.—Editor.]

MR. HEARST'S nomination by the Democratic party of New York State is a victory for genuine popular government.

The people have had several years of government by the trusts.

Every trust in the United States and every corporation that wants special privileges are opposed to Mr. Hearst. There is no question that his nomination means a severe blow at trust and corporation government.

The plan of the trusts has been to control both political parties, winning with one and keeping the other in reserve.

Something went wrong this time with that plan in New York. The people have an opportunity to vote for government independent of trusts.

The situation is emphasized by the nomination of Mr. Hughes on the Republican ticket. Mr. Hughes is a corporation lawyer. He is very highly spoken of, but he is a corporation lawyer. His work has been done for corporations and with corporations. His income has been paid to him in large fees, thousands at a time, by a few corporation managers.

Mr. Hearst may be called a journalistic lawyer of the people. His income has been paid to him by millions of citizens contributing one cent each.

A man, in office or out, must be influenced by the individuals or other forces that have been his friends and the sources of his success.

In office, it would be perfectly natural for Mr. Hearst to represent the millions who have employed him as their representative, paying one cent a day each.

And it would be perfectly natural for Mr. Hughes, consciously or unconsciously, to represent the corporations that have been employing him on a very different basis.

People will not mistake the rallying of all trusts and all corporations to the support of Mr. Hughes.

There isn't an intelligent American who questions the statement that every trust, every person seeking for special privileges in this country, wants to see Mr. Hughes elected and Mr. Hearst defeated.

There is no attack intended upon Mr. Hughes' personal integrity. He is a high-class corporation lawyer, beyond question.

But the trusts know that he is their kind of a man, and they prove it in throwing their support to him.

The people know that Mr. Hearst is their kind of a man, and they will prove that on election day, when they will get their chance to give with their votes the approval that the trust gives with its campaign check.

Mr. Hearst is a very strong man. He impresses all that meet him. He is destined to be one of the great and useful figures in the history of our national progress toward genuine democracy, toward republican government by the people as it was planned in 1776.

No unbiased, intelligent man has ever talked with Mr. Hearst, even for a few minutes, without describing him as a man of force, character, modesty, wide information, and one wilfully maligned by ignorance or by the paid traducers of special interests.

The important feature of Mr. Hearst's nomination by the Independence League and by the Democrats is the fact that the nomination represents the victory of principle. Fundamental principles are few, men of ability are many.

Men as devoted and as able as Mr. Hearst have lived and worked and died for principle.

They are dead, many are forgotten, but the principle lives.

The right of the people, of the citizen with only his vote, to direct this government and to forbid government control by trusts, is the principle that triumphs in Mr. Hearst's nomination.

It is not necessary to say that he would

not have been nominated by the Democratic party if the influence of corporations in that party had not been, momentarily at least, wiped out by a powerful revolt of the popular will.

His nomination proves again that an honorable defeat is really a victory.

Last fall the people were defeated, and they were cheated. From that defeat and the evidence of power and will purpose which the people showed arises the victory that has now been won over trust control of both political parties.

In this campaign there will be a fight new in our politics, a fight that the people need, one that they have been longing for.

On one side, the corporations, led by the best, cleanest corporation lawyer that they could find, are lined up for a hard fight.

On the other side is Mr. Hearst, representing opposition to corporation control.

Mr. Hughes will be greeted by corporation agencies, and by those that are unconsciously enemies of popular government, as a great, an almost invincible man.

But the people will ask Mr. Hughes questions that he will not answer satisfactorily.

He will not be able to explain his failure to put Messrs. Cortelyou and Bliss on the stand in the Insurance Investigation, his failure to make them tell what they did with the policy-holders' money that was given to them.

He will not explain satisfactorily his failure to put Mr. Root on the stand, his failure to get from Mr. Root the large supply of information that he could have given concerning his work as the attorney of Mr. Ryan in life insurance affairs.

Mr. Hughes might say that it would not be becoming for one distinguished corporation lawyer to pry into the affairs or the profits or the doings of another. But the people will not accept that explanation.

Mr. Hughes may say that it would have been disrespectful to the President of the United States to summon his representative, Mr. Cortelyou, and ask him what he did with the policy-holders' money that was handed to him. But the people will not accept that explanation. They will say that money stolen from policy-holders, money stolen from Democrats and turned over to a Republican campaign fund, should be accounted for, no matter how distinguished the person that received it.

Mr. Hearst, in a speech at Rome, N. Y., said:

> The corporation lawyer is a man who has served the corporation before he went into office, who expects to serve the corporations after he goes out of office, and what does any fair-minded man imagine he is going to do while he is in office? If nine-tenths of your representatives in politics are attorneys looking out for the interests of their corporation masters, you surely do not have representative government.

This quotation represents the thought of a great many thousands of voters, both Democrats and Republicans.

Mr. Hughes's occupation as a corporation attorney, if it be interrupted by his election to office, will be resumed upon the expiration of his term. The people will want very definite assurances from one "who has served the corporations before he went into office, who expects to serve the corporations after he goes out of office," as to his probable attitude toward the corporations while he is in office.

The people will ask Mr. Hughes how it happens that there was no effort whatever by the trusts to prevent his nomination at Saratoga.

They will contrast the harmony of Saratoga with the desperate effort of trust representatives to prevent Hearst's nomination at Buffalo. They will realize that the trusts would never give up without a struggle the control of Republican nominations. And they will ask Mr. Hughes how it happens that, while a half a million dollars were sent by the trusts to Buffalo to prevent Hearst's nomination; while the ablest representatives of Wall Street monopolists went up with the trust money to Buffalo, not a dollar and not a man were sent by the trusts to defeat Hughes. The friends of Mr. Hughes will find it difficult to explain this.

The editor of THE INDEPENDENT asks for some description of Mr. Hearst's personality and his character.

Those that choose to do so will have opportunities to study Mr. Hearst during this campaign. He will speak constantly.

Those that cannot attend his meetings will be able to study his character in his public addresses.

Mr. Hearst may be briefly described as follows:

He is very tall—well over six feet. He is very quiet in manner and in his talk. He works very hard, but does not worry about results. On the night of the nomination at Buffalo, while affairs were still undecided, while the agents of the New York traction and gas trusts were making their last desperate effort against him, Mr. Hearst was in bed fast asleep. He does not waste his energies in any way. He will be hard at work on important problems long after he shall have disposed of the shallow enemies of today, who only know how to fight with their pocketbooks.

Mr. Hearst, as has been said, does not waste his vitality. He does not smoke or drink. He advocates moderation for all, teetotalism for those that are equal to it. Personally a total abstainer, he does not believe in prohibition; personal liberty is paramount in his doctrine. He believes that drunkenness should be fought with prosperity and argument—not with compulsion.

Mr. Hearst is a studious man, a constant and earnest student of history. His interests are confined entirely to his family, to public questions, which he studies in the light of past events, and to his newspapers, which constitute his great working machine.

Mr. Hearst is a conservative in the true sense. He believes in holding fast to that which is good. He is not a theorist, but confines his attention to meeting in a practical way the practical problems of today.

He believes that this country can provide well for its inhabitants in accordance with their needs, their industry and their deserts. He realizes that, if the few, thru monopoly and conspiracy, are allowed to take a great deal more than their share, then the many, tho honestly willing, must necessarily suffer and get less than their share.

Mr. Hearst is a capable man in business; he realizes the problems that confront business men; he has every reason to understand their side of important questions.

Mr. Hearst, in the nature of affairs, is an earnest advocate of the highest possible prosperity. His own success depends absolutely upon the continued prosperity, upon the profitable transactions of thousands of business men all over the country. He carries on his business in five American cities, from Boston to San Francisco, so that he is interested in the welfare of the nation as a whole. It is exceedingly difficult for those that oppose him to find any honest argument against his election. Mr. Hearst advocates high wages. He does more—he PAYS high wages.

Mr. Hearst advocates the eight-hour day—and he does more, all of his newspapers are CONDUCTED on the eight-hour plan.

When he talks about high wages and eight hours for the skilled mechanic, he is not theorizing, he is talking about what he understands, he is talking about what he does.

Mr. Hearst believes that the people have a right to control the great public corporations, the great concerns that monopolize absolute necessities of life. And he is glad to represent in his newspapers and as a candidate for office the millions that have shown their confidence in him.

To the man who honestly, perhaps, but from ignorance, opposes Mr. Hearst, I would put these questions:

Has Mr. Hearst anything to gain from office, except public approval?

Do you know of any dishonest corporation or any recognized public enemy that is not an opponent of Mr. Hearst?

Is there any reason conceivable why he should betray the millions of average honest American citizens who read his newspapers, constitute his following, and hold in their hands his material and political welfare?

I would recommend also to conscientious men lacking information a statement written by Justice Gaynor the day after Mr. Hearst's nomination:

"Certainly I shall support Mr. Hearst, and I advise every one to examine and ascertain what his political and economic principles are before deciding against him.

"It is a miserable man who will not look on both sides before making up his mind."

NEW YORK CITY.

The Future of the Home

[It would be difficult to find two brighter women writers in the United States today than Mrs. Gilman and Mrs. Harris. Mrs. Gilman is a destructive and constructive critic of social affairs. Mrs. Harris is a Southerner. We take great pride in being able to publish this debate of theirs. We do not say which gets the better of the argument.—EDITOR.]

Home-Worship

BY CHARLOTTE PERKINS GILMAN

I MIGHT have called it family worship, but people would have thought I meant family prayer. It is not worship by the family, but worship of the family, that needs to be examined a bit; that popular, that wellnigh universal belief, that "a man's first duty is to his family," and that a woman has no other.

"Charity begins at home" is a proverb built on this same foundation. Such charity seldom goes farther.

To begin with, let us establish our order of precedence.

What do we mean by "first"? First in date of introduction or first in importance?

If the former, then our common belief is right enough.

For the family is our best means of reproducing the race; and race preservation is the primal duty, coming before self-preservation.

Don't ever believe anybody who tries to tell you that "self-preservation is the first law of nature." Nature knows better. It might be true of the phœnix—there's only one of him at a time. Even he has to burn up to make another. Race-preservation is so wholly the first law of nature that she sacrifices the individual by millions to insure it, and even to improve it. If we study nature's laws with a large and open mind we see three great processes going on: The maintenance of species, the reproduction of species, the improvement of species; and this last is what gives us people on earth now, instead of polyps. Besides polyps I should say—for there are polyps in plenty still with us.

When you measure real values in living, it is the last and not the first that counts highest. Without going back to polyps, or even to anthropoids, we should look at the story of human advance to get a standard of ethics. We were beasts, almost, when we began. We were savages for long, long ages. We were struggling barbarians for ages more. We finally, in the very few last centuries, began to grasp the rudiments of civilization; and long as the story is it does march faster toward the end. Where once it took ten thousand years to give us fire or wheels or horses, now every decade, every year, sees us leap forward. The family came in a long way back. It was a step, a very good step, but not the top of the ladder. You find the family at its serene, unclouded hight in early barbarian times; the big, boundless patriarchal family. One man as the head, as many women as he could buy or steal, and children proportionate.

Then was the time when a man could justly say that his first—*i. e.,* highest, duty was to his family; because no higher form of human relation had been introduced. There was no state or nation then; no civic duty, no public duty; the family was the top.

That was a long time ago. That poor, bare little world, sparsely speckled with families, has given place to our rich world, thickly netted with nations; and at last we begin to see past even that, to the time when humanity will run smooth-woven over all the earth. We should worship the highest; work for the highest; it is the highest duty that comes first. a man's first duty is to the world—the whole of humanity—and also a woman's.

Suppose you have a truth, a great valuable truth, of service to all mankind. And suppose if you utter that truth the purblind people will kill you and destroy your family.

Suppose again you have a lie, a pleasant, profitable lie, but of deadly danger to mankind. If you utter the lie the purblind people will reward you and honor you, and your family will flourish. Which is your duty, to utter the lie and serve your family, or to utter the truth and serve the world?

Where do we get this notion that duty to the family is so pre-eminent? Here are all these popular parsons telling us

that if only a man is all right in his family he is therefore a good citizen and all will go well with the state. Why do we believe things so easily? (The answer to that is that we have had so much practice in believing and so little in thinking.)

Just examine the nations of the earth and *see* for yourself if the admirable domestic character is necessarily the best citizen. The noblest citizenship the world ever saw blossomed briefly in ancient Athens; but those glorious Athenians put civic duty far, far before the family.

In China, on the other hand, we have real family-worship, and citizenship is scarcely known. To love and serve the state is higher than to love and serve the family. One may be a benefactor of all mankind and never have a family at all!

The great religions of the world lay no such stress on duty to the family; in particular Christianity, whose great founder specifically repudiated his family and said: "I am come to set a man at variance against his father, and the daughter against her mother and the daughter-in-law against the mother-in-law; and a man's foes shall be they of his own household." Note that it is the

Charlotte Perkins Gilman.

young who are set at variance with the old by new truth.

He taught human love, not family love; the love of the neighbor, the brotherhood of man; the love of God best shown in loving man. He never said: "A man's first duty is to his family," nor a woman's, even.

No, it is not in any strong leading religion of the world. It belongs far, far, behind, in dark early barbarian ages, and has come down to us like a subterranean stream, thru the religion of the Jews. Before they grasped such truth as was given them, before Moses, before Abraham, was the real period of family-worship.

See Abraham discarding his mistress and his child at will, ready to slay another, sole master of his household. Those habits date from an antiquity to which Judaism is modern. But the Jewish religion, great as it was, was unable to supersede this current of ancestral custom; the family was more to them than the church or state; and is so yet.

And we in our blindness point to the "beautiful family life" of the Jew as a superiority! It is beautiful; it is good as far as it goes; but unless we had developed a higher duty than that we too should be a race, but not a nation — a million families, but no state.

The goal of humanity is nothing short of universal peace and right living; an organization as wide as the world.

Toward this end the widening, strengthening web of social relation steadily extends. Self-interest, family interest, tribal interest, national interest, all must give way to this world interest, which alone can ensure the prosperous growth of all the others, its lesser parts, its graded constituents.

Self, one's personal, individual self, is at the bottom in our order of human duty. The family is next to self, *i. e.*, next to the bottom.

Our universal error on this ground is largely responsible for those grievous public evils under which we suffer so today.

Here is a burglar, loving, kind, devoted to his family, but denying his duty to society; preying on it, to serve them.

Here is a meat packer, following his business under the apparent idea that the feeding of millions of people is no concern of his—that he is there only to "make money" and provide for his family.

He may be an admirable husband and father, son and brother, but he is a criminal citizen.

Here is the scab; an honest workman perhaps; clever, industrious, thrifty, temperate, keeping out of the union because, as he guilelsssly states, "I'm for Mrs. Bodenau and the baby." He thinks his first duty is to his family.

He thinks it would be really wrong of him to risk injuring them for the sake of improving conditions for all workingmen and their families.

That's where he is mistaken. By self-sacrifice and family sacrifice the long, slow upward struggle of the trades-union movement has raised wages, shortened hours, won some glimmer of justice for labor; and man, woman and child is the better for it.

The other way—each man alone for his family—is the way of the barbarian. And the barbarian is not really better off.

A thousand men, standing together for a thousand families, are more of a safeguard than each for his own.

The trades union makes mistakes, so does the nation. But it is a higher form of organization than a family for all that. The blood tie is common to us and the animals; but ties of specialized social relation are humanity's prerogative. We may pass lightly enough over men's sins in this regard, because, in spite of them, it is men, and men alone, who have risen above physical relationship and given us what we know of human relationship. For centuries upon centuries the real world grew, human faculties were developed, social institutions widened and deepened, without women having any hand in the great process.

You will find father, mother and child in Africa, Egypt, Turkey, China, Russia, Patagonia. Wherever humanity exists above the promiscuous horde there is the family in some form, and there is the home. But not till you have added the shop, the school, the Church, the hall, the factory, the post office, the public buildings for the public work, do you find progress and civilization.

As civilization advances, each man

mistakenly plucks all he can of its fruits and carries them home. There sits the woman, content to receive; and the more she piles up comforts and luxuries in that soft place the more she clings to her ancient code of home worship.

She is "a good wife"—meaning that she is not only chaste and affectionate, but a proficient house servant, directly or by proxy.

She is "a good mother"—meaning that she devotes herself continuously to the care and service of her children (without the least regard to her fitness for the task!).

What else is she?

Nothing else. She doesn't want to be anything else. She doesn't dream that she ought to be anything else. She honestly believes that the first, last and only duty of a woman is to "keep house" and "raise children."

This faith is deeper than her religion. It is her religion. Let the religion of men change and grow as it will—Judaism, Mohammedanism, Buddhism, Brahmanism, Shintoism, Buabism, or Christianity; let his order of duties change and grow as it has—well for the world! The women remain content in their little code, faithful to a circle of duties which has not changed in ten thousand years. Only now, in a brief century, have women begun to rouse themselves, to see that they, too, are human, that they, too, are part of the world and that they have many great responsibilities in it.

But what a struggle! what immeasurable opposition! Not only from men, who have been "the world" so long that woman's claim to be part of it seems to them monstrous and absurd; but women—poor, care-hardened, home-dwarfed creatures—whose eyes, long used to a small, dark space, can see nothing outside but a glare.

The "domestic woman"! The "old-fashioned woman"! How fondly we cling to her, and how pitifully we strive to retain a fast-vanishing type.

We are perfectly sincere in this. We do honestly believe, most of us, that the world has to be as bad as it is; gradually moving along to something better; and that women have no part nor lot in it; that they are here to make people—not to be people! So we exalt our own personal comforts into a code of virtues. We build a little home to live in, to eat in, sleep in, bear children in, love and quarrel in, be sick and die in—and then we turn round and worship it.

Worship the house we live in, because we live in it.

Worship our own bodies and their various processes. Keep one whole woman—and more if we can afford it—to cook and clean and serve us. And we have persuaded this bodyservant of ours that it is her highest, her only, duty to fill this place.

She believes it. She is so befuddled with centuries of house service that she has buried even motherhood under her "domestic duties." We wave a beautiful banner labeled "Motherhood" over this place of our idolatry; but if we would once learn to honor that word as we should and study its high requirements we should blush with shame that for so long we have been content to subordinate motherhood to house service.

So satisfied are we with our domestic idol that we fail to observe its real effect on motherhood. We fail to notice that a race of mothers who are house servants by trade have never learned how to care for children properly.

Maternal instinct we left behind with other instincts when we ceased to be mere brutes. Maternal reason we have not developed.

Therefore our children, instead of being a splendid, pushing wave of the latest improved kind of humanity, are always born and reared in the dim past, in the ancient status of barbarism—the age of home worship.

Here is a child born. He ought to be so placed as to learn deeply and naturally, in those invaluable early years of lasting impression, that he is a citizen—a member of humanity; that he owes to his city, his State, his country, his world all these glorious advantages of civilized life. That the faults of our time are ours in common, and that we must work together to outgrow them; that the glory and joy and beauty of life lies in our social consciousness, our social service. That God is in man—not merely in the Jones family, but in the human family; and that religion is in right relation of man to man, so fulfilling the work of God.

None of this does the little child hear or see. He is born and reared in an atmosphere of personality—just as he was thousands of years back. He has papa and mamma, brother and sister, very big; the rest of the world very small. But, above all, he has the Great Object Lesson, his mother; his mother, who is all in all to him; spending her entire time at the cook-stove and sewing-machine, with broom and tub; unless she can hire servants and spend it at the bridge table.

She may be a good woman—she mostly is. She may believe her position to be quite right—she mostly does; and in her contented acceptance of this primitive faith she never dreams that she is doing most cruel injustice to her child; that they, mothers in general (she never thinks "They"), are retarding the growth of the children of the world.

Now suppose we substitute the word World for the word Home for a while. Suppose we spread our consciences quite a bit and say: "I am here in the World, a member of the Human Family. My first duty is to love and serve them, to keep them comfortable and happy and to help them grow." Suppose we had right here in America over fifteen or twenty million mothers awake and alive to their common responsibility, their common duty, their common power. Look at the housecleaning there would be! Imagine these deep, sunken wells of mother love rising, overflowing, meeting and mingling, flooding the world with peace and hope and happiness.

They would love all their children—and all men are their children. They would sweep away all mischievous things that hurt their children. They would promote all good things that help their children. They would—but what's the use? They can't. They haven't the capacity—or they think they haven't.

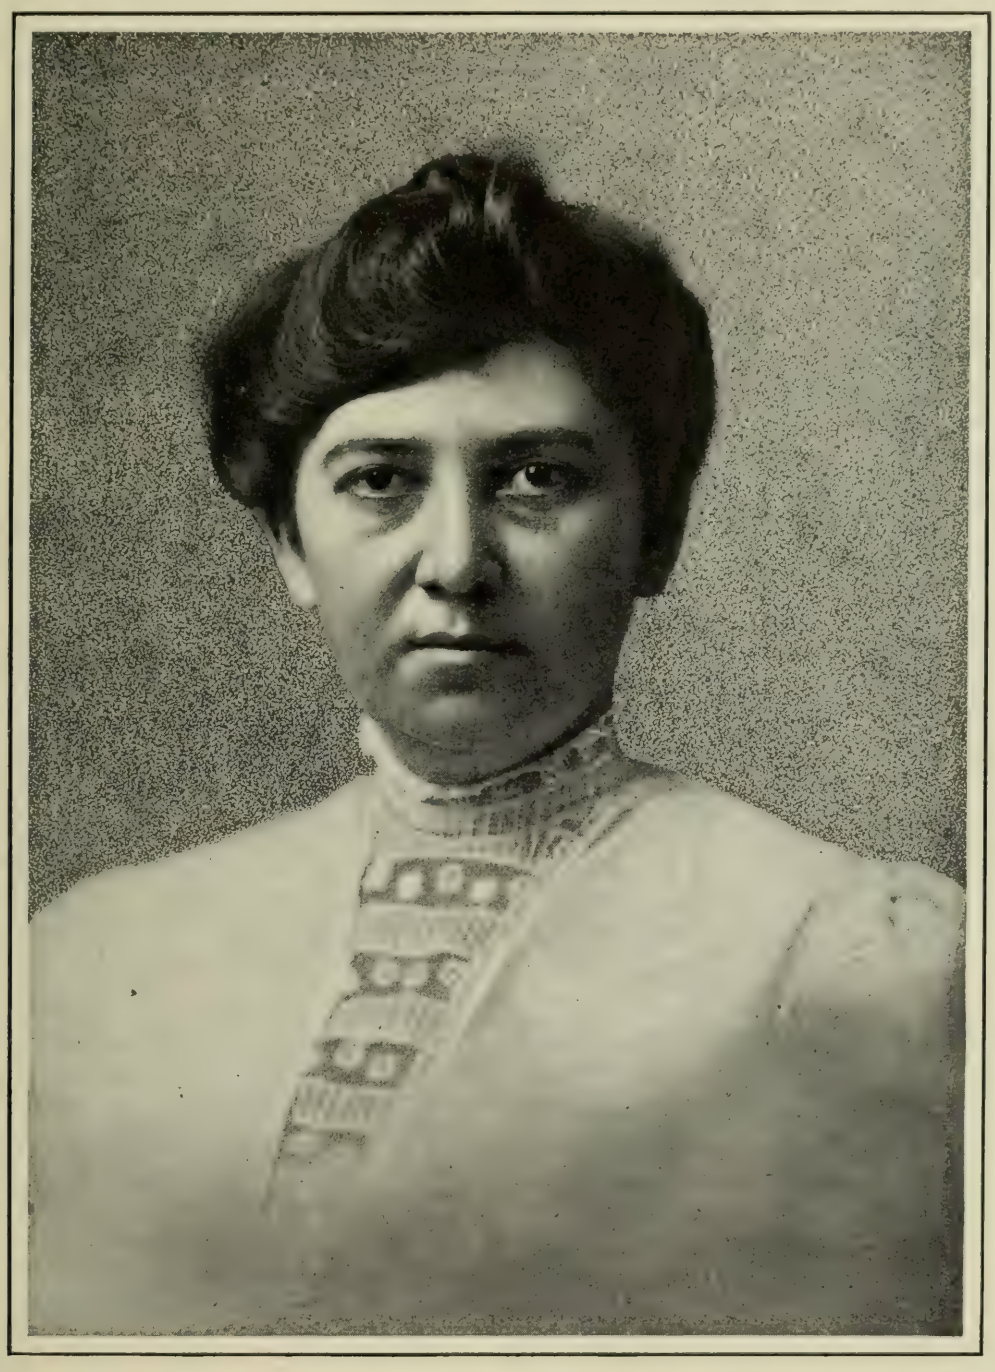
It is very difficult for a mind that has always confined itself to the question of what to get for dinner to rise to consider the question of how to ensure pure food to the world. You can't expect to make philanthropists and philosophers, citizens and heroes, out of a working class, a servant class, a domestic-servant class of women. Not in one day.

But the hope of the world is in them, and they will not disappoint it. They have begun already, and they will not stop.

By and by our women will see that motherhood comes before housekeeping and citizenship before either.

A land of citizen mothers would do more for childhood than a dozen lands of primitive mothers. Our home worship is closely wrapped up in the idea of child service. But motherhood of the human variety does not stop with infancy. Children are born in homes, but they grow up in streets, schools, and all the provisions of our common life. Our motherhood stops at the cradle almost. The bassinet must be hung with lace and ribbons, but the street may be foul and poisonous both physically and morally.

Home, the true human home, is the round world.



That is our home. That is what women should love and serve and help to keep in order. It's a lonely business for one sex to be civilized without the other—the product is not uniform. So soon as the lady ostrich will take her head out of the sand she may see something to her advantage.

The Monstrous Altruism

BY MRS. L. H. HARRIS

SOME of our modern social economists get their ideas from behind instead of before, from the bottom instead of the top. They are disposed to view every problem concerning the welfare of man as if he swung by the tail but yesterday from the universal human family tree. And their writings upon all such subjects may be recognized by the disposition they show in the first paragraph to take the conceit of immortality out of the reader. He was once a nit, an ape, a "polyp," a "beast," a "savage," a "barbarian"; even now he has grasped only the rudiments of civilization, and never will be truly civilized until he learns to practice a kind of monstrous altruism which requires that he *must* concern himself primarily for the good of the "whole round world," and that he ought to be willing to sacrifice his own home, family, wife and child to this end. But for this doctrine it is necessary to have an exoteric and an esoteric manner of expression. Among themselves, this

school of economists do not mince matters, but when they write for the ignorant—that is, for people who do not know yet that the way to get rid of immorality is to get rid of the moral sense —they write with a certain vagueness.

Mrs. L. H. Harris.

They do not show the monstrous ends of their own logic. Thus in this issue of THE INDEPENDENT Mrs. Gilman has a jack-o'-lantern article upon home (family) worship. It is really a plea for a sort of commonwealth race incubator, a proposition to raise a foundling nation, but she has covered the conclusions of her own argument with such a noble, missionary use of language, that she merely brings the reader under conviction for sin for being a decent man. He is almost upon the defensive because his father and mother remained the selfish guardians of their own home and did not send him to a day nursery to be brought up.

The family, in fact, is the oldest and strongest barrier opposed to this perverted altruism, and, for this reason, their zeal is indefatigably directed against it. When the integral family consciousness has been destroyed, it will be time enough to reveal the logical end

of the whole movement. Then the history of marriage will "begin with the promiscuous freedom of savagery and end in the equally incidental and loose relations of individual and temporary desire." Even now the country is flooded with books on social economics, which but thinly veil this prophecy. And if all the economists of the school to which Mrs. Gilman appears to belong do not admit it, they nearly all proclaim social doctrines and demand social conditions which bring just this to pass.

Now history shows that the highest form of civilization exists only where the family life is pre-eminent in its demands, and that when this ceases to be the rule, the order of things, disintegration sets in. (See cause for the decay of the ancient Greek civilization.) Therefore, even as a citizen, a man's first duty is to his family, to keep it, reserve it, and hold the bonds which bind him to it more sacred than any other. But Mrs. Gilman thinks that a man's first duty is to his family only in the sense that "the family is our best means of reproducing the race"—meaning that he must beget children, but after that his duty is to the state, to civil and social service at large. She lays great stress upon this point. His altruism would consist in placing a woman in a condition where she could not support herself, and then sacrificing both her and the child to the policy, say, of a labor union.

Suppose, even, that the Utopian age has already dawned when the distribution of the common income from collective capital provides for these indigents, what is really implied by this theory of social economics? What ultimately becomes of the man, woman and child? *They cannot live together in the natural, exclusive family circle, in a home, for this would cultivate those affections, that sense of unity and of partiality based upon blood kinship, all of which is damaging to the realization and success of this new social order.* Doubtless they would live in co-operative establishments. (Mrs. Gilman and Upton Sinclair have a predilection for this kind of wholesale domesticity.) And the much talked of freedom and equality with men which women are promised under this system would be realized in the following manner: Having borne a child, the mother could leave it in the day-nursery department to be brought up as the bottle baby of the state, while she went forth to labor, teach, preach, or, it may be, run for the office of controller of the common boodle. She would sacrifice the old-fashioned ideal of maternal altruism which consisted in the mother giving her heart and time and strength to the child, *because this would be an exercise of a primitive, and damaging affection which placed the child before the "whole round world" in the mother's regard.* And she would become the citizen-mother. Her altruism would then consist in seeing that the milk wagons were kept clean, and in looking after municipal affairs generally.

Meanwhile what will the man who is the child's father be doing? Not, of course, attending to those public duties which the citizen-mother has taken off of his shoulders. Man never did anything since the world begun that he could get a woman to do for him. Even now he is laughing in his sleeve at having put the "citizen-mother" to the garbage job of looking after sanitary conditions in many of the larger towns and cities. And she, poor deluded soul, is vastly complimented at the political prestige of being made the supervisor of everybody's ash-pile. Men have always found women simple, but the simplest of all simple women is this "citizen-mother" type, the bee of "equality" buzzing in her bonnet.

However, leaving her to her own devices for a moment, let us return to the father man. As things are now, every man's life is threefold—private and domestic as the head of his own particular family, public as a citizen of the state, industrial, commercial as a factor in the business world. But under this new system he will have no home, no family in the recognized sense of these sacred terms. He will be a citizen-father and some kind of a transient visiting husband. And, since the citizen-mother comes in for an equal share of public duties and offices (so that, say in New England, where there are five women to every man, she will get the lioness's share!), he will have more leisure and less responsibility. And the question is, What will he do with it, his leisure and

irresponsibility? When we consider that at best he never has been regarded as the author of monogamic marriage, and that now he will live under a social system where "it is easier to be divorced than to be good," the inference is that his altruism will consist mostly in what Mrs. Gilman calls his "first duty," and in being a sort of political henchman to the "citizen-mother." For, bless you! those students of affairs who speak with alarm of the possible feminization of modern life have cause for anxiety. We are on our way to a matriarchal civilization if the Mrs. Gilman economists can achieve it. This is a conclusion, however, which they will deny. There never was such a set of back-acting intelligences for denying the obvious, inevitable conclusions of their own ruthless arguments.

And now one more question before we leave this new family group: What kind of consciousness would a wife have who realized that she was simply a state institution to her husband, the bearer of citizen-babes, so to speak, for the state, not for her husband. The old Spartan mothers could do this for old Sparta because it was not the fashion of the human mind then to know the delicacy and privacy of the marital relation as we know it. Then a woman was sacred to the state; now she is sacred, first, to herself; second, to her husband and children. And to destroy this feeling of decent reserve is to outrage her morally and spiritually. The horror of the whole proposition is revealed when we remember that every social and political economy has and must give place to another as time and circumstances change, but that the home, the family, has always survived, the eternal pattern from which a right and adequate government for that particular age could be formed. Now the plan is to destroy the family by destroying the conditions of family life, and the morals and sentiments upon which it is based, so that disintegration will be complete and lasting.

"If we study nature's laws with a large and open mind," says Mrs. Gilman, "we see three great processes going on, the maintenance of species, the reproduction of species, the improvement of species." To be sure, but nature has been the victim of many disastrous experiments along this line. For example, we do not improve the human species every time we reproduce it, not even when we endow it with genius and educate it in every art. If we did, that "noblest citizenship" in ancient Athens which Mrs. Gilman extols and bewails would not have "blossomed" so "briefly." She says they "put civic duty far, far before the family." That was the beginning and the end of their trouble. You cannot build a nation upon a forum, nor upon an intellectual market-place, even if you have a Socrates at the four corners of it. A nation is made in the home compress of love and honor and sacrifice. "The national life of Greece lasted barely for three generations, in spite of the undying glory of its literature and unrivaled triumphs of its art, *because* there the family fell from its proper place," says Westcott. It is not enough to have great gifts, great minds, or even great virtues, but to "improve the human species we must have a certain kind of virtue, *the* virtue, which makes these twain one flesh and keeps them so, a moral and spiritual refuge for their young. This is impossible to accomplish outside of the home. The family is not yet perfect, but it is not maintained, as Mrs. Gilman claims, at the expense of the common good. The common good suffers most when something happens to disrupt the family. "Only when there have been . . . established the closest ties of blood, only when family altruism has been most fostered has social altruism become most conspicuous," says Herbert Spencer. The trouble with our new economists is that they do not recognize the *evolution* of family life. "You find the family at its serene, unclouded hight in early barbarian times," says Mrs. Gilman. You do not. You find the family at its serene, unclouded hight *now* wherever married people stay married, where divorce is unthinkable, where children honor and obey their parents, where social recognition depends upon family honor and personal, not civic, virtue. And there are many such communities, else the country would not hold together as it does under so many false teachers.

"Where do we get this notion that duty to the family is so pre-eminent?" In the first place, it is not a mere "notion," but

it is a conviction as deep as love and as regnant as courage is in an honorable man for the care and defense of his young and helpless. Second, because his duty to his family *is* pre-eminent. We can get up early any morning, have a revolution and write out the charter for a new one before the next morning, but destroy the family, loosen its ties and you have pulled the gear off of that great force which can only make a stable state when it is geared with a very strong family check-rein. "The nations with a thoroly compacted family system have 'possessed the earth,'" says Walter Bagehot—"that is, they have taken all the finest districts in the most competed-for parts; and the nations with loose systems have been left merely to the mountain ranges and lonely islands. The family system, and that in its highest form, has been so exclusively the system of civilization that literature hardly recognizes any other." The point our new economists would make is that they do not object to the family, but to the family as it is now conducted. They are very hazy, however, as to the plans for improving it. If somebody could pin one of them down to tell definitely where the wife would stay, and exactly what would happen if the husband had to abandon her, say, to starvation, for the sake of his union policy; what would become of the children while she carried forward the reforms of the citizen-mother; how would she feel toward them; how much would they honor her and why; and, above all, what relation would the father-man have to his wife and children when he could not seclude them in a home, or in the private family life, and when he was duty bound to put civic service before their welfare? These are important questions when the proposition is virtually to do away with the home. A child is not an Irish potato; he is that out of which a man is made, and he requires a certain environment which the family has furnished in the past better than any other institution. This has been the training school of civilization for many centuries, and if he is not to have that, let us know definitely what he is to have. It is very well to deal in glittering generalities when we write about economics, but when we live we do it more veraciously and on a smaller scale. "Home, the true human home, is the round world." No, it is not. Even a citizen-babe has no business in such an open space, much less a wife or a maiden. The "round world" is the home of tribes, races and nations, humanly speaking; but home, the true human home, is the cave, the tent, tenement room or house where a married man and woman live and bring up children if they have them. It is the hearthstone about which they gather to sing and dance and pray. It is the place, more sacred than any church, where they learn to love, honor and obey. The atmosphere of it is so fine and sweet that some very sincere, intelligent, but misled, people would seem like reptiles there once they began to expound their doctrines upon the social life.

But this school of new economists enumerate the faults of the family life as an excuse for jumping out of the frying-pan into the fire. To this end they pervert the few scriptures we have and quote history upside down to this end. "In China," says Mrs. Gilman, "we have real family worship, and citizenship is scarcely known." No, we do not. In China we have ancestor worship, which is as different from the thing Mrs. Gilman calls family worship as a superstition is different from a virtue. The trouble with China is that the family life is not pure, and some members of the family are not honored as they should be. Also, it is the case of a nation getting its ideas from behind instead of before, and their civilization should be a warning to those social economists who appear to have been hypnotized by the study of apes and polyps. It is degrading to realize a sense of immediate relationship to remote ancestors. The temptation is to give up the idea of having an immortal soul, and whether we have or not, when a man yields to that temptation it is only a question of time when he will be swinging again by the tail from the universal family tree.

Nor is it a reproach to the Jews that they have a beautiful family life. This is their distinction, and it will not interfere with their being good citizens when the Gentiles give them a chance. Neither is the fact that a burglar may be "loving,

kind and devoted to his family" an argument against having a home and family. The trouble with the burglar is that he is a burglar, not that he is loving and kind to his family.

"The great religions of the world lay no such stress on duty to family," says Mrs. Gilman; "in particular, Christianity, whose great founder specifically repudiated his family." The quotation made to prove this, however, had no reference to family in this sense, but to the spiritual kingdom which he had come to establish. When hanging upon the cross, in an agony which might well have made Him oblivious of every human tie, he saw His mother standing by, and commended her to the care of the disciple whom he loved. Solicitude of a son for his mother was as strong in His breast as in that of any other Galilean peasant. Home ties were the emblems of His heavenly thoughts. "His whole theology," says Mr. Peabody, "may be described as a transfiguration of the family. God is a father, man is His son, and from father to son there is conveyed the precious, patient message of paternal love." How could He have spoken thus if He regarded family life as unimportant or with contempt? "In my Father's house are many mansions." What would such a figure of speech mean in a world where fatherhood was regarded merely as the method of "reproducing the race"? The sacredness of the home was more to Jesus than it has ever been to any other, and he was most emphatic in his denunciations of those social abuses which tend to weaken its bonds or to endanger the purity of its life. But these abuses are the very ones which would spring from the conditions proposed in the new "whole-round-world" home life. They are the abuses that did happen when citizens "put civic duty far, far before the family."

"Wherever humanity exists above the promiscuous horde there is the family in some form and there is the home, but not till you have added the school, the church, the hall, the factory, etc. . . . do we find progress and civilization." But who added them? Is there any record of their antedating the family? Rather do they not flourish more where the family life is most "pre-eminent"?

Progress and civilization appear to such people to be the result of energy, intelligence and executive ability, but beneath all is the human heart and the needs of the human heart. No form of life, civic or domestic, can last which does not recognize and supply them. And they are not supplied by the kind of altruism proposed by Mrs. Gilman. After all, we are related to one another and to God, not by any civic code, but thru the sentiments and emotions. These in turn make our principles and poetry. When a man will suffer, sacrifice and live for a sentiment it has become a principle; when his emotions flower into immortal speech they have become poetry. And we need both more than we need a new-fangled male and female head-butting civilization.

"By and by our women will see that motherhood comes before housekeeping and citizenship before either." Those among us who have been mothers know already that motherhood comes before housekeeping. As for the rest, no self-respecting man ought to want a "citizen" for his mother, and no wise woman will wish to follow her sons to the polls and henpeck them while they are looking after that part of the world's business, which is as essentially the man's as rolling logs and building dams.

In the right order of things the mother is the martyr for her children, and the father is the hero for them. The mother gives all, and the father achieves all for them. This is the altruism upon which the "improvement" of the race is really founded. Whether we know their names or not, the great women of our times and of all times are not those who demand citizenship, but they are the ones who have borne sons and daughters and taught them to pray and to keep the Ten Commandments. They have blossomed in holy beauty, withered and died for the home to keep it pure and undefiled. They are not "primitive," but sacred.

And finally, when the first bird built the first nest, nature proclaimed from that green bough the necessity and pre-eminence of the home. When the first child was born helpless, man set about conforming to that necessity, and he will go on conforming more and more wisely till the family shall have a pre-eminence

not yet dreamed of. It is the home, the family, which have redeemed him from savagery and barbarism, and it will be the influence of the home that shall save him from the practice of that monstrous altruism which I have but faintly interpreted in this article.

NASHVILLE, TENN.

Why "Monstrous?"

BY CHARLOTTE PERKINS GILMAN

A LARGE part of the foregoing "reply" consists in an appeal to popular prejudices by attributing to me certain horrifying theories and supposed consequences which have no connection with the article under discussion.

The same method is used to incite the Russian populace against the Jews, who are accused of sacrificing babies and other revolting rites; similar tales were told in Rome against the early Christians; the pioneers of modern science were branded as "atheists," and Socialists are dubbed "free-lovers." This is an old trick, a common trick, a cheap trick, but it is easy and usually successful; for false charges will stick in minds already sticky, while an appeal to reason is never popular. The position taken in my article is that in the order of virtues we should rank social duty before domestic duty, and that the Christian religion does precisely this, demanding of us the love of the neighbor, the care for "the least of these," as our direct service to God. Christ does not therefore ignore or exclude family love and service. Neither do I.

When there is a choice of conduct in which one must decide between serving one's family to society's loss, or serving society to one's family's loss, the duty to society comes first, that is all.

The soldier who serves his country at the cost of his life, to the neglect and injury of his family, is not therefore considered a depraved and dissolute character.

The woman who sends her sons to war with her blessing on them is not an unnatural mother; she is simply a mother whose patriotism is stronger than her maternal instinct, as it ought to be. We have had plenty of such men and women, practicing the "monstrous altruism" of sacrificing everything in life, including their best beloved, in devotion to certain square miles of land, certain thousands of population, certain groups of institutions and ideas—to a thing called "My Country"—and we have never found it necessary to blackguard and misrepresent them because of it.

The common duty of the citizen, man and woman, in time of war, we all admit; why call it "monstrous" in time of peace?

We are here to make a peaceful, happy and civilized world. In its upbuilding the private virtues and affections have their place, but still more we need public virtues and affections.

America is the scorn of the world today for its civic shame, its industrial dishonor.

A new scale of duties, in which every child should be taught that the honorable service of the State came first, and the loving service of the family second, would help us re-establish our good name.

The italics in which Mrs. Harris cheerfully forbids to such future citizens a private house and family affections are merely absurd. With as much right could she solemnly assert for them celibacy, or wholesale infanticide, or universal idiocy—there are no limits to the imagination.

The conception of "the whole round world" as our home, which Mrs. Harris seems to find as difficult to grasp as astronomical distances, is not new to sociologists. Love of humanity is the same feeling as patriotism, only larger.

Where there are only families, we have family feuds. Where there are only nations we have national wars. Some day we shall have a world at peace, with nations still in the world and families still in the nation. To this end we need a code of ethics, a code of honor, a standard of duty and service, far larger than we have now.

Such a higher morality need not alarm the most timid and stationary mind—the lesser morality will remain to us, purified and enlightened.

NEW YORK CITY.

The Atlanta Massacre

[The following article is from an educated negro, a life-long resident of Georgia, in whom, were it safe to print his name, our readers would have every confidence.—EDITOR.]

ATLANTA, Ga., has again demonstrated that it is not a civilized community. Last Saturday the Atlanta *News*, hard pressed for existence in competition with two other afternoon papers, felt called upon to print sensational charges of assault upon white women by negroes. Not one of these charges has yet been proved, but the mere report was enough to call together all the white "toughs" in the city as soon as they had drawn their week's wages, and to give them license to set upon innocent and unsuspecting blacks wherever found and butcher them upon the spot.

The cause of all this violence, by careful inquiry, I have traced to four sources —one remote and three immediate.

The remote cause is the contest between Hoke Smith and Clark Howell for Governor, in which both men openly declared that negroes have no rights save those granted thru sufferance by the white people. The three immediate causes are: 1. There was circulated by the Atlanta newspapers—*The News* and *The Georgian* especially—the report that five assaults had occurred in one week and an additional one on Saturday—*not one of which charges has been proved.* 2. There is a sharp struggle for existence among three evening papers, which feel called upon to use any measures whatsoever to attract readers among a population that can be best attracted by abuse of the negro. 3. There is an increasing number of educated and prosperous negroes, whose business and whose success are an eyesore to some of the whites, who can in no peaceable way prevent that progress, as the facts here will show.

The facts about the most aggravating case of assault I have found to be as follows: A negro whose purpose was unknown was seen in the yard of a white woman; she drove him away with abusive language without asking him about his mission; the negro again returned and the woman again began to call him vile names and to scream and to cry that the negro was attempting to assault her. A mob at once assembled, and before they had well got together all of the evening papers—*The News* and *The Georgian* especially—were circulating "extras" under the glaring headlines, "Another Assault." Then separate and extra editions of *The News* appeared hourly until dark, saying, "Another Assault." It semed only necessary for a white woman to see a negro meeting her in the same street or looking at her on her front porch to make her cry out, "Assault!"

That is the evidence that drove the editors mad and made them advocate the gathering of a mob to murder peaceable negroes. It is coming out little by little that the whole affair was planned. A negro lad, the driver of a laundry wagon, told me that his employer said to him Saturday morning, "Well, Sammie, we are going to kill all the niggers tonight." The most horrible exhibition of savagery was in the treatment of negro passengers on the street cars as often as they came into the public square—negro men, women and children were beaten unmercifully. Even the negro barbers were dragged out of their shops while they were shaving white men, beaten and their shops demolished. One of the finest shops in the whole country had the glass front smashed because the owner was colored. It is believed that this violence upon the barbers was done by white barbers who were members of the mob and who have been unable to cope successfully in Atlanta in competition with negro barbers. They used the mob as a cover to destroy their competitors.

A hardware store and a pawnshop were broken into by the mob, and all revolvers and ammunition taken, but none of the stores would sell weapons to negroes. A negro fled thru a fruit house kept by Greeks, and when the Greeks attempted to defend their store against the mob, it was straightway demolished and the fruit taken. A stable owner, with revolver in hand, defied the mob

to break open his door to take his horses to chase negroes to the suburbs. This only shows what one policeman might have done.

Where were the policemen? That is what all negroes asked at first, but when the bluecoats began to halt them on back-streets, arrest them upon State charges for carrying concealed weapons, it became plain that the policemen were not interested in quelling the mob. When one was seen in a crowd he made no effort to use his club or his gun to rescue a prisoner. One of the newspapers confesses that on Peachtree street, in the heart of the city, where the mob gathered, "only one policeman could be seen, and, of course, he could do nothing with such a mob."

Where were the conservative, good white people? That is not a question any one will ask when he knows that *ten* of the leading white pulpits in Atlanta are vacant because the pastors of moral courage have either been driven away or will not come to stifle their conscience in such service. On Sunday morning only one pastor stood up *positively* for law and order, according to statements published in the Atlanta *Constitution,* and that one was a Catholic bishop. All the others said it was what you might expect.

What will be the outcome of all this? That is more a question for the white people North and South than it is for negroes. It certainly is not going to make the lawless element of whites, who are very much in the majority in Georgia, disposed to hate the negro less when he beats them in competition, as in the case of the barbers; it certainly is not going to frighten the negroes who are actually bad, and it certainly is not going to make the great majority of negroes, who are honest, law-abiding folk, assume the responsibility of chasing down every one of their number who is merely accused by some malicious, frightened white woman, any more than a report of theft is going to make the honest bankers of New York close their doors to hunt down absconding cashiers because they happen to be of the same race. All that Christian piety in humble homes, all that honest labor and forbearance, and all that teaching and preaching can do has been done by by the better element of negroes to help their fellows; and if the white people of the South are going to expect negroes to co-operate in catching negroes accused of crime, or actual criminals, when experience proves every day that such persons have no hope in the world of a fair trial, then the white people are doomed to disappointment.

ATLANTA, GA.

The Ostracized South

BY ALBERT HALL WHITFIELD, A. M., LL.D.

CHIEF JUSTICE OF THE SUPREME COURT OF MISSISSIPPI.

THE ostracized South? Yes. So far as any potential participation in the Federal Government is concerned—ostracized as completely as she was in 1866. In the executive, legislative and judicial departments of the Federal Government the South is absolutely without influence. Ostracized? Have not forty long years rolled away, burying two generations of men, since the close of the great Civil War? And yet, who would dare name a Southern man for even the Vice-Presidency, on either the Democratic or the Republican ticket? It is unquestioningly accepted as a fact that such nomination would be predoomed to defeat. Nay! if a Southern man were nominated for the Presidency, and possessed, indisputably, ten times the capacity to make a great executive which any Northern opponent might have, it is nevertheless tacitly understood everywhere that he would suffer certain and humiliating defeat, merely because he came from the South. Unfitness of the Northern aspirant would detract nothing, if only his opponent, however magnificently endowed, morally and intellectu-

ally, happened to be from the South. This statement, made in cold print, shocks the moral sense; and yet there is no man, North or South, who is honest with himself, that will question its unfailing accuracy for an instant. In other words, geographical residence and not intellectual and moral fitness, determine the hopes of an aspirant for the Presidency. And why, let us ask? What is the plain, unadorned truth about it? Simply and precisely and only, because the South seceded some forty years ago!

The query naturally arises: Is that fact forever to disqualify any Southerner from the Presidency of this Union, no matter how far superior he may be, to any and all other aspirants; and if not, what limit of time must be reached before a Southern man, thoroly qualified, will be permitted to be named for even the Vice-Presidency of this great country? Is it not an unspeakable shame that this principle is true? And ought not the office of President to be filled by that man whose moral character is loftiest; whose intellectual equipment is most splendid; whose will power is most imperial; and whose patriotism is the true growth of genuine affection for his native land and its institutions? How long shall intelligence be insulted and morality outraged by the contemptible fact that a man is to be barred from candidacy for the Presidency merely and only because he is from the South? So much for the executive department; tho one might well add here: Is there any ambassador of the United States abroad, representing us at any foreign court now, or has there ever been under any Republican President, any such ambassador, from the South or of Democratic faith? Is it a correct view of the functions of an ambassador that he represents a section of this country, or one of its political parties? Is he not rather what his name imports—ambassador for the entire country? Does he not represent the whole country as a sovereign unit? And if so, is it anything less than despite done the majesty of this country as a great unit to select all its ambassadors from one section, or one party? Will we ever have done with this ineffable pettifogging; with conduct thus infinitely unworthy of our country and our country's greatness and glory?

What now of the legislative department? Why, the mournful fact is perfectly obvious that the Senate of the United States is now practically divided into Northern Republicans and Southern Democrats. There is not one great Senator from the North representing the Democratic party. There is a Senator who will be great—Senator La Follette—who is an unconscious Democrat. And it may be added, with perhaps more truth than satire, that in the just sense of the term great, there is not a great Senator of Republican name. Spooner, leaving out of view his moral nature, is a sophist, pure and simple, and Hoar is dead. But the point I stress is that it is a Republican North against a Democratic South in the Senate. Why? Because Northern legislatures since 1896 have returned to the Senate of the United States, at the bidding of the plutocracy of the North, no Webster, no Douglas, no Morton, no Thurman, no Hendricks, no Sumner, no Garfield, no Blaine, no Edmunds, no Conkling; but Lilliputians in intellect and Calibans in morals, who shall be nameless on this page, but whom the country, and the whole country, knows and despises.

It is impossible to conceive anything more wretchedly pitiable than the attitude occupied by the great Empire State of New York, with such "things" as Depew and Platt standing for the majesty of that State in the Senate.

If a Democratic Senator should combine the eloquence of Cicero and the logic of Demosthenes with the splendor of Chatham and the patriotism of Washington, he would nevertheless be impotent to stay the tide of commercial degradation at this time staining with indelible infamy the name and fame of the Senate of the United States. Shades of our ancestors! Imagine Webster sitting beside Dietrich; fancy Conkling recognizing Burton of Kansas; picture John C. Calhoun admitting the claim of Mitchell of Oregon to represent that State as its ambassador in the Senate! Thank God, not one Southern Senator has ever yet been indicted by a grand jury or sentenced to a felon's cell!

And that mob, the House! Has the South any power there? This question may be dismissed with the single statement that the Speaker is the House;

what was once a representative body, coming directly from the people, is now an automaton to register the Speaker's will. And I say this is true whether the Speaker be Democrat or Republican. The system is wrong. No Speaker ought ever to have been given such power, nor was it ever dreamed, in fancy's wildest flight, by any of the founders of this Government, that the office of Speaker of the House of Representatives would ever be invested with such undesigned absolutism. What has the brilliant—yes, the unprecedentedly brilliant—leadership of Mr. Williams availed the hopeless minority? Absolutely less than nothing. Partisanship of the most rancorous type has trampled ruthlessly under foot, every suggestion, however wise, emanating from that great parliamentary leader. So much for the legislative department.

But the conservative man would say, the real lover of his country, would here interpose, "Has not the South been treated justly in the judicial department of the Federal Government?" The theory is that the President appoints the judges of the Supreme Court of the United States, of the Circuit Courts of Appeal, of the Circuit Courts of the United States, of the District Courts of the United States, and of the Territorial Courts of the United States—in short, all Federal judges—because alone of special fitness, above their fellows without reference to political creed or affiliations. Never was there a theory more utterly repudiated in practice than this. With the single exception of Mr. Cleveland, all the Presidents since the great Civil War have been Republicans, and yet not one solitary judge from the South has ever been appointed to the Supreme Court judgeship of the United States in all that time by Republican Presidents, save only Howell Jackson, of Tennessee, nor one single Federal judge of Democratic faith from the South to any inferior judgeship, save only ex-Governor Johnson, of Alabama, and possibly a few others not now recalled, and who merely emphasize the exception, the utter partisanship of the rule. I say, measuring my words, that no more stupendous travesty on the meting out impartially of the appointments to judicial position has ever been witnessed in the history of the entire world than the Republican party has furnished since the great Civil War! There is no man —I care not what his political or religious faith, if only he be honest with himself—who will not unhesitatingly say that no judgeship in the gift of the President of the United States ought ever, in any wise, to be awarded with reference to anything else than the legal and moral fitness of the aspirant for such place. And yet the undeniable and unspeakably shameless fact is, standing out unchallenged, that judgeships have been as completely the rewards of political service as any Federal position not judicial and strictly political. The simple truth is, that there is not a Republican President since the war great enough, morally grand enough, patriotically lover enough of his whole country, to measure up to the standard required in the appointment of the judges who are to dispose of the lives, the liberty and the property of the whole people within their jurisdictions. It is a fact, and a shamefully damning fact, that cannot be effaced or explained.

And who are these people of the South that have been thus ruthlessly put aside and thus pitilessly denied any potential participation in the executive, legislative and judicial departments of this, their government and their country? Who were they in 1860? Ah, me! what a civilization rushes upon our memory as we recall that period! We are with our ancestors of the Sunny South of old! We see again that

> "glorious loyalty to rank and sex, that proud submission, that dignified obedience, that subordination of the heart, which kept alive, even in servitude itself, the spirit of an exalted freedom. The unbought grace of life, the cheap defense of nations, the nurse of manly sentiment and heroic enterprise is there! And there that sensibility of principle, that chastity of honor, which felt a stain like a wound, which inspired courage whilst it mitigated ferocity, which ennobled whatever it touched, and under which vice lost half its evil by losing all its grossness!"

It was a civilization which developed individualism; it magnified man, it enthroned woman. It imparted to the individual the sense of worth; the honor that preferred death to disgrace; fidelity to every trust; the sacred observance, as a matter of individual conscience, of every obligation, national, State and social, and it exacted of every official, from the high-

est to the lowest, military and civil, that stainless standard of conduct, that lofty conception of public office, as a public trust, which made every public servant tremble, under the sense of responsibility, like the needle, into place.

Cultivated, fired with the noblest patriotism, self-centered, used to power, the people of the South gave the United States, by their matchless statesmanship, a government strong in its justice at home, great in its dignity abroad, loved as the asylum of the oppressed of all lands, attracting at once the reverence and the affection of universal humanity. Such was the South in 1860. Illimitable wealth and boundless content were present everywhere. Her civilization was, in all that makes up the real blessings of civilization, the purest and loftiest time has ever yet known. Her people stood apart among the nations of the world. Their bosoms were the home of the most exalted honor. Whatever was mean, or low, or sordid, fled scorned from her borders. Majestic truth, imperial conscience, Olympian power, toned by the very courtesy of the gods, lifted its noble men and its glorious women far, far up, above the levels of other civilizations. Content, happy, prosperous, moved always to splendid action by the highest ideals, if some god descending from superior worlds, in quest of the race most akin to his own, had swept with his vision the land of the South in '60, he would have claimed us as his offspring and here made his home.

That is the civilization which is scorned; these are the people who cannot be trusted to fill the Presidency, or the Vice-Presidency, or to control the Senate or the House, or to furnish judges even for the inferior Federal bench! What answer is made when these plain truths are driven home to our friends "across the Tweed"? No direct answer, for none is possible.

But they point us to the tremendous strides our country has taken under Republican Presidents in material prosperity; they "point with pride" to the vast fortunes accumulated in the hands of the few millionaires and multi-millionaires. They call attention to the dependent provinces in the distant seas, the Philippines, et al., appanages of an imperial government. They draw our attention to transcontinental railways, to subsidized shipping interests, to internal improvements, and, in a word, to all that great and—confessedly unprecedented—magnificence, in a material sense, which our country has attained from ocean to ocean, and from the Arctic to the Gulf, and then ask us if the Republican party is not to be credited with great glory, by reason of these things! We may admit its wonderful achievements in this merely material line. Yet if it would be granted—as it may be granted—that no people on earth have ever exhibited the ingenuity and the variety and energy of effort which have characterized our Northern brethren in accumulating mere dollars; if it should be conceded, without hesitation, that not Rome nor any government in all the past has ever approached the Republican party in the creation of those splendors, which blaze all around us as evidences of material advancement — have we advanced one step in answering the question whether all this atones for such sectional misgovernment, for legislative and executive partisanship, and for judicial decisions denying that "the Constitution follows the flag," and overthrowing the income tax laws at the cost of overruling the unanimous precedents of one hundred years? Let me retort with the question: Have the great principles of virtue kept pace with this great triumphant march of materialism? I will not fill in the dark background over which blaze the phosphorescent splendors of this materialism!

But Burke says "we must soften with a credulity below the milkiness of infancy to think all men virtuous"; and he is less than a patriot who does not realize the need for solemn warning, if the Republic is to endure. Without stopping to particularize, it must be obvious to all that there have been two totally diverse tendencies in operation in our beloved country since the great Civil War. Our brethren of the North, flushed with triumph, have had, with scarce an interruption, absolute control of the Federal Government, and the tendency has been—the usual one with conquerors—more and more away from constitutional restraints, and more and more toward centralized and irresponsible power, the illegal accumulation of vast wealth thru class legis-

lation, the reckless annexation of unassimilable provinces, never to become States, until we have come to hear it as familiar doctrine that we have outgrown the Constitution, and that Congress must govern at will. I shall not offend here by drawing aside the veil from the desolations and infamies wrought by imperialism, such and so great that the public conscience stands, in mute horror, appalled. I shall not enumerate the long list of infractions of the Constitution, for I write not as a Mississippian, but as an American. I invoke the conscience of the great North as well as of the powerless South. I appeal to the patriots North, represented by Charles Francis Adams, Hoar and Littlefield. Rapid and more rapid has been the stride toward despotism at home as well as in the provinces, and when the patriot voices solemn protest he is told that we are a superior order of men, that our government is to endure forever. So thought the flattering optimists of Babylon and Thebes, but the hanging gardens of the one and the hundred gates of the other live only in song. Such were the dreams of every nation that has ever flourished and faded, and the sands of the desert entomb their buried glories. Greece, "the land of scholars and the nurse of arms," so dreamed. But Byron wrote:

Spirit of Freedom! When on Phyle's brow
Thou sat'st with Thrasybulus and his train,
Could'st thou forebode the dismal hour which now
Dims the green beauties of thine Attic plain!
Not thirty tyrants now enforce the chain,
But every carle can lord it o'er thy land,
Nor rise thy sons, but idly rail in vain,
Trembling beneath the scourge of Turkish hand,
From birth 'till death enslaved; in word, in deed, unmanned.

Rome, the eternal city, so dreamed; yet

"the time came when darkness settled on all her hills; when foreign and domestic violence overthrew her altars and temples, when ignorance and despotism filled the places where laws and arts and liberty had flourished, when the feet of the barbarians trampled on the tombs of her consuls, and the walls of her Senate house and forum echoed only to the voice of savage triumph."

In all these forty odd years of progressive disregard of the Constitution, irreverence for the ideals of our deathless past, on the part of the controlling forces in the nation's life, the South has stood powerless but protesting; helpless to stay the iconoclastic destruction of the faiths and traditions of our immortal ancestry; but iterating and reiterating her sublime protest; loving the restored Union as devotedly as her Northern brethren possibly could, she knew its perpetuity was conditioned upon adherence to virtue, truth, honor, justice and equal laws; and without ability to do aught else, she has lifted her voice, calling back the nation to its ancient faith, to the splendid virtues which made great Puritan and Cavalier alike. Glorious land of constitutional government, our brethren of the North themselves shall come to see and acknowledge the sublimity of your position! Stript of property, clad in ruins, subjected to reconstruction legislation, binding thee like Prometheus to the rock, surviving on the statute books only to kindle on every patriot's cheek the blush of shame, without government aid to the least extent, in the face of all manner of repressive forces, legislative and commercial, rising, in thine own unassisted might and unique grandeur, thou, whilst building anew the foundations of social, commercial, industrial and educational greatness, hast, with consistent voice, called back the Union to its better self! And unto thee, from the great deep of the eternities, comes the voice of thy King, saying:

"Whereas, thou has been forsaken and hated, so that no man went thru thee, I will make thee an eternal excellency, a joy of many generations. For brass I will bring gold, and for iron I will bring silver, and for wood brass, and for stones iron; I will also make thine officers peace; and thine exactors righteousness. Violence shall no more be heard in thy land, wasting nor destruction within thy borders; but thou shalt call thy walls Salvation, and thy gates Praise.

"Thy sun shall no more go down, neither shall thy moon withdraw itself, for the Lord shall be thine everlasting light, and the days of thy mourning shall be ended."

Will our country heed the truth, that there is no dispensation of grace for nations? That God saves, not nations, but the individual; that He guides the upward ascent of the race to himself, raising or crushing nations as their righteousness advances or their wickedness retards in its spiral line of advance, over all opposition? That man answers at

His bar hereafter, nations here? That He applies his administrative justice in their reform, or their ruin, as they heed or despise His discipline?

Who shall say that He has not meant the North to learn that a proud and self-respecting people are not to be scourged, but loved into the concord of indissoluble union; to be reconstructed, not by enactments born of the frenzied passions of war and framed "in the eclipse of reason," but reconstructed by the healing processes of divine justice, which chastens not to humiliate, and disciplines only to save—reconstructed by the legislation of the skies!

Who shall say He has not subjected the South to the awful experiences thru which she has struggled to this day of hope, integrating into the fiber, moral and intellectual, of her people the loyalty to justice, the fealty to truth, the consecration to unchanging right which, under Him, are to call back the Republic to its ancient faith and honor, and ground it anew in that allegiance to God which may indeed make it endure,

"Till wrapt in flames the realms of ether glow
And Heaven's last thunders shake the world below."

There can be no immortality of a nation apart from the immortality of the virtues of its citizens.

"The virtues and the sins of a nation are the virtues and the sins of each of its citizens, on a larger scale, and written in gigantic letters."

Nothing has survived to us from the nations that have perished save the deeds of virtue and heroism wrought by their great and good. In "silence and pathetic dust" their towers and temples and palaces lie crumbled and entombed, the factitious splendors of a vicious materialism faded into eternal night; but over their entombed ruins God arches a firmament of beauty, in which He sets to shine, as stars forever, all that the spirit wrought, all that the soul of its great and good accomplished for the betterment of the race.

We all may, we all do most heartily join the greatest of all our orators, the immortal Webster, in his deprecation:

"God forbid that that happy constellation under which we have risen to so much greatness and renown, should be shattered to fragments, and be seen sinking star after star into obscurity and night."

But if that prayer is to receive certain answer, it must be accompanied by a life of national morality in keeping with the lofty aspiration.

If the horrors of the French Revolution are not to be re-enacted here on a direr scale, the law must know, in its enforcement, no caste, no rank, no race. If the manifest injustices and inequalities marring its present administration are to be corrected thru peaceful agencies, and not by an American Cromwell, sword in hand; if the time is never to come when Macaulay's New Zealander shall, "in the midst of a vast solitude," stand on a broken arch of the Brooklyn Bridge to sketch the ruins of a city gone forever, the abuses threatening the life of the Republic must be reformed altogether. These reflections are not meant to intimidate doubt, but to incite to duty. Let no man say we despair of the Union. We love its glorious flag. We love best of all its matchless Constitution!

Reverently deducing from the past its great lessons, standing in the exulting joy of the present, let us make the noble language of Dean Stanley voice our aspirations as we face the great future:

"We have climbed to the hight of one of those ridges which part the past from the future. We are on the watershed of the dividing streams. We see the last thread of the waters which belonged to the earlier epoch amongst the remains of which the ashes of the dead are laid; we are on the turning point, whence, henceforward, the springs of political and national life will flow in another direction, taking their rise from another range destined to commingle with other seas and to fertilize other climes. Let us forget all that is behind the best spirit of our age, all that is behind the requirements of the most enlightened and the most Christian conscience; and reach forward, one and all, toward those great things which we may trust are still before us—the great problems which our age, if any, may solve, the great tasks which our nation alone can accomplish, the great doctrines of our common faith, which we may have the opportunity of grasping with a firmer hold than ever before, the great reconciliation of things old with things new, of things common with things sacred, of class with class, of man with man, of nation with nation, of Church with Church, of all with God."

JACKSON, MISS.

German and American Samoa: A Comparison

BY H. J. MOORS

TUTUILA, Manua, Ofu, Olosega and Rose Island are all of them Samoan islands lying east of the meridian 171, and, in consequence, they came into the possession of the United States as a result of negotiations with Germany and Great Britain in 1900.

Under terms of the same agreement Germany took possession of the islands lying westward of the same meridian, namely, Upolu, Manono, Apolima and Savaii, and on the 1st day of March, 1900, Governor Wilhelm Solf raised the imperial standard at Mulinuu, in the presence of a large and appreciative gathering which assembled to do it proper honor.

At a little later date, 17th April, Commander Tilley, of the United States coaling steamer "Abarenda," hoisted the stars and stripes on the eminence just above the present coaling sheds at Pago Pago, the ceremonies being simple, impressive and instructive.

A few months previous both the United States and Great Britain were by armed force endeavoring to coerce the Samoan natives into the recognition and acceptance of a judgment rendered by Chief Justice Chambers, while Germany, on the other hand, had disregarded that decision, pronouncing it illegal, and was vigorously protesting against every warlike measure adopted for its enforcement. Arbitration had, meanwhile, stilled the growing tempest. Tactful diplomacy

Pago Pago Harbor, Tutuila. Showing coal sheds, training ship, "Adams," and the Governor's mansion in the distance on the elongated point. In the foreground is shown the court house, which cost about $150,000 to erect.

Waterfall at Falefa, East of Apia.

had disposed of every question effectively, and general good feeling everywhere prevailed.

At the Pago Pago flag-raising German officers respectfully attended, and their warship thunderously saluted the stars and stripes when they ascended. In fact, the commander of the German warship had courteously invited all Americans residing in German Samoa to journey freely to Pago Pago for the ceremonies and then return to Apia in his vessel.

For some months after the flag-raisings and the political changes which necessarily followed, the foreign population in the different sections was more or less unsettled and restless. Naturally some of those who only understood the English language, and who looked for better business under the American flag, gravitated to Pago Pago, greatly astonishing the quiet natives, who had never, looked for such a sudden influx of foreigners.

On the other hand, German Samoa, tho it lost a number of old settlers, was soon enabled to replace them with newcomers from all portions of the world—most of them valuable additions to any community.

Very casual consideration was sufficient to show that extensive areas of valuable lands were available for cultivation on Upolu and on Savaii, and all that was needed to make them productive and profitable was the introduction of capital and labor, and intelligent direction, supplemented and controlled by a far-seeing and lenient form of government.

American Samoa presented a different

aspect. Very little arable land existed on Tutuila, the only island of consequence, and the laws of the United States would not allow the foreign element to import contract laborers. Therefore this section of Samoa had no really valuable resource except the few cocoanuts which grew spontaneously, and the fine harbor of Pago Pago, at which point the Government at Washington had decided to lay down a substantial wharf and erect extensive coaling sheds, for the uses of the American navy.

Large disbursements of money were expected, and besides more or less business would arise from the calling of the

Tanati, Samoa's most famous orator. During twenty-five years no rival has approached him in eloquence.

regular mail boats as they passed twice every three weeks bound to and from Australia and New Zealand. For the reasons above stated, a different class of settlers was attracted to that point, and traders, storekeepers and seafaring men made up the bulk of the foreign population. Planting interests were barely considered.

American Samoa had scarcely been affected by the devastating war of 1899, as none of the battles had taken place on its soil. Its whole population numbered but 6,000, and among these was but a single chief of predominating importance.

When Commander Tilley raised the American flag, its sheltering attributes were welcomed, and his sensible address fell upon approving ears, and up till the present time nothing has arisen to disturb, even temporarily, the dominion of the United States in these quarters. Our Samoans are as orderly, and as satisfied, and probably as well governed, as is any known community in the world.

A succession of talented and able Commandants followed after the departure of Captain Tilley until the arrival of Captain C. B. T. Moore, who has lately been raised to the full dignity of Governor.

From the beginning the Government undertook the control of the copra trade. The measure was arbitrary, and perhaps uncalled for, and whether it has been of the least service to the native individually it is very hard to say. In the beginning, this revolution in trade conditions was resented by the traders and by some of the natives, but it was persisted in and finally accepted.

Legislation has made regulations and ordinances commanding the native people to plant hundreds of thousands of cocoanut trees on their spare lands, and without doubt the time is not far distant when their ordinary crop of 2,700,000 pounds of copra, worth say $65,000, will be doubled in volume, perhaps trebled.

Chiefly because of generous appropriations from Washington, roads have been constructed to various points on Tutuila, and an excellent court house and governor's mansion have been erected and furnished in becoming style. The old "Adams" has been stationed in the harbor of Pago Pago, and drillmasters have instructed quite a number of the native inhabitants, so that were the place called upon to defend itself, the nucleus of an efficient force has already been assembled.

Up till the present moment nothing has been done toward providing any form of artificial defense. No works have been thrown up and not a single gun is mounted, or even on the spot.

The coaling facilities are such that one warship at a time may lie at the wharf, and perhaps, by using great effort, 300 or 400 tons of coal per day might be shipped aboard. The sheds themselves may hold from 5,000 to 8,000 tons. If

this station is at all valuable, its efficiency ought to be vastly increased and its defenses provided.

Since governmental appropriations have dwindled to a mere nothing, as at present, business in American Samoa is at a very low ebb, but while the trader views this with alarm and with disgust, the Samoan native—who has scarcely profited by past appropriations, since he has himself done very little of the work, even when wages were $1 per diem, looks complacently on, making and selling his copra as of yore, and speculating on the increase of his crops.

On the other hand, the Germans came into possession of a country which had lately been racked by the throes of a devastating civil war, in which the minority had been assisted by civilized organizations of warlike forces. Foreign warships had participated, and large detachments of sailors had been landed, and armed clashes had for several months been of almost daily occurrence, and tho peace had been secured at the time of the flag-raising, feelings still ran very high, and the small minority who had unsuccessfully made use of foreign intervention were in real danger of annihilation. The dominant party, who were confirmed in power by the German officials, were inclined to make reprisals upon those with whom they had lately contended, and they were firmly determined to keep their late opponents completely in the background, allowing them no political power whatsoever.

Full-Blooded Samoan Native Girl.

German Samoa also swarmed with chiefs of every degree—from the stately Mataafa downward to the petty talking men, whose mischievous courses, for long centuries back, had marked the beginnings of countless hostilities.

The foreign population consisted of representatives from all parts of the

world, and among the number were men whose education, fitness and general conduct would have qualified them to adorn almost any station in society. The general bulk of the white inhabitants were distinctly above the average intelligence of a similar number picked at random in any civilized center. There were more Germans than either British or Americans, but collectively the Germans were outnumbered by other foreigners.

Flag-hoisting day in Apia was one of very general rejoicing, and right thinking residents must have welcomed the thoughts of a strong governmental control taking the place of the existing hurly-burly, for peace was not yet assured.

Many of the whites were doubtful of the degree of success that would follow a change to civilized practices, and few believed that the hitherto intractable Samoan people, could be brought under reasonable control, without the actual application of a considerable degree of force. Many, indeed, were firmly fixed in their opinions that actual subjugation would have to be resorted to, but how this was to be accomplished, unless at an enormous expenditure of money and a great loss of life, was an unexplainable problem, for the Samoans had just resisted successfully the determined efforts of a British fleet, assisted by the "Philadelphia" and all of the native discontents who could be gathered in and equipped with modern arms. It is true that they had surrendered a good many of their rifles during the presence of the Peace Commission, but these would have been useless to them in any case, for their ammunition had been practically exhausted for a considerable period, and they were prepared to engage in hand-to-hand conflict, which would have been far more deadly.

Fortunately for the prosperity of the islands, the Imperial Government selected Dr. Wilhelm Solf as first Governor for this its latest colony. Whether this gentleman's efforts were successful or otherwise is best judged by the results which have followed his administration. One of his first movements was to request that all warships should be withdrawn from these waters, and that no military force whatsoever should be displayed, other than a small company which he soon organized and which was composed of selected young Samoans, who had lately been fighting under Mataafa.

The title and office of king was abolished, and Mataafa was acknowledged as the supreme chief of the Samoans, and the presiding member at their Parliament. But all actual power the Governor wisely retained in his own hands. To make this disposition of authority acceptable was not the work of a day, a week or a month—it took time and tactful, convincing argument, and was accomplished without resort to subterfuge. On several occasions revolt appeared likely enough, but careful management averted such a disaster, and the people became in the end accustomed to control. Tho a number of native orators made incendiary speeches and sometimes counseled resistance, these efforts were estimated carefully and punished leniently, for not a single drop of blood has so far been shed, and but three natives have as yet been exiled.

A great deal of the undeveloped land already belonged to the foreign settlers, having been confirmed to them by the Lands and Title Commission during the years 1890 to 1894, but the natives themselves still retained absolute title to at least three-fourths of the area of their own country. They were too lazy to bring their own lands under cultivation, and were very willing to sell them or dispose of them on long leases to the foreign element, but such arrangements did not meet with the approval of the Governor and sales were absolutely prohibited, and leases were only valid after the courts had investigated their terms and signified their approval.

About 100,000 acres of land were offered for sale by different foreign interests, and probably one-half of this has changed hands within the past six years. Besides, leaseholds covering probably 30,000 acres have been confirmed by the Government courts.

About the year 1890 it had been observed that the cacao tree might be successfully cultivated in Samoa, and was liable to return to the planters a very satisfactory profit. Internal troubles and lack of sufficient labor deterred this growing interest, and it was not until the new

administration solved the difficulty by boldly importing the first batch of 287 Chinese coolies in 1902, distributing them among the different planters who had applied for them and were willing to pay the heavy import cost, that the success of the agricultural interests was assured.

This experiment, having proved eminently satisfactory, has been followed by two more importations, and tho the first batch of Chinese (that is, those among them who wished) have been returned to their homes, there are now in Samoa no less than 1,200 industrious workers toiling daily over thousands of acres which have lain unused since the islands were created.

A heap of cacao pods, each of which contains from 25 to 40 beans or seeds, which are cured by drying and sweating. From these the chocolate is made.

Within two years after the flag raising a regulation was issued commanding all Samoans to plant at least fifty cocoanut trees per annum. At first this wholesome law was more or less disregarded by the slothful, but the employment of native inspectors soon placed matters on a different footing, and, altho it is yet too early to note an increase in the copra output from this new resource, there is little doubt but that over one million trees have been planted up till now, and the whole of these will be in full bearing within a comparatively short time. In fact, several hundred thousand new trees will commence to expand the exports during the year 1908.

It is said that in Samoa the cocoanut tree grows in its most perfect form, and that it is freer from pests and diseases than in any other tropical country. The trees yield an average of thirty pounds of copra each per annum, and this product has advanced in price so of late that their output is worth to their owners from sixty to seventy-five cents per tree per annum. As the native usually grows from sixty to one hundred trees to the acre according to location (near the sea cocoanuts may be planted quite close), he is fast coming into a very independent position.

A great many acres of cocoanuts are owned by different whites, who are making fine profits upon their investments in this way, and added profits by grazing herds of cattle under the trees on the

luxuriant native grasses, and on the sensitive plant, which grows spontaneously.

Many private individuals came to Samoa shortly after the annexation was accomplished, and a number of respectable companies were formed to acquire lands and plant both cacao and rubber, and at this writing many new acres are being cleared off, and older cultivations are being improved. Till now the sale of lands by the native people is prohibited, but at a later date it is expected that the Government will allow absolute transfers to take place under certain approved conditions.

The colony's revenue is derived from duties levied on imports, property taxes and licenses. With very trifling assistance from the home government all expenses have been met, and many very substantial improvements have been carried thru to completion.

Many miles of fine macadamized roads now radiate from Apia in various directions, and very few of the new cultivations are without easy and direct communication. In fact, hundreds of vehicles of all sorts and very many bicycles have been imported, and a large proportion of them are in the hands of Mataafa's late warriors, who are now contentedly following more peaceful pursuits.

Public buildings which would be creditable to any community have been erected, or are in process of construction, and tho of late the Imperial Government has all but ceased its contributions, the colony proceeds on its prosperous course, paying as it goes out of its enhancing revenues.

In Apia is located an Inferior and a Supreme Court and a Lands Record Office. Properties may be transferred quickly and at trifling expense, and all titles are absolutely good, for none of a doubtful character are recorded in the "Grundbook."

The administration of justice has been reasonably fair in criminal cases, but often tardy and inefficient in civil causes, thus creating heavy expense to litigants, perplexing delays, and dissatisfactions. The cause of this blemish to a singularly able administration has been laid by some to the inexperience of certain officials, who perhaps have not possessed those requirements and that degree of calm firmness especially desirable in such a community. Likewise the assertion is frequently made in Apia that the Government still feels that it is not quite safe to trust the Samoan people, and that decisions against natives are not always certain, even if the facts and the law show them to be absolutely in the wrong. Of course, such a state of affairs is regrettable and likely to come to an ending in due course, but while it lasts a feeling of insecurity will exist and investment will be retarded.

In both sections—Americans and German—schools have been enlarged and multiplied to such an extent that some believe that the subject of educating the people is receiving far too much attention, and that they would be much better off if instructed in different handicrafts which would be of practical use to them.

In both divisions the people are healthy and vigorous, and the census shows that the race is slowly increasing numerically, German Samoa containing something over 30,000 full-blooded natives and 700 half-castes. I have endeavored to show that the conditions of the two divisions of Samoa were totally different at the outset, and that while one section was capable of great development, the other was devoid of reasonable possibilities and was restricted by fundamental laws which deprived it of cheap labor.

American Samoa as a coaling station may become of great importance, especially after the completion of the Panama Canal, but unless its defenses are provided we are liable to lose it, and until its facilities are improved the celerity of our fleets visiting those waters is endangered.

German Samoa is fulfilling its destinies, and it is today probably the most successful German colony in the world, and tho up to the present the islands import but little directly from the mother country, this trade is on the increase, and may become of importance, for Germany pays the highest prices obtainable for the fine qualities of Samoan cacao which enter her markets and which is universally esteemed as a delicious product. Likewise she also consumes very large quantities of copra.

APIA, SAMOA.

Literature

A New Political Philosopher

*The Economy of Happiness,** by its style and scope, challenges comparison with the works of such masters of philosophy and political science as John Stuart Mill and Herbert Spencer. Usually such a challenge is presumptuous, especially when made by a young writer without academic distinction, tho he belong to a family which has produced actors and dramatists. But Mr. MacKaye, by profession a deviser of chemical processes that shall be commercially profitable, resembles John Stuart Mill in demonstrating that consecutive thinking is compatible with earning a living in practical business. This, his first work, shows that he has taken the maximum profit from Harvard, his alma mater, and from the late Professor Shaler, his venerated friend.

He follows the great English philosophers of the eighteenth century—Hobbes, Locke, Berkeley, Hume, Bentham—in their "common sense" philosophy, which declares that human beings normally seek pleasure and avoid pain, and that society should be organized to secure "the greatest happiness of the greatest number." But what is happiness? How can the statesman increase it? Mr. MacKaye answers by analyzing happiness, and by attempting, according to the method of physical science, to establish a unit of measurement for pain. That life is a failure, he says in effect, in which the pain outbalances the happiness. Better to be dead than to suffer. Mere multiplication of being is not in itself a good. A million famished and suffering mortals are not as desirable as a hundred that are healthy, bright-eyed and happy. A rational society must have a goal, and that goal should be, not the increase of mere life, but of well being. Statesmen and economists, the political guides of a people, should set themselves deliberately to organize society to that end. *Laissez faire,* the policy of drift, has flagrantly failed to attain the goal; for examine New York, the fine product of our civilization, and consider what proportion of its people have for any day more happy than unhappy minutes. Even the rich—most of them—are not happy a great part of the time, and the wage earner would rarely choose to live afresh one of his days. Even in the rural districts, where the balance, on account of the low development of competition, is most favorable, it is probable that a majority would rather sleep thru any year than repeat its round of drudgery and suffering, only mitigated by occasional satisfaction. "What a pessimist!" the patriotic reader will cry out, "does not this man know that a greater proportion of people in the United States enjoy three good meals a day than ever before among eighty millions?" Yes, he does; and he considers that today the dining table is the chief altar of joy. But three daily spells of the pleasures of the table do not redress the balance of pain.

What can be done, then? Wherein is our social system at fault? Primarily in that we aim at the increase, not of happiness, but of wealth. As the mercantile school, to our contemptuous amazement, considered that gold and not goods made a nation wealthy, so we, to the expected amazement of posterity, reckon goods and not happiness the measure of national well being. Production is our God and John Stuart Mill is its Prophet. In fact, Mill, who determined the course of the political philosophy of the nineteenth century, is the Giant whom this David would overthrow. Therein he does Mill a slight injustice; for tho Mill in the books which gave him fame swam with the current which Adam Smith had set running and glorified Production, yet, as he said in his "Autobiography," both he and Mrs. Taylor became so impressed, in their later years, with the evils of haphazard distribution, that they virtually endorsed socialism.

Mr. MacKaye shows that there is a Law of Diminishing Returns of happiness, and that the greatest sum of happiness in a nation is secured when wealth is equally distributed. Of competition, the supposed regulating force so vener-

* The Economy of Happiness. *By James MacKaye.* Boston: Little, Brown & Co. $2.50.

ated by the Manchester school of economists, he gives a scathing analysis and condemnation. But he is no sentimentalist; self-interest he knows to be the chief driving force in men. He would harness it, however, to the social machine in such a way that it would work for the collective benefit.

This new social machine, for convenience only, he calls Pantocracy—the ownership and management by the people of all utilities that affect the interests of the public.

A Logmen's Houseboat. From "The Connecticut River." Putnam's.

This scheme differs but slightly from Socialism as expounded by English and American writers—the Fabian Society, Robert Blatchford, Kirkup, Grönlund, etc. But it is distinguished from Marxian Socialism by the deliberate retention of the wage system. "Abolition of the wage system" is one of the catch phrases of the raw convert to Marxism, but, as George Bernard Shaw once said at a Fabian meeting, "We don't want to abolish wages, but to make them bigger and more regular."

Upon one essential of organization Pantocracy strongly insists. Managers shall be paid a fixt salary, and, in addition, a bonus upon the reduction they effect in the average time needed to turn out the unit of product. The cost of the product, not in money, but in labor time, would measure their efficiency; therefore their interest would be identical with the interest of the wage earners under them. With the fixing of the price either of labor, the raw material or the finished goods they would have nothing to do, and, as in the Civil Service now, they could dismiss only for cause. Otherwise they would be rulers in their shop domains. Thus they would be stimulated to introduce new machinery, to perfect organization and to shorten hours. The benefit from the continual improvement of processes which an army of highly esteemed inventors and scientists would

discover should go to producers and consumers on a proportion respectively that would be decided by popular vote. Elections for fixing this "industrial coefficient" might parallel the campaign on "16 to 1." None of the novel features are incompatible with Socialism of the step-by-step order, and Mr. MacKaye sanely agrees that any scheme of social reconstruction must be worked out experimentally and on a small scale first.

Probably close criticism would reveal flaws in the Pantocratic system. It assumes a mobility of labor greater than exists today; reduction of working hours would hardly be as steady and frictionless as the typical examples indicate; and because folks love "to handle the money" (as an American workman recently told a British investigator) they would prefer increasing wages even if prices also went up—each man is apt to insist that the certain addition to his dollars is better than the uncertain reduction of his housekeeping bills.

Every socialist, sociologist, economist and serious journalist should examine this book. For the wayfaring man it is perhaps too solid, tho it is enlivened by brilliant, unforced epigrams and humorous phrases. For him, the third part, which we understand will be published separately, will be a sufficient meal.

Wise Nature

THERE are so many faddists writing on health in these days, and unfortunately attracting so much attention, that it is indeed a pleasure to pick up a book without fads* and that insists only on the necessity for following the counsels of nature and one's better instincts if one would be healthy. Professor Curtis has long held the chair of therapeutics in the medical school of Columbia, and one might think that his prolonged teaching of the use of drugs would have brought him to minimize the influence of nature for the cure of illness and the preservation of health. Far from doing so, it seems to have rather emphasized his opinion of the value of nature in the matter. Perhaps some of this is due to the fact that his book, as the author confesses in the preface, was written mainly out of doors. That is probably why also it begins with the following breezy paragraph:

"There is a draft here; I feel it on my neck; close the window!"

Why not put it thus:

"Life is at the lattice; he blows a soft kiss upon my cheek. Shut him out!"

We feed the stomach three times a day, but feed the lungs five times as often every minute. We are dainty to a nicety about our stomach-food, but for lung-food will complacently consume stuff that already has past in and out of other lungs over and over again, merely remarking: "The air is quite close in this room."

Dr. Curtis treats of breathing, eating, drinking, drugging for delectation, seeing, hearing, clothing, bathing, disinfecting, exercise of body and mind, sleeping and waking, working and playing, and living and dying. He would thus seem to have exhausted the possibilities of nature and health, and there are indeed few books that contain so much information imparted in such a pleasant, easy way. We are hearing much at the present time of the necessity of eating slowly and of the need of thoro mastication. Dr. Curtis has no theories in this matter, tho he has some very practical observations. He is not with those who would counsel such attention to mastication that mealtime becomes a glum hour of working jaws. Far from advising, as some have done, that a man should even count the number of times that he has chewed each morsel of food, Dr. Curtis would have him neglect this matter entirely and give himself up to the enjoyment of pleasant company during meals. His words are well worth remembering:

"There is sound philosophy in the custom of civilization to make a meal of ceremony. For if the ceremonial aspect be observed properly—if it be forbidden to make the home meal the occasion for the home-grumbling—then amid talk and laughter will eating be slow, as it should be, and mastication thoro. So when at the family dinner table appear only pleasant faces; when conversation is bright and merry, and when from one to the other of the diners is a bearing as courtly as if each were 'company,' then does indeed 'good digestion wait on appetite, and health on both.'"

For those who must read about their

health there is no better book than this, with its clarion call back to nature.

The Development of European Nations

CLOTHES may make the man, but a title-page does not make the book. The title-page of Dr. Rose's latest book[1] is full of promise. The title itself leads one to expect a study of the aspects of national life dwelt upon with especial emphasis by the new generation of historians, which, while it does not ignore foreign relations and military campaigns, but, on the contrary, gives full recognition to their close association with national life and their intimate reactions upon it, nevertheless makes it its chief aspiration to describe that national life itself in all the multiplicity of its aspects and to trace their interactions. This expectation of the guileless reader is strengthened by the Virgilian motto subjoined to the title: *"Felix qui potuit rerum cognoscere causas,"* which points to the adoption by the author of the only historical method that has hitherto proved itself productive, namely, the investigation primarily of the objective facts

[1] THE DEVELOPMENT OF THE EUROPEAN NATIONS, 1870-1900. Two vols. *By J. Holland Rose.* New York: G. P. Putnam's Sons. $2.50.

Silver Vase. Example of Alsatian workmanship of the seventeenth century. From the Talbot J. Taylor collection. Putnam's.

of the nation's life, instead of the subjective moods of its rulers. The book itself, however, disappoints the hopes thus invoked. In its matter it confines itself to foreign relations, diplomatic intrigue and military actions, and in its manner it follows in the footsteps of Ranke, to whom the words and acts of diplomats and generals and kings, as recorded in the archives, constituted the sacred fount of all high historical inspiration.

Having thus stated the very serious limitations of the work, we have, by implication, also stated those of its points which will strongly recommend it to a large class of readers. It is an eminently readable book. The Franco-German War, the Eastern Question, the Russian conquest of Central Asia and the English conquest of the Sudan, what Bismarck did, what Skobelev planned, and how Gordon died are subjects which only a bungler could deprive of their perennial interest. And Dr. Rose is a craftsman of experience, who, on the whole, does his work well. On occasion he is even capable of rising to the terse, expressive phrase that adheres tenaciously to the memory, as when he sums up the result of the conquest of the warlike hill tribes to the north of India in the words: "Britain has transformed a troublesome border fringe into a protective girdle," or when, in his revolt from the now fashionable calculating egotism, he joins in bold denunciation the names of Herbert Spencer, the sociologist who was devoid of all historical sense; Nietzsche, the philosopher of tame, philistine *literati* hungering for an original pose, and Omar Khayyám, the poet of disillusioned *commis voyageurs.*

Artists' Lives

If the general public does not soon acquire some knowledge of painting, or of its eminent practicers at least, it will be the general public's own fault; for the publishers and writers are steadily increasing the already numerous "series" and "libraries" devoted to the subject, and many of these new books about painters are not only wisely informing and judiciously critical, but surprisingly readable as well.

In writing for "The British Artists' Series" a new life of *Turner*,[1] Mr. W. L. Wyllie, A. R. A., tells us his only hope was that, being a painter himself, he might look at Turner's life and work from a point of view different from that of a literary man. "An artist should be better able to distinguish and note the influences and beauties, the difficulties and limitations, of another artist's work than a critic or a teller of tales"—and it is a painter's portrait of a painter that he gives us. Mr. Wyllie's style is somewhat crude, and there may be even an occasional lapse in grammar, but he succeeds in sketching graphically the course of Turner's artistic development, and describes his masterpieces "as they appear to a fellow-painter traveling, however remotely, along the same road." Our artist-author no more agrees with Ruskin's moaning that Turner's life was wholly unhappy and his end miserable than he does with that rhetorical critic's appraisements of Turner's works—in which, indeed, there is sometimes blame for the artist's good qualities and often praise for his inferior ones. "The task was not an easy one," says Mr. Wyllie, "but night after night, as I went slowly thru the trials and triumphs of Turner, the uncouth old wizard, with his rough manners and tender heart, somehow became more and more real to me, until at last he seemed a friend that I had known all my life." His labor of love in thus presenting the life and achievements of this "wonder-worker," who "suggested the beauty of nature and its infinity without trying to make an actual copy," has not been in vain. The book is illustrated with four color plates and many half-tone reproductions of photographs from Turner's pictures.

Mr. Maclean's book on *Henry Moore*,[2] in the set called "The Makers of British Art," doubtless will long remain the standard biography of England's foremost marine painter. It is a thoroly workmanlike "life," narrating the details of Moore's rather uneventful career, describing and characterizing all his works of importance, and certainly, in its estimate of those works, doing full justice to

[1] J. M. W. Turner. *By W. L. Wyllie, A.R.A.* London: George Bell & Sons. Imported by Macmillan. $3.00.

[2] Henry Moore, R.A. *By Frank Maclean.* London: Walter Scott Publishing Co. Imported by Scribners. $1.25.

the painter—comparatively few of whose pictures have been seen on this side of the Atlantic. Numerous half-tone blocks help to give some faint idea of the man's power and versatility in depicting his chosen theme, the "howler and scooper up of storms, capricious and dainty sea." A final chapter touches briefly but illuminatingly on the work of the few noteworthy painters of the sea with whom Henry Moore was contemporary—John Brett, Whistler, Claude Monet, Mesdag—and several lesser British marine artists.

A beautiful and satisfactory little book has been made by the publishers of Sir Walter Armstrong's monograph on *Gainsborough.*[3] The really good half-tone plates, the soft, light-weight paper, clear type and neat binding are all in keeping with the work of the Director of Ireland's National Gallery, who is one of the foremost of living authorities on the English art of Gainsborough's time, is scholarly without being pedantic, and is abundantly able to make both biography and art criticism interesting.

English painters always have had a particular fondness for water-color, one of the most delightful of the mediums of art, and often have handled it so successfully as to secure results of lasting charm. In his essay written for "The Popular Library of Art" Mr. A. J. Finberg[4] points out that the work of the English school of painters in water-color deserves to be studied as a valuable expression of national character; and he makes such a study with rare discretion, treating briefly, concisely, of the water-color pictures of Gainsborough, Cozens, Girtin, Turner, Rowlandson, Blake, Cotman, Cox, De Wint and the rest, and enlivening his critical exposition with a modicum of biographical fact sufficient to enhance the reader's interest and round out what is really a model short treatise.

Two more volumes come to us in the same "Library" of handy and attractive little books: Mrs. Ady's *Raphael*[5] and Mr. Hueffer's *Holbein*[6], each authoritatively informing, sufficiently critical and admirably well written. Each is profusely illustrated with fairly good half-tone plates, and each is a creditable contribution to the minor literature of art.

In many respects the most admirable of all these series of art books is "The Library of Art," several of the volumes of which THE INDEPENDENT has found occasion heretofore to commend. The latest volume to be added to this set, *The Scottish School of Painting*[7], is hardly up to the standard hitherto maintained, either in interest or importance. There have been painters in Scotland for three hundred years, but Henry Raeburn is the only one among them all who deserves the title of master. Wilkie, Graham-Gilbert, Nasmyth, John Phillip, John Wilson, Dyce and a few others have attained to a certain eminence at home, and their names are known abroad, but they do not constitute a "school" of painting in the proper acceptation of that term. Mr. McKay fills a fat volume of 380 pages with assertion and insistence that there is a "Scottish school," adducing the work of no less than one hundred and forty individual painters to prove his contention—and becomes a bit tiresome before he has done with it. A smaller book dealing with the few leading painters of Scottish birth and leaving out the nobodies would have been more acceptable.

The Connecticut River and the Valley of the Connecticut. By Edwin M. Bacon. New York: G. P. Putnam's Sons. $3.50.

Good print and liberal illustrations add much to the value of any readable book. This volume has ninety-six illustrations. If not remarkable in artistic merit, they yet illustrate the text, and have much the same attraction that views taken with a camera on a summer vacation always have. This is not simply a guide book of the Connecticut River, but much more than that. The history of the country from the time of the early Dutch settlers is faithfully given. The story of the old Indian wars is not wholly pleasant reading. The burning of the Indian fort at the head of the Mystic River by Captain

[3] THOMAS GAINSBOROUGH. *By Sir Walter Armstrong.* New York: E. P. Dutton & Co. 75 cents.

[4] THE ENGLISH WATER COLOR PAINTERS. *By A. J. Finberg.* London: Duckworth & Co. Imported by Dutton. 75 cents.

[5] RAPHAEL. *By Julia Cartwright (Mrs. Ady).*

[6] HANS HOLBEIN THE YOUNGER. A Critical Monograph. *By Ford Madox Hueffer.* London: Duckworth & Co. Imported by Dutton. 75 cents each.

[7] THE SCOTTISH SCHOOL OF PAINTING. *By William D. McKay, R.S.A.,* Librarian to the Royal Scottish Academy. London: Duckworth & Co. Imported by Scribners. $2.00.

Mason, when no quarter was given, and both women and children perished in the flames, probably was not worse than other barbarous things done in this country, in Africa and Russia, in the name of Christianity. Yet it was not a reasonable way of converting savages. The history is interesting, well and simply told. King Philip's War, the rising of the Narragansetts, the sack of Deerfield, are all carefully narrated. The old story that the regicide Goffe appeared at Hadley Church on a fast day and led the people when they were attacked by Indians, routing the enemy, is wholly discredited. Not only the history of the early settlement of the valley and the Indian wars are narrated, but a careful historic account is given of the founding of colleges. The writer claims that there are more colleges, academies and schools for higher education on the Connecticut than on any other river in the world. Yale is claimed for the river, as it was founded at Saybrook in 1701, and after the college moved to New Haven half of the students continued to study in the river towns — Saybrook, Weathersfield and Hartford—going to New Haven only to receive degrees. The history of the founding of Dartmouth is fully given. Slight mention is made of Trinity College, Smith College, South Hadley, Northfield, etc. The latter part of the book has more the character of a guide book—useful, perhaps, but without the charm that one finds in the story of John Fitch and Capt. Samuel Morey, in the chapter on "Steamboats and Steamboating." There is a good map of the Connecticut Valley.

The Talbot J. Taylor Collection. Furniture, Wood Carving and Other Branches of the Decorative Arts, with One Hundred and Eighty-seven Illustrations. New York: G. P. Putnam's Sons. $6.00.

This volume, sumptuous in illustration and general appearance, is designed

"to give to the reader some idea of the treasures of art and craft which Talbot House contains, and to point out the good taste displayed in arranging them and the beautiful and harmonious setting which the house itself, with its rooms, halls, galleries and conservatory, affords the collection."

This country house of Mr. Talbot J. Taylor, at Cedarhurst, Long Island, has grown gradually to its present proportions. It is a low, rambling many-gabled structure, with red chimney stacks of a style still to be seen in Normandy, tho known here as Elizabethan, surrounded by gardens shrouded by vines and banked with roses. More than twenty of the numerous pictures that adorn the book represent the house, its various rooms as furnished, the grounds and gardens. The objects here described represent much labor and study on the part of the collector. That most interesting portion of the collection's history is but lightly touched upon. It is only when treating of the remarkably fine and great number of wood carvings that the reader is told that Mr. Taylor was so fortunate—and "forethoughtful," one might add—as to secure very many choice specimens, as fine examples as can be found in this country, before the law was past in France forbidding the sale of religious *objets d'art* from churches and monasteries. As carvings of this sort are rarely well set off by the dark oak paneling of the rooms, the collector has specially favored them. There are fine examples of sixteenth century carving—stalls from desecrated monasteries, brackets, figures of Popes, bishops, saints, wood panels, groups of figures, a lectern, a tabernacle, busts, figures of Christ and of the Virgin of different periods, Gothic, and of the later periods. Turning the leaves the eye is held by pictures of choice Flemish chairs with cane seats and backs. Here is a cabinet and a divan, each of which served its day as a beautiful carved bed in Brittany. A catalog of the furniture and other bibelots of the collection would include clocks, tables of the best French periods, chairs covered with Cordova leather, chests and coffers, sanctuary lamps, church vessels, silver vases, beakers, armoires. In the library, in addition to its two thousand modern books, may be seen collections of old bindings, early examples of printing, manuscripts on vellum and rare books of historical value. This work will be of interest to collectors, and the illustrations are so large and the designs on the chair covers and tapestries so distinct that the reader hardly needs to visit Cedarhurst to have a good idea of its beauties and treasures.

Puck of Pook's Hill. By Rudyard Kipling. New York: Doubleday, Page & Co. $1.50.

There are still fairy-rings on the greensward of Old England, and not all of fairy-lore has departed from our literature while two men of imagination live and write as tho they had been touched with the wand of Queen Titania herself, making them free of her elfin country, and blood brothers to one Will Shakespeare, who, we have always known, must have surprised her at her revels on some midsummer night's eve in the Stratford wood. Barrie and Kipling, unlike in many things, are one in the gift

W. B. Maxwell, Author of "The Guarded Flame."

of the child-imagination, which is as remote from the man-imagination as fairyland is from Sixth avenue. We are always persuaded to "believe in fairies" when they bid us listen and look. And so we are sure it is quite true that Puck came to Dan and Una and told them of the "Old Things" and showed them how to recall the Long Ago of their ancestors and ours, giving the History of England the most attractive guise that ever boys and girls could dream of, and, incidentally, preaching a few sermons to the Powers of the Present Day. Puck's song on the first page strikes the keynote of the book:

"See you the dimpled track that runs
All hollow thru the wheat?
O that was where they hauled the guns
That smote King Philip's fleet.

"See you our little mill that clacks
So busy by the brook?
She has ground her corn and paid her tax
Ever since Domesday Book."

Kipling's Janus-faced purpose shows itself most plainly in the best told of these stories of England's past, that of the "Centurion of the Thirtieth," and how he kept the wall with a handful of ill-disciplined recruits in the north against the Painted Picts when Maximus set out with the best of the troops to make himself Emperor of Rome. This colonial-born Roman had never seen the Eternal City, he was a worshipper of Mithras and half a barbarian, but looked with loyalty and reverence on Rome and held the border valiantly, altho he dimly felt that the great Empire was rotten at the core. The book concludes with a "Children's Song" that will probably find its way into the patriotic songs of our schools as quickly as the "Recessional" was received into our hymnbooks:

"Land of our Birth, we pledge to thee
Our love and toil in the years to be,
When we are grown and take our place,
As men and women with our race.

"Father in Heaven who lovest all,
Oh help Thy children when they call;
That they may build from age to age,
An undefiled heritage.

"Teach us to bear the yoke in youth,
With steadfastness and careful truth;
That, in our time, Thy grace may give
The Truth whereby the Nations live."

The Sin of George Warrener. By Marie Van Vorst. New York: The Macmillan Co. $1.50.

This story is well conceived and ably written, but it is not elevating. The scenes are laid in the dark of the human heart and in the wrong places generally. Evidently the author belongs to that class of writers who teach ethics by illustrating the evil effects of vice, and it is a doubtful as well as a partial method. In this novel the sin of George Warrener consisted in gambling with and losing another man's money in the effort to provide for his extravagant, silly wife. He is discovered, treads the brink of self-

destruction, is baptized privately in his own dishonor, *but* he gets another chance. This kind of sinner often does in a novel, but rarely in real life. And that is why this class of filching, fleeing Wall Street fiction is not more effective as a warning to the tempted reader. The sequel does not tally well enough with the stocks and bonds of reality. It is impossible to say whether Warrener's wife is one of the most veracious characters drawn in this year's fiction, or the most shrewdly fallacious. Such questions as these must be answered upon this point. Is it true that a young village matron, who had nothing but virtues exemplified by her stupid past, can take a walk upon a winter afternoon and be so suddenly sensitized to new impressions that she returns home in love with a strange man to whom she has barely spoken, and animated by the most abandon impulses? Is it possible for such a woman to act out consistently from that hour the disposition of a pretty little buffet drab, done up like a lettuce salad of appetizing femininity, and without a qualm of conscience? There is no active, spiteful harm in her; she merely dramatizes her inane wickedness with that simplicity and fastidiousness which makes such women at once so attractive and so contemptible. She is incapable of love, but so impressionable to it that her pretty, putty face flames with the passing passion of the passing man. And it is this selfish creature's helplessness which finally frightens her back into her husband's care. The author has made the character so real, so accurate in manner and mind that the reader closes the book with the conviction and the regret that she is a "type."

The Guarded Flame. By W. B. Maxwell. New York: D. Appleton & Co. $1.50.

What would have happened if Herbert Spencer had married George Eliot is a question that has been frequently discussed during the past year. No one would have ventured to think of such a thing if Spencer had not in his characteristically grave and naïve manner suggested that this might have occurred if she had been a little prettier. It seems likely that the germ idea of this novel arose from this discussion, for certainly Mr. Burgoyne, the valetudinarian philosopher, has no nearer prototype than Spencer. But Mrs. Burgoyne was undeniably pretty, too pretty, for, being mismated with respect to years as well as temperament with the great man, she gives way to a fatal passion that brings disaster upon the whole quiet household. The importance of the book lies not in its plot, but in the marvelously vivid and realistic picture of the genius, whose flickering flame has to be carefully guarded, yet burns so brightly that all the world is lighted by it. The psychology of the scientist has never before been worked out in fiction with such accuracy. The biographies of Huxley, Darwin and Spencer have evidently supplied much of material, but it is not the work of a copyist or imitator, but of a creator of character. He has provided Burgoyne with a whole library full of published works, and he shows us the reasons for their order and nature. He has patiently acquired and arranged the details of the background until the whole figure of the great man stands out before us in three dimensions. In these days of slipshod workmanship and rapid writing it is a pleasure to find a work like this, where the author shows that he is master of his craft and willing to take pains to make his picture perfect. It is truly a grand old man that he has drawn, one that anybody would be the better for knowing intimately; lovable in his daily life, marvelous in the comprehensiveness and alertness of his intellect, admirable in his lifelong devotion to truth, sublime in his forgiveness and forgetfulness of injuries done him personally. Certainly the great scientist is the nearest approach to the true superman that the twentieth century can yet show. Mr. Maxwell has produced the most powerfully written book of the year. It is not likely to be the most popular one, for it is too true to life. Sin, disease and death are not softened by rosy clouds of misty writing. Everything is not brought out all right by an ingenious trick. The curtain does not fall at the climax; the characters have to live on and live down their tragedy, just as they do in real life. The author is the son of Mrs. John Maxwell, better known to novel readers as Mrs. M. E. Braddon.

Main Currents in Nineteenth Century Literature. By George Brandes. Vol. IV., Naturalism in England. Vol. VII., Young Germany. Translated by Mary Morison. New York: The Macmillan Co. $3.00 each.

The fourth volume of Brandes's *Main Currents in Nineteenth Century Literature* has always appeared to us the least successful of the series. The name is not a very apt one to denote that revival of the naturally romantic spirit of English literature which took place at the beginning of the nineteenth century, and which was a very different matter indeed from the later movement with which the name has come to be associated. The effect of such a confusion of associations is embarrassing enough at best, but it is increased by Dr. Brandes's habit of applying to the epoch certain very general labels, such as pantheism, humanism, liberty, freedom—without making the distinctions required by the particular conditions. Nor, on the other hand, is his grasp of the period altogether satisfactory. His conception of a literary movement as a kind of mechanical reaction in a sense directly opposed to some preceding social or political condition, while sufficiently plausible, perhaps, in the case of Continental letters, is an hypothesis quite inadequate to account for all the phenomena of the English movement, even with the assistance of certain characteristics specified as distinctly English; while his social radicalism blinds him to what were some of the most profound and significant features of the period. Indeed, it would hardly be too much to say that in his eagerness to find in the age the seeds of future revolutionism he has in some respects misconceived its character and tendency, particularly in its earlier stages. In short, his whole political view of literature, as an instrument of social and moral revolution, singularly misrepresents the nature of English poetry, which has always had fewer *arrière pensées* and a much less consistent philosophy than a foreigner is inclined to believe. From this misconception Scott suffers most, perhaps, altho the effect of all these prepossessions, taken one with another, is to distort the whole relative estimate of authorship. Naturally, Byron "eclipses" Wordsworth altogether; Coleridge is dismissed with disproportionate brevity; Campbell "plainly shows his spiritual superiority to the poets of the Lake School"; Shelley is apotheosized, until he is scarce recognizable, in what is, perhaps, on the whole, the most unhappy criticism in the book. In fact, the volume has already begun to show its age. It was written in 1875, over thirty years ago. And while this style of social and humanitarian criticism which it represents is by no means antiquated nowadays, yet the hard and airless rationalism, the bitter and intolerant spirit of moral revolt amid which it was conceived, has greatly abated and softened. With the exception of Heine's, the period, covered by the volume on "Young Germany," contains almost no names of any particular interest or importance. Börne, Gutzkow, Laube, Mundt and the like mean nothing or next to nothing nowadays. But in spite of its insignificance from the point of view of literature proper, the period is admirably suited to Dr. Brandes's politico-social conception of criticism, and is of the very sort with which his mind is singularly well adapted to engage. It happens, therefore, that, without always bringing out its profounder relations or lack of relations with culture, he has produced a very interesting and suggestive survey of the times. Not that Dr. Brandes is destitute of literary sense, by any means; his comparison of Heine and Goethe would disprove any such assertion. But he is much less interested in the general contribution of literature to the permanent treasures of the human spirit than in its temporary effects and affiliations in its own day. In one sense he may be called the critical successor to that Liberation War of humanity in which Heine boasted himself a soldier. He is still preoccupied with the campaign and its successive maneuvers, and as such his subject fits him like a glove. Not only are the writings with which he has to deal largely political and social in tendency; but there is a good deal of human interest about these writers who were no great geniuses, just for that reason, no doubt. In other words, it is as an historical sketch, a picture of the intellectual life of the epoch in a group of very unusual "characters," not the least unusual of whom are the women, that the volume is chiefly interesting.

The Unrealized Logic of Religion: the 35th Fernley Lecture. By W. H. Fitchett. New York: Eaton & Mains. $1.25.

The subtitle is: "A Study in Credibilities"; and in the introduction the author says: "Incidentally, it may be added, the chapters are a study of what may be called opposing credibilities. Faith has its difficulties; but the incredibilities of unbelief, when tested at any point, are so vast that their mere scale constitutes a new argument for Christian belief." While the book is scholarly enough to claim the attention of experts, yet it is written in a style which brings it within the comprehension of the average reader of thoughtful books. It is a very strong book. The author has read widely, thought deeply and knows his ground thoroly. While he does not claim a demonstration, yet he does make it very clear that the infidel has harder intellectual difficulties to face than the believer has, and that, all things taken into account, the reason finds it easier to believe Christianity to be true than to believe it false.

Church Federation. Proceedings of the Inter-Church Conference on Federation. Edited by Elias B. Sanford. New York: Fleming H. Revell Co. $2.00.

It was in itself a remarkable achievement in the way of the demonstration of essential Christian unity to get together at the conference last November the official delegates of thirty Protestant denominations, representing 18,000,000 communicants and three times as many adherents, and to get them to agree upon a practical plan for future co-operation. It now rests with several denominations to see that the movement so well launched shall not fail. On the approval of two-thirds of the denominations represented, the plan of federation goes into effect. It in no wise restricts the autonomy of the individual sects, and it attempts no unification of creed. The success of the movement depends upon the diffusion of the federation idea among the people of all denominations. In addition to the personal influence of the thousands who filled Carnegie Hall during the conference, the extensive circulation of the present volume is the most powerful factor. With that aim in view, its price has been placed below the cost of production. It is a large volume of nearly 700 pages and illustrated by 27 well-printed portraits of the leaders of the movement in the different denominations. There are over eighty addresses of varying length on such subjects as religious education, labor and capital, home and foreign missions, the practical working of federation, evangelization and all forms of Christian work. Of the names of lay and clerical speakers only a few can be mentioned: John H. Vincent, David H. Greer, Charles Cuthbert Hall, Henry Wade Rogers, David J. Brewer, Peter S. Grosscup, Newell Dwight Hillis, Woodrow Wilson, Josiah Strong, Robert F. Coyle, H. L. Willett, William H. P. Faunce, Walter Laidlaw, John P. Peters, Charles H. Fowler, Henry Van Dyke, W. J. Tucker, William Hayes Ward, E. B. Sanford, James M. Buckley, George Hodges, Henry C. King, John Wanamaker and John Bancroft Devins. The book should be in the hands of every pastor.

God's Image in Man and Its Defacement in the Light of Modern Denials. By James Orr, D. D. New York: A. C. Armstrong & Son. $1.75.

Professor Orr is a doughty champion of orthodoxy, always alert in the defense of the faith and eager for attack upon any heresy, ancient or modern, Biblical or doctrinal. In his Stone lectures at Princeton, published under the above somewhat cumbersome title, he insisted that our whole modern view of the world is wrong and out of harmony with the Christian view, and that consequently if we are to retain our Christianity we must throw overboard a large part of the conceptions which we have taken over from science and the prevailing philosophies. He asserts that the current evolutionary philosophy "dislocates the entire Christian system; alters, where it does not overthrow every doctrine in it." He will not allow the plea that the doctrine of evolution comes into conflict only with certain forms of Christianity which have been held in the past, while real and essential Christianity remains true under all philosophies. "It is not the Christianity of the Church only that falls, but the Christianity of the *New*

Testament," he asserts. Such opinions were common enough thirty or forty years ago, but their utterance today by a man of the prominence of Professor Orr is remarkable. The best answer to them is an appeal to the world of fact; that the Christianity of the New Testament was never a more powerful and penetrative force than it is today in both the thoughts and deeds of men and women who, consciously or unconsciously, are all imbued with the scientific and philosophical notions which Professor Orr says make Christianity impossible. The times of evolution are also the times of foreign missions and of the Federation of the Churches, and it behooves apologists to account for the facts rather than argue that such facts cannot possibly be. It is unquestionably true that the conception of the origin of man and the beginning of sin of the early chapters of Genesis, and some of the ideas concerning God and salvation to be found in the Bible, cannot be held by those who share the modern view of the world. But it is late in the day to maintain that one must accept the cosmogony of Genesis to accept Christianity, and believe that

"In Adam's fall
We sinned all"

in order to believe in Jesus Christ. Dr. Orr is somewhat scornful of those for whom the story of Eden is "baseless legend—the idlest of dreams." But does he think it history? Would he say one must subscribe to it as literal fact in order to be saved thru Christ? There are very many who count it fortunate that they are not bound to the crude views of nature and man which were associated with the beginnings of a faith which, as spiritual religion, they accept with all their heart. On the other hand, Dr. Orr's tactics in loading Christian faith with the philosophical notions of early Hebrews and of Palestinian Jews at the beginning of our era would seem most unwise.

What Is Religion? and Other Student Questions. By Henry S. Pritchett. Boston: Houghton, Mifflin & Co, $1.

The President of the Massachusetts Institute of Technology is a layman, an astronomer by training and long practice, a member of several important astronomical expeditions, and a former Director of the United States Coast and Geodetic Survey. He is also a preacher of no mean ability, as these addresses to students witness. He speaks as a scientist, without dogmatic prejudices, and in a free, outspoken and brotherly manner. Especially noteworthy is his emphatic declaration that a man cannot live by science alone; that religion is a necessary consideration for every man, and that a scientific education which does not strengthen moral purpose and induce appreciation of spiritual things is superficial and incomplete. President Pritchett believes that the scientific spirit is not hostile to religion, but that, on the contrary, it tends to develop faith, and that the spirit of scientific truth-seeking is one of the great needs of modern piety. These five addresses are not only valuable in themselves for their terse, clear statement of truth, but are also peculiarly interesting as examples of religious teaching to technical students by a man of science. The latter observation applies especially to the chapters on "The Significance of Prayer" and "Ought a Religious Man to Join a Church?"

Side-Lights on the Home Rule Movement. By Sir Robert Anderson. New York: E. P. Dutton & Co. $3.00.

To the Irish rulers of American cities these side-lights on the history of their native country will prove both entertaining and irritating; entertaining because this London Fouché reveals a few—tantalizingly few—of the secrets of the Irish detective department; and irritating because he discloses the incompetence and criminality of the leading Fenians. The book is meant to counteract the influence of the chapters on the Irish movement in Mr. John Morley's classic "Life of Gladstone." Sir Robert Anderson, an Irishman, whose whole professional life was spent in the Secret Service, and who necessarily saw the shadiest side of the Home Rule agitation and of erring humanity, is naturally Tory-minded and averse to entrusting the Government to the uneducated millions. He is very angry with Mr. Morley for what he styles the romantic drama which Mr. Morley has written about Ireland, and

he hopes to club the monster of Home Rule, whose threatening head has been lifted afresh under the sunny influence of the Campbell-Bannerman Government. His weapon is the record of the murderous and treasonable activities of certain members of the Fenian movement and of the Irish Land League. While acquitting Michael Davitt, the founder of the League, of all knowledge of the projected Phœnix Park murders, for instance, he declares that Mr. Parnell connived at the propaganda of force, and that Byrne, the Secretary of the League, paid for and sent to Ireland, the knives with which the foul deed was done.

A Son of the People. By Baroness Orczy. New York and London: G. P. Putnam's Sons. $1.50.

This old story of class against caste will have an interest for American readers because of the novelty and charm of the Hungarian setting. The proud peasant versus the arrogant nobleman are the star characters. And, of course, the peasant is rich and noble, while the aristocrat is poor, and more or less ignobly overbearing. But he is possessed of a beautiful daughter, whom the proud peasant eventually marries, which is the old, eternal way of preventing decadence on the one hand and winning a refinement of blood on the other. The story is well told, and as interesting as any other thrice told tale.

My Impressions of America. By Charles Wagner. New York: McClure, Phillips & Co. $1.00.

It would be interesting to have a composite photograph of America as seen by the three prominent men who have recently told us what they thought of us—Maxim Gorky, H. G. Wells and Charles Wagner. In no other way except this of optical superposition could their diverse views be brought together. The Rev. Wagner wears rose-tinted spectacles and is genially appreciative of his hosts. In particular he praises the American home, our schools and colleges, our habits of industry and care for health and cleanliness, our devotion to liberty, and, above all, our simplicity of life.

Pebbles

Is this really funny: "How will you have your eggs?" a waiter inquired of a spiritualist. "Medium," he replied.—*Atchison Globe.*

KNIGHT-STAND—This is a frosty town, isn't it?

BARNES-STORME—Frosty? It's a regular ice burg.—*Princeton Tiger.*

THE Kedah postoffice authorities have a somewhat blunt way of putting things. Copies of a Penang paper posted to a subscriber were the other day returned marked, "Addressee hanged for Murder."—*Bangkok Times.*

NOTES FOR MUSIC LOVERS.

GERSUMPSKI's new symphonic poem, "The Housecleaner" (*Die Teufelsfrau*), is destined to produce a profound impression. The opening passage, *Allegro Assisi,* is marked in the score "Cheerful Feelings at the Approach of Spring." This gentle melody, a duet for triangles, is interrupted by a shrill cry from the ophicleide, abruptly introducing the main theme, "The Charwoman"—a delicate, elf-like figure, constantly reappearing at unexpected intervals in a vigorous *moto perpetuo,* working out in strict style, mostly brass, but full of deceptive endings. The muted piccolos sing the first phrase of the "Moth Ball Motif," taken up by the entire camphor-woodwind family. This modulates naturally into the "Clothes Line Theme," a series of strong chords from the strings, sustained by several bars, *fortissimo.* Upon this is skilfully overlaid the "Carpet-figure," rapidly taken up in imitation by the neighboring families, and enduring an incredible number of beats. A long and exhaustive set of variations follows in A-flat, with a succession of heroic measures. Discords become dominant, till a sudden resolution on the owner's part leads to "The Invocation to the Vacuum Cleaner"—an elusive phrase given out by the solo cascarina, *commodo molto,* elaborated by the tenor thermopile in semi-breves and decimeters. The picaroon, in a characteristic episode, emitting cold blasts from the lower register, and reenforced by the fire shovels in G and G-sharp, indicates the giving-out of the furnace. A striking *chorale* in the percussion family introduces the coda, "Grand March of the Buffalo Bugs." This ominous subject, first breathed in long-drawn *staccato* from the contra-gramophone, climbs by irresistible *crescendos* thruout the entire orchestral fabric, culminating in a stentorian roar from that quaint, little-used instrument, the Viennese bock-horn. The trio, founded upon a charming Dalmatian air, portrays the delight of the invading hordes at the discovery of a quantity of insect powder. Thru the orgy that ensues the earlier themes attempt in vain to obtain a point of vantage. All the resources of modern works are called upon, but each in turn is overpowered, leaving the march to complete its invincible course in triumphant octaves and tetrachords. The manuscript is inscribed "To My Janitor."—*Life.*

Editorials

One More Chance for Cuba

Once more the President of the United States has taken possession of Cuba—temporary possession only.

The United States freed Cuba from the rule of Spain. We might have held possession of the most fruitful, the most desirable island in American waters—the Pearl of the Antilles. What other nation would not have kept what it had acquired by the sword? But we promised to give Cuba her independent freedom, and we restored the island to the people just as soon as it could peacefully be done, warning the Cubans that they must keep the peace and give up the habit of revolution, or we would come again to compel tranquillity. For five years they were quiet and prosperous; and then internal war broke out, and we have been compelled to intervene.

The position of the United States has been absolutely, ideally perfect. Not the most belligerent advocate of peace, not the most turbulent anti-Imperialist, can find a word of criticism. The President waited until the insurgent army had destroyed railroad communication, had met the Government force in battle, and had threatened or attacked American interests, and even approached the city of Havana. Then President Roosevelt addressed a most solemn warning to the Cuban people, to those in both parties. He told them, in terms that allowed no equivocation and no doubt of his sincerity, that he desired the maintenance of Cuban independence, but that they must come together or he would be compelled to intervene. They were warned of the danger; that disorder too long continued would mean permanent occupation, an eventuality we desired to avoid. And they were told that two of the President's Cabinet would go down to use their good offices for peace.

So Secretary Taft and the Assistant Secretary of State went down, and heard both sides, and begged them in some honorable way to come together. But they would not. President Palma would resign before he would yield at all to the insurgents. He resigned, with all his Cabinet. Then Secretary Taft asked the Cuban Congress to elect his successor. The idiotically foolish Congress refused. They had not patriotism enough to overbalance their partisan spirit. There was no Government left, and Secretary Taft was obliged to take the government himself.

Then followed an act to be blazoned in red letters of historic praise. The Cubans believed their independence was lost. By their fault it might well have been lost, but by the magnanimity of their protector it was restored to them again. Secretary Taft had not taken the island to keep it as a possession of the United States. He issued a proclamation declaring that he would respect and maintain the Cuban flag. He would simply keep the peace until he could order a new election, when he would once more, as five years ago, transfer the rule to the chosen representatives of the people. Once more should Cuba have the chance to show whether she were fit, or fitting herself, to be an independent nation.

We say that such action is unusual; it is unprecedented. By right and by might we could have kept the island which the folly of its people had put into our hands. We have made a new record for the nations of international altruism. Europe expected it no more than did Cuba. Selfishness has been the rule of diplomacy, floriated with falsehood. This is good, honest, plain, Christian, shirt-sleeve diplomacy, which the humblest can understand. It gives more glory to the country than the victory over Spain or the acquisition of the Philippines.

It strengthens the position of the United States in the family of nations, because it gives us moral character. Secretary Root has just met the delegates of all the American republics at Rio, and the chief object of his labor was to prove to these republics that their elder sister had no selfish designs upon them. Scarce had the Conference broken up, not yet had the Secretary of State reached our shores, when this disturbance broke out in Cuba, and we had this signal opportunity to give proof of the sincerity of

Mr. Root's assurances. Cuba, forfeited by the folly of its citizens, lost and tost into our hands, is returned by us as a free gift to those who had so inconsiderately given it away. Let Brazil and Argentina and Chile—yes, and Venezuela and Colombia—understand what is the generous spirit of our Government.

And yet let Cuba take warning. What we have found it necessary to do in the Philippines we may have to do in Cuba. It depends wholly on the temper of the Cubans. We cannot be expected to intervene for peace time after time. This grace we have given, but it may not be given again. We did not do it because we should not like to possess the fair island, just as we might wish that the whole Continent of North America were one nation, but not without the good will of its peoples, and each of them in the full right with us of free and united government. But if Cuba cannot keep the peace herself, peace will be kept for her by United States soldiers, and kept permanently. One more opportunity she has to practice self-restraint and enjoy independence; let her not abuse it.

Politics in New York

A GREAT majority of those who are to vote in the State of New York at the coming election will give little weight to questions of national policy. They will have in mind the crimes and the corruption exposed by the life insurance investigation, the relation of those crimes to the politics and politicians of the State, the failure of executive officers to prevent the offenses which investigation brought to light, the failure of prosecutors to punish, and the evidence as to the influence of great corporations and of corporation money upon the conduct of public affairs.

The Republican party, responsible for the government of the State, meets attack by driving into obscurity its smirched bossses and by nominating Mr. Hughes, a clean and competent man, who by reason of his recent public service represents the popular protest against the sins of corporations and the shortcomings of official supervision. The Democrats, or a majority of them, with such aid as may be given by Independents and dissatisfied Republicans, make the assault under the leadership of Mr. Hearst.

In the past we have not questioned the sincerity of Mr. Hearst. Many have believed, and have said, that he was merely pretending to be the champion of the people in order that he might gain notoriety, increase the circulation of his newspapers, or promote his political fortunes. In our judgment, his course furnished no proof of selfish purpose and insincerity. To be sure, it might have been true that he was not moved by devotion to the people's interests; on the other hand, there was no conclusive evidence that his purpose was not what it appeared to be. While his methods were highly sensational, he did use his money and his influence to enforce justice. He supported certain policies which we believed to be sound. He procured evidence to be used by the Government in prosecuting law-breakers. We thought there was evidence tending to show that he had been elected Mayor of New York, and had been robbed of the office. At all events, there should have been an honest recount of the ballots. This was denied to him.

But now the circumstances attending his nomination at Buffalo clearly point to his insincerity. Professing to be the foe of bosses, he entered into an alliance with a boss of the worst type, a boss whom he had denounced in his journals, picturing him clad in prison stripes. Professing to hate corrupt politicians, he joined hands at Buffalo with the worst of their kind, whose names have been a reproach at Albany for many years. To such men he entrusted his political fortunes. To their brutal domination of the convention, their intrigues, their foul bargains, their unjust exclusion of many delegates justly entitled to seats, he owes his nomination. Do Boss Murphy, Grady and the other Tammany worthies without compensation bring their forces to the support of a champion of pure politics and a foe of dishonest wealth? Is it surprising that every one is asking what price was paid for their services? It must have been something more than mere thanks. Bosses do not readily serve those who have publicly accused them of crimes and cartooned them in the garb of the penitentiary.

If Mr. Hearst had been content with the votes which he could have had without the help of Tammany's boss, and had then stood for election as the nominee of the Independence League, his course would have been a straightforward one, consistent with an assertion of clean purpose. We sincerely regret that he consented to become the partner and beneficiary of the Tammany boss. We did not think he could do that. We are disappointed. Worthy causes suffer when prominent advocates of them thus go astray.

It does not necessarily follow that Mr. Hearst's vote at the polls will be small. Many who long to punish those in power will not be fastidious about the kind of club they use for the work. Others will retain their original estimate of Mr. Hearst's sincere devotion to principle. If Governor Higgins had been renominated the Republican party could not now expect to defeat even the candidate of a Murphy agreement. But Mr. Hughes is a candidate of exceptional strength, representing a party united under the leadership of such clean and vigorous men as Mr. Herbert E. Parsons. His professional career has been an honorable one. He is connected with no machine, is burdened with no political debts, has no repellent political past. We said on August 9th that it should be the policy of the Republicans "to nominate a man who enjoys the confidence of the people as an advocate of those reforms for which recent investigations have sharpened the public appetite," and that "the desired qualifications" could "be seen most clearly in the character and achievements of Mr. Hughes." To him the logic of the situation pointed. The party could have made no better choice.

Rainbows From Coal Tar

It is just fifty years since this bit of chemical magic was first accomplished, when a young English chemist, mixing a bit of chromic acid with the dingy oil known as aniline, extracted from black coal tar, found it suddenly transformed into a beautiful purple. There was only a little of it, but it seemed to multiply mysteriously in his hands, for as often as he filled up the beaker with water to wash it out it would color the water, until he must have thought that, like Lady Macbeth's hands, "it would the multitudinous seas incarnadine."

It was not what young Perkin wanted, but he knew a good thing when he saw it, and hastened to obtain the first patent of the many thousands that have been issued for the aniline dyes. He was trying to make artificial quinine, but, like Columbus, who blundered on America when he was trying to get to India, he had discovered something better; for, altho quinine has since been made, it is not profitable, while the manufacture of aniline colors has become one of the best paying of chemical industries. The two German firms which have now a practical monopoly of the business are capitalized at $250,000,000 and pay dividends of 20 to 30 per cent. per annum. This industry was lost to England because her manufacturers, like our own, do not appreciate the commercial value of scientific research. There are several German manufacturing houses that have more university-trained men engaged solely in scientific research than any university laboratory in the United States. England's revenues from India have recently had a hard blow from these Germans, who, after forty years of patient chemical investigation, have discovered how to make indigo, another aniline dye, out of this same coal tar, and so put out of commission the thousands of acres devoted to the culture of the indigo plant. As early as 1868 a similar transference from field to factory had been effected by the discovery that the coloring matter of madder could be made from coal tar. These synthetic colors must not be looked upon as imitations; they are identical with nature's product, but purer and cheaper.

In their cheapness lies the offense of the aniline dyes in the minds of some people. Our modern aristocrats would delight to be entitled "porphyrogeniti," and wear exclusive gowns of Tyrian dye, but when any shop girl can be also clothed in purple it spoils its beauty to their eyes. Applied science accomplishes a real democracy, such as legislation has ever failed to establish.

The value of the aniline colors lies in their infinite variety. Some are fast,

some will fade, some will stand wear and weather as long as the fabric, some will wash out or spot. Dyes can be made that will attach themselves to wool, to silk or to cotton, and give it any shade of any color. The period of discovery by accident has long gone by. The chemist nowadays decides first just what kind of a dye he wants, and then goes to work systematically to make it. He begins by drawing a diagram of the molecule, double-linking nitrogen or carbon and oxygen atoms to give the required intensity, putting in acid or basic radicals to fasten it to the fiber, shifting the color back and forth along the spectrum at will by introducing methyl groups, until he gets it just to his liking.

Of late the anilines have come into ill repute on account of their use in coloring foods. Where this is done with fraudulent intent, such as the concealment of inferior materials, it is, of course, wrong, and should be prohibited. The Food Commissioners are right, too, in insisting that the label on the can or package shall tell when the contents are artificially colored. But it is to be hoped that they will not go so far as to prohibit the use of aniline colors in food, for they have done much to make our food attractive and appetizing. To rule them out, as it is said will be done, on the ground that only animal and vegetable coloring matter may be used, would be absurd, for some of them, as we have seen, are identical with the colors found in plants, and the rest of them might be found there were nature as ingenious as modern chemists. Such a ruling would prevent the use of a pure and harmless aniline dye to color our candy red, while permitting the use of dirty bugs ground into a powder, such as cochineal.

One of our Congressmen last winter waved a red flag dyed with artificial coloring matter extracted from catsup, and by this means roused his colleagues to the passage of the Pure Food Law. It was, perhaps, justifiable—many equally good causes have been carried with worse arguments—but it might have occurred to some of our astute lawmakers that a substance which could go so far could not be very strong. In fact, strychnine could be added to our jellies and soft drinks to the same amount as the aniline dyes without poisoning anybody, and so far from being as poisonous as strychnine, most of the aniline dyes are not known to be injurious at all.

But we must not hold Sir William Perkin responsible for the abuses of his wonderful discovery, for the garish colors of Easter hats and the hectic flush of our foods. For we all of us have reason to join with the chemists of America in welcoming our distinguished guest on the occasion of his scientific jubilee. He has increased the economy of civilization and added to the wealth of the world by showing how a waste by-product could be utilized for making new dyes and valuable medicines, a better use for tar than as fuel for political bonfires and as clothing for the nakedness of social outcasts.

A Consecration Service

It was not a baptism—it was a consecration service over a child, which took place in the St. James Methodist Church in Chicago the other day. But even in baptism consecration is the most important element—many think the only thing there is of value in baptism. The father of the child is a member of the Bookbinders' Union, and President Wright, of the Allied Printing Trades Council, and officials of eighteen labor unions, attended. The parents presented the child and the pastor of the church made an address, and then a Presbyterian minister said:

"Do you, of your own free will and with a full knowledge of the solemnity of the act, dedicate the life of this, your child, to the cause of organized labor?"

"We do."

"Will you endeavor, with the grace of God, to direct the education of this child, so that he may best serve the cause of organized labor?"

"We will."

"Will you promise that, to the full extent of your ability and to the limit of your resources, you will give this child the opportunities which will make him a valued worker in the cause of organized labor?"

"We will."

Then turning to President Wright, the minister said:

"Will you accept this child in and for the cause of organized labor? Will you be sponsor for the child and aid and assist him until he reaches the age when he may properly take upon himself the solemn obligations entered into by his parents?"

"I will," replied Mr. Wright.

Then a consecration prayer was offered by Chancellor Tobial, of the Chicago Law School, and the father made an address, and Jane Addams spoke, and Miss Eva Shonts, sister of the man who is digging the Panama Canal, gave the occasion her blessing.

Now what do we think of it? It was perfectly proper and right. It was a religious service, in a church, for a religious purpose. "By the grace of God," the parents promised to bring up their child for what they believed to be a deeply righteous end—the benefit of a great class of men. Even so have religious services been held in churches for other righteous ends—for missionaries, for teachers, for graduating students, for nurses, for soldiers, for those engaging in a hundred causes that help those that need care or uplifting. It was not a travesty, but a serious consecration service, which very properly connects the Church with one of the most important movements for human advancement.

An American Forestry System

The National Hard Wood Lumber Association, recently in session in Memphis, gave out the following estimate of our forests and the prospective lumber supply. They told us that the United States holds at present approximately 1,475,000,000,000 feet of lumber, and that of this amount 45,000,000,000 feet are being cut each year. At this rate American forests will last about thirty-three years; so that after the year 1940 "the production of commercial lumber in the United States must cease altogether." Annual fires destroy also an incredible quantity of standing timber, besides preventing the development of new forests from seed, so that, from this count alone, we should have to cut down our estimates considerably this side of 1940. The State of Florida, and possibly one or two more, still retain the old public pasturage system, which requires a burning over of the State once a year. These fires destroy nine-tenths of the young pines and oaks that would otherwise quickly renew the forests that are cut for lumber, for turpentine and for fuel. The estimate also fails to take into consideration the enormously increasing consumption of wood for pulp and paper, for telegraph and telephone poles, for home use in building, which is constantly on the increase, and for export. The Lumber Association would therefore be compelled to bring down its calculations very materially, and in a general way it does assure us that at the present rate of consumption, estimating also increased consumption and waste, twenty years is the utmost limit to cover our supply.

On the other hand, however, the Association fails to give us an appreciative consideration of what the nation is now doing to check waste, increase growth and preserve its present forests. This, of course, cannot be done by a mere system of Reserves, but by a forestry system that prevents waste, keeps control of timber growing, and supplies the market at the same time with mature timber. President Roosevelt, in his message to the recent Irrigation Congress, speaks of our forestry as "a growth," a necessity that began when the forest reserves were transferred from the Interior Department to that of Agriculture. By the Act of March 3d, 1891, the President was authorized to proclaim Forest Reserves, and control of them was given to the Secretary of the Interior. There was, however, in the Act, no provision for adequate administration. By the advice of the National Academy of Sciences, the whole business was transferred to the Secretary of Agriculture, and the actual administration devolved upon the Bureau of Forestry.

From that time the principal object of our forestry system has been use and the prevention of waste. Forest reserves do not mean the mere locking up of vast timber supplies, but the use of these in such a manner that they shall be conserved, and perpetual sources of supply. The rule adopted is that all timber upon forest reserves which can be safely cut, and for which there is an immediate market, is for sale. All dead timber is sold. The cutting of timber is done under rigid supervision of the Service, and in accordance with established rules. The Division of Forestry, which ten years ago employed eleven persons, now has in the field nearly or quite nine hundred employees, of whom over one hundred and fifty are trained foresters. It

is estimated that from one of our Western Reserves 165,000,000 feet of lodgepole pine can be cut, without affecting the future supply. The entire property of the forest Reserves, estimated at $250,000,000, is administered by our Agricultural Department at less than one-third of one per cent. of its value, while the increase of value is not less than ten per cent. each year. This is a superb showing, not only as to the capacity of the people to manage public utilities, but as showing a very wholesome increase in our national wealth. Thus our forestry service is also furnishing an object lesson, on a vast scale, to show that wise management of agricultural products may make profit go hand in hand with conservative management. In the year 1905 timber was sold to the amount of $273,000. President Roosevelt says well, that the close relation of these Reserves to the prosperity of the people is just beginning to be apprehended. He tells us that "if the time should ever come when these Western forests should be turned over once more to the destroyer, there would disappear with them the prosperity of the stockman, the miner, the lumberman, the railroad, and, most important of all, the small ranchman who cultivates his own land." The forest service, upon its present basis, has not existed more than two years, but it has already proved that forest fires can be controlled and timber thieves can be held in check. Secretary Hitchcock has shown that they can also be punished. The President shows that only one-tenth of one per cent. of the area of the Reserves was burned over in 1905.

While vast areas have been turned over to the Government by the people for absolute control, there have been some secondary results of a wide-reaching character. Lands of an agricultural character have been open to settlement within the Reserves and adjacent. The timber that is cut is sold to miners and lumbermen, and ten per cent. of the money received goes to the counties in which the Reserves lie, for the use of schools and roads. New Reserves are to be created as seems wise to the Government, and the good work pushed forward as fast as possible. Meanwhile remains the fact that our present tariff shuts us off from the vast lumber supplies of Canada, and makes a wise preservation and use of our own lumber all the more important. As long ago as 1885 Judge Cooley, of Michigan, warned us that a high protective system was sure to sweep out the fine forests of that State—forests that challenged comparison with any in the world. Protective duties enabled the owners of forests and mills to turn their products and work so rapidly into money that the future was absolutely forgotten. As our reserves increase we may look confidently to an increase of supply, rather than to a total deficit. While we give every just attention to the warnings of our Hard Wood Lumber Association, we may confidently reply, with the President himself, that the outlook is very far from a total extinction of our forests by 1920, or for that matter, by 1940. The creation of our present system is so recent that very few have come to an appreciation of the work that it has undertaken, and to some extent already accomplished.

Under wise control our forests may be rendered perpetual, and the fuel and lumber supply can be made equal to increased demands for many centuries to come. At the same time agriculture, instead of being hindered in its development, will be materially assisted. The distribution of moisture will be equalized, to decrease labor and increase the quality of the crop. It is to be hoped that there will be a very large co-operation between the farmer and the public in this matter. One of our best authorities figures that it would be wise and economic for every farmer in possession of one hundred acres to devote at least ten of these to timber raising. The small farm reserves would supplement the greater reserves and work along the same lines. Orton insisted that within fifty years there would be a very general return to the use of wood for fuel. However this may be, the prices of lumber are such as to make it very desirable for every land owner, not only to control his own fuel supply, but his lumber supply as well. In case of strikes affecting our coal supply, or the prophesied exhaustion of our coal supply proving correct, these home forests or woodlots will prove to be matters of vast importance to the people.

The New Canadian Tariff

THE Canadian tariff, which was enacted in 1897, is to be revised by the Dominion Parliament next month. Some of these changes will be surprising and not agreeable to the American interests which will be affected. The revision is the result of pressure, which, from 1901 to the general election in 1904, was brought to bear upon the Laurier Government by the Canadian Manufacturers' Association.

In 1902 they brought around one member of the Laurier Government—Mr. J. I. Tarte—to their point of view; and Mr. Tarte started out to head a movement within the Liberal party in favor of the extreme demands of the Canadian manufacturers. He was promptly dropped by Sir Wilfrid Laurier; and thenceforward as editor of *La Patrie,* of Montreal, Mr. Tarte had to carry on his campaign for Dingley duties for Canada outside the breastworks occupied by the Liberal party.

Mr. Tarte's deposition was the first setback for the movement for more protection. The second setback, which was infinitely more disastrous, came as soon as the Tariff Commission began the public hearings which have preceded tariff revision by the Laurier Cabinet. Three members of the Cabinet formed the Commission of Inquiry, and from the beginning of September, 1905, to the first week of February, 1906, the Commission was traveling all over Canada, offering opportunities to every man who had anything to suggest with regard to the new tariff or as to the general fiscal policy of the Dominion.

At an early stage in the inquiry, the association was told by the president of the Commission that the Government at Ottawa had not the slightest intention of embodying the Dingley schedules in the Dominion tariff, and was not in the least disposed to a policy of retaliation against the United States. At St. John the members of the New Brunswick section of the Canadian Manufacturers' Association were told this with much emphasis. There, more than at any other place visited by the commissioners, Dingley rates and retaliation were urged: urged so strongly in fact that the Manufacturers' representatives drew from Mr. Fielding the remark that to adopt Dingley rates would save the Canadian Government much trouble, but that such a policy must mean that the Dominion tariff would be made at Washington and not at Ottawa.

But altho the Canadian Manufacturers' Association is thus likely to gain little from this propaganda for Dingley rates, there will be many changes in the Dominion tariff which will adversely affect American trade with Canada. The Preferential Tariff for Great Britain, established in 1897—under which British imports pay only two-thirds of the duties levied in the general tariff—is to be varied and greatly extended. The policy of the Government at Ottawa is to stimulate import trade from Great Britain, and to give British manufacturers new advantages in Canada in return for the sentimental preference which since about 1898 Great Britain has so generously given to Canadian food-stuffs. The commissioners stated at Toronto that this sentimental preference had been of enormous advantage to Canadian agriculture, and that one object of the revision was to ascertain how an adequate return could be made to Great Britain.

The new tariff, accordingly, will be so framed as to make it greatly to the advantage of Canadian importers to obtain from Great Britain all manufactured goods not made in Canada instead of obtaining them from the United States or Germany. In this way much trade will be diverted to Great Britain, and new business will be created for the subsidized lines of steamers which are now in the Atlantic service between British and Canadian ports.

The American Steel Trust and the Shoe Machinery Trust, of Boston, are both likely to be hit by the new tariff; and there are dangers ahead for American magazines and newspapers, especially for the popular illustrated monthlies. There is no complaint in Canada against the literary make-up of American magazines, except the general one put forward by the union printers at Toronto that these magazines are not empire-building. The attack on the American magazines comes mainly from Canadian manufacturers. They object to the American ad-

vertising, which occupies so many pages of the five million American magazines sold every year all over the Dominion. They insist that this advertising diverts an enormous volume of trade to the United States; and they came so near convincing the Commission that they had a real grievance that at Toronto Mr. Paterson, Minister of Customs, admitted that the problem was one demanding the attention of the Dominion Government, and suggested that a clause might be embodied in the Canadian tariff, under which all magazines which carry more than ten per cent. of advertising are liable to heavy import duties.

Another American interest which is threatened is the manufacture of paper. Many mills in this country import all their supplies of pulp wood from Canada. A proposal which was submitted to the Commission—to which the commissioners devoted much serious attention—is that there shall be such an export duty on pulp wood as will either drive American mills which have no pulp wood lands in this country out of business or impel them to move their plants to the Provinces of Quebec or New Brunswick.

The last of the American interests threatened are the ports from Portland, Me., to Philadelphia, and the railways which serve these ports. At the present time $25,000,000 worth of British imports into Canada reach the Dominion via these American routes. Montreal, Quebec, St. John and Halifax have been sore about this British-Canadian trade, and the strongest representations were made to the Commission in favor of such an amendment to the tariff as will deny the British preference to all imports into Canada which are not landed at Canadian ports.

Reciprocity with the United States was not even mentioned at the recent tariff hearing. It is a dead issue now, even in the Maritime Provinces, which formerly were the strongholds of the reciprocity movement. The feeling in favor of reciprocity with the United States was killed by the Dingley Act and by the preferential tariff for Great Britain of 1897, and the sentimental preference which since then Great Britain has freely accorded to Canadian imports. There is to be no general retaliation in the new Canadian tariff against the United States. So much is settled. But Canada is bent on protecting itself against a number of aggressive American industrial interests; and moreover it is intent on a tariff that shall be framed with a view to diverting as much business as possible from the United States to Great Britain. Those were stone-blind politicians in the Senate who killed the reciprocity treaties.

A Southern Candidate for President

Some of our Southern Democrats are clamoring for a Southern Democrat as candidate for the next Presidency—say Senator Bailey, of Texas, or Hoke Smith, of Georgia, the two largest Southern States, or Senator Tillman, of South Carolina. They declare that the South gives the electoral votes to the Democratic party, but it never gets a show at the chief office. It is true that the South supplies the electoral votes, but it does not supply the popular Democratic votes. In the election of 1902 the sixteen States in which slavery existed before the war, and which are called Southern States, tho no more Southern in latitude than a number of others, cast 1,655,270 Democratic votes out of a total of 5,082,754 Democratic votes; and of those 1,655,270 there were 525,973 that came from four Southern States whose electoral votes went to Roosevelt. That is, only about 22 per cent. of the Democratic votes for President came from the Southern States which gave their electoral votes to Parker. Such a minority as that has no great right to claim the candidate for its section. It may be said, in reply, that voting is not a popular amusement in these States, and that only enough vote to make sure of the result. That is quite too true, and may be considered; but again, the heavy Democratic votes were in such States as Kentucky, Tennessee, North Carolina and Texas, where there was also a heavy Republican vote.

Dangerous Sports

It does not need much argument to prove that danger is one of the chief ingredients of sport. Ruskin even goes so far as to say that war is the greatest of all games because the stake is death. The winner

of the Norwich, Conn., annual croquet tournament or the lady bridge whist champion could hardly be described as "hero" or "heroine." This week Monday, Lieut. F. P. Lahm, U. S. A., won the James Gordon Bennett balloon race in his balloon, "The United States." There were sixteen starters from Paris, nine of whom alighted after more or less mishap in France. The others crossed the English Channel, and one of them has not yet been heard from. Lieutenant Lahm, after being in the air twenty-three hours, alighted in England one mile from the ocean, fearing the breeze would carry him out to the North Sea. This Saturday comes even a greater international sporting event. Down on Long Island, over a 30-mile, well-oiled course, will be run off the automobile race for the Vanderbilt Cup. Probably one or more of the competing "red devils," while speeding over a mile a minute, will explode, or turn turtle, or attempt to climb a barn, and the chauffeur will be killed. Already, under the new rules devised to debrutalize the game, before the season has fairly begun, the captain of the Laurenceville Preparatory School football team has been killed in a scrimmage. The Duke of the Abruzzi has just announced his intention, in his zest for "the most dangerous sport in the world," to climb the topmost peak of the highest Himalaya. If there were any trade involving such danger to life and limb, indignation meetings would be held everywhere, and it would very properly be legislated out of business. But sport is voluntary.

The Thirteen Ah Fong Girls

The report of the death of Wing Ah Fong, of Hongkong, attracts more attention in this country than we ordinarily pay to a Chinese merchant, even tho he may be a multimillionaire. Like King Christian of Denmark, "the father-in-law of Europe," Ah Fong is chiefly distinguished in American eyes by the brilliant matches made by the thirteen girls he left behind him when he returned to his native land. He went to Honolulu in 1860 as a humble coolie, but by handling silk and real estate, with opium as a side line, he amassed a large fortune and became the chief adviser of King Kalakaua. He married a beautiful Hawaiian girl of fourteen, who had been educated in a missionary home. Her father was a sailor, half Portuguese and half English, and her mother a Kanaka belle. By 1892 Wing Ah Fong was ready to go back to his home to die, like a good Chinaman, so he divided his fortune and his family with his Hawaiian wife, taking with him his eldest son, and leaving with her his thirteen daughters and one son. The mixture of the blood of four races was a happy combination, for all the children are reputed to be remarkably intelligent and handsome. They were educated in the best schools of Europe and America, and the Afong mansion (the name in the course of time became so modified) became an exceedingly popular resort for army and navy officers and travelers around the world, who, deprived of feminine society for many weary days, were enchanted to be received so hospitably by thirteen beautiful heiresses, each with a balcony to herself. It was generally love at first sight, and they say that in one instance only a single hour elapsed between the introduction and the asking of mama. All tastes could be suited. Seven of the daughters were tall, like their father; six petite, like their mother. Seven had black eyes, six had blue. One married Rear Admiral Whiting, of the United States Navy; one married Lieutenant Dougherty, of the Army; the other fortunate men were merchants and lawyers of Honolulu and our Pacific States. There are four left. We mention this for the benefit of any Bassanios who may profit by the information.

Old-Age Pensions in Australia.

The Royal Commission appointed by the Government of Australia a year ago last February to investigate the workings of the old-age pension systems in operation in Victoria, New South Wales and New Zealand, has made a favorable report and unanimously recommends that the Commonwealth of Australia adopt a similar system. In New South Wales there are now 22,000 pensioners receiving about $2,540,000 per annum, and the cost of administration is about $100,000. In Victoria there are 11,452 pensioners receiving $1,025,000

per annum, and the cost of administration is $8,500. In New Zealand there are 11,770 pensioners, receiving $1,625,000 per annum, and the cost of administration is $20,000. In New South Wales the maximum pension is $2.50 a week, or $3.75 for a married couple. It is reducible by the amount of all independent income over this and by one-fifteenth of the capital value of property over $250. In New Zealand the maximum is the same, reducible by all independent income exceeding $170 and by one-tenth the capital value of property exceeding $750. In Victoria the maximum pension is $2 per week, reduced by the amount of all independent income over 50 cents a week, and by 12 cents a week for every $50 of property exceeding $375. There is a great difference in the proportion of persons over sixty-five years of age receiving pensions in the different colonies. In Victoria the pensioners are 17 per cent. of the population over sixty-five and in New South Wales they are nearly 44. The Commission recommends for the Commonwealth of Australia a law providing a maximum pension of $2.50 from the age of sixty-five, or, in case of permanent disability, from sixty; the payments to be made fortnightly thru the post office. There is to be a general Commissioner of Pensions, with a deputy in each State and a registrar in each district. Magistrates will hear applications either in open or secret session, taking evidence under oath, and deserving cases are recommended to the Commissioner. The husband, wife or child may be compelled to contribute toward the pension. No pension is to be granted which will make the aggregate income of the pensioner more than $260. Five dollars per annum is to be deducted from the pension for every $5 over $130 derived from other sources, and for every $50 of value of property over $250. Any property owned by a pensioner at death will be placed in the hands of a Government officer, who will take from it the amount paid in pensions before satisfying other claims. All pensions are forfeitable if the recipient proves to be of disreputable or intemperate habits, and the Commission recommends that a penalty be imposed for supplying an old-age pensioner with intoxicating liquor. In the testimony taken by the Commission it appeared that frauds were sometimes practiced upon the Government by the concealment of property or disowning of relationship, and some witnesses held that the effect of the system was to discourage thrift and self-help. It is not apparent, however, why it should be any more so than our own haphazard but more flexible methods of outdoor relief.

An Alcoholic Revolution

The liquor business which Count Witte made a Government monopoly is now the chief support of the Russian finances. The greater the excitement of the people or the deeper their despair, the more vodka they drink to the profit of the Government that they are fighting. In the province of Tula in the five years ending July 1st, 1906, appropriations were made for famine relief amounting to $700,000. In the same years the people of the province paid to the Government for alcoholic liquors, $3,100,000, so the treasury gained about three times as much as it paid out. Russia, like the United States, has just adopted a law providing for the sale of alcohol for manufacturing and fuel without the government tax. The Russian peasants understood this as an act of charity on the part of the Czar to provide cheap drinks for the benefit of his poor but loyal subjects. The addition of the denaturants, wood alcohol and vile smelling essences, rather improved the flavor to their taste, and they found that it took less of it than of vodka to make a man crazy drunk. Shops opened for the sale of it did a thriving business until the fatal effects of the new beverage became manifest.

One of the interesting and curious phenomena in British politics is the agreement of both the leaders of the Government in the two Houses of Parliament in condemning that feature in their Transvaal policy which regards the treatment of the natives. They accept it, but they do not like it or think it just. They feel bound by the Treaty of Vereeniging not to allow any natives to vote in the Transvaal, and this includes so-called colored, by which is meant, in

that country, those of mixt blood. Mr. Churchill says:

"We may regret that there is no willingness in the Transvaal and Orange River Colonies to make arrangements that have been found not altogether harmful in Cape Colony."

And the Earl of Elgin said in the House of Lords:

"I regret that the terms of the Vereeniging treaty confines the franchise to white subjects. I regret it, because I am of opinion that a reasonable representation of natives would give strength and not weakness to the government of the country, and I cannot but hope that this will be recognized in some time to come."

A leading daily in this city, which "shines for all," tells us with editorial authority that the American negroes who were sent to Africa and founded the republic of Liberia "have reverted to the original type." Then the original type was higher than is generally supposed. There work was begun and has been carried out under all disadvantages by negroes just out of slavery and some free negroes without experience in statecraft or finance. But they have kept a stable government, without revolutions, and they have a public school system, a central college, an organized Church and a respectable newspaper press, a worthy judiciary, and a growing agriculture and territory. It is a condition far above the original type of barbarism, as the highest authority tells our readers.

In order to force the closing of the stores on Sunday, the French trade unionists are employing some very ingenious if unjustifiable methods. In accordance with instructions from the Secretary of the Federation of Commercial Unions, the stores dealing in clothing and furnishings which kept open on Sunday were thronged with the employees of the stores that had given them a holiday. They kept all the clerks busy by taking a long time for insignificant purposes, and giving fictitious addresses for the goods selected, so the *bona fide* purchasers were crowded out and Sunday opening proved unprofitable.

Mr. Adolph Oppenheimer asks the President how his simplified spelling would apply to such words as *ail, ale; all, awl; eight, ate; beer, bier,* and forty other couples of words he cites, in which different meanings are indicated by different spellings. Well, the President has not touched those words, altho we hope they will be changed some day. As to confusion arising, no confusion arises in speech, and no more would there in writing. We would deal with them precisely as we do with hundreds of words which carry different meanings with one spelling, such as the common auxiliaries *will, may, can* and *must,* or *loom* (noun and verb); *grave* (noun and adjective), of which our dictionaries are full. They make no trouble.

The Governor of Georgia writes to Secretary Bonaparte asking that the new magnificent battleship "Georgia" be sent to either Savannah or Brunswick, so that it might go into commission from the waters of that State. But the Department says that the harbors in Georgia are not deep enough to float the monster, and that it would have to anchor some fifteen or twenty miles distant from either city by the whistling buoy, which is not very conducive to a great social function. Charleston, S. C., graciously offers her fine harbor for the festivity, which invitation ought to be accepted; but Georgia should give the vessel which bears her name nothing less than a full silver set, in place of the "piece of silver" which is promised.

At last, so we are informed in that mysterious way in which the Russian Terrorists publish their actions, it is decreed that the Russian Czar must die. Hitherto he has been regarded as a puppet; now he is a principal, and must suffer with his advisers. No wonder he goes to sea, Czar in name, but in fact condemned and banished to the seas, like the Man Without a Country in Edward Everett Hale's story. It is no blessing to be born a Czar, and then not have the sense to know his generation.

We are glad to learn that the committee appointed to aid the sufferers by the earthquake in Valparaiso have forwarded by cable the $56,952 already subscribed in this country. That amount should be much increased, and contributions should be sent to the treasurer, J. P. Grace, 1 Hanover Square, New York.

Financial

A Step in the Right Direction

THE Columbia Trust Company, of this city, is seeking to make it impossible that irregularities such as those which wrecked the Milwaukee Avenue Bank in Chicago, and the Real Estate Trust Company in Philadelphia, should occur in the conduct of its affairs. After a recent meeting of the board of directors, at which the subject was discussed, the following notice was posted at the company's banking house:

"Every employee of the Columbia Trust Company is hereby notified that if at any time he or she has knowledge or suspicion of any irregularities on the part of any of the officers or clerks in connection with the business of the company, it shall be the duty of such employee to at once notify the Executive Committee of the Board of Directors of such irregularities, who will in their discretion withhold the name of their informant.

"Should it be found that any employee has had knowledge of such irregularities and has not reported the same to the Executive Committee, such employee will be deemed to have had guilty knowledge, and will be dealt with accordingly."

The notice was signed by Vice-President Clark Williams, who is president of the Trust Company Section of the American Bankers' Association, which meets in national convention this month in St. Louis.

Department Store Banking

To the galling competition that the modern banker is now obliged to meet from the trust companies will presently be added banking departments inaugurated by department stores. Until very recently but few department stores have gone into the banking business, but there is a very general tendency on the part of their managers toward the establishment of departments devoted to banking. Such departments are exceedingly beneficial to the department stores. Mail order customers and suburbanites in particular, who frequently lack banking facilities, find department store banking very convenient in connection with shopping. Certain department stores in Chicago have been prominent in the movement toward department store banking, and they have solicited banking deposits from inland merchants, farmers and even laborers, upon which 6 per cent. interest is promised annually. No restrictions are put upon the amount of balance required, as is the custom on the part of most banks of discount, and sums ranging from $5 to $5,000 are received, against which desired purchases may be charged. Mail order houses are important commercial factors, particularly in the West, and if their plan to attract deposits succeeds, it cannot help hurting country bankers, who have heretofore limited themselves in the payment of interest to 3 or 4 per cent. per annum. Department store banking will soon have to be reckoned with.

....It is estimated that the world's output of coal in 1905 was 929,623,000 tons. The outputs of the four leading producers are reported as follows: United States, 352,694,000 tons; Great Britain, 239,889,000; Germany, 173,664,000; Austria-Hungary, 40,725,000.

....Altho the law requires that only 75 per cent. of the cars in every freight train shall be equipped with air brakes, an official report shows that more than 98 per cent. of the Pennsylvania Company's cars on the lines east of Pittsburg and Erie (or 130,915) are so equipped.

....The Hall Signal Company, which has been paying $1\frac{1}{2}$ per cent. quarterly on its common stock, now increases this dividend to $1\frac{3}{4}$ per cent, and also declares a quarterly dividend of $\frac{1}{4}$ of 1 per cent. on its preferred stock, in addition to the regular annual dividend of 6 per cent., which was declared last March and made payable in four instalments.

....The first railroad train drawn by an electric motor over standard gauge tracks ran into the Grand Central Depot in this city over the New York Central road on Sunday last. It marked a pronounced step in the application of electricity, which is eventually to be extended over the New York Central's system. The engine used last Sunday is capable of a maximum speed of eighty-two miles an hour.

Insurance

The "Administration" of the Mutual and Its Agents

THERE has been a difference of opinion respecting the righteousness of the Mutual Life administration in insisting upon the whole and unreserved support of the so-called "administration" ticket containing nominees for the board of trustees, by all persons connected with that company. The expectation on the part of the management that its various managers will electioneer actively and positively for the administration ticket, and making it mandatory for them so to do, has not been accepted in all quarters without question.

Frederick O. Paige, of Detroit; Herbert N. Fell, of this city; Edward O. Sutton, of Springfield, Mass., and J. F. Ferre, of Worcester, Mass., have all during the past week come into the public eye as opposed to the universal acceptance of the theory that the administration can do no wrong. The result has been that the companies' contracts with the first two named have been ordered canceled, and the other men have offered their managerial resignations.

THE INDEPENDENT believes that the action of the Mutual Life Insurance Company in discharging these agency managers who have joined the opposition to the administration ticket for trustees to have been absolutely justifiable. The existing administration is recognized by the new insurance law of 1906, and is, in our opinion, amply justified under this law in seeking, by every legitimate means in its power, to defend its control against other persons seeking to wrest it away. In making such a fight the company but exercises its right to claim the aid and abetment, the allegiance and assistance of the entire body of its employees, whether trustees, officers, clerks, agents or what not. A management that would remain blind to disloyalty on the part of those in its service, to whom it ought to be able to say, the company expects every man to do his duty, and one of his duties is to support the administration under which he is working and from whom he receives instructions and remuneration, would in no wise merit the esteem and confidence of the policy-holders.

The Insurance Hazard on the Great Lakes

THE foundering of an unknown steamer on Lake Huron, off Sanilac, on September 30th, whereby the vessel was lost with all on board, and the loss of three vessels on Lake Erie on the same date, lends especial interest to the words of a writer in the Cleveland *Plain Dealer* who estimates the annual wrecking of between 200 and 400 vessels of all kinds on our Great Lakes. Perhaps one-fourth of all the wrecked vessels are total losses. The insurance companies stand to lose from $1,500,000 to $2,500,000 because of risks covered by them on the Great Lakes. The loss of life is also very considerable, and the death list of a single season often contains from 100 to 200 names. Wrecks, explosions, beachings, collisions and founderings almost without number have conspired to bring about this lamentable condition, and it is not to be wondered at that these beautiful inland seas have earned for themselves the reputation of being the most perilous bodies of water in the world. Every spring and fall Lake Erie and its cruel and treacherous waters wreck several vessels. Happily, however, the number of wrecks and the property loss have been declining, altho these still remain a constant menace to ship owners and marine underwriters. Many of the wrecks are absolute mysteries, and many mighty ships have sailed away from shipping ports and then have vanished forever. They sailed and were never heard from afterward is the unhappy record.

....Dividends announced:

Atch., Top. & S. F. R'way (Adj. Mort. Bonds), 4 per cent., coupon No. 10, payable November 1st.

Atch, Top. & S. F. R'way (Stamped Adjust. Bonds), 4 per cent., coupon No. 20, payable November 1st.

Amer. Chicle Co. (Quarterly Preferred), 1½ per cent., payable October 1st.

Amer. Chicle Co. (Quarterly Common), 1 per cent., payable October 20th.

Minn. & St. L. R. R., coupons due October 1st, payable October 15th.

The Independent

VOL. LXI. NEW YORK, THURSDAY, OCTOBER 11, 1906 No. 3019

Survey of the World

To Curb Wealth by Federal Power

At the beginning of his long address at the dedication of Pennsylvania's Capitol, on the 4th inst., President Roosevelt reviewed the history of the State, saying that in each great crisis of our national history her weight had been cast unhesitatingly upon the right side and had been irresistible. Study of the great deeds of the past, he continued, should incite us to grapple effectively with the problems of the present and with those new evils for which new remedies must be devised. For some of these an increase of the power of the Federal Government was needed. "If we fail to increase it, we leave ourselves at the mercy of the ingenious legal advisers of the holders of vast corporate wealth." He described at some length the devices of "these astute lawyers," who would make the Constitution "merely the shield of incompetence and the excuse for governmental paralysis." Speaking of the field in which the States should work for a betterment of present conditions, he warmly commended the reform acts of the recent Legislature of Pennsylvania, and earnestly urged the enactment of a law relating to child labor. Turning to the subject of great corporations, he asserted that a narrow construction of the powers of the National Government was now "the chief bulwark of those great moneyed interests which oppose and dread any attempt to place them under efficient governmental control." There were legislative acts and judicial decisions of the past which now "put us at a great disadvantage in the battle for industrial order as against the present industrial chaos." A narrow interpretation of the Constitution now would make us "impotent to deal with any abuses which may be committed by the men who have accumulated the enormous fortunes of today." We should abhor any effort to excite hostility to men of wealth as such, and we should encourage thrift and business energy:

"But it is our clear duty to see, in the interest of the people, that there is adequate supervision and control over the business use of the swollen fortunes of today, and also wisely to determine the conditions upon which these fortunes are to be transmitted and the percentage that they shall pay to the Government whose protecting arm alone enables them to exist. Only the Nation can do this work. To relegate it to the States is a farce, and is simply another way of saying it shall not be done at all."

"Under a wise and farseeing interpretation of the interstate commerce clause of the Constitution, I maintain that the National Government should have complete power to deal with all this wealth which in any way goes into the commerce between the States—and practically all of it that is employed in the great corporations does thus go in."

National lawmakers should scrupulously avoid any demagogic legislation about the business use of this wealth:

"But, on the other hand, it shall and must ultimately be understood that the United States Government, on behalf of the people of the United States, has and is to exercise the power of supervision and control over the business use of this wealth—in the first place, over all the work of the common carriers of the Nation, and in the next place over the work of all the great corporations which directly or indirectly do any interstate business whatever—and this includes almost all of the great corporations."

The advocacy of policies that have either now become law or are in a fair way of becoming law had been denounced by great financiers as incitement to anarchy or as an apology for Socialism, but in reality these policies were the antidotes to both Socialism and anarchy:

"To exercise a constantly increasing and constantly more efficient supervision and control over the great common carriers of the country prevents all necessity for seriously considering such a project as the Government ownership of railroads—a policy which would be evil in its results from every standpoint.

"A similar extension of the national power to oversee and secure correct behavior in the management of all great corporations engaged in interstate business will in similar fashion render far more stable the present system by doing away with those grave abuses which are not only evil in themselves, but are also evil because they furnish an excuse for agitators to inflame well-meaning people against all forms of property, and to commit the country to schemes of wild, would-be remedy which would work infinitely more harm than the disease itself.

"The Government ought not to conduct the business of the country; but it ought to regulate it so that it shall be conducted in the interest of the public."

Justification of the Government's recent course was found in the condemnation of it with almost equal rancor by the reactionary and by the wild apostle of unrest —by the former because it deprived him of power which he had misused to the public hurt; by the latter because by remedying abuses it took from him the fulcrum of real grievance, which alone makes the lever of irrational agitation formidable. "We shall not halt; we shall steadily follow the path we have marked out." The civilization to be developed from the new conditions of vast industrial growth "must not be, it shall not be, the civilization of a mere plutocracy, a banking-house, Wall - Street - syndicate civilization; nor yet can there be submission to class hatred, to rancor, brutality and mob violence—for that would mean the end of all civilization."

Washington Notes

It is reported that a treaty between Colombia and the United States, and another between Colombia and Panama, will soon be negotiated at Washington, and that thereby the controversies due to Colombia's loss of Panama in 1903 will be ended.——Our Government has arranged with Great Britain a *modus vivendi* relating to the rights of American fishermen in Newfoundland waters, but only for the coming season. As the London Government acted without Newfoundland's consent (which was withheld), the Newfoundland press bitterly complains, asserting that the colony's interests have been sacrificed.——President Roosevelt has decided to withdraw from entry all the coal lands in the public domain that have not been taken up, and to ask Congress for legislation concerning them.——It has been decided that the Panama Canal shall be built by contract, and bids will soon be invited.——Frank L. Emmett, formerly an employee of the Shelby Steel Tube Company (a part of the Steel Corporation), informs the Government in a sworn statement that by direction of his superior officers he procured the acceptance, by the Government, of thousands of boiler tubes which had not been tested or which had been rejected as defective. These are now in use in several battleships. He obtained the Government stamp by breaking open the inspector's desk, he says, and he also broke the seals on cars in order that defective tubes might be placed in them. It is to save American sailors, he asserts, that he now makes this confession.

The Situation in Cuba

At the end of last week a large majority of the Cuban insurgents had given up their arms and returned to their homes. The guns surrendered are old and almost worthless. There was no friction, except in the cases of a few groups that insisted upon the simultaneous disarming of the Government's volunteers. It was expected that the work would be completed peacefully thruout the island. In Washington it was made plain that our Government's purpose was to give the Cuban people another opportunity to prove their ability to govern themselves in an orderly manner. The United States, it was announced, might act as guardian for perhaps a year. The new elections will take place in June, probably, and our troops are to be withdrawn after the installation of the new officers. In the meantime, with the help of an American Commission, there will be prepared and enacted new laws for general and municipal elections, for the civil service and for the judiciary. It is intended that the courts shall be made as far as possible independent of the executive branch of the Government. They have been more or less subservient to it. The Governor will be Judge Charles E. Magoon, recently Governor of the Canal Zone, who is familiar with the laws of Cuba, and (being then in the War Department)

was largely responsible for the decision of legal questions affecting our relations with Cuba during the period of American occupation. At first Governor Winthrop was selected, but the President afterward decided that he ought not to be taken from Porto Rico. Governor Magoon will be an officer under the Cuban Constitution (that part of it which is identical with the Platt Amendment), but his power, both civil and military, will practically be absolute. Brigadier-General J. Franklin Bell accompanies him to Cuba, altho it is said that General Funston will command the troops. It is thought that not many of these will be needed. Fourteen hundred marines and 850 soldiers have been landed. Ex-President Palma has gone to Matanzas, on his way to his old home at Bayamo. Minister Quesada has withdrawn his resignation at the earnest request of Secretary Root, who said to him: "With hopeful courage and determination on the part of Cuba's real friends, all of this wretched business will soon be over." It is reported that the property-holding interests generally desire intervention to be permanent and will urge that the Cuban people be asked to say at the polls whether they prefer independence, annexation or an American protectorate. These interests hold, it is said, that the people are incapable of governing themselves properly and peacefully for more than a short time. This is the opinion of Senators Beveridge and Hemenway, of Indiana, as expressed last week in public speeches. A few cases of yellow fever in Havana have caused earnest efforts to be made, under the direction of Secretary Taft, for preventing an epidemic. Owing to the publication of Palma's appeals to Washington, as far back as September 8th, for help and intervention, he is now denounced by many prominent men of his party.

Palma's Early Plea for Intervention

Correspondence published on the 4th by Secretary Root shows that as early as September 8th President Palma asked for intervention, and that it was on September 13th that he, with the Vice-President and members of the Cabinet, determined to resign. His requests were forwarded in dispatches from Consul General Steinhardt. On September 8th he asked President Roosevelt to send "immediately" two warships, one to Havana, and the other to Cienfuegos, because the Government was "unable to quell the rebellion" or "to protect life and property." In answer to a second request, on the 10th, Acting Secretary Bacon said to the Consul General:

"The President directs me to state that perhaps you do not yourself appreciate the reluctance with which this country would intervene. President Palma should be informed that in the public opinion here, it would have a most damaging effect for intervention to be taken until the Cuban Government has exhausted every effort in a serious attempt to put down the insurrection and has made this fact evident to the world. At present the impression certainly would be that there was no real popular support of the Cuban Government, or else that the Government was hopelessly weak. As conditions are at this moment, we are not prepared to say what shape the intervention should take. It is, of course, a very serious thing to undertake forcible intervention, and before going into it we should have to be absolutely certain of the equities of the case and of the needs of the situation. Meanwhile, we assume that every effort is being made by the Government to come to a working agreement which will secure peace with the insurrectos, provided they are unable to hold their own with them in the field. Until such efforts have been made, we are not prepared to consider the question of intervention at all."

Two ships were sent. Palma promised to do all that he could to suppress the insurrection. Steinhardt explained that Palma had made no preparation for war, having expended public funds upon public works and public education. On the 11th, Mr. Bacon wrote that Mr. Roosevelt "believed actual and immediate intervention to be out of the question," but would like the opinion of President Palma and the Consul General as to the expediency of sending "a word of emphatic warning" pointing out the certainty of intervention if the people of Cuba should not settle their differences quietly and live in peace. On the 12th, there was transmitted to Washington the following from Palma's Secretary of State:

"President Estrada Palma asks for American intervention, and begs that President Roosevelt send to Havana with the greatest secrecy and rapidity two or three thousand men to avoid any catastrophe in the capital. The intervention asked for should not be

made public until the Administration troops are in Havana. The situation is grave, and any delay may produce a massacre of citizens in Havana."

Steinhardt expressed the opinion that the suggested message of warning should be sent at once. On the following day, Palma again asked for intervention, saying he had irrevocably resolved to resign and to deliver the Government to a representative of the United States whom President Roosevelt should designate. His act was to save his country from complete anarchy. Intervention must take place at once; 8,000 rebels were near Havana, and Cienfuegos was at their mercy. Steinhardt's dispatches on the 14th said that Palma had resolved not to retain office even if the disturbance should "cease at once"; that the Vice-President would also retire, with the Cabinet; and that Congress would be unable to do anything. Therefore anarchy would prevail unless the United States should intervene. On the 29th, Secretary Taft assumed control of the Government.

Lynch Law in the South

The grand jury at Atlanta has indicted Walter Edmonds, a white man, for killing Frank Smith, a negro, during the recent riots, as the latter was fleeing from the mob. Edmonds has been arrested. Several negroes have been indicted upon the charge that they killed a policeman named Heard on the second day of the riots. This is the grand jury that, in a presentment on the 27th ult., "severely condemned" the sensationalism of the afternoon newspapers of Atlanta, and especially the extra issues and editorials of the *News* (which is controlled by Colonel English, Governor Terrell's chief of staff), saying that these publications suggested lawlessness and promoted the formation of mobs. During the riots, eighteen negroes and one white man were killed.——A mob attacked the jail in Mobile, on the 2d inst., demanding a negro named Richard Robinson, who had been arrested for assaulting a young white girl as she was returning from school in the outskirts of the city. Robinson had been taken secretly to Birmingham. During the attack upon the jail, the mob shot and killed Roy Hoyle, a policeman who was trying to preserve order. Governor Jelks came to Mobile that evening and sent for three companies of militia, and at the request of the Mayor no extra editions of the newspapers were issued. On the 6th, Sheriff Powers started to return from Birmingham with Robinson and another negro named William Thompson. The two were accused of assaulting four young white girls. A mob of two thousand had waited for the Sheriff that morning at the station in Mobile, expecting that he would arrive on an early train. A few hours later, sixty white men, wearing masks, left Mobile on a train to meet him. They stopped his train a few miles from Mobile, disarmed him, took the two negroes to the woods and hanged them. The conductor held the train for a time in order that the passengers might see the negroes lynched. The lynchers said that they hanged the negroes to avoid race riots in Mobile. Governor Jelks explained that by telegram he had directed the Sheriff to travel by way of Montgomery, where he intended to give him a military escort. Not having received the telegram, the Sheriff had made the journey on another railroad.——On the same day, at Argenta, Ark., near Little Rock, two negroes named Colum, defending themselves in a house against the police, wounded a policeman named Lindsay, and killed his father. In the evening the house was destroyed by dynamite, but the negroes escaped. This affair followed a recent conflict at an inquest upon the body of a negro who had been killed by a white man. At that time Lindsay's brother was shot and a brother of the two Colums was killed. On the 7th, the disturbance continuing, a negro named Blackburn, who had been arrested, was taken from jail and hanged. ——Three companies of militia have been guarding the jail at Macon, Ga., owing to an attack upon it by a mob searching for a negro who had shot two white men. He was taken to Atlanta secretly. After his departure the mob opened every cell in the jail, thereby releasing several white men accused of murder. One negro was shot, but not mortally wounded.——In a public address at Augusta, Ga., on the 7th, Senator Tillman predicted many bloody race

riots in the near future. Lynching had failed, he said, and he suggested that negroes should be controlled by a system of passports. The proper place for depraved negroes was in the North. If they remained in the South, those who could not produce passports should be placed in chain gangs. He denounced white men who were guilty of unlawful association with negro women. "The superior race should protect many millions of innocent negroes from false teachers and bad leaders." In conclusion, he remarked that Southern whites should go ahead and do what they believed to be right, "regardless of all the Yankees between Cape Cod and hell!" ——Owing to the killing of negroes in Atlanta, Bishop Walters, of the African Methodist Episcopal Zion Church, on the 2d, at Louisville, issued an address calling upon the negroes of the country to observe the 7th as a day of prayer. In a communication to the press of the country he said: "In the name of humanity, help us to find some Garrison, Sumner or Lincoln, who will stand squarely for human rights in these days of lawlessness."

Racing with Automobiles

The third international automobile race for the Vanderbilt Cup took place on the 6th over the familiar highway course on Long Island, north of Mineola and about twenty miles from New York. This course, 29.7 miles of fine country road, was covered ten times, and the time of the winner (Louis Wagner, in a car from France) for the entire distance of 297 miles was a shade more than 290 minutes. Altho there were 110 turns, some of them difficult, Wagner's average was nearly 61½ miles an hour, and the average of the second and third cars was better than a mile in a minute. At least 250,000 people saw the race. As it began at 6 a. m., many had been at the course all night. It is estimated that these spectators' expenses exceeded $1,000,000. One of them was run down and killed on the course; another was fatally injured, and two men were killed by automobiles on roads near at hand. The crowds of spectators at certain points on the course could not be restrained, and their escape from injury at times seemed almost miraculous. On account of the accidents which took place, and because it was seen that so many spectators could not be restrained and protected there, the Automobile Association decided that this course should not be used again.

British Labor and Political Questions

On the opening of the next session of Parliament the Liberal Cabinet will be confronted with a number of difficult questions, especially those relating to home rule in Ireland and labor in England. The split between the Socialistic wing of the Labor party, led by James Keir Hardie, and the more moderate section, led by John Burns, is becoming more pronounced, and the Government cannot count upon the support of the Socialistic members in the House of Commons, who now number 29. The fight between the two factions has been raging in the trades unions during the Parliamentary recess, and, on the whole, the tendency has been for the unions to be more pronouncedly Socialistic. The Amalgamated Railway Servants, meeting at Cardiff, declared in favor of the Hardie party. On the other hand, the Miners' Federation, meeting at the same time in Swansea, refused to join the Socialists. Keir Hardie has announced that the Socialists will put a candidate in the field in every precinct where they stand a chance of winning. In accordance with this policy, a Socialist ran against the official Liberal candidate in the Cockermouth election, and the result was the election of a Unionist. These tactics have caused great indignation to the Liberal leaders and in recent speeches they have directly attacked the Socialists. The Scottish Liberal Association passed a resolution declaring that

"It is the primary duty of the Liberal party to present strenuous opposition to all candidates who are not prepared to dissociate themselves from the Socialist party, the avowed object of which is the complete destruction of those principles of individual liberty for which Liberalism has always contended."

The Times accuses Mr. Hardie of lack of patriotism in denouncing Mr. Haldane's proposals for the promotion of military training among the people. He states that the labor movement in every

country is anti-military, and that the Laborites in England should join "the democracies abroad in battling for the dethronement of the war-god." *The Times* argues "that since Socialists intend to exalt the claims of the community upon the individual as against the unregulated assertion of individual interest," the claim of the state upon the individual for military service is a decided Socialistic measure, and it endeavors to prove from the utterances of German Socialists that they are not opposed to universal military training, in particular from Herr Beer, the London correspondent of *Vörwarts*, who says:

"that wars are the result of a deep disturbance of the economic and political equilibrium of the world, and can no more be met by pacifist speeches and humanitarian manifestoes than a serious illness can be removed by the pious suggestions of the 'Christian scientist.' Not soothing or irritating words and dispatches, but hard economic and geographic facts, control foreign affairs and international relations."

——Three extensive strikes are impending in Great Britain. The 600,000 railway employees demand shorter hours of labor and higher wages. The union coal miners of South Wales and North Scotland have declared for the strike at the beginning of winter, with the object of obtaining higher wages and forcing independent laborers into the Union. The third impending strike is among the shipbuilders on the Clyde.——The Hon. John Burns, who a few years ago was one of the unemployed himself, now has a seat in the Cabinet and an appropriation of a million dollars for the solution of the unemployed problem. As he is opposed to charity on the ground that it destroys the independence and manhood of the pauper, he will expend the money in wages in profitable public works, such as the reclamation of waste lands, the repairing of coast erosion, in agricultural labor, in afforestation, the building of public works, digging of ditches and other things. He states that in London there are 124,000 paupers and vagrants, 30,000 casual poor in lodging houses, 20,000 pauper lunatics, 6,000 imbeciles and 50,000 criminal population.——The financial situation of the Government has been improved by unusual acquisitions from the inheritance tax. The revenue received from the death duties within a week was $2,500,000, and $6,250,000 has been paid into the Exchequer since March 31st last. The Marquis of Bute, who inherited an estate of $50,000,000, has to pay $3,000,000 death duty.——On the assembling of Parliament, the Government will have to propose some sort of Irish policy, but whatever form it may take it will offend a considerable number of anti-Home-Rule Liberals, and will fail to satisfy the Irish members. Mr. Redmond, the leader of the Irish party, has declared emphatically that nothing short of complete home rule with a parliament freely elected and an executive responsibility to it will be accepted. The appropriation of $22,500,000 from the British Treasury for building cottages for farm laborers in Ireland was only a partial measure of relief, since workers in the town were not provided for.——The announcement that the Grand Duke Michael, brother of the Emperor of Russia, is engaged to Princess Patricia of Connaught, niece of King Edward, has been officially denied from London, and officially declared premature from St. Petersburg.——The *modus vivendi* arranged between the United States and the British Government in regard to the fishing rights off Newfoundland, is creating a great deál of dissatisfaction in Newfoundland.

The Conflict of Races in Hungary

Now that the Magyar statesmen are in power they are finding out how much easier it is to criticise a Government than to run it. They are having to take their own medicine, for all the minor nationalities of Hungary are insisting upon racial recognition against the Magyars, just as the Magyars did against the Austrians. The Magyar leaders who form the Coalition Ministry took office under embarrassing conditions. They agreed to carry thru the measures for the reform of the electoral law providing for universal suffrage and to postpone their nationalist demands until this is done. Yet these demands they have insisted are of such immediate importance that they threatened revolution if they were not granted, and universal suffrage they do not want at all, because the Magyars, who aspire

to be the dominant race in Hungary, are really a minority of the whole population. At the prospect of greater power thru the new suffrage laws and system of representation there has been a revival of racial patriotism, and, what seems its inevitable accompaniment, racial feuds. The Slovaks, who number some 2,500,000, demand gymnasia or secondary educational institutions, but when a Slovak Deputy voiced this demand in the Hungarian Chamber the Magyars shouted: "You deserve the gallows instead of a gymnasium." A number of Slovak boys were expelled from a gymnasium at Rozsahegy, because their parents had voted for Slovak candidates at the recent election. Several Slovak students at a Hungarian institution in Vienna were expelled because they had spoken Slovak among themselves. Various combinations of the minor races are being formed. In Agram, the capital of Croatia, a Slav Congress and Festival was held last month, in which Czechs, Poles, Slovenes, Dalmatians, Bulgarians, Serbs and Montenegrins were represented. At the conclusion of the session several hundred of the delegates, inflamed with Slavic patriotism, made a demonstration in the streets of Fiume, thru which they were passing on their way home, in favor of the annexation of Fiume to Croatia. This precipitated a riot at once, for the inhabitants are mostly Italians and very jealous of the independence of Fiume, which has been a free city ever since the ninth century. Over fifty persons were wounded in the affray, and the Magyars and Italians joined in raiding the Croatian quarter of the city. The Croatians in the Hungarian Diet have hitherto supported the Magyars in their fight against the Austrians, but the Deputies elected to the Diet soon to meet represent another element, and are likely to break the old alliance, certainly if they insist upon the annexation to Croatia of Fiume, which is the only seaport that Hungary possesses and on which much money has been spent to make it a rival of Trieste. A new party will be represented in the next Diet, the Nationalist, composed of the twenty-six Rumanian, Slovak and Serb Deputies. So Premier Wekerle and his Coalition Cabinet will have on their hands some internal affairs requiring delicate treatment as well as the difficult negotiations with the Austrian Government on the question of the common tariff.

The Fragments of the Turkish Empire

The Turkish Empire is gradually disintegrating into minor nationalities in spite of the efforts of the Powers of Europe to patch it up and keep it together, and its fragments are reforming into new groups under the influence of the diverse forces of race, commercial interests and religion. Herzegovina and Bosnia are still nominally under the sway of the Sultan, tho they are ruled by Austria and Hungary in conjunction under the official designation of "the occupied territories." The expansionists of Croatia are anxious to acquire these two provinces as well as the Free City of Fiume, and when it was announced that the Emperor Francis Joseph was about to visit them for the first time the Municipal Council of Agram prepared an Address to the Throne asking for the annexation of Bosnia and Herzegovina to Croatia. Rather than receive such an embarrassing request the Emperor abandoned his intended visit and sent his son and heir, the Archduke Ferdinand, in his place.——King Peter has been making a tour thru the eastern districts of Servia making speeches intended to arouse the patriotism of his people. At Negotin, a town near the Bulgarian frontier, he declared that Servia would resist all interference with her rights as an independent state to the last drop of blood. This is apparently directed at Austria-Hungary, which has refused to permit Bulgaria and Servia to unite in tariff regulations. The Rumanian press declares that any attack upon Bulgaria would bring the Rumanian army to its aid. The Bulgarian army maneuvers now in progress have placed 100,000 men under arms and in such a disposition as to act effectively against Turkey, and the Turks are actively engaged in strengthening the military defenses of the frontier. If a triple alliance of Bulgaria, Servia and Rumania is not already formed, the ground is certainly prepared for it. The persecution

of the Greeks in Bulgarian territory still continues. The Patriarch of the Greek Church made a protest to the Sultan against the action of the Bulgarians in seizing the Greek Church buildings, and the note was forwarded to Bulgaria. The Bulgarian Government returned a very saucy reply to the effect that it was no business of the Porte's and that the persecution of the Bulgarians in Macedonia and the depredations of the Greek bands there were the real causes of the trouble. The Patriarch then sent a telegram of protest directly to Prince Ferdinand of Bulgaria. The only response to this was that the dragoman of the Bulgarian Agency at Constantinople called at the Patriarchate and stated verbally that his Royal Highness, the Prince, had no answer to make to "the lies and calumnies" of his Holiness, the Patriarch.——After a storm of protests to the four Powers on the part of the Cretan Assembly and some rioting on the part of the people, Prince George of Greece left Crete, where he has been High Commissioner for eight years. According to the agreement made between Greece and the allied Powers last August, the King of Greece has the right to nominate the High Commissioner of Crete, with the advice and consent of the Powers, and the new Commissioner, Zaimis, is a Greek. He takes office for five years under agreement to respect the suzerainty of the Sultan and to carry out the reforms recommended by the protecting Powers.——The Sultan, who has been dangerously ill from some disease requiring a surgical operation, is now reported to be recovering. He has at last consented to receive the American Ambassador Leishman, altho the Porte is still represented at Washington by a Minister.

New Zealand Labor Laws

The Secretary of the Department of Labor of New Zealand, in his report for the year ending June 2, 1906, just issued, states that the year has been a prosperous and remunerative one for labor. There has been full employment for the great majority of workers, and many trades could have used more than they could get. The immigration from Great Britain and Australia has been absorbed without disturbance to industrial conditions, owing to the fact that the undercutting of wages is prevented by the unions. Exports have risen from $60,000,000 in 1902 to $80,000,000 in 1906. The rise in wages, which is very slight (and in many trades imperceptible), has been swallowed up and entirely lost in the increased rents and cost of commodities, but the worker has been benefited by continuous employment and reliable wages. The building trades have been rushed on account of the number of fine buildings erected in the four chief cities of New Zealand. Two reasons are given for this; one is the taxes imposed on unimproved lots, making it costly to keep sections of land idle for speculative purposes, or occupied by old buildings at low rentals; the other is the encouragement of building in the suburbs thru the extension of electric tramways. The number of men employed or assisted in obtaining employment by the Department of Labor in 1905-6 was more than double that of any previous year. The number assisted to private employment was 1,929, while 4,783 were provided for by the railway co-operative works. Work of some sort was provided to every one who applied for it, but some of the newcomers objected to being given the pick and shovel on the Government works when they thought themselves qualified for higher tasks. During the past fifteen years the Department has found work for 45,084 men, having 84,631 dependents. The number of factories has increased in twelve years from 4,109 to 9,881, and the number of employees from 29,879 to 70,403. Overtime work has been kept within reasonable limits. The average of overtime for women and boys was 26 hours, and for men 70 hours. It has probably not been in any case of a nature or duration to injure the worker's health, and the economic objection to overtime, that it militates against the employment of outsiders, has little bearing on the subject, as in the trades which have used the permits for overtime, trained hands have not been obtainable from outside for temporary employment. Accidents in factories have been reduced to the minimum, in the opinion of the Secretary.

Impressions of Musical America

BY VINCENT d'INDY

[The author of this article, who visited the United States last winter, is one of the greatest living composers and conductors. He was born in Paris on March 27th, 1851, and studied the organ and composition under César Franck, the distinguished French composer, who died in 1890. From 1873 to 1877, M. d'Indy was kettle-drummer and leader of the chorus in the Colonne concerts, which are so well known in the Paris musical world. M. d'Indy is the founder of the French National Society of Music. In 1884 he received the grand prize for musical composition awarded by the city of Paris, and ten years later, founded, with Alexandre Guilmant, the celebrated organist, who has also visited America, and Charles Bordes, the composer, the excellent Schola Cantorum. Two years ago, M. d'Indy became the sole head of this important musical institution of Paris, which has turned out so many admirable pupils. France, Spain, Belgium and Holland have all conferred decorations on M. d'Indy.—EDITOR.]

I DO not belong to the number of those privileged psychologists, novelists and journalists who possess the gift of penetrating, after a few hours' sojourn, into the inmost soul of a country hitherto quite unknown to them, of discerning the faults and the good qualities of the inhabitants, and of offering an opinion concerning everything—an opinion which is often as lacking in solid foundation as it is pre-sumptuous in spirit. But having been asked by THE INDEPENDENT to give my views concerning the state of music in America, I find myself very much embarrassed to formulate them, as I really know very little about music in the New World, having been but a month in the United States. I beg the reader to excuse me, therefore, if the impressions which I am going to try to bring together turn out to be of rather medi-

Vincent d'Indy.

ocre interest, as being personal to me, and because, being a simple man and not even a novelist or journalist, I am essentially subject to error. I also hesitate to speak for quite another reason, which is very near to my heart. All the Americans whom I had the pleasure to meet during my stay in the United States were so kind to me that I should feel very sorry if any of them were to take in bad part the few criticisms which I shall venture to make in the following paragraphs. If here and there I permit myself to indulge opinions which are not shared by my whilom charming hosts, it is not done in a spirit of self-complaisant captiousness, a habit too common with French travelers, but simply in the interest of the development of musical art in America, and in the hope that the young musicians of that country may profit by the advice of an elder who has had experience and who is actuated by the kindliest sympathy.

The first strong impression I received in America was one of enormity; everything seemed to be big; there was bigness everywhere. This will be better understood when I tell how and under what circumstances I first got this feeling. On a somber evening in November I was suddenly informed that we were in the harbor of New York, so I hastened on deck, when my eye was first attracted by the fleet ferryboats plying in all directions, their rows of brightly lighted windows making me think of some prehistoric sea monster. Then, right on top of this sensation, came that of the innumerable lights of the towering skyscrapers; the streets of New York seemed to be climbing the sides of gigantic mountains. On landing, my manager met me, and wishing to give me some little idea of the big city before starting at midnight for Boston, he took me to a queer theater* where nearly five hundred ballet girls were swarming over an immense stage, which was already crowded with horses, elephants and cages filled with lions and tigers. In front of the proscenium, rising above the invisible musicians, was an orchestra leader brandishing as a baton a long cane with an electric light at the end! This cane made a deep impression on me; it affected me more than the ferryboats or the skyscrapers, for I began to wonder if I would be asked to lead orchestras, during my American tour, with a baton of this kind! So never after could I shake off this feeling of immensity; the boats, the buildings, this theater, and especially this cane, were ever before my eyes.

The second impression which I received in America was that of the seeming temporariness of everything; things appeared to be made too quickly, which detracted largely from the esthetic side of all I saw. Too hastily constructed and without regard for artistic considerations are those ferryboats, which might, however, be given graceful forms; too hastily run up are those lofty edifices, which are surely condemned to crumble to pieces or to be torn down; too hastily invented that baton of the orchestra leader, who looked as if he were angling for an electric fish! I then and there put myself the question if the dominant characteristic of America were not that of too great haste in the preparation of spiritual and material things; and when, later, I had looked more closely into the matter, I found that this first feeling was not far from the truth, at least as regards American music.

Nothing interests me more than to try and get acquainted with the musical production of a country which is new to me, and especially to meet the young composers, those to whom is given the part of being the pioneers of their art, who prepare the way for the ever-recurring evolution, which is the mother of all progress. Consequently, it was with avidity that I read and listened to the new works which were shown me or which were executed before me by their authors. In almost every case I remarked a praiseworthy effort to do something grand, a clever assimilation of secondary means of expression, such as harmony and instrumentation, but I noticed such evident signs of haste in the production of the completed piece that the final work seemed a bit of improvisation, or at least denoted a real ignorance of the fundamental laws of eurythmy, the basis of every true artistic conception. To make one's fortune quickly may be a

* M. d'Indy of course means the Hippodrome.—EDITOR.

good thing, but to make an art work quickly is unquestionably a grave fault.

Time is an important element in a musical composition. In fact, every musical work is the result of three very distinct periods of labor—the period of invention, that of arrangement and that of execution. The duration of the first of these periods is unlimited, for it does not depend on the will of the composer. To discover good elements for a musical composition—that is to say, musical ideas that fall in with the nature of the musical piece to be created—this sometimes takes several years. Beethoven was ten years trying to find the simple theme of the finale of the ninth symphony. In a word, a composer cannot be too careful about the choice of the materials which are to form the foundation of his composition.

The second period of labor consists in arranging these materials in a logical and harmonious order, binding them together and drawing out from them their natural consequences. It is a more precise sort of work and so is more likely to proceed without interruption; but it is also the most arduous and is often very deceptive. How many times the unfortunate composer is forced to abandon combinations established after much toil, to demolish a carefully constructed edifice and to begin at the bottom again in order that the synthesis should be more solid and properly balanced! This is the period of tribulation, but of worry in a good cause, for one knows that in spite of moments of despair and discouragement, a successful issue will be found if one be brave to the end.

The final period is that of execution—that is to say, the actual writing of the work, its instrumentation, etc. But little invention enters into this part of the task; it is more the hand than the head that is now called into play. Almost any musician who knows how to write can easily carry thru this portion of his labor. It is, in fact, recreation after hard study.

Let me sum up these three periods: That of execution, just mentioned, depends upon whether one knows one's trade, so to speak, whereas the period of arrangement requires the exercise of real art work; but the nature of the labor accomplished during the period of invention will vary according to the character of the musician himself, and to the greater or less amount of creative force in his make-up. However, he must not let this creative force run wild. It must be kept under the control of artistic good taste; otherwise the composer might accept any musical idea that happens to come into his head—a too frequent defect, especially in our epoch.

I trust the reader will excuse this rather long digression, but it was necessary, in order to bring out clearly the disastrous effects of hurried musical composition. Assuming to be good whatever comes to him, the hasty composer accepts musical ideas regardless of their true value, instead of taking the time necessary to free the little vein of gold which he may have discovered from the dross and the gangue. Furthermore, evidently well up in the mere mechanical side of his profession, but perfectly ignorant of the artistic side, because the study of musical art demands a minimum of seven or eight years of assiduous labor, exclusive of the three or four years required for the more mechanical part—this composer in a hurry might write correctly, even elegantly; he might instrument in a fashion full of interest and color, but of what use could all this be to him if his creation is badly balanced and likely to fall to pieces at the slightest breath?

Now, I wish I could persuade myself that I am mistaken, but it seemed to me that most of the young composers whose works I read in America were in too much haste. Here and there a touch of beauty showed what might have been produced if the author had only studied his art thoroughly and given time a chance to act in the periods of invention and arrangement. In some cases, where the composer was better endowed naturally, this hurried composition had not prevented the development of a certain studied elegance in the ideas; but the effort was not carried far enough and the thought was not fully expanded. Others, on the contrary, appeared to imagine that composition was little else than a subtle concatenation of harmonies, and one of these, when I asked him for his plan of the work, which he showed me and which seemed incomplete, answered that his piece was constructed according to "a chromatic plan"—a very funny re-

ply, for it was much as tho an architect were to say: "I intend to erect this building on a foundation of blue and red"!

Young composers of America, allow a sincere friend to give you a piece of advice: Never be in too great a hurry to begin, and do not write too quickly. Study your art and study it thoroly before starting out to prepare badly constructed works which you are sure to regret later; and, above all things, do not limit your efforts to the acquisition of the more mechanical side of your profession—the *métier,* as we say in French. This you all have to a very high degree; but it will not suffice to inspire original works. If your only support is the *métier,* you will fatally fall into mere imitation, absorbing German heaviness or the harmonic coloring of our modern French composers; for, while it is a good thing to receive inspiration, especially at the beginning of one's career, from long-established tradition, it is a very dangerous thing to imitate one's contemporaries. Long meditation and years of the study of art can alone give you the originality which, if not sought after, sometimes springs from assiduous labor, but which almost never comes if made the unique aim of one's efforts.

It may be said that I am very severe on American composers. My answer is that this disposition arises only from a desire to see formed across the Atlantic an absolutely native school of music which will borrow nothing from our old Europe and which will be able to live by its own life. Americans can, if they will make up their minds to do so, check this habit of hastiness, which, I do not hesitate to assert, kills their native qualities; and for the very reason that in the imperfect fragments of their work which I ran over I discovered scraps of real merit, I should like to see the Americans take as their motto, at least in art, the device of Irredentist Italy: *"Fara da se."*

I will come back again in a moment to this important question, but before leaving the subject of composition I wish to do justice to certain musicians whom I met in Boston, and especially to Mr. Charles M. Loeffler, whose works are as carefully constructed as they are interesting from the point of view of execution. Nor must I forget to mention a quite phenomenal musical critic, who is thoroly acquainted with the subject about which he is writing, who is very learned, and who holds opinions which he knows how to defend. I refer to Mr. Philip Hale, whose example might be followed by some of our Old World musical critics, who, tho they may be informed concerning music, are not always able to judge sanely a work, for the simple reason that they have no sentiment and replace the heart, the only safe interpreter in matters of art, by a lot of cut-and-dried dicta. In addition to these, we have a number of ignorant faddists who pass judgments which have neither head nor tail. So, in this matter of art criticism, America certainly leads us, and she may well take pride in having produced two real musical critics—Philip Hale and Thayer, the best biographer of Beethoven.

Concerning the American musical public, I am embarrassed to give an opinion, for I am afflicted by a real infirmity; when I am leading an orchestra, I quite forget that there is an audience in the hall, and I am sometimes forced to check myself from stopping in the midst of a piece when I find the orchestra executing badly some passage. I was told, however, that the public in the different cities where I gave our French music showed deep interest. But I have never been able to study the character of an audience, and so must pass over in silence this point.

But the American orchestras I cannot praise too highly. The Boston Symphony, at the head of which I found myself during my whole sojourn in the United States, is certainly in the first rank and quite on a level with our best Parisian orchestras. That of New York, which I heard rehearsing, appeared to me also to be excellent. But what very much astonished me in the orchestras in America was the large number of foreigners, Germans being in the majority, with some Frenchmen, old or young companions of mine in our Paris concert societies. I noticed few or no American musicians. And this fact serves me as a natural transition for taking up a question which seems to me of the highest importance for the future of music in America.

There is no doubt that at the present moment the United States are, as regards music, quite in the hands of Germany. Members and leaders of orchestras, directors and professors in conservatories —all or nearly all those who exercise music as a profession, at least in the cities that I visited, are Germans. Far from me the thought of questioning the merits or the talents of the teachers of Teutonic origin who have emigrated to or established themselves momentarily in the United States. But it is certain that, for young artists of another nationality, the German, notwithstanding his ability, is, as a general rule, a very mediocre and harmful educator. I have seen Belgians and Frenchmen, Americans and Englishmen, return home after several years of study in Munich or Berlin, with a technique that was ordinarily all one could demand, but lacking in a true conception of art, and so forced to begin their musical education all over again. The reason for this lies in the fact that the German is almost always wanting in two qualities, especially essential where teaching is concerned, viz., good taste and a respect for art.

Good taste is that subtle faculty which enables the mind to discern with certitude in a production what is bad and what is fine; it is that feeling which forces one almost instinctively to accept certain works as favorable to the development of art and to repel others as useless or even hurtful to this development. Taste has always been considered as inseparable from French genius. To be convinced of this, you have simply to compare our type of cathedral, prevailing in the heart of France, all the parts of which are so wonderfully suited to their purpose, with the too heavy or too exaggerated types of German or English Gothic, and with the excess of details with which the churches of Northern Italy are overloaded.

It was also due to our French taste that, alone in Europe, our country was preserved from the invasion of the Italian opera in the eighteenth century, whereas all the theaters of Germany were in the hands of *maestri* for the most part without a particle of talent, but who knew how to throw together an opera in accordance with the formula of the day. As French taste repudiated this cheap art, our composers were obliged to create a dramatic music which was in accord with its aspirations, and thence sprang those immortal masterpieces of Lully, Rameau, Gluck, who did not produce real dramatic music till he came to reside in France, and the wonderful comic operas of Grétry, Monsigny and Dalayrac.

The German, as I have just said, is almost totally lacking in taste. A musician by nature and education, he is inebriated by sonorities, is charmed by all kinds of music, and does not know how to distinguish the good from the bad. He will listen with the same enthusiasm to a beautiful masterpiece like "Freischütz" or "Parsifal," and to a perfect platitude, like Auber's "Fra Diavolo" or Nicolai's "Lustige Weibchen." He will applaud with the same conviction the "Battle of Vittoria," that very inferior production of Beethoven, and the "Johannis-Passion" of Bach. Nor should it be forgotten that the ridiculous "Cavalleria" of Mascagni was received in Germany as a work of genius, whereas France and her sister state of Belgium immediately judged it and reduced to its just level this unhealthy production of trans-Alpine speculation.

It follows from what has just been said that, tho the German is a born musician, his opinion of a musical work is without artistic value. As a composer he will treat magnificently, and with talent not at all in keeping with the theme, low and even vulgar subjects; he will found on a weak base a monument of colossal dimensions, without perceiving that these too feeble productions must eventually tumble down. As an educator, he will endow his pupils with an extremely clever hand, but will never penetrate their souls and awaken in them any enthusiasm, that creator of things of beauty. As an interpreter he will not hesitate in concerts to give productions of no value. I have seen this done in Paris by German artists of undisputed talent, who later regretted their rash act.

The second peculiarity of the German mind, which is evidently due to this absence of taste, has still more baleful effects, because things subjective becoming things objective, art itself is marred

in its best manifestations. I refer to that strange passion of the German to disguise under a new form, often to change the very nature of, and thus to deteriorate, masterpieces. There is not a picture in the rich museums of Dresden, Munich or Berlin which has not been "touched up," sometimes repainted, or at least varnished till it has the shine of a patent-leather shoe! We had a sad proof of this habit when, at a recent retrospective exhibition at Paris of French art, one of the finest portraits of our Fouquet appeared outrageously repainted and "made new," so that the generous coloring, which is the large part of the charm of this old master, had entirely disappeared. This canvas was lent by the director of the Berlin Museum.

Very few of the ancient monuments on the other side of the Rhine have escaped this ferocious mania of restoration at the hands of the state architects. But it is above all in musical art that this lamentable tendency has had full play and has produced some of its worst results. Except in the case of some very expensive publications, it may be said that most of the German editions of musical works are little else than a mass of artistic, or, rather, unartistic forgeries. Incalculable is the number of "*Bearbeitungen*" with which a pianist of doubtful talent or a doctor of music of questionable authority ventures to "embellish" the most famous works, inserting new shades of expression, rhythms and false accents which never entered the head of the author, and which are not at all in keeping with the musical ways of the epoch in which the piece was written. A very highly esteemed German composer even dared to add harmonies of his own manufacture to Monteverde's "Orfeo," on the fallacious pretext that certain harmonic successions written by the Venetian composer were of too harsh an effect, whereas, on the contrary, the successions in question are veritable strokes of genius and real models of dramatic expression! I could mention an orchestra partition of a symphony of Haydn in which a well-known German musical publisher has not hesitated to cut out twenty-eight measures so that the part for the first violin could be kept within four pages. The violin sonatas of my fellow-countryman, Leclair, have been absolutely changed by an awkward German publisher, and I refrain from mentioning a very large publishing house which is regularly selling the overture of the "Barber of Seville" adorned with a trombone part which Rossini never wrote, and in which the first trombone—a most extraordinary liberty—plays the part which the composer had attributed to the flute solo.

But what is even more astonishing, the German is not contented with *bearbeiten*-ing the musical productions of France and Italy; he does not show respect for his own national masterpieces, and seems to enjoy changing them. Many a pianist is acquainted with the magnificent sonatas, so original, of Philip Emmanuel Bach only thru the grotesque disguisement practiced upon them by a musician of repute—no less a personage than Hans von Bülow! Tho these lucubrations are presented by the publisher under the title, "Sechs Sonaten von Ph. Emm. Bach," they are nothing more than scraps of the music attributed to the son of John Sebastian. But Bülow was known for this sort of thing, and his *dis*-arrangements of the sonatas of Domenico Scarlatti have deceived many musicians. The great "Cantar" of St. Thomas of Leipsic itself has not escaped this redoubtable German mania, and not to speak of the gross faults of style and accent which obtrude themselves on every hand in the violin and the viola da gamba sonatas—see the editions of David and others—many professional pianists would be astonished to be told that there exists an original "Fantasia Cromatica e Fuga" other than that "improved" by the vandalisms of a Tausig or of the aforesaid Bülow.

I perfectly well understand the transcription for the piano of pieces originally written for an orchestra, as, for example, that masterpiece in the way of transcription, Liszt's arrangement for two pianos of Beethoven's ninth symphony; but what it is impossible to accept is a musician rewriting for the piano, in accordance with his own personal idiosyncrasies, a beautiful production already thought out and prepared for the same instrument by a man of genius, or reinstrumenting according to his own fancy an old orchestral work whose arrange-

ment is perfect as it stands. If the irascible Chevalier Gluck were to come back to earth, it is hard to say what treatment he would mete out to the arranger of his gracious minuet of "Orfeo," buried under the din of horns and bassoons, and what would be his anger on hearing the admirable, plaintive flute movement which follows this minuet marred by a German bandmaster, who has a wide reputation, but who has dared to introduce violin repetitions, which quite destroy all the dreamy poetry and peculiar color of this inimitable melody. And yet it is this very score, thus changed, that is currently used at concerts on the other side of the Rhine. What is to be said, furthermore, of the acts of treason against music committed with the approval of the German Emperor in the case of such masterpieces as "Armide" and "Iphigenia," by this same Gluck?

We Frenchmen could not find strong enough words with which to condemn the conduct of Castil-Blaze for tampering with "Freischütz" under the pretext of making it acceptable to the public, or Adolphe Adam for adding trombones to the light partitions of Grétry and of Monsigny, so as to make money thereby. Our indignation was so strong that these versions, so contrary to the dignity of art, have fallen under the universal ban in France. Consequently, we are profoundly shocked when we see with what culpable license these German doctors, professors and crowned heads tamper with the finest productions of the musical art. It is not to Germany, therefore, that one should turn for lessons in good taste and for artistic education, and the Americans make a grave mistake in confiding their musical instruction to Teutonic hands. But your readers may ask, Where is to be found the remedy for this state of things? The answer is very simple.

I am perfectly convinced that Americans are quite as capable as Germans or Frenchmen—I say nothing of the Italians, who are, alas! totally degenerate—of feeling the power of and of understanding beautiful and healthy music. Why, then, do they leave to foreigners the exclusive, or almost exclusive, privilege of furnishing the music of this young land? What is to prevent Americans from having orchestras, singers and pianists of their own nationality, educated in the United States by means of a solid musical instruction given from earliest childhood up, in school and university, instead of sending the youth of both sexes by the hundreds to European professors, who care more for the dollars of their pupils than for anything else, and who generally send them back home unsuccessful virtuosos instead of the good plain artists whom they might have become? There are American singers who would have been a precious acquisition to the chorus of some concert or theatre, but who, even after the expensive lessons of a Paris or Berlin teacher, can never be anything else but poor prima donnas. There are violinists who might have been excellent first violins in an orchestra, but who, after two years of study at Brussels or Munich, can only manage to worry thru the difficult passages of a concerto and "murder" the chaconne of Bach or the sonata of Franck. There are pianists who might become fair musicians and conscientious interpreters, but who come back from Vienna with an undeserved fame as virtuosos simply because they have spoken with the waitress on the Ring who serves Professor Leschetizky's coffee, and for this reason will consider themselves authorized to bang thru Beethoven's op. 57 or Balakirew's "Islamej." These migratory artists are just so much strength lost to America and to art, and how much more desirable it would have been if they had become what it was intended they should be both by nature and temperament, thus contributing to the expansion of musical taste in America in a much more efficacious way than by attempting to astonish by a grand voice, trills or concerto runs. I know that in writing thus I lay myself open to the abuse of these virtuoso apprentices and of the European professors to whom the American pupil is an inexhaustible source of a too easily won income. But, as I have been fighting all my life for the cause of artistic truth, it is not at my age that I will begin to hide what I think.

It is desirable, therefore, that the young musicians of America should pursue a solid and long course of uninterrupted studies, so as to acquire not only

a thoro knowledge of the more mechanical side of their profession, but so as to be imbued with a profound acquaintance with and a sincere love for art, without which an artist is simply a feelingless toiler. They must thoroly grasp the fact that "art is long," and not forget that a good violinist or pianist, an interpreter worthy of his mission, is not made in three years. They should recall the fact that in the schools of the fine Italian epoch, no singer was authorized to appear in public until he had completely finished ten years of study. Then was produced a nursery of artists whence were drawn instrumentalists fitted to interpret Beethoven's op. 57 and Bach's chaconne, not only with their fingers but also with their hearts. Then was formed a race of singers who understood what they were singing and who knew why one should not present in the same fashion an aria of Bach, a recitative of Monteverdi, an opera of Rameau and a drama of Wagner. Then—and this is the aim I should like to see the Americans have in view—the recruitment of orchestras, choruses and soloists would become easy and normal, and there would be no necessity of having recourse to the foreign element the moment an attempt is made to form a concert society.

I think several efforts in this direction have already been made. Mr. Chadwick, the distinguished head of the Boston Conservatory, and his worthy assistant, Mr. Goodrich, are striving to form a body of young national artists, and at New York I visited Mr. Damrosch's new school of music, organized on a scale which may be a little too splendid, and whose purpose is the very one I am describing here. There evidently exist other similar centers in the States which I did not visit. May the efforts of all these establishments be crowned with the best of success!

But in writing these lines I trust nobody will think that I wish to depreciate other excellent musical institutions which have done so much for the progress of musical art in the United States, such as the Boston Symphony, an exceptional body of artists; the admirable society of chamber music, the Kneisel Quartet, of New York, etc. But it would not appear to me unworthy of the generous philanthropy of Colonel Higginson, or of the wide experience of the violinist Kneisel, to create, for the purpose of securing the cohesion instead of the dispersion of the musical forces of America, a whole army of young volunteers, ardent and enthusiastic, marching in accord with the superb body of veteran troops and resolved to combat exclusively for art and not for personal vanity or private interest. It is thru disinterestedness, devotion and the love of others that in art, as in everything else, some good result is attained; nothing is accomplished thru hatred, badly directed rivalry and love of self. And this remark leads me to say a word or two concerning those who might be called upon not to receive but to give such instruction.

For this purpose you must have teachers filled with the spirit of abnegation, who possess sensibility and who are endowed with a solid instruction, and not with that superficial instruction which would give their pupils only a sort of external veneer and nothing more; a solid instruction drawn from the fountain head, warmed by enthusiasm and love, and which, penetrating the very soul of the young, would make real artists of them. With this end in view, it would be well that the future masters, their education terminated in America, come over here to Europe for a period and pass a certain time not exclusively at Munich and Berlin, but also at Paris, London and even at Venice, so as to be in a position to judge for themselves of the different methods employed in the Old World, and so learn how to teach and how not to teach. Then they should return to their native land, having assimilated all that is best here; and knowing the faults, the good qualities and the aptitudes of their fellow-countrymen, they would be in a better position than any European teacher to make the most of their pupils. In this way, and in this way alone, can be founded a truly American school of composition, whose accomplishments will not be limited to a more or less clever imitation of Brahms, Strauss or Debussy, but which will search for and find within itself its artistic material.

The young composers of America will then be convinced that, in order to produce good work, something more is nec-

essary than simply to write well and to orchestrate with ability. They will perceive that after long study—ten years if need be—they must know how to draw from a joyous or suffering soul the musical expression of this joy and this pain. To put into the pages of his partition a portion of his own life, a fragment of himself, should be the objective of the artist who is fit to create. For him who does not feel thus it would be preferable that he make shoes, that he go into journalism, that he seek a fortune.

American composers, my brothers! It is especially to you that I wish to address my words in closing these too copious reflections. You have the good fortune to belong to a young country, filled with art forces which are still scattered, as was the case with Italy of the sixteenth century, Germany of the seventeenth and France of the eighteenth centuries. It depends upon you to bring together these as yet unknown elements, and, while respecting the sure, solid, imperishable foundations laid by the traditional geniuses of music, to establish in your land an art which will be the true expression of your American character, an expression brought into harmonious accord with these eternal sentiments which are alone capable of lifting up the soul of the artist to the creative point of absolute beauty.

PARIS, September, 1906.

The Surrender of Yorktown, October 9, 1781

BY LEWIS WORTHINGTON SMITH

"Past two o'clock and Cornwallis is taken."
How the voice rolled down the street
Till the silence rang and echoed
With the stir of hurrying feet!
In the hush of the Quaker city,
As the night drew on to morn,
How it startled the troubled sleepers,
Like the cry for a man-child born!

"Past two o'clock and Cornwallis is taken."
How they gathered, man and maid,
Here the child with a heart for the flint-lock,
There the trembling grandsire staid!
From the stateliest homes of the city,
From hovels that love might scorn,
How they followed that ringing summons,
Like the cry for a king's heir born!

"Past two o'clock and Cornwallis is taken."
I can see the quick lights flare,
See the glad, wild face at the window,
Half dumb in a breathless stare.
In the pause of an hour portentous,
In the gloom of a hope forlorn,
How it throbbed to the star-deep heavens,
Like the cry for a nation born!

"Past two o'clock and Cornwallis is taken."
How the message is sped and gone
To the farm and the town and the forest
Till the world was one vast dawn!
To distant and slave-sunk races,
Bowed down in their chains that morn,
How it swept on the winds of heaven,
Like a cry for God's justice born!

DRAKE UNIVERSITY, DES MOINES, IA.

A Litany of Atlanta

O Silent God, Thou whose voice afar in mist and mystery hath left our ears an-hungered in these fearful days—

Hear us, good Lord!

☙ ☙ Listen to us, Thy children: our faces dark with doubt, are made a mockery in Thy sanctuary. With uplifted hands we front Thy heaven, O God, crying:

We beseech Thee to hear us, good Lord!

☙ ☙ We are not better than our fellows, Lord, we are but weak and human men. When our devils do deviltry, curse Thou the doer and the deed: curse them as we curse them, do to them all and more than ever they have done to innocence and weakness, to womanhood and home.

Have mercy upon us, miserable sinners!

☙ ☙ And yet whose is the deeper guilt? Who made these devils? Who nursed them in crime and fed them on injustice? Who ravished and debauched their mothers and their grandmothers? Who bought and sold their crime, and waxed fat and rich on public iniquity?

Thou knowest, good God!

☙ ☙ Is this Thy justice, O Father, that guile be easier than innocence, and the innocent crucified for the guilt of the untouched guilty?

Justice, O Judge of men!

☙ ☙ Wherefore do we pray? Is not the God of the fathers dead? Have not seers seen in Heaven's halls Thine hearsed and lifeless form stark amidst the black and rolling smoke of sin, where all along bow bitter forms of endless dead?

Awake, Thou that sleepest!

☙ ☙ Thou art not dead, but flown afar, up hills of endless light, thru blazing corridors of suns, where worlds do swing of good and gentle men, of women strong and free—far from the cozenage, black hypocrisy and chaste prostitution of this shameful speck of dust!

Turn again, O Lord, leave us not to perish in our sin!

☙ ☙ From lust of body and lust of blood

Great God deliver us!

FROM lust of power and lust of gold,
Great God deliver us!

From the leagued lying of despot and of brute,
Great God deliver us!

A city lay in travail, God our Lord, and from her loins sprang twin Murder and Black Hate. Red was the midnight; clang, crack and cry of death and fury filled the air and trembled underneath the stars when church spires pointed silently to Thee. And all this was to sate the greed of greedy men who hide behind the veil of vengeance!
Bend us Thine ear, O Lord!

In the pale, still morning we looked upon the deed. We stopped our ears and held our leaping hands, but they—did they not wag their heads and leer and cry with bloody jaws: *Cease from Crime!* The word was mockery, for thus they train a hundred crimes while we do cure one.
Turn again our captivity, O Lord!

Behold this maimed and broken thing; dear God it was an humble black man who toiled and sweat to save a bit from the pittance paid him. They told him: *Work and Rise.* He worked. Did this man sin? Nay, but some one told how some one said another did—one whom he had never seen nor known. Yet for that man's crime this man lieth maimed and murdered, his wife naked to shame, his children, to poverty and evil.
Hear us, O heavenly Father!

Doth not this justice of hell stink in Thy nostrils, O God? How long shall the mounting flood of innocent blood roar in Thine ears and pound in our hearts for vengeance? Pile the pale frenzy of blood-crazed brutes who do such deeds high on Thine altar, Jehovah Jireh, and burn it in hell forever and forever!
Forgive us, good Lord; we know not what we say!

Bewildered we are, and passion-tost, mad with the madness of a mobbed and mocked and murdered people; straining at the armposts of Thy Throne, we raise our shackled hands and charge Thee, God, by the bones of our stolen fathers, by the tears of our dead mothers, by the very blood of Thy crucified Christ: *What meaneth this?* Tell us the Plan; give us the Sign!
Keep not thou silence, O God!

SIT no longer blind, Lord God, deaf to our prayer and dumb to our dumb suffering. Surely Thou too art not white, O Lord, a pale, bloodless, heartless thing?

Ah! Christ of all the Pities!

⁂ Forgive the thought! Forgive these wild, blasphemous words. Thou art still the God of our black fathers, and in Thy soul's soul sit some soft darkenings of the evening, some shadowings of the velvet night.

⁂ But whisper—speak—call, great God, for Thy silence is white terror to our hearts! The way, O God, show us the way and point us the path.

⁂ Whither? North is greed and South is blood; within, the coward, and without, the liar. Whither? To death?

Amen! Welcome dark sleep!

⁂ Whither? To life? But not this life, dear God, not this. Let the cup pass from us, tempt us not beyond our strength, for there is that clamoring and clawing within, to whose voice we would not listen, yet shudder lest we must, and it is red, Ah! God! It is a red and awful shape.

Selah!

⁂ In yonder East trembles a star.

Vengeance is mine; I will repay, saith the Lord!

⁂ Thy will, O Lord, be done!

Kyrie Eleison!

⁂ Lord, we have done these pleading, wavering words.

We beseech Thee to hear us, good Lord!

⁂ We bow our heads and hearken soft to the sobbing of women and little children.

We beseech Thee to hear us, good Lord!

⁂ Our voices sink in silence and in night.

Hear us, good Lord!

⁂ In night, O God of a godless land!

Amen!

⁂ In silence, O Silent God.

Selah!

Done at Atlanta, in the Day of Death, 1906. W. E. BURGHARDT DU BOIS.

The Orchard in October

BY E. P. POWELL

Author of "The Country Home," "Old Farm Days," Etc.

AFTER fifty years of experience among the trees, and sympathy with nature in many moods and conditions, I am settled in the conviction that there is no more homeful spot than a large well-trimmed apple and pear orchard; and this is true at all seasons of the year, when the trees are in blossom or when they are in fruit, or in winter. A well-formed apple tree is as beautiful as any tree that we plant on our lawns. Birds love their branches, and the robins as well as the orioles prefer them for their nests. If one becomes hollow, the yellow-hammers will select it for their retreat. I once found a nest of owls in one of my apple trees, filling up the hole, apparently with big round eyes. One of my leaning trees used to be a favorite spot for the girls to take their knitting and make seats in the limbs.

In my boyhood an old orchard, the first planted by whites going westward from New England, was owned by my father. He had filled the tops with cions of the deep red Spitzenburg. The effect was beautiful beyond description. Every tree stood from twenty-five to thirty-five feet high, and the gorgeous display of crimson over that hillside I have never seen surpassed. In the country, where intensive farming is proposed, I suggest that our houses can find no better locality than in the heart of such an orchard. There is enough variety in the form of different sorts of apple trees, from the uprightness of the Oldenberg to the broad spreading of the Roxbury russet, to make

Over a Hundred Years Old.

the orchard agreeable to the eye. It is not necessary, in all cases, to plant the trees in formal rows. The old Indian orchards were groves, and very beautiful at that. Some of these groves, cut down by the whites during the Revolutionary War, contained nearly two thousand trees.

These old Indian orchards did not originate from the native American crab apple, but from improved Eastern stocks, brought over by the earliest colonists. The Indians were good horticulturists, and had created a great deal of notable evolution—such as corn from grass. They were quick to appreciate the apple. The New Englander's early imported cions of Spitzenberg, Rhode Island Greenings, and Newtown Pippin, with several varieties of Russet, and the Seeknofurther. From seeds of these varieties new sorts of considerable value began to spring up, sometimes along the highway. Some of these were allowed to die out, but others were propagated by grafting, and slowly increased our valuable sorts. Probably forty varieties would cover all that would be of importance for any special section of our country, at the present time. For the general apple belt I should like to include for early, Crimson Beauty—a Fameuse seedling of great beauty and promise; Early Strawberry, sometimes called Sherwood's Favorite; Liefland Raspberry, a very beautiful apple, of high quality; Fanny, large, crimson, and fine quality; Dutchess of Oldenburg, a delicious apple for either table or kitchen; Primate, not a large apple, but fine grained, productive and juicy; Red Astrachan, too well known to need description, and invaluable; Yellow Transparent, a Russian apple of the very finest quality, and one of the earliest. To this list I should be inclined to add Maxson's Early, a new seedling of the Sweet Bough, which it resembles only that it is mildly acid instead of sweet. I would also add Sweet Bough, were it not so badly infested with the trypeta fly. Williams Favorite is a splendid apple for Massachusetts, and other sections; while Julian is one of the best for North Carolina, and Summer Queen one of the best in the Western States.

In Bloom.

A list for autumn bearing should include Alexander, which is of the highest beauty and noble appearance every way.

but rather second rate for dessert. Fameuse, now well known everywhere for its rich crimson color and its pure white flesh, the tree is especially hardy and vigorous, and bears enormous crops: Gravenstein, one of the finest apples of any season, solid, and about equally good for dessert or cooking; Maiden's Blush, beautiful and very productive—the fruit, however, must be picked promptly, or it will fall; Porter, an excellent apple, especially when grown in the limbs of old trees; Wealthy, an apple that originated in Minnesota, very hardy and a free grower.

For winter use we begin with the Baldwin, as one of the two or three most universally successful and excellent apples in the world; it should be grown on open trees, and never on trees crowded in a close orchard; if so grown the quality is very fine; Black Ben, a splendid-looking apple and of long-keeping qualities, a great commercial fruit, of fair quality; of the sweet apples, Danchy's Sweet, the handsomest and best that I have tasted; Delicious, a new fruit of the highest quality and decided beauty; Grimes' Golden, best adapted to sandy soils, and there a splendid acquisition; Hubbardston, noble every way—must be picked early, but is a long keeper; can be used from November to May; Jonathan, a seedling of the Spitzenburg, of spreading growth, likes sandy soil, and there of magnificent quality, keeping till May; King, grown on old trees, grafted high, a well-named apple, but it does poorly on its own stock; McIntosh Red, one of the grandest of our new apples, a seedling of Fameuse, of higher flavor and a longer keeper; Mother, one of the best dessert apples in the world; Newtown Pippin, one of the best in a few localities, keeping till June, and of the highest quality; Northern Spy, an apple that deserves to stand at the head of the list for quality, color, and long keeping—provided you have strong soil and an orchard well opened to the sun; Pound Sweet, one of the three or four best sweet apples, and coming back into favor everywhere; Ribston Pippin, an early winter apple, that bears, annually, superb crops of beautiful fruit, seldom infested by worms—growing in favor in the English markets; Rhode Island Greening, one more variety that needs open trees and plenty of sunshine, and then you get something worth the while: Spitzenburg, an apple that needs no description, but should never be planted on its own stock, but grafted high on hardy stock; Stayman's Winesap, a decided improvement on the old Winesap, and invaluable; Stuart's Golden, a rather new apple, of the finest quality and keeping finely until May; Swaar, still the ideal in quality, but must be grafted high on old stock; Wagener, resembling the Northern Spy, but more upright in growth, very productive and most excellent; Walter Pease, an apple that begins to ripen in October, of delicious quality, and keeping all winter (another seedling of Fameuse); Wismer's Dessert, a new apple, unanimously pronounced a very high-grade fruit—tree very hardy, and the apple a long keeper. York Imperial and Sutton Beauty have gained great favor of late, and are doubtless fine market varieties; but I am still in doubt as to the advisability of planting these fruits for home use.

These lists could be very greatly extended by adding varieties of local interest and value, but they are long enough to make a first-class orchard; and not any too long. A thorobred horticulturist does not grow simply what he likes to eat, but he grows for test and comparison. An orchard containing twenty-five or thirty varieties, and extending from August till June or July, is about right for a home market; and this is about the ideal for most of those who are creating country homes. If you are shipping for foreign market, ten varieties is much better. For a commercial orchard of this sort I should want to confine myself mainly to winter apples, and these should be Baldwin, King, Spy, Grimes' Golden, Spitzenburg, Hubbardston, and, if rightly located, Jonathan and Newtown (or Albemarle) Pippin. King David is a new applicant for favor, and if we can believe all that those good judges, the Stark Brothers, say of it, is going to lead the whole list. I am grafting it and planting it extensively. Shiawassie Beauty I have left out of the list, altho an excellent seedling of the Fameuse, and one of the best for a nearby market. The only trouble with it is that

it drops as fast as it ripens. It must be grown in sod, or picked every second day for three or four weeks. The finest crab apple that I have been able to secure is the Imperial, nearly as large as the Fameuse, very beautiful, and of fine quality. Paul's Imperial, Florence, and Whitney are three more very fine sorts.

A good orchard is the best possible property. The price of apples is sure to improve, rather than decline. Not only have we the English and the German markets, but the open door in China promises to absorb all the apples that our Pacific States can produce. We are in all of the ports of the world, in spite of trade restrictions; and will stay there. At home the apple is entering, much more largely than formerly, into family consumption. I find that my old and established customers are doubling their orders of ten years ago.

In selecting an orchard location the first point is to have it well drained; and strong clay is much preferable to sand. In either case the mulch must be applied at once, and in case of clay soil the coal ashes constitute by all odds the best material. The soil should on no account be adhesive or lumpy. If not in really good mellow condition, heel in your trees until you can get the proper conditions. I should prefer to set in the fall if the soil be all right; but I frequently buy my trees at that season of the year, and heel them in until spring. Far more depends upon the condition of the soil at planting time than is generally estimated.

The tree that is planted should have good roots and be full of vigor. It should on no account be a whip stalk. I prefer a tree about six feet in hight and thoroly juicy. Cut this back so as to leave about two buds to each shoot—always leaving the last bud pointing outward, in the direction the limb should go. After trimming should be annual, or rather biannual. All suckers must be kept from growing at all; and each fall or winter the limbs should be headed in and bud direction looked out for, until the tree is well formed.

The coal ashes mulch will serve to keep borers out of the tree around the roots.

Picking

But if they succeed in entering, destroy them with a flexible wire, and pile the ashes a little higher. This sort of mulch is very porous, and will not hurt the tree if somewhat mounded. Of course, weeds and grass should be kept away from young trees entirely. If you are in danger of mice gnawing, wrap a glazed paper around the tree, holding it there with soft twine. This will need to be renewed not oftener than once a year. It will protect against rabbits as well as mice.

These simple rules attended to, and your orchard will be a success. Do not begin with the idea that you must buy a large amount of commercial fertilizer and whip up your trees into rapid growth. As a rule, most of this fertilizer does more harm than good. What you want is not speed, but steadiness. If an apple or cherry or pear tree is driven too fast it will crack and then become wormy. I have never yet seen a place where Nature did not give material for growing a good orchard, provided the owner knew how to save the material and use it. Compost what nature gives you, and it will furnish better apple tree food than any commercial fertilizer ever manufactured. At all events, be sure that not one ounce of manure of any sort is placed in contact with the roots of your trees. This is a rule for every sort of fruit tree. I am not advocating any principle of starvation in the orchard. On the contrary, I believe in thoro feeding—*very thoro.* My rule, however, is simply this: (1) Keep your young trees on a steady growth; with a mulch of compost, including coal ashes (which not only mulch the tree, but loosen the soil). You will understand that our real manures come out of the air, for the most part; and what we want is to keep the soil in a condition to absorb those elements. When the tree is large, apply more compost, always including the ashes. I have trees that are heavily composted every year, and they give me annual crops, where other trees of the same sort are far less liberal. One Northern Spy has netted me nearly one hundred dollars in four years. I firmly believe that we can enormously increase the profits of an apple orchard. Sheep pasturing an orchard is one of the very best possible methods of increasing fertility and prolific bearing.

I am so much in love with this wonderful apple tree, that I believe no one can have any rights in an orchard who is not a gentleman—perhaps I should say something of a poet. A rude boor or a heedless lout will make a botch of it at some point. The owner must have a thoro sympathy with his trees. He must comprehend the wishes and the bias of each tree. There is no reason why an apple tree should not be consulted as to its tastes, just as much as a calf or a pig. The most distressing sight anywhere about the country is a neglected orchard, gone to suckers and dead wood. The owner of a noble apple orchard may stand under his trees, in sight of his strawberry garden, and with amazement consider what forces nature has put forth, to create out of a common stock fruits as far apart and yet as beautiful and delicious as these two; for the strawberry and the apple, as well as the blackberry and the raspberry and all the rosaceæ family have come from some common ancestor. Nor do we know the end of this magnificent evolution. The future has startling novelties in store for us. But hereafter we may not count on so much of fruit progress coming about by accident as by human volition. The art of crossing varieties is now fully under the hand and brain of man. Burbank is a leader, but he is a leader only. There are fifty men in the United States today who are fairly his rivals, while in other branches of the family, like the plum and the cherry and the pear, there are still more brainy creators.

The fact that the apple tree is large and needs sunshine and space does not debar it from small country places. There are some varieties that nature has created specifically for dooryards. But better yet is it to select a few of what we call dwarfed varieties, and which never grow to exceed the size of a good Mayduke cherry tree. It is possible, in this way, with a suburban lot, to have a succession of home grown apples thruout the year. Select the Oldenberg, the summer Rose, the Porter, the McIntosh, the Wagner, and you will have already enough. Add to the list as many as you like after consulting a good nurseryman's catalog. But at all events try to make place for at least one apple tree. It has in it such poetry and such homefulness as belongs to no other tree with which I am acquainted.

CLINTON, N. Y.

The Kronstadt Fiasco

BY KELLOGG DURLAND

One of the Representatives of The Independent in Russia.

REACTION followed the dissolution of the Duma—black, merciless reaction. Nearly every newspaper in St. Petersburg was immediately confiscated and permanently suppressed—not only radical journals, but moderate newspapers, like those edited by Professor Paul Miliukov and Professor Kovalevsky, newspapers of a dignity and spirit untainted by commercial or ignoble motives, such as we in America can hardly appreciate. Foreign newspapers—from England, from France, from Germany—were so rigidly censored that nothing about Russia worth reading got into the country. This aspect of the censorship is most farcical. The men who write the telegrams and articles remain in St. Petersburg. The things they write are lamp-blacked in every individual paper that enters the country. Personal correspondence was demoralized. The letters of private individuals were opened and frequently confiscated. Arrests were made wholesale. It seemed as if nine out of every ten men who had ever expressed a liberal opinion were marked for prison. The London *Times* correspondent estimates that six hundred political arrests were made in St. Petersburg alone during the week of the Duma dissolution.

This was the situation when the week of mutinies began. For four days alarming reports poured into St. Petersburg from all sides. The Sveaborg garrison at Helsingfors, in Finland, had mutinied. Three forts were held by revolutionists and the guns turned upon the town. Each dispatch that reached Petersburg was more panicky than the last. The railroad had been cut off by the dynamiting of a bridge. Two torpedo boats sent to quell the Sveaborg mutiny had been repulsed and retired to Reval. These boats had scarcely reached this Baltic seaport when the garrison there mutinied. The wires were suddenly cut and all further news was reduced to conjecture. Then quickly came the Sebastopol rising. Before the details from there had been safely transmitted those wires were cut. With equal suddenness communication with Kronstadt was broken. The situation indeed promised well for the revolutionists. It seemed as if Russia were on the threshold of a great uprising—an uprising which might lead to the downfall of the House of Romanoff.

The foreign correspondents in St. Petersburg for once had their hands full and began to divide up the work. Those who could, left immediately for Finland. Kronstadt was my allotment, because I was familiar with the great fortress and its avenues of approach. Once I had attended a conspirative meeting within the barracks. I set off at once.

What a coup it would be for the revolutionists to capture Kronstadt, with its commanding strategical position at the head of the Gulf of Finland! The main fortress is on a large island, surrounded by several smaller, also heavily fortified islands. It is Russia's most important military and naval station. Its fall would menace Peterhof, the summer home of the royal family, and would imperil St. Petersburg.

The Sunday preceding the mutiny I had visited Kronstadt. Its very serenity was disquieting. Near the center of the island is a summer garden, in which a military band plays each Sunday afternoon. Ordinarily this garden is crowded with visitors. I found it as desolated as a cemetery. The band was there—

playing manfully to deserted groves and empty benches. Here and there a soldier strolled with his sweetheart. But the absence of the usual gala throng was ominous. The streets, too, were still. Houses were closed. Veritably it was an evacuated city. Upon inquiry I was told that a rumor had been circulated during the previous two or three days that all of Kronstadt had been mined by the Government, and a warning issued to the soldiers and sailors that if mutiny did break out the mines would be exploded, blowing sailors, soldiers, ships and town into kingdom come. This sounds like a ridiculous fiction, but the people had learned by costly experiences that the wildest tales of the Government often prove true in Russia. A panic had, therefore, possessed the town, and all of the townspeople who could had fled.

But I had discovered no signs of an imminent uprising. If there had been any thought of mutiny it was for weeks later, when the peasants had gathered their scanty harvests and were ready to fight; when railroad, postal and telegraph strikes were prepared.

And now suddenly had come this rumor of mutiny and telegraph communication had been cut off.

I arrived at Oranienbaum, crossed the mile of water and reached the island at sunset. The streets of the town were deserted; a quieter spot could not be imagined. No one seemed to know who had disturbed the Petersburg connections. Nor do I know yet whether the Government or the revolutionists were responsible, but I strongly suspect the former. Ordinarily the acts of the revolutionists are made known, and the mystery which still enshrouds this particular thing inclines one to assume the Government's responsibility.

The first information of importance I picked up was that nearly all of the ships stationed at Kronstadt had put out to sea, and of those remaining all but one or two had been dismantled. Their guns had been dismounted and most of the sailors disarmed. This was indication that trouble was in the air. The effect of these precautions upon the men was precisely what any reasonable and logical person would have supposed—discouragement from immediate action. I found a small Government boat lying at a quay with about twenty sailors and heavy artillerymen lounging about the decks. There was no officer near, so I boarded the ship and sat talking with the men for perhaps half an hour. After the first few minutes of suspicion they talked more freely, and told me that they knew almost nothing of what was going on at Helsingfors, as the Government had prevented their seeing any newspapers. They admitted that there were plans for a mutiny—"but not yet." All agreed in this—"not now." The artillerymen said: "If any ship flying a red flag comes along it will not be fired upon by us. But we don't want to start the affair." I spent the remainder of the evening going from point to point and talking to sailors, soldiers and young men about the town. Nearly all told me the same thing. "We know we must rise. There is no other way. But we must not be hasty. We will wait and rise together with other garrisons and with the fleet." The men seemed to have learned their lesson well from the agitators, for I knew absolutely that this was what they had been instilling into the Kronstadt garrison for weeks.

By 10 o'clock I was satisfied that Kronstadt would remain serene for the present. Returning to the quay I found the regular ferryboat running to Oranienbaum as usual. I boarded the 10.30 boat without hindrance. We were delayed a few minutes at starting by a brawling sailor. This was absolutely the only enlivening incident I had witnessed. Midway to the mainland a searchlight on a warship, which apparently had just crept in close to Kronstadt, began sweeping the water. Round and round, now slowly, now fast; now near, now far. Once the great white light caught our little boat and fastened upon us. Then it turned and flashed toward the sea. The night was wonderful. Still and calm, with a clear sky and brilliant stars above, and a soft summer breeze drifting pleasantly across the Gulf. Perfect peace seemed to brood over Kronstadt. When the circling searchlight fell upon the grim fortress walls they stood out in frowning silence which seemed set and

lasting—like eternal verities, great hopes of struggling men, and all things which endure.

We were twenty minutes in crossing. I vaguely framed the telegram I had promised to send for other correspondents, according to the co-operative arrangement—telegrams to London, to Paris, to Berlin. Their substance was: "Kronstadt promises to remain quiet for the present, altho ships flying red flags will meet with no hostile reception." Only twenty minutes. Yet—we had not fairly landed when the great guns boomed and the mutiny was on.

I believe I was the only correspondent at Kronstadt that night. From nearness to the scene and from knowledge gathered on previous visits, I should be in a position to write an intelligent and full account of the uprising. But probably no one was more surprised than I that the mutiny occurred when it did—unless, perhaps, the very men themselves who mutinied. At all events the fight was on, and altho closer to it than any one else, I might just as well have been in Timbuctu, and the only men of my acquaintance who could give an eye-witness account are arrested, or have been or are about to be executed. Every stranger found in Kronstadt after 10.30 (the very minute I left) that night was arrested. The boat next after the one I crossed on was met by troops, and every one not in uniform placed under arrest. There was just one exception—a girl—one of the "military organization." She is the only one, so far as is known, who escaped. I met her the next day, quite by chance, and got further details.

It was an old trick—the Government had played it again and again. But still they do not learn—these earnest, eager, liberty-loving revolutionists. The Government—ever mercilessly alert—learned that mutiny was in the air, got the essential details of the plan, and touched it off prematurely. And the mutineers paid for their mistake with a hundred lives and a guard house full of prisoners awaiting execution.

Just before the first gun was fired word was suddenly circulated among the corps of sappers and miners that ships were coming from Helsingfors and that Kronstadt must be taken immediately by the garrison. Details of the Sveaborg mutiny were, in an incredibly short time, made known everywhere. Kronstadt was in honor bound to respond! The men sprang to the guns and fired two shots. The officers' quarters were invaded and six officers killed, including an admiral. As the sappers and miners were joined by the other troops the need for arms became pressing, so they advanced upon and easily took the arsenal.

When the heavy guns were taken it was noticed that there were only two shells where many more were supposed to be. Yet no one, apparently, suspected the ruse. Not till the arsenal was invaded did it dawn upon the mutineers that they were trapped. The guns were all in the arsenal, as expected, but every lock had been removed! Unarmed soldiers and sailors are no better than an unarmed mob. When the mutineers poured out into the street from the arsenal they were received by a regiment of loyal troops, who poured volley after volley into them. There was some bayonet fighting, but Gatling guns speedily forced a surrender. The actual casualties of this night will never be known. They cannot be reckoned from without, and the Government will not disclose the figures. It is only known that many were killed and scores were wounded.

The failure of Kronstadt, of Sveaborg and of Reval have not made any appreciable impression upon the men. More of the best leaders have been taken, a few hundred more lives given up, but the spirit of unrest remains. The hugeness of Russia makes the revolutionary movement unwieldy. Every man or woman who is educated or who shows liberal tendencies is marked, and at the first opportunity, reasonable or unreasonable, he is clapped into prison or exiled. The best disciplined army in the world would fall asunder if practically all of the officers were suddenly snatched away; and the leaders are not big enough to restrain these sporadic outbreaks. Discontent is constantly seething and boiling and must have an outlet. It is only the great underlying principle of revolution which now moves the masses on. The reign of anarchy which threatens Russia today is a far more terrible menace than the bloodiest revolution fought out on a civil

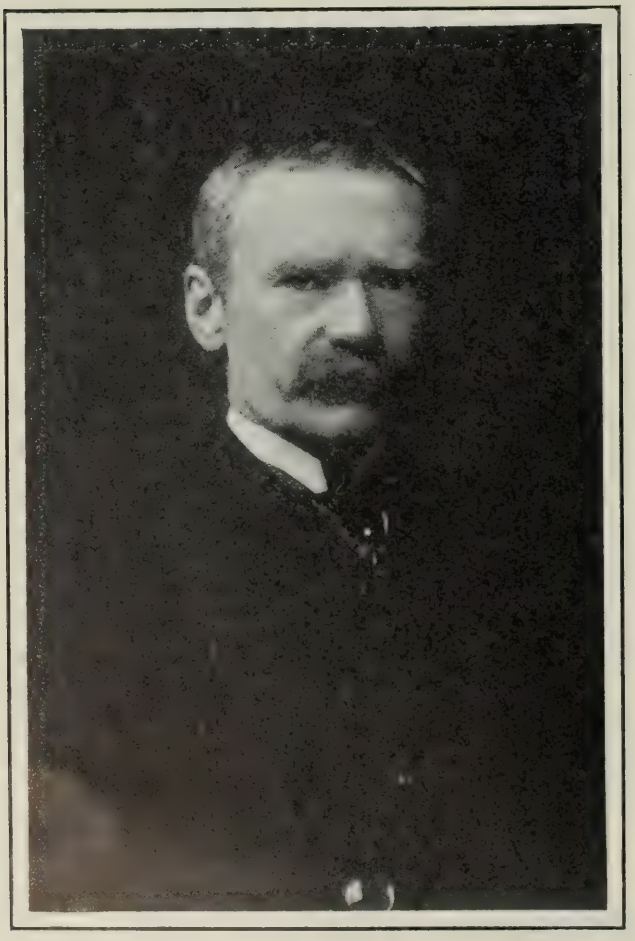
war basis. When a whole people become utterly lawless, each man striking blindly, and all striking, the result is chaos. The attitude of the Government is rapidly forcing Russia to this. For the Government, while able to demoralize the ranks of the revolutionists, is yet unable to administer, to rule or to influence. The great mass of the people are against the Government. Many, especially of the middle classes, are silent because they dare not openly fight. But the very moment the tide of success turns into the channels of the revolutionists, the ranks of the Government's enemies will swell enormously. There is an inestimable number of people all over the country who are "on the fence," but who will join the revolutionists as soon as the propitious moment seems to have arrived.

Reaction is at its strongest now. In spite of Premier Stolypin's protestations that a "liberal" *régime* would be maintained, the curtailment of personal liberties is more insufferable than ever. Wholesale arrests are still going on. M. Leroy Beaulieu, who is recognized as the foremost French authority on Russia, asserts that the prisons are already so overcrowded that criminals are being allowed their liberty in order that "politicals" may be held—that is to say, the educated men and women who love their country enough to risk fighting or dying for it. In Rostov I saw cholera barracks being used as prison pens for political prisoners. In Warsaw the fortresses were accommodating the political prisoners whom the regular prisons could not admit.

The sacrifice of lives, the blood spilled, is already far greater than during the entire French Revolution. During the days of the French Terror only two thousand three hundred heads fell under the guillotine, and during the entire Revolution only about thirty thousand lives were sacrificed all over France. In Russia the Revolution proper dates back only about eighteen months. Yet the number of victims is appalling. Professor Mouss, of the Sorbonne, who is now in Russia gathering such estimates, tells me that last year (1905) there were seventy-two thousand victims in Russia! He defines "victims" as persons killed, exiled or imprisoned. During the first six months of the present year there have probably been double this enormous aggregate for all of last year. If this ratio is maintained, as now seems inevitable, the total number of victims for this year will reach nearly three hundred thousand.

Generations must pass before the scars of the present period are healed. The reckless waste of life and ruthless spilling of blood are stamping the national character. The number of murders and assassinations since the dissolution of the Duma is appalling. Almost every edict of the Government is launched in blood. And every blow the people give back draws blood. As one who has been in Russia only six months, I can testify to the effect of this prolonged bloody *régime* upon individuals. The light, thoughtless way one comes to view blood spilling is shocking. And if six months have so calloused one individual, the result of the whole *régime* upon the people themselves is obvious. There is a nonchalance, a flippant indifference in the manner of the people of St. Petersburg and Moscow and other cities that all too clearly testifies to this coarsening of the sensibilities. The streets of the capital are always gay and brilliant. The people laugh in the presence of death.

Harrowing as these details are, the bigger fact must not be lost sight of that strong souls are daily rising to bear the brunt of each day's fight. One of the little group captured at Kronstadt—one whose execution is about to take place or has just taken place—said to me once: "I know the work is hazardous. Therefore I try to do enough each day to justify my entire life." Russia is full of men and women of such dauntless spirit. What a future there would be for Russia if the Government would only make it possible for these minds and energies to be devoted to the construction of a new and better country!



ST. PETERSBURG, RUSSIA.

Westminster Waiting for the Session

BY JUSTIN McCARTHY

THE approach of a Parliamentary session has seldom within my recollection been darkened by so sad an event as that which has lately befallen the Prime Minister of England in the death of his most loved and loving wife. Sir Henry Campbell-Bannerman is certainly the most popular English statesman of the present day, and the whole country followed with the deepest interest and sympathy the published accounts of Lady Campbell-Bannerman's sinking health. Then there came the journey of the pair to Marienbad, with a faint hope that the wife might be enabled there to find some hope of restored health; and at last there came the husband's return home bearing with him the wife's coffined body.

Sir Henry Campbell-Bannerman's condition is made all the more sad and lonely because he has no children to console him. The very day after his wife's funeral was his own seventieth birthday, and it may be hoped that rarely in life has such an event come to pass under such mournful auspices. It was rumored at first that Sir Henry could no longer endure the work of statesmanship when deprived of that companion who had been such a source of encouragement and inspiration to him, and that he would take the earliest opportunity of resigning his office and even his seat in the House of Commons. Most of us, however, who have had opportunities of knowing Sir Henry personally could not bring ourselves to believe that he would, even under such conditions, abandon his career of national usefulness, and there appears now to be a general conviction that Sir Henry will keep to that public work from which just now he could so ill be spared and from which his late wife would never have wished him to withdraw.

Sir Antony MacDonnell.

The Liberal Government has some great tasks before it, and in the accomplishment of these tasks no other man living could render such effective service as Campbell-Bannerman. The mere fact of his withdrawal from the position of Prime Minister just now would of itself create peculiar embarrassment to his colleagues. The question as to his successor would involve serious trouble, very undesirable and very inconvenient at the present hour. There is no man in the Ministry whom the public opinion of the country could at once agree upon as the rightful successor to Campbell-Bannerman. That is not because the present ministry is wanting in men any one of whom might be safely intrusted with the duties, and indeed may be safely expected to have the duties at some future period entrusted to him.

I could name several of these men, but then each of them differs more or less from certain of his colleagues on this or that question of home or foreign policy, and his nomination could not therefore at the present crisis be received with universal approval. Some of these differ-

ences, it may well be hoped, will lose their effect as time goes on and as the questions involving difference of opinion become gradually settled. But just at the present crisis it would not be easy for the Liberal party, inside or outside Parliament, to agree as to the fitting man for the place. One statesman appears to a section of the public rather too much of an Imperialist in foreign policy; another is too much disposed toward the policy which unfriendly critics would describe as that of the Little Englander; a third would be regarded by other critics as too deeply devoted to the principle of Home Rule for Ireland, and so on thruout the whole of the present Cabinet. It would, therefore, raise a serious difficulty in state affairs if the position of Prime Minister were to become vacant just now, and even if there were no other reason for Sir Henry Campbell-Bannerman's remaining at his post, he is far too patriotic a statesman to think of creating any avoidable embarrassment for the Liberal Ministry.

Edmund Leamy, M. P.

We have had much discussion lately concerning the correspondence which took place during the existence of the late Conservative Government between certain members of that Government and Sir Antony MacDonnell, then, as now, permanent Under Secretary to the Lord Lieutenant of Ireland. I think I can explain to American readers the actual meaning of the question thus involved, divested of all technicalities. Sir Antony MacDonnell is an Irishman who rose to high distinction in the diplomatic service of England abroad, and was lately appointed, still under the Conservative Government, to his position in Dublin. He is an Irish Nationalist as well as an Irishman, and he refused to accept the office unless he were accepted as a responsible adviser to the Lord Lieutenant and not merely as a subordinate clerk to the nominal Chief Secretary, who plays no real part in political affairs. Thereupon the correspondence took place, and it ended in the appointment of Sir Antony with the full powers which he claimed.

The question now is what were the actual terms set forth in the correspondence on which the appointment was finally arranged. Did the members of the Government, including the late Prime Minister, prevail over Sir Antony or did Sir Antony prevail over them? The outer world demands the publication of the whole correspondence as the readiest means of settling the question; but this apparently is the very thing which the leading members of the late Conservative Administration are anxious to avoid. I feel quite satisfied myself that when the correspondence comes to be published it will be made perfectly clear that the Conservative statesmen agreed to regard the principle of Devolution, as it is called, the principle of devolving some direct share in the Irish government to the people of Ireland, was accepted by the Conservative leaders as a necessary condition of the arrangement—in fact that Home Rule in some form was to become sooner or later a subject for administrative consideration. The Liberals now in office came into power with frankest declarations to that effect, and nobody could have put more clearly and more decisively than Sir Henry Campbell-Bannerman himself put it, the resolve of the new administration to introduce measures for the gradual settlement of the Home Rule question.

Some trouble is threatened to the Liberal Government, and indeed to the Liberal cause generally, by the action of one division of the Labor Party in the House of Commons. For the Labor Party numbering some forty members is already separated into two divisions, one of which is governed by the principles of genuine and constitutional Liberalism while the other, the more recent in its growth and settlement, may be fairly described as distinctly Socialistic. This new Labor Party appears determined to act with absolute independence of Liberals and Conservatives alike and to support or to oppose every administration and every measure according as administration or measure is favorable or hostile to the principles of Socialism. It can easily be understood that even a small party of members acting constantly together and without regard to the interests of any other party may frequently put embarrasssing difficulties in the way of the most powerful and popular ministry, and become a source of much irritation to the majority on both sides of the House of Commons. It cannot be doubted that among the working classes thruout this country generally there is a large amount of Socialistic sentiment, mainly called into being, it must be owned, by that neglect of the working classes and their interests which was for a long time common to all our administrations. It cannot, however, be contended now by any reasonable creature that the present Government has shown or is ever likely to show any want of sympathy with the needs and the wishes of the workingman, and we may therefore assume that the Socialists will not be able to make much capital for themselves out of the policy of the Liberal leaders. I think it cannot be doubted that the Socialistic Labor Party regards with extreme disfavor the career of John Burns, first, because he has consented to become the occupant of an important office with a large salary in the Liberal Government. Mr. Burns, however, holds on his way composedly and is not likely to seek for conflict, altho well capable in every sense of fighting a good fight if the conflict should be forced upon him.

I pass, according to my usual fashion in my INDEPENDENT articles, from politics to literature. The first book which I have to notice is one which brings both sweet and sad recollections to my mind. Irish readers will thoroly understand my feelings when I say that the work to which I would now invite attention is "Irish Fairy Tales," by Edmund Leamy. The author of this book is dead. He was one of the most brilliant and gifted Irishmen of our times. He was a devoted Nationalist and patriot, and sat in the House of Commons for many years. I knew him well both in and out of Parliament, and must ever admire his genius, for no other word could fittingly characterize his extraordinary intellectual qualities. He was a brilliant speaker, and on great occasions could prove himself a genuine orator. In his "Irish Fairy Tales" we have him in his literary and poetic capacity. The inspiration of these stories is found in Gaelic legend and in Gaelic romance, but the stories are not translations and are Leamy's own work, only owing their inspiration to the Celtic atmosphere in which Leamy's soul found much delight. They are exquisitely beautiful fairy tales and would hold a high place in any literature.

Edmund Leamy died poor and left a wife and family who had been dependent on his work for their support. I do not, however, recommend this volume to my countrymen and women merely because of the claims of Edmund Leamy and his family on Ireland's gratitude. I am able to recommend the stories because of their own intrinsic value, because of their delightful fancy, their brilliant imaginative powers, their genuine humor made all the more bright because of the frequent contrast given by passages of quiet and penetrating pathos. The volume is introduced by a preface from Mr. John E. Redmond, leader of the Irish National party in the House of Commons, an old friend, colleague and comrade of Edmund Leamy, and is published by Messrs. Gill & Son of Dublin. Such a book must be welcome to all Irish readers, and is sure to find thoro appreciation among readers of any country who can appreciate a literary work which appeals alike to the intellect and to the heart.

Once again I come upon a recent publication which brings back to me some

melancholy memories. In five dainty little volumes the selected poems of the late Nora Chesson have just been given to the world by Alston Rivers, publisher, of London. Nora Chesson, whose promising and indeed actually brilliant career was lately cut short by death, was a valued friend of mine, and was the beloved wife of my dear friend, Hugh Chesson. Nora Chesson was before her marriage Nora Hopper, and was English by birth, tho not by family, and won for herself a distinct celebrity as a contributor to all or nearly all the great English periodicals and newspapers. Her career as an authoress in poetry and in prose began in 1887, when she was not quite seventeen years of age, and she went on increasing her literary reputation until her far too early death. She was a genuine poetess, and could touch with quick and tender impression every chord of human feeling. Over some of these poems there is an atmosphere of melancholy which might seem as if it cast upon them already the shadow of a too early death, but the poetess, as I have said, could touch every chord of human feeling, and many of her poems sparkle with the best brilliancy of life. They are all thoroly original, and come straight from the moods, the fancies, the intellect and the heart of the authoress. The most casual reader opening one of these five thin volumes and glancing at any of the poems they contain will find himself at once quickened into a recognition of Nora Chesson's originality, varied fancy and exquisite sense of music. Better poetic work has not been given to the world in our more recent days.

A novel which has attracted much attention since I wrote last is "Tally-Ho," by Helen Mathers, the well-known novelist, published by Messrs. Methuen. It is a sporting novel, and will appeal more especially to readers of racing and hunting stories. But even to me, who am not specially interested in these subjects, it has been immensely interesting. Helen Mathers has got a most exciting story to tell, and she tells it admirably—it is hardly necessary to say this to those who know her books well, as I am sure my readers do—I will not endeavor to tell the plot of "Tally-Ho," for it seems to me that it would to a certain extent spoil the pleasure of those who read it, tho the character drawing is as clever as the story itself. Both the heroine Sandra and the hero Blaise Blundell are quite new types and are most vividly drawn. I have called Blaise Blundell the hero because he dominates the story, but Luke, who sacrifices himself to preserve the happiness of San's life, is a hero indeed. The other characters — Lady Sophy, the Princess and Tessa, to mention the most important among them— are made living and real without too much description. A part of the book that interested me very much is the West African diary, and the authoress has introduced it into the story so early that it does not in any way delay the action. I congratulate Helen Mathers most heartily on another success.

London, England.

Joseph

BY SARAH JEANNETTE BURKE

Twelve children, like the patriarch, has the year;
Which loves he best? Ah! that I may not say;
But well I know October triumphs in
"A coat of many colors" glad and gay.

A Medical Specialty for Women

BY HENRY T. FINCK

Author of "Romantic Love and Personal Beauty," Primitive Love and Love Stories," Etc.

AMERICA has fortunately never been tainted by what is one of the greatest evils of modern England—the institution of barmaids; but while England and those of her colonies which have the same institution are realizing its detrimental character more and more vividly, and taking measures to get rid of it, an evil of almost equal dimensions and similar in character is rapidly overshadowing this country. While we have always kept women and girls out of saloons, both behind and in front of the counter, there has been within a few years, a startling increase in the number of women and girls employed in our barber shops, where they are quite as much out of place as in saloons.

Attempts to train and employ women for shaving men and cutting and dressing their hair never appear to have had much success; it is as manicures that they have increased in number so amazingly. Doubtless there are not a few respectable women among these, as among the barmaids; but is there a man who would willingly allow his sister or daughter to become a manicure in a New York barber shop?

An attempt to arrest this pernicious movement, made by one of our reformatory associations, would no doubt be met (as in the case of the English barmaids) with the cry: "You are taking away the bread and butter from these poor girls." But there are thousands of other ways, especially in this country, for women to earn their bread and butter, and cakes and candy, too. It is to one of these that I wish to call attention today.

While establishments for the dressing of women's hair by women are not uncommon in our cities, there is an opportunity for a hundred times as many as there are now, without the least overcrowding. At present there are many thousands of wealthy ladies who have their hair washed and dressed by their own maids, who are seldom experts. Most of these ladies would patronize the establishments referred to if run by experts—by women who are not only hair dressers, but *hair doctors and beautifiers.*

It is admitted that no woman can be called beautiful unless she has fine teeth and beautiful hair. The teeth are now, especially in this country, well cared for by countless specialists. Dentistry has, within the last decades, made such progress that few women have any excuse for showing anything but a pearly mouth. Before the age of modern dentistry it used to be taken for granted that middle-aged persons must lose their teeth as a matter of course, and be ugly and dyspeptic the rest of their lives.

The same sort of Asiatic fatalism prevails to the present day regarding the hair. Most people neglect or maltreat theirs till it begins to fall out, and this process is regarded as a natural and necessary result of advancing age. But it is neither necessary nor natural. One of the most eminent German physicians, Prof. Oscar Lassar, of Berlin, who has made a specialty of the hair and its diseases for over a quarter of a century, predicts that the time will come when few people will be bald.

For those who are bald already there is no hope; baldness is incurable. But it is preventable—as preventable as decay of the teeth; and the simple reason why so many persons have their heads partially or entirely denuded of hair is that they do not begin early enough to take proper care of it. The usual cause of the loss of hair is a sort of catarrh of its sebaceous glands, which can be prevented by proper hygienic precautions.

The family physician is not usually consulted in this matter, probably because the loss of hair is so gradual that no special concern is felt till it is too late to do anything. Women use false hair in proportion as they lose their own, while men do not seem to mind their baldness as long as so many others are like them. But the time is coming when it will be generally understood that it is a man's duty to himself to prevent baldness as much as it is to prevent dental caries; and then the medical man will be required to add another branch to his usual studies.

As for women, they can hardly be expected to rely much on their family doctors for help in the preservation of their hair. Prevention is, in this case, particularly, much easier than cure; and prevention of loss of hair implies so much manipulation of it that a busy doctor would hardly have time for it, nor would such work seem exactly suitable for a man. We have here a detail of medical work that is pre-eminently suitable for women.

The world has so far not taken the woman in medicine very seriously, for the reason that most medical work (including surgery and dentistry) is of a kind that goes beyond her strength and special aptitudes. But as hair doctors—for women—medical women may and doubtless will have a great future. They will, of course, be hair dressers as well as curers of hair diseases, and also hygienic advisers of women and children, at home and in school.

Let no one suppose that such a profession places an educated woman on a level with the ordinary man's-barber. She will rank far above even the barber of the good old times, who was also a surgeon. Surely there is nothing in the least derogatory in the dressing and beautifying of hair—in doing professionally what every woman, since the beginning of time, has done for herself in a more or less amateurish way; while the prevention and cure of hair diseases which result in baldness are as legitimate and as dignified branches of hygiene and therapeutics as any other branch. The medical colleges, it is true, teach little or nothing on this subject, and for this reason some physicians, if questioned as to whether the treatment of unhealthy hair is a regular branch of the healer's art, might possibly answer "No"; but that would only show that they have given the matter insufficient attention.

What Professor Lassar says on this point is suggestive. He has been consulted, he tells us, by jurists on this very question, and his answer was a decided "Yes." As long ago as 1882 he wrote on this topic for Liebreich's *Therapeutische Monatshefte*, and his latest article appears in the *Deutsche Medicinische Wochenschrift;* being addressed, therefore, to a medical audience. Other medical periodicals, as well as congresses of physicians, have in recent years discussed the question, and the Berlin Directory has a large number of addresses of "*Specialärzte für Haarkrankheiten.*"

Here, then, is a new and important medical specialty for women—a specialty offering great opportunities for distinction and wealth, and calling for no departure from what is strictly "woman's sphere," in the wider, modern sense of the word. Young women in college, wondering what avocation they had better choose, will no doubt see their opportunity; and their prospective patients will hail their advent with delight. There is hope for all, except those absolutely bald. As Professor Lassar remarks:

> "Age is of no consequence. There are women of over seventy years, in whom proper treatment, applied promptly after a late loss of hair, brought on a luxuriant new growth of silvery hair."

The women hair doctors will find it an advantage to keep abreast of the latest therapeutic discoveries—in the realm of X rays, for instance. In the early days of that eleven-year-old science cases were recorded of operators or patients losing their hair permanently. But that was a result of ignorant or inexperienced manipulation of the Roentgen apparatus. Some recent striking experiences convinced Professors Imbert and Marquès, of the University of Montpelier, that these rays, applied in a certain way, have the power of restoring white hair to its original black color. Is not this the elixir of youth—in part, at least? Are there not "millions" in a single discovery like this? Need women despair of making a living without doing man's work?

New York City.

The Future of Liberia

BY SIR HARRY H. JOHNSTON, K. C. B.

[There is no one in Europe better qualified to write on Africa than the author of the following article, who has traveled and lived almost everywhere in Africa and published much on the subject.—EDITOR.]

I HAVE been asked to express my views in THE INDEPENDENT on the subject of the future that may await the negro republic of Liberia, on the West Coast of Africa. I first made the acquaintance of this land of the Kruboy, the Vai, the Mandingo and the American negro in 1882, and my last visit was paid at the commencement of the present year, so that I may claim to have had this state under observation for a considerable period.

Liberia was an experiment made somewhat hastily by politicians and philanthropists in the United States eighty to ninety years ago, to solve a difficulty which had not been considered when the American Constitution was drawn up in the eighteenth century—namely, what status in the land of the free was to be held by the ex-slave. A hundred years ago many pious Americans shared with Wilberforce and British philanthropists the horror of slavery in the abstract. Quaker influence had brought this about, and many a Quaker, in dying, bequeathed freedom to his slaves. At the period in which the Napoleonic wars ceased and the civilized world had time to reflect on questions of internal politics, public opinion, more especially in the Southern States of America, was increasingly favorable toward terminating slavery as an inherited condition. But at the same time a racial dislike to the negro was growing steadily, and while many a philanthropist preached against slavery, he was equally indignant at according civic rights to the freed slave. By 1817 the number of free negroes in the United States had swollen to several thousand, and as many of these were educated men, they had begun to ask if there was no voice for them in the councils of their adopted country. The reply of philanthropist America at that date was to hurry them off to the West Coast of Africa and so get rid of the problem. The British had been making experiments along this line from the end of the eighteenth century in Sierra Leone, and the original American idea of Liberia was copied somewhat servilely from the plan of the Sierra Leone Colony. Indeed, it was sought to found a Liberia at Sierra Leone; but the British Government would not agree to any "state within a state," and indeed, repeatedly, during the subsequent history of Liberia down to the acknowledgment of its independence in 1847, Great Britain was seeking to draw this American enterprise within the limits of an enlarged Sierra Leone.

Curiously enough, the tendency of things as they are seems to be following this line with a certain inevitableness. The civilized, English-speaking negroes of Sierra Leone are derived from very much the same negro origins as the American colonists of Liberia, while the indigenous races of the two contiguous countries are also closely allied. But in all probability Liberia will never form part of a British Crown colony. If the Americo-Liberians and their descendants and the indigenous people whom they may bring within the pale of civilization can show to the world, after another twenty or thirty years' trial, the example of a successful government of negroes by negroes, it is more likely that in the distant future Liberia may swallow Sierra Leone rather than Sierra Leone Liberia. Some portions of the hinterland of Liberia may find greater affinity with the adjacent French possessions, but there again—not in our time, but in that of

our descendants—it may be rather that the germ of negro self-government will start from this little republic in West Africa.

Unless, of course, the flame that has been kept alight (flickering, but still alive) for eighty years should be blown out by some sudden gust of European clamor, or unless the Liberians should turn their back on progress and activity, both bodily and intellectually, and resign the opportunity which Fate has placed in their hands. I hope they may not do so. I hope that they may have the courage on the one hand to dissociate themselves from a good deal of useless tradition regarding the past life of their ancestors in America, and a good deal of equally useless adherence to Anglo-Saxon ideals, and that, on the other, they will be prompt to welcome reasonable and safeguarded cooperation with the white man, who will lend his science and his capital to develop their marvelously rich but very neglected country. They need not be over-anxious. They may bear in mind this incontrovertible fact, which is the charter of the liberties of the black man in British, French and German West Africa—that the climate will always fight on their side. None of these West African negro lands could be colonized by the Caucasian, as may be the case with the elevated, healthy and often uninhabited plateaus of Eastern and Central Africa. The white man in West Africa, between the Gambia and Angola, is only there to educate, and the more attention the black man gives to this education the quicker he will arrive at a stage in his history when he can claim justifiably the right to govern himself.

I do not think there is *much* room in Liberia for the immigration of American negroes; nor, as an impartial counselor, should I advise the negro of America to turn his thoughts toward West Africa unless he himself was born in the Dark Continent. The negro of the West Indies is perhaps more at home in the climate of Liberia; the negro whose family has been settled for one or more generations in the United States suffers almost as much from the climate of West Africa as does the European or the white American. One or more generations of life in America seems to rid the negro's blood of the malarial parasite, and his descendants are as much subject, therefore, to malarial fever as is the case with other non-African races. There are many other reasons which want of space prevents my detailing why, as a rule, the American negro is not successful as a settler in West Africa. I would venture to say that the domain of the American negro in the future is the islands of the West Indies and the states of tropical America. The best hope of the American colony that has been planted—painfully, but at last successfully—in the coast lands of Liberia, lies in fusion with the fine indigenous African peoples—Fulas, Mandingos, Vais, Kpwesis, and that remarkable congeries of Kru peoples, one tribe of which—the Grebo—may be said to have attained something like stable civilization. The present power of Liberia must not be measured by the fact that the Liberians of American descent are estimated at some 12,000 in number. By their schools, and by the mastery which they have acquired over much of the coast lands, they have gradually added to their numbers, as the civilized citizens of the modern state, some forty to fifty thousand Vai, Gora, Basa, Kru and Grebo natives, who make common cause with the American negroes and mulattoes in their attitude toward the natives of the interior. Some of the Kru tribes are still recalcitrant. But since the advent to power of President Barclay, the influence of the Liberian Government at Monrovia extends very far inland, and is constantly being appealed to by native chiefs as an arbiter in the quarrels between tribe and tribe. It is curious to note that many Europeans prefer dealing with the Liberians to the English-speaking natives of Sierra Leone. They find them better mannered, quieter and a good deal more interested in the affairs of the great world outside West Africa. The fact is that the English-speaking Liberians keep much more in touch with what is going on in Britain, France, Germany and America than is the case with the more or less civilized natives of the Gold Coast and Sierra Leone. In this respect they more resemble the very intelligent natives of Lagos and the Cameroons.

It is to be hoped that the United States

will not lose interest in the little republic that was founded by her citizens. Tho its future history may be a good deal more concerned with the development of the British colony of Sierra Leone and the French colony of the Ivory Coast, the United States may at any rate take to itself the credit of having founded the first civilized independent negro state in West Africa, a land in which, if the negro have but patience to bear with us for a while, and with our help to frame a civilization of his own to suit his own environment, he may come to find himself independent of white tutelage, and an equally endowed collaborator with the Caucasian in a world-wide civilization.

LONDON, ENGLAND.

The Trial by Existence

BY ROBERT FROST

EVEN the bravest that are slain
Shall not dissemble their surprise
On waking to find valor reign
Even as on earth in paradise:
And where they sought without the sword
Wide fields of asphodel fore'er,
To find that the utmost reward
Of daring should be still to dare.

The light of heaven falls whole and white
And is not shattered into dyes,
The light forever is morning light;
The hills are verdured pasturewise;
The angel hosts with freshness go
And seek with laughter what to brave;
And binding all is the hushed snow
Of the far-distant breaking wave.

And from a cliff top is proclaimed
The gathering of the souls for birth,
The Trial by Existence named,
The obscuration upon earth.
And the slant spirits trooping by
In streams and cross- and counter-streams
Can but give ear to that sweet cry
For its suggestion of what dreams.

And the more loitering are turned
To view once more the sacrifice
Of those who for some good discerned
Will gladly give up paradise.
And a white shimmering concourse rolls
Toward the throne to witness there
The speeding of devoted souls
Which God makes his especial care.

And none are taken but who will
Having first heard the life read out
That opens earthward, good and ill
Beyond the shadow of a doubt.
And very beautifully God limns,
And tenderly, life's little dream,
But naught extenuates or dims,
Setting the thing that is supreme.

Nor is there wanting in the press
Some spirit to stand simply forth
Heroic in its nakedness
Against the uttermost of earth.
The tale of earth's unhonored things
Sounds nobler there than 'neath the sun;
And the mind whirls and the heart sings
And a shout greets the daring one.

But always God speaks at the end:
"One thought in agony of life
The bravest would have by for friend,
The memory that he chose the life;
But the pure fate to which you go
Admits no memory of choice,
Or the woe were not earthly woe
To which you give the assenting voice."

And so the choice must be again,
But the last choice is still the same.
And the awe passes wonder then
And a hush falls for all acclaim.
And God has ta'en a flower of gold
And broken it, and used therefrom
The mystic link to bind and hold
Spirit to matter till death come.

'Tis of the essence of life here,
Tho we choose greatly, still to lack
The lasting memory, at all clear,
That life has for us on the wrack
Nothing but what we somehow chose:
Thus are we wholly stripped of pride
In the pain that has but one close,
Bearing it crushed and mystified.

WEST DERBY, N. H.

Literature

The Fighting Chance

THE interpretation which Mrs. Wharton attempted of New York society in "The House of Mirth," Robert Chambers has really accomplished in his new novel.* And it appears that the situation is not so hopeless as she represented. The people are bad, of course, but Chambers shows the reason why, and so at last we get the mitigating circumstances. They are great sinners, just as the Turks are great sinners, but, like the Turks, they do not know it; therefore not such great sinners after all. At least, not the morbid, self-damned souls that Mrs. Wharton would have us believe. The trouble with Mrs. Wharton is that she has a literary preacher understanding. She uses humanity for a text and the good and bad of human conduct to illustrate her preconceived point of view, for a background against which the spire of her ethics shines. This is all very well in a sermon, but it has nothing much to do with a truthful interpretation of life, because she understands not life, but only the good and bad of it.

Mr. Chambers is not so much of a preacher, and he has that kind of genius which makes his mind an impartial negative of every line and shade of whatever passes before it and of the very spirit of things. Besides, he has a sort of literary *insouciance* which enables him to tell with startling inspiration what he sees. The marvelous descriptions of common and uncommon things in this book show that he can describe a man or a world just as God or the devil makes them without the bribery of a word or a sneer. This is to command a daring reality of expression and at the same time escape the fever, the sullen horror, of realism. The picture he draws of society life in New York is complete, with its accurate and elegant imitation of English customs, its aquatic phases, quash galleries, water-ball performances, its iniquities and dignified, unconscious snobbery, and it is really the most frightful revelation we have had of this kind of living; but it will not appear to be so to the casual reader, because what he has written is so embedded in life, so much a part of the atmosphere of wealth and of the gilded place generally that it is difficult to realize in terms of morality what is really going. But, primarily, Chambers is not thinking in these terms, he is catching in phrases and sentences every character line of the life, every color and charm of it, the taste and distinction and epicurean spirituality which go to make men and women who are born to gamble, drink and flirt, as others are born to honor and labor and chastity. That is why they are not so bad, these society people, as Mrs. Wharton represented them. They are simply not yet evolved. They are the hereditary outlaws of the moral order, and ought not to be held accountable to the same degree that we hold Christian, civilized people accountable.

However, there is in all fallen humanity a struggling upward might, and in this book it is represented by Siward, the hero, who has inherited an appetite for liquor. The tale tells, between the orgies of the other characters who have a greater capacity for staying sober under inebriating circumstances, of this man's failure in self-control, of his love and despair, how he is never to conquer, but at best must lead the camp life within of a spirit on guard. And from this the story takes its name. The idea is a good one, typifying all life in a way, and the author has portrayed it with a fine wisdom, where many another would have given the neurasthenic effect of fine nerves. And toward the end we come to the spire of the whole conception, and showing that genius always recognizes the fact that the ultimate solution of things, the last stand a man makes in such an extremity is always spiritual. In a conversation between Siward and his friend Plant, at a time when the former is down and out, with scarcely a fighting chance left, Siward wants to know if, after a man has lost his will and nerve

* THE FIGHTING CHANCE. *By Robert W. Chambers.* New York: D. Appleton & Co. $1.50.

and courage, there is not a last chance for him thru the spiritual medium of Sylvia's braver mind. This is the final, inevitable refuge of the unfortunate, the orphan cry to some god, any god, so that it be a god with might to take the place of mortal weakness. Only an artist with the far, far sense of things could have made this denouement, so simple, so natural and without hanging his tale upon a mere creed. He has sounded rather the sorrowful depth of that mortal neediness which makes all gods and creeds.

There are other people of note in the book, peculiar and interesting because they are typical of the live—Quarries, the secret sensualist; Plank, the Dutchman with delft blue eyes, who controlled affairs on Wall Street—for we must remember that Wall Street runs like a serpent thru every story of New York society life; and there is Mortimer, the beast husband, a bloated, blotched horror, waddling from one dishonor to another, until he is flung like an ugly, obscene jelly from his automobile and killed. This is the only time in the course of the story that the *deus ex machina* is rudely apparent. But Mortimer must be got rid of in the book, because his wife is in love with another man. What happens in real life in New York when this is the case may be different and worse, but in books we must still preserve the semblance of propriety—hence the death of Mortimer. But immediately his widow appears enticingly before her lover with her hair braided and her face blooming like a girl's. From this incident one sees how naïvely savage and how remote these people are from even the sense of decency. In no other walk of life could a widow let down and comb out her hair for a lover at once without offense. Here it is accepted conduct. But having done the most indelicate thing possible, these two proceed with great delicacy to the prettiest of romantic conclusions. In short, the same sensuousness of taste and environment which makes these people so much finer than the common sort destroys their moral sense, and renders them more depraved than the commonest sort. And Chambers's story proves it.

Early Western Travels

THE recent volumes of reprinted early Western travel narratives* which Mr. Thwaites and his able assistant, Miss Kellogg, have so satisfactorily edited, continue to reach the standard of value and interest found in the earlier issues. The two volumes, containing Ogden's "Letters from the West," 1821-23; Bullock's "Journey from New Orleans to New York," 1827; and Gregg's "Commerce of the Prairies," 1831-1839, have not only historical interest, but the latter narrative, at least, has much of the charm of Marco Polo's famous story. Ogden was a Quaker merchant from New England, who tells of a business journey to the Western country, devoting one letter to Pittsburg, one to the Ohio River as far as Cincinnati, and a third to the remaining Ohio Valley as far as the Mississippi. Tho he saw the West Virginians with a narrow Yankee view—noting especially their rough and savage manners and their lack of learning and settled principles of religion—yet, on the whole, he saw clearly and wrote honestly, and he found bordermen, as a rule, "humane and hospitable, kind and attentive." Bullock describes the same region five years later, and with the eyes of an Englisman who became so charmed with the climate, scenery and people of the Cincinnati neighborhood that he bought an immense estate near by, in Kentucky. He wrote to attract settlers to his new colony, called Hygeia, and tho there is much about the "richness of soil," "overflowing plenty," "taxes scarcely felt," and "unparalleled cheapness of necessities," yet his observations are those of a trained traveler and have great value as a true historical picture. Josiah Gregg, in search of health on the Western prairies, found it and at the same time became the Thucydides of the Santa Fé trail, writing a book "entitled to rank as one of the great works of American history." Leading caravan after caravan from Missouri far into the Mexican territory, he kept faithfully a journal of all that befell him, and when at last he wrote and printed a book, its

* EARLY WESTERN TRAVELS. 1748-1846. Vols. XIX, XX, XVIII, XXII, XXIII, XXIV, XXI. Edited by *Reuben Gold Thwaites*. Cleveland, Ohio: A. H. Clark Co.

popularity was immediate. He gives a minute account of the trail, the formation and governing of a caravan, the fortified and guard-watched camps, the seeing of buffaloes, the "imminent, hairbreadth 'scapes" from hostile Indians, the entry into Mexican domains, and the vicissitudes of the customs methods, mingling history, description and narrative into a fascinating tale, which gives the reader Gregg's own enthusiasm for the "broad, unembarrassed freedom of the great Western prairies."

Another volume treating of this part of America is the one containing "Pattie's Personal Narrative," 1824-1830. Any schoolboy would read this volume with avidity, and yet it furnishes the serious student with a true picture of the contact between two civilizations in the Southwest, and the beginnings of the drama to be closed only by the Mexican War. The narrative is a thrilling tale of pure adventure, ranging from fights with grizzly bears and savages who had never seen the white man, to a revolution in a Latin-American state. Pattie was a typical American pioneer, tempted by a rich and beautiful land to push aside the indolent and effeminate owners. His ancestors for generations had belonged to that restless type of frontiersman, always hovering upon the outskirts of civilization, taking up fresh lands in untilled places and fighting the Indians who disputed their invasion. They had followed Boone and Clark and Logan, and their children had gone on seeking new adventure in the mysterious West. The author's father had settled for a time on the utmost borders of civilization, but the spirit of adventure came upon him, and with his son he set out upon a long series of adventures, so full of hazard and suffering that even the plain narration seems the invention of romance. Once their party prepared to fight a band of some 600 Indians when they were rescued by a rival tribe of horsemen, who, "with a noise like distant thunder," swept in between the hostile lines. Again the son and narrator rescued from the savages a charming young Spanish maiden, daughter of a provincial governor, and the gratitude of the father proved of lasting value. "Wondrous strange" and romantic as are some of the experiences, one has a sense of the verity of the narrative, and it certainly has the charm of simplicity and vigor.

The remaining four volumes have to do with the Northwest, and three of them are filled with "Travels in the Interior of North America," by Maximilian, Prince of Wied. The Prince is described by a contemporary as "a bachelor and a man of science." In the latter capacity he roamed so far from his ancestral home on the Rhine. "He was a man of medium hight, rather slender, sans teeth, passionately fond of his pipe, unostentatious, and speaking very broken English. His favorite dress was a white slouch hat, a black velvet coat, rather rusty from long service, and probably the greasiest pair of trousers that ever encased princely legs." This odd little man passed thru Boston, New York and Philadelphia, and eagerly sought the forests of Pennsylvania, showing great interest in the German immigrants there, and especially in the Moravians at Bethlehem. In the autumn of 1832 he reached Pittsburg, went by land to Wheeling, and thence down the Ohio to Louisville, turning aside to spend a winter in New Harmony, the Socialist settlement on the Wabash, to which interesting subject he gives a chapter of his book. In the spring he went on down the Ohio and up the Mississippi to St. Louis, where he arranged with the Rocky Mountain Fur Company to take him up the Missouri to the heart of the Cordilleras, where he wished to make a study of the Indians, and the flora and fauna—for in those days there were no specialists, and each scientist took all nature to be his province. In the end Maximilian made a special study of the Mandan Indian, and, since they were almost wholly destroyed by smallpox some five years later, his study came to have unique value to the ethnologists. Aside from this value, the work is highly interesting as an historical description of natural conditions west of the Mississippi seventy years ago.

Another volume treating of the further Northwest—the Oregon region—contains Wyeth's "Oregon," and Townsend's "Narrative of a Journey Across the Rocky Mountains to the Columbia River." Wyeth's book (1833) was the first American publication on the subject

after the Lewis and Clark expedition. The spark of interest kindled by this book became a flame three years later, when Irving's classic "Astoria" appeared, and several years later the world greeted with great interest Townsend's book, giving the first detailed knowledge of the resources of the Far Northwest.

Communion With God

A DISTINGUISHED American teacher of theology, being asked by a student what books he should procure for the study of doctrinal theology, replied: "I would recommend first of all Herrmann's *Der Verkehr des Christen mit Gott.* The student took down name and title and asked: "What else?" The professor thought a moment and finally said: "I do not know as you will need anything else." The work so highly recommended has been available in English for ten years past under the title *The Communion of the Christian with God.* In the meantime a third and fourth edition have appeared in Germany, each considerably altered, and the present English translation* is from the last German edition, and is issued in more convenient form and at a more popular price.

Professor Herrmann, of Marburg, is the most eminent of living German teachers of systematic theology, as he has been for years the most popular with students of all nationalities and the exponent of liberal theology most nearly in favor with orthodox clergymen of the State Church. He is one of those men who make enthusiastic followers, not only by their clearness and eloquence of speech and charm of personal presence, but also by the force and beauty of their writings. Herrmann's books, of which the *Communion with God* is the most important and best known, have made him friends the world over among those who search for light on the deepest questions connected with religious faith.

One must ask what gives the man this power. It is not any one thing, but what Dr. Johnson called an "obstinate rationality" certainly enters into it. Herrmann is a master in logic and philosophy. He is never clouded nor confused, but uses terms properly and accurately and follows his thought thru. He deals with realities and not with words, which is a quality especially desirable in theologians and sometimes conspicuous by its absence in the writings of well-intentioned divines. This is a matter for special emphasis, since the title of the book in English suggests those mystic transports from which every-day men turn away as unreliable and dangerous. As a matter of fact, it is the mystic type of piety which Herrmann above all else opposes, and which he maintains is not at all Christian. He writes:

> "If we wish to come to God, we must not, above all things, turn our back upon the actual relationships in which we stand. The concrete reality amid which we actually live must be the nourishment of our inner life. Dreams which soar away from reality lead not to God but to nothing."

It is this firm footing on the ground, this rejection of mysticism and pietism, the search for a faith grounded in real experience, which commends Herrmann to many minds.

Another reason for the wide influence the Marburg teacher has exerted is that he is strikingly free from bondage to creed and tradition and at the same time Christian and orthodox, or at least orthodox, as the Presbyterians say, "for substance of doctrine." He knows no law for belief save the law—Thou shalt believe the truth, or, as he puts it, "Truly religious faith recognizes no other law than the moral law of sincerity and love" (p. 8). Speaking of the effort to compel assent to the articles of the creeds, he asserts: "We leave all these fruitless endeavors at religious self-help behind when we entirely reject the idea that it is our duty to believe doctrines" (p. 59). He specifies in detail, and many who read his pages will feel burdens like that of Bunyan's pilgrim roll from their back as it comes into the clear that certain things they had supposed they must believe are not essential.

It is not the same when Professor Herrmann shows how the hard doctrines are not required as when certain others make the same declaration. For you feel thru and thru that this man must be a

* THE COMMUNION OF THE CHRISTIAN WITH GOD. Described on the Basis of Luther's Statements. *By Wilhelm Herrmann.* Second English edition, being the translation by *J. Sandys Stanyon,* revised thruout and enlarged and altered in accordance with the Fourth German edition of 1903, by *R. W. Stewart.* New York: G. P. Putnam's Sons. $1.50.

Christian. It must be said that there are theological writers and teachers whose personal religious faith never impinges very sensibly upon one. They deal in religion as they might deal in chemistry or Egyptology. But the generations of students who have flocked to Herrmann's classrooms, and the hundreds who have read his books, have felt the touch of a real believer, whose spirit is cheering and enkindling, even to those who cannot follow him all the way in his orthodoxy.

It must not be imagined that his pages bear only the general atmosphere of Christian faith without specific confessions. The man who would count it sacrilege to attempt to make one believe as a duty has met with experiences and realities which force from him witness to the essential Christian doctrines. Thus, as to the divinity of Christ, he says:

"In the work which Christ does upon us, we get a view of His Person which can only rightly be expressed in the confession of His Deity. . . . What the Christian has in Christ, namely that God turns to him and is accessible to him, is simply summed up in the confession of His Deity. Hence it is impossible that this confession should ever vanish from the Christian Church." (p. 142, 144.)

Professor Herrmann claims to be an exponent of Luther, a sincere follower of the founder of Protestant theology, not indeed in all his doctrine, but in his method of approach to God and his essential religious message. As to the atonement, we read: "It is quite right that men are unwilling to let go the thought that redemption has been won by the vicarious sufferings of Christ." (p. 135.)

There are many persons who want to believe, but who do not know how, who ought to be able to find help in Professor Herrmann's treatise. There are others who have cast faith aside who might be led again to believe if they could read such an exposition of the Christian's certainty of God. Here is something more reasonable and persuasive than the usual conservative dogmatics, more truly religious and deeply spiritual than the ordinary doctrine of liberals. It is assuredly one of the important doctrinal treatises of a generation, and it is well that it is rendered into English from the text which is likely to be the author's final revision.

The Legendary Diaz

It is not strange that extravagant praise is bestowed upon President Diaz in his own country. Any man whose merits for actual achievements were as great as his would be exalted by his contemporaries and the men he has made; besides, flattery of rulers is particularly facile in the Spanish tongue and a custom of the Spanish-speaking peoples, while, moreover, a dictator can receive no homage but flattery. But it is quite time to protest against the tendency of every whilom journalist who comes to Mexico to erect Diaz into a demi-god. Knowing nothing of the country or its history except in the most superficial way, speaking very little Spanish, or, more commonly, none at all, and reading only the Mexico City organ in English, which is subsidized by the Mexican Government, these peripatetic writers of magazine sketches and even sometimes books find it safe to conceal their ignorance by telling, at fourth or fifth hand, of the wonders Diaz has wrought. This has become an established habit, until it is apparently an axiom of American editorial offices that Diaz is a model of a ruler and statesman and his Government an example of perfection and efficiency. All this is very gross exaggeration of the real facts—which, be it said, are very creditable both to Mexico and to Diaz himself—and in reality it is inconsistent with the notion that, as lately appeared, still persists in the American editorial offices, that political revolution may again break out in Mexico. It is plain that the picture of Mexico which the American public has had placed in its mind's eye has too many high lights and too much shadow.

A recent pretentious book upon Diaz and his Government by a British woman* is precisely of this type of journalistic writing—and of that thin journalism so much in vogue just now. Mrs. Tweedie naïvely explains how she came to write her previous book on Mexico: "In 1900 I looked up the map of the world for a good subject for a book, and Mexico seemed to offer all I wanted—

* The Maker of Modern Mexico: Porfirio Diaz. *By Mrs. Alec. Tweedie.* 4to. pp. xvi, 421. New York: John Lane Co. $5.00.

history, romance, picturesqueness, beauty." An acquaintance then obtained with President Diaz led her to return in 1905 to write what purports to be his biography and a history of Mexico under his rule. It is neither of these things. The only portions of value are the descriptions of Diaz in his home and of social life among certain of the prominent families of Mexico City. But the author is not equipped in the history of Mexico, nor in political history or economy in general, so as to qualify her for any such task as she has assumed. The result is, for example, a woman's picture of the picturesque gathering at Diaz's last inauguration where we should expect to be told how this "election" of President and Vice-President was carried out and what it meant. Likewise, in a chapter on how Mexico's debt was paid, we are never told how it was done, but we are told with womanly emphasis that Diaz brought his country "thru probably the greatest economic crisis with which a nation has ever been faced," just as the author repeatedly assures us that her hero is "the greatest figure in modern history," a greater than Lincoln or Bismarck, etc. The so-called "diary" of Diaz, frequently quoted and spoken of as exclusive to this work, is, in fact, a reminiscence of his military career (to 1867), written later by Diaz, and already published in Mexico.

The Tides of Barnegat. By F. Hopkinson Smith. New York: Charles Scribner's Sons. $1.50.

Mr. Smith is nothing if not emphatic in delineating the characters of his new story; indeed, so emphatic is he that readers quite lose the pleasure of discovering for themselves what the book people stand for. In the opening chapter of this tale of the Jersey coast half a century ago, there is not the slightest doubt that old Martha, nurse in the Cobden household, is intended to be taken as a type—rare enough in these days—of the faithful family servant. It is also evident that Miss Lucy Cobden, just returned from boarding school, is a very selfish young person, as careless of the feelings of others as she is regardful of her own wishes. Moreover, it is obvious that Lucy's elder sister, Jane, and Dr. John Cavendish are studies in perfection, and there is a strong hint of the irresponsibility of the young man, Bart Holt, who is soon to take a leading place among Lucy's admirers. As the narrative unfolds, the author largely devotes his attention to sketching in the figures, which, at the first, he so strongly outlines, and the other personages who have a part to play are introduced as a rule with those parts pretty clearly defined. Captain Nat Holt, for example, could not well be mistaken for any other than the stern parent; Ann Gossaway, the dressmaker, is recognized from the first as the village mischief maker, and Max Feilding is properly classified as the debonair man of the world—such a man as Lucy in her mature years would inevitably try to enslave. This insistence by Mr. Smith as to what his characters should represent is in keeping with the dramatic nature of his story, for one is free to appreciate situations without giving over much attention to their human element. But, as the novel brings more than one problem to the surface, its artistic quality would be more marked if more latitude of development were allowed the principals. The chief problem—and a sufficiently distressing one it is—is the use that Jane Cobden shall make of her life. She is wrapt up in her sister, who proves to be a most unworthy object for affection to be lavished upon. By Lucy's wilfulness a terrible stain is placed upon the Cobdens—a stain that if known to the world would smirch ineradicably an honored line. All of Jane's instincts impel her to protect the erring one and save the family name, even tho the course of action makes her run the risk of placing herself in a false position, and, what is of greater consequence, postpones, perhaps indefinitely, her marriage to Dr. Cavendish. In a word, she is one of the women to whom the thing instantly appeals because it is sacrificial. The end of all this selfishness, on the one hand, and abnegation on the other comes, as if to compensate for a decidedly long period of waiting, in a sort of literary whirlwind wreaking vengeance of varying degrees. The author's best work is in suggesting the at-

mosphere of the narrative. The events take place amid scenes which are always picturesquely and sometimes vividly described. As the selfish characters had been most assiduously sowing the wind in the earlier part of the story, the whirlwind climax of storm and disclosure has the inevitableness of such harvests. Mr. Smith writes of the sea like the artist and ocean lover that he is, and the storm at the close is no stage tempest, but a veritable phenomenon, wherein the *Tides of Barnegat* play the part of Fate.

Literary Notes.

ALL of the poems of Edward Rowland Sill are for the first time brought together in one volume in the Household Edition, published by Houghton, Mifflin & Co., for $1.50.

....A volume of poems of the seafaring life, containing old favorites and new acquaintances, selected and edited by John Masefield, is published by Macmillans under the title of *The Sailor's Garland.* ($1.50.)

....Baedeker's *Northern Italy* appears remodeled in its thirteenth edition (Scribner's, $2.40), with 30 maps and 40 plans. This series of guide books is so uniformly excellent that criticism is difficult and commendation is unnecessary.

....Mrs. Edith Nicholl Ellison, who grew up with Hallam and Lionel Tennyson, and was a pet of the late Poet Laureate at Farringford, Isle of Wight, has written an interesting little book, entitled *A Child's Recollections of Tennyson* (Dutton, $1).

....William Jennings Bryan has written a defense of our Christian civilization in reply to the "Letters of a Chinese Official," published three years ago. He is not the only person who was taken in by G. Lowe Dickinson's clever hoax. (*Letters to a Chinese Official.* McClure, Phillips & Co. 50 cents.)

...."ANTIPATHY, *n.* The sentiment inspired by one's friend's friend.

"APHORISM, *n.* A brief statement, bold in style and flat in sense.

"APOLOGIZE, *v. i.* To lay the foundation for a future offense.

"APPEAL, *v. t.* In law, to put the dice back in the box for another throw."

Any one wanting more of such definitions can find them in *The Cynic's Word Book.* (Doubleday, Page & Co. $1.)

....Colonel Waddell's book on Tibet, published last year under the title of *Lhasa and Its Mysteries,* which we reviewed at length (Vol. LVIII, p. 1186), now appears in a cheaper edition, $3.00, which for most persons and libraries will be as satisfactory, as it retains 155 of the beautiful photographic illustrations and the maps. It contains more information about the "Forbidden Land" than any other book, and gives a readable narrative of the Younghusband expedition which opened Tibet to the world. (E. P. Dutton & Co., N. Y.)

....The story of *Lincoln's Gettysburg Address* is twice told this week. Probably the only survivor of the commission who had charge of the National Cemetery when the consecration ceremonies were held, is Clark E. Carr, of Illinois, and he has told in a very interesting way how the great address was given and received. Everett's oration of two hours undeniably made more impression upon the crowd at the time than Lincoln's of two minutes, but posterity has reversed this judgment. This book is published by McClurg. in a neat and unusual binding. In her short story entitled *The Perfect Tribute,* Mary Raymond Andrews has given the same facts a slight fictional adornment in a little volume published by Scribner's.

Pebbles

SPEAKING of the departure of old-fashioned customs; what has become of the woman who took the table cloth to the door after a meal and shook it?—*Atchison Globe.*

I saw recently some wonderful calculations beginning with the amount of money saved annually by women at Friday bargain-sales. Can you give me the rest of the article? I thought the statistics were so interesting and showed such careful study. BEDELIA.

You probably refer to the following, which has appeared in many quarters of late: "If all the money saved annually by the women of the United States at the Friday bargain sales were to be divided among the 24,737 turpentine farmers and laborers in the United States each would receive $518,882, or $2 more than the value of the vote of Vermont at $10 a vote, and there would be a balance of $78.12, which would be enough to buy each of the 1,953 camels in Western Australia a nose-ring worth four cents. If all the stogies made in Wheeling, W. Va., in April and May, 1904, were rolled into one stogie it would be 97,341.10 inches long, 6,344 inches thick, and weigh 283,876 ounces, troy weight. A man would have to have a jaw 8,166 feet from ear to ear, measured thru his mouth, to get it between his teeth; and if he smoked it up he would be so sick that it would require the services of 823 physicians, 1,200 nurses, and 343 attendants 33 years, 11 months, 18 days, 22 minutes and 51 seconds to get his stomach in order again. The smoke from the stogie would form a cloud 221¼ miles long by 47 1-3 wide, obscuring the sun from Maysville to Monessen, Pa. If the cold feet of the men ahead of the game in all of the poker seances in Chicago on an average night were to be collected it would give a frigidity equal to that of 91,715,400 pounds of artificial ice manufactured annually in St. Louis; and if a percentage of this ice equal to the duty on candles into that part of the Gold Coast of Africa west of the river Volta were to be used in high-balls it would cool 36,686,160 of these drinks."—*Judge.*

Editorials

Degrading the Judiciary

It may be that the American judiciary is an obstacle to progress. Possibly its conservatism is extreme; perhaps its fondness for tradition, its conviction that our Federal and State Constitutions are the last word of human wisdom, may render every effort to bring our American life up to date unnecessarily tedious. It may be that government by injunction is a poor substitute for government by a deliberative body unhampered by the "dead hand" and sensitive to public opinion. We are not convinced that any of these possibilities is convertible into a demonstrated proposition. But, if it were, and if much worse things were matters of established fact, we should not expect to see the judiciary reformed by such imbecile and rascally methods as those that we are witnessing in the city of New York today in the shameful nomination of judicial candidates by partisan dickering.

The appointment, rather than the popular election, of judges is not on the face of it a democratic procedure. But, for some reason or other, American government abounds in paradox, and no well-informed man would think of denying that thus far in our history appointed judges, secure in their positions for life, have been immeasurably more loyal to the people, and far more progressive in their rulings, than judges elected on partisan tickets. It is notorious that the most advanced, the most democratic, the most popular decisions in America have for years been those handed down by the appointed judges of the Massachusetts Supreme Court and the Supreme Court of the United States; while the most absurd, ignorant, illogical and morally rotten decisions have been those of certain great States—we do not need to name them—in which all judges are elected. Massachusetts has never in her history been compelled to unseat such wretches as Barnard and Cardoza were in the Empire State, nor forced to wage an electoral campaign on the single issue of getting rid of such a scoundrel as Judge Maynard was.

Theoretically, elected judges should be loyal to the people and sensitive to the conscience of the public. Practically, it is easier and more in the nature of things, under our actual working scheme of politics, for them to be the creatures of the political bosses, and, thru them, the subservient tools of corrupt and powerful corporate interests.

This is why the blacklegs who manage our party politics, in the long stretches of time that elapse between our occasional spasms of political virtue, lay themselves out to get just the men that suit them on the judicial ticket. This is why the recent legislation in this State to "relieve the bench" by the creation of new judges, was carefully framed to give every iniquitous interest in the State new aid and comfort rather than to facilitate a real dispatch of legitimate judicial business. And this is why the whole population of Greater New York, including among its four million souls a few hundred thousand decent and intelligent citizens, is standing today open-mouthed, like a jackass chained before a hay heap, wondering what "Pat" McCarren and "Tim" Woodruff are going to "do" about the judgeships, how the rival chiefs of the political factions can agree to split the bench between them.

The whole thing is shocking, infamous, incredibly imbecile. It could not possibly exist were the forces of decency and intelligence effectively organized for team-work in our political life. It means disloyalty to public duty on the part of thousands of men so submerged in their private business interests that they cannot give a reasonable amount of attention to public affairs, or so obsessed by partianship that they cannot distinguish between good and evil.

The bar of this city, and especially the Bar Association, to which no mere shyster can gain admission, is all in all an eminently honorable and intelligent group of men. This group of men is back of the independent judiciary nominations that will be offered to the voters for their suffrages on election day These nominations have been made by

a committee of the fairest-minded and most honest gentlemen that we have in this community. Every voter who has a grain of common sense and a scintilla of plain honesty in his composition will vote this year for the independent judiciary nominees.

Mr. Rockefeller's Protest

WHILE President Roosevelt was arguing at Harrisburg, last Thursday, for a just official supervision of the business use of vast corporate wealth, John D. Rockefeller was giving to the press his protest against the command of Congress that the beef packers should carry on their business decently and honestly. It is an interesting coincidence that these two appeals to the public were made on the same day. "The reactionary," said Mr. Roosevelt, "is bitterly angry because we have deprived him of that portion of his power which he misuses to the public hurt." He may have had in mind the restraining effect upon the Standard Oil Company of the many indictments which now lie upon that great corporation. But Mr. Rockefeller does not regard himself as a reactionary. He professes to be a champion of progress. In his address to the public on that same day he was opposing the demand for official regulation of railways and great industrial combinations because it would fetter and discourage endeavor:

"If we limit opportunity we will have to put the brakes on our national development. Will the individual strive for success if he knows the hard won prize is to be snatched from his fingers at last by his Government? We are still too young a nation to begin tearing down. We must build up, build up, for years to come. Is it common sense to tell our young men, on whom the future must depend, that they can hope for no other reward for carrying our commercial flag forward than frenzied attacks at home, and all the handicaps their own Government can pile upon their business to satisfy the violent prejudice excited against them? . . . Take the attack we made upon our own packing business, for example. I know none of the men in the beef trade, I never dealt with them, nor was I ever associated even indirectly with their business or themselves. But it is safe to assume, from the proportions of their industry, that they are sound business men. And it is safe to assume, too, that no business could have been built to such proportions on such false principles, or by such unsound methods, as they were charged with. We are too young a nation for this tearing down."

Probably it is impossible for Mr. Rockefeller to see things as they really are. No one could ever make him understand that the only opportunity which recent laws and recent executive action seek to limit is the opportunity to steal, to rob or ruin one man for the enrichment of another, to plunder the public for the benefit of the holders of a few enormous fortunes. This is the Government's purpose when it forbids favoritism in railway freight rates and procures the indictment of such corporations as the Standard Oil Company.

He could not be convinced that the Government does not seek to snatch away any "hard won prize" unless it has been won by methods like those of the highwayman or common thief; that it strives to "tear down" only that which has been built up by dishonesty and injustice; that thus to "tear down" is really to "build up" on the best and most enduring foundations. The Standard Oil Company is his model, and it was not "built up" in that way.

It is "safe to assume," in his opinion, that the beef packers were sound business men and that their methods were faultless, because their business had reached such great proportions. Its size is enough to answer all charges. His own experience has taught him the convincing character of such evidence. The incontrovertible proofs that satisfied a vast majority of the American people and compelled the enactment of a severe inspection law by Congress have no weight with him. The fact that exposure of foul and dangerous practices in the Chicago packinghouses caused sanitary reform not only there but in the same industry thruout the country and even in the Old World excites no interest in his mind. This packing business was a big one; therefore it was beyond criticism, and no one who had common sense or was not an enemy of his country could have seen anything foul or disgusting in its methods of production. If he admits that, under the compulsion of law, the old foul methods have been given up, and that cleanliness has been substituted for nastiness, he will say, we presume, that the packers have been forced unjustly to

accept "all the handicaps piled upon their business by their own Government to satisfy a violent prejudice."

Mr. Rockefeller's views concerning business are not in accord with those of a very great majority of his fellow citizens. They believe, with Mr. Roosevelt, that corporations should avoid injustice and dishonesty, or be compelled to do so; that every man should have "a square deal"; that national development at the cost of honor and decency is not worth having; that in the long run, American trade, whether at home or abroad, is best promoted by honest practices; that we can most effectively build ourselves up by tearing down and casting away all that has been permitted to stand upon a foundation of theft and fraud.

Cuba and President Palma

It is a most curious tangle into which our intervention in Cuba has placed diplomatic relations. Cuba is an independent nation. The Governor and Acting President of Cuba is not only an American citizen, but is Secretary of War at Washington. The Minister from Cuba at Washington gets his instructions from Mr. Taft, says what Mr. Taft tells him, reports it to President Roosevelt and his Cabinet, of which Mr. Taft is a member. That is, Taft plays the game of statecraft for both sides of the board. It is a sort of jugglery and pretense of independent conference, in which both conferees are the same person. But it is a game, a play, which is for but a few months, and is absolutely unavoidable for the time.

We must say that in the correspondence which is published President Palma cuts a sorry figure. He is evidently a well-meaning man, fit to keep the boys' school from which he was called to take the Presidency, but not equal to the demands of rule in a turbulent community. It was moral weakness which made him attempt to keep his party in power by arbitrary control of the election machinery. Then, when the insurrection broke out, he lost heart and courage, and—what no one had suspected—he appealed piteously to President Roosevelt to intervene and help him keep his seat. A strong man would not have been so quickly frightened, would have organized resistance, and would probably have suppressed the revolt. Instead of taking vigorous measures he begged that United States soldiers be sent to his aid, but that they be sent so secretly that no one should know it till they landed. His own party friends and his own Cabinet did not know what he had done. People supposed it was the Liberals, not the Moderates, that desired intervention. There was a cowardice about his conduct which by no means claims respect. It is not strange that the journals of his own party are now denouncing him as traitor for trying to bring in American intervention at the imminent risk of the loss of independence. What else could he have expected? It was but the unparalleled generosity and magnanimity of the Government of the United States, as represented by President Roosevelt, that saves Cuban independence.

But President Palma and the Cuban Congress must divide the blame and shame of this temporary loss of independence. The United States just now rules Cuba as truly as it rules Porto Rico or the Philippines, and will for months. Why? Because President Palma insisted on resigning, and the Cuban Congress refused to meet and select a successor. Until that resignation and refusal Cuba was actually independent. Mr. Taft was there only as an adviser; Palma laid down his office; his Cabinet went with him; the Cuban Congress would choose no one to take his place, and the island was left to anarchy. The only man who had held authority had asked this country to intervene, and now we had to do it. We are amazed at the weakness, the pusillanimity, of all these men concerned, executive and legislative. They seemed more careful for their so-called individual dignity, or their faction's pride than for the honor and protection of their country. It was left for those not Cubans, for those who had made their independence possible, to preserve it for them by taking it away for a season. And so the Cuban flag remains, supported by American soldiers.

We most earnestly hope, and we believe, that the task we have in Cuba will

be a short one; that by next June an honest election may be held, and that, whichever party gains the power, the lesson will not be forgotten, but that the habit of revolution will be lost, and government of and by and for the Cuban people will be allowed peacefully to prevail and continue. But Palma's political career is ended. He had better come back to this country to live.

Parental Advice

It was a merry "lark" while it lasted, that scrimmage into which a number of Harvard students got with a policeman on Boston Common the other day—at least they thought it merry while they were in it. But the policeman got hurt, was struck and injured by some of the boys, and it got into the papers that Theodore Roosevelt, Jr., and his roommate, both freshmen, were in it. That did not look so merry; and even less merry was it when the two, with other boys, were summoned before the grand jury to learn if an indictment for a most serious misdemeanor, if not felony, should not be brought against some of them. There was nothing merry about that. They left the grand jury room looking solemn enough. Every paper in the United States told of it, the news agencies telegraphed it all over the country, and cabled it over the world, that the son of the President of the United States, who bears his name, had been engaged in a disgraceful assault, and was threatened with arrest and punishment. There was nothing merry about that. Then, as soon as his father learned the news from the press, he sent for his son to come immediately to Washington, doubtless, as the press despatches had it, "for parental advice." It was a sober boy who rode in the train from Boston to Washington.

What was the "advice" his father gave him? That was private, and the President's private secretary will not give it to the press; but if he could it would be mighty interesting reading. We presume he said something like this:

"My son, what means all this noise in the papers about your taking part in a rowdy fight with officers of the law on Boston Common? Is it true that you, supposed to be a decent young gentleman, son of a gentleman, have been engaged in this brutal, vulgar, unlawful fight? Is this what you went to college for? Have you lost the inheritance of honorable Christian instincts? Don't you know that such conduct is not merely vulgar, but wrong? When men of the humblest ranks of life are set to keep the peace, do you join those that break the peace and fight the law? Is it gentlemanly, is it right, to beat the officers of law, like the most low-lived denizens of the dives? Is that the way to get the university training which will make you fit to become a useful citizen, to deserve well of the State and to rule men?

"My son, did you forget who your father is? Don't you know that when you hold his name you also hold to a considerable degree his honor in your keeping? Your father, Theodore, has been chosen by the people to represent the right and might of law. His business is to execute law. What will the people think of the man who cannot teach his own eldest son to obey the law? My dear son Theodore, I was at the head of the police system of New York City. It was my business to support the honor and authority of the officers of law, such men as you defied and attacked; and is this the sort of lesson you have learnt of me? And your father now represents the impartial exercise of law all over this mighty nation, that even justice which allows no guilty man to escape; can you expect to escape? It may be that you have put yourself and your father's name into the clutches of the law. You may be arrested; you may be imprisoned, drest in prison clothes and set to break stone. That is the kind of medicine the Government I rule over provides for those who break the peace and break heads. You ought to be ashamed of yourself. If you had no respect for yourself, you ought at least to have had some respect for your father and your father's office. Theodore, your father is ashamed of you, and he loves you enough to tell you so. Now go back to Cambridge, tell the whole truth, and if you must suffer for it, suffer at least honestly, even tho in the meantime you lose your rank as a gentleman; and

let this be a sad and useful lesson to you for all your life."

Something like this Theodore senior may have said to Theodore junior. Something like this ought to be said to every silly boy—yes, and silly girl—who thinks it smart in college to be cruel and lawless.

Abbe Klein's Complaint

It is not easy to see what are the injustices which the churchmen find in the French law separating Church and State; but the Abbé Klein has, to the benefit of American readers, pointed them out, altho himself not one of the class which has declared for a fight to the end. They are these:

1. "In 1790 the National Assembly and afterward Napoleon, agreed in the name of France to grant salaries to all the ministers of religion as a compensation for the property which the Church had relinquished under this express condition. The State has now broken this solemn agreement without offering any serious compensation. It has not even left the religious bodies the real ownership of the churches. It has only granted the use of them on conditions fixed by itself and at any time liable to be revoked. It has been decided that in two years' time the Government will take over the Bishops' houses, and in five years the rectories and seminaries."

Is this statement of the case true? As we understand it, the Church had not relinquished the Church property on an amicable agreement with the State, but the State had previously, under the Revolution, taken possession of the churches under its right of eminent domain, often tyrannically exercised, but yet valid. Napoleon did not give the churches back to the Roman Church, and did not make the agreement to support the clergy as a restitution for the act of the Government of the Revolution. Indeed, he maintained that action, and if in any degree the claim can be made that this was a restitution, it would apply only to the Church property which had been sold. The remaining Church property he gave the Church to use, but under strict civil ownership and law.

It may be claimed that there was a moral claim made by the Church, if not definitely admitted by Napoleon, that the grant of stipends was in virtual payment for the loss of the churches held by the State. But they have held the churches all this time, and they are still to hold possession of them as long as they please under the law; and we would think that a hundred years of support would have quitted that debt. Must it continue forever?

The next complaint brought by the Abbé Klein against the new law is that it confines churches to the support of worship, and requires that any funds or establishments belonging to the churches which have a charitable purpose shall be transferred to separate similar organizations existing for that purpose. That varies from our liberty, for we would allow a Catholic or Lutheran church to have a school property or an orphanage or hospital. But this is not the established French way, under which the religious orders have been suppressed. In France they think it not safe to let the Church acquire great property. It is the feeling which here asks that we limit the wealth of the millionaires. Under the French law, the property which a church, thru its cultural association, can hold is limited to three times its annual expenses, except as a fund is raised to build or repair. The Abbé takes offense that each cultural association is required to give in an annual financial report to the Government; but that seems quite innocent.

The Abbé Klein has one other wrong to mention. It is that "for the crime of speaking against the magistrates or the laws in a church" there is the penalty of fine or imprisonment. That is not quite the fact. What the law says is that if a minister of religion shall in church "have outraged or defamed a citizen charged with a public service" he shall be subject to fine or imprisonment; or if his discourse "contains a direct provocation to resist the execution of the laws" he is liable to imprisonment. Whether or not that is after the way of American law, it is quite after the style of legislation in France or Germany and is not to be complained of. The Abbé says it might be used to punish a priest who preached against divorce; but that is not true, unless he counsels violent resistance or attacks an officer of the law personally.

But the Abbé Klein, who wrote before Pius X's last encyclical, thinks that, with some injustice, the law on the whole gives the Church much needed freedom,

and can be accepted. He does not seem to object particularly to the cultural associations, or boards of trustees. What he will do now that the Pope has condemned them it is not easy to surmise. We are inclined to think that the French bishops will find some way to obey the law and reap its advantages. To refuse would be suicidal. Nevertheless the present Pope seems to lack the prudence and patience of Leo XIII, and he is giving much anxiety to the more liberal members of the Church. They are quite concerned over the threatened new Syllabus.

Homicide as an Amusement

MACAULAY holds our Puritan ancestors up to ridicule for abolishing bear-baiting—"not because it gave pain to the bears, but because it gave pleasure to the spectators." In this, however, the Puritans were quite right. They had a deeper knowledge of the psychology of immorality than Macaulay. It was not nearly so bad that the animals should suffer as that man should take delight in their suffering. The same thing can be said with a considerable degree of truth about the practice of Jew-baiting now prevailing in Russia. The loss of a few thousand Jews, however valuable as citizens some of them were, is something that will injure the future of Russia less than the fact that hundreds of thousands of orthodox Russians took pleasure in hunting, torturing and killing them. These massacred Jews might have been killed by a cyclone with as much suffering to themselves and affliction to their relatives, but that would not have been so bad as to have them butchered to make a Russian holiday. What shocks us most in the news from Russia is not the assassination of a grand duke or chief of police, but the stories of the boys and girls in their teens who throw bombs into crowds for the fun of the thing, and the Cossacks who practice fancy shots at the heads of spectators in the windows of their homes. And so of our own pogroms. Some who witnessed the Atlanta massacre give it as an extenuating circumstance—extenuating, mind you—that the riots were begun by frolicsome rowdies, who attacked and beat negroes in a playful spirit, just as in other communities they knock off hats and tickle necks. We have never witnessed a lynching, but we have seen something more horrible—little children playing at lynching one of their schoolmates. To kill a man in wrath is bad enough, but to kill him in fun is much worse.

Delight in seeing people in danger of death is only an attenuation of the same wicked emotion. What did 200,000 people go into Long Island at sunrise last Saturday to see? Was it purely to witness the conquering of space and the triumph of man over machine? Was it merely to see which country made the best automobiles or which chauffeur was the most skillful? It must be admitted that a very large, if indeterminate, element of their enjoyment of the race was the well-founded expectation that somebody, participants or spectators, would be killed. The crowds gathered thickest at such points as the hair-pin curve, where the anticipated "accidents" were most likely to happen.

The result of the race was a disappointment to many people. Only one man was killed and four or five wounded. It was only by chance or mischance that it was not a dozen. But it was thrilling to see an automobile weighing a ton run at the rate of a mile a minute thru a lane of spectators so narrow that it brushed their clothes on either side, or dash thru a fence straight into a scurrying crowd. A car driven by an Italian millionaire became unmanageable on account of the steering gear, ran over a thirteen-year-old boy, and smashed against a telegraph pole. The Italian shed tears, not, of course, because he had hurt the boy, but because he was out of the race in the first round. Tracy, driving an American car, ran over a boy and smashed both his legs, but fortunately the accident did not delay him a second. Shepard was not so lucky, for in killing his man he bent his crank and was soon obliged to quit. He did not notice that he had run over anybody until his mechanician suggested that as an explanation of the bent crank. Mr. Shepard is still under sentence in France for this absent-minded way of running an automobile. Last year, in St. Ouen, he killed a twelve-year-old girl, on whom

rested part of the burden of supporting the family. He did not stop for it; in fact, he said he did not notice it at the time. His companion, Mr. Thorne, told him of it later, but he did not think it advisable to go back to investigate. But the French do not take homicide so lightly as we, and he was arrested for killing the girl and fleeing from justice, and sentenced to a fine of $120, the payment of $4,000 to the girl's parents, and to three months in jail, but the imprisonment was suspended. There was great excitement over the affair, and the popular prejudice against American automobilists is still so strong that he finds it pleasanter to live in this country, where he can pursue his favorite sport without interference by the law.

One day last summer we sampled the popular amusements of Coney Island and found them essentially the same as those that pleased the Roman senate and people 2,000 years ago. The bloodshed was not real as formerly, but mostly fictitious or potential, still the enjoyment of the crowd in it had the same basis. First there was a Wild West show culminating in a lynching, when a thousand spectators enjoyed the sight of a horse-thief dancing in the air. Then we went to the lions' cage, where a crowd was watching a one-armed lion trainer, eager to see his other arm torn off by the beast which had a few months before bitten off the first. When the lions left the cage, most of the crowd went away, for the performances of seals, dogs, goats and monkeys, tho quite as interesting as illustrating the power of man and the capacity of animals, had no element of danger. The trapeze acts we saw would have been just as beautiful if there had been safety nets underneath, but these would have diminished the attraction to the degree that they decreased the danger. Looping the loop and other centrifugal diversions obviously derived much of their popularity from their ostensible danger. The "Dip of Death," in which an automobile turns a somersault in the air, tho very interesting and instructive as an experiment in physics, would not have drawn the crowds unless they had known that a helpless girl was bound in the machine. For refreshment, after so many harrowing scenes, we went to a restaurant where the moving pictures gave us a vivid representation of "the great game," the hunting of men. It was evidently thought a suitable and graceful accompaniment to the badinage and flirtation at the tables to watch the struggles of a girl in the hands of a black brute in the woods, and it apparently added a pleasant piquancy to the ice cream to see the writhing negro burning at the stake.

Milk and Alcohol in Medicine

THE *Journal* of the American Medical Association in a recent number comments on some very interesting data with regard to the comparative consumption of milk and alcohol in the London hospitals during the past forty years which were the subject of an important communication from Sir Victor Horsley at the recent meeting of the British Medical Association at Toronto at the end of August of the present year. Sir Victor Horsley is one of the most distinguished surgeons of the English-speaking world, and is widely known for his magnificent work on the surgery of the brain and the spinal cord. The question of the present use of alcohol in medicine and in hospital work was touched upon at several of the section meetings at Toronto and was the main subject of Sir Victor's address at the temperance luncheon given to the doctors during the meeting, which was attended by more than three hundred physicians. As the statistics given serve to indicate very well the present attitude of the London medical profession toward alcohol as compared with their feelings in the same matter forty years ago they are sure to be of much more than passing interest.

At the beginning of the seventh decade of the nineteenth century the total expenditure for alcohol in the London hospitals was about $40,000 a year. The expenditure for milk during a corresponding period was about $15,000. At the present time these figures are almost exactly reversed. The annual expenditure for alcohol for medicinal purposes is slightly under $15,000, while

that for milk is more than $40,000. Of course it must be borne in mind that the London hospitals now do much more work and tend many more patients, both indoor and outdoor, than was the case forty years ago. Notwithstanding this the bill for alcohol is scarcely more than one-third what it was half a century ago. The fact that the milk bill should have risen to take its place is the best possible index of the attitude of the physician of the present day toward both these liquids.

Commenting upon this complete reversal of feeling in physicians' minds the *Journal* of the American Medical Association suggests that the contrast between the use of milk and alcohol is likely to be further increased with the progress of medical science. Forty years ago, because of the occurrence of infection after surgical operations, asepsis was very common in the London Hospital. This was nearly always treated as a sort of last resort by large quantities of stimulants. It is generally acknowledged now that this method of treatment did very little, if any, good beyond giving the patient a sense of well-being and exhilaration that prevented discouragement and nervous collapse in the case of surely advancing death. Sepsis is extremely uncommon now, and the stimulant treatment of it when it does occur is used almost exclusively by old-fashioned surgeons, who still cling to the traditions of a previous generation.

The decrease in the use of alcohol and the corresponding increase in the consumption of milk represents indeed a definite principle in medication whose significance cannot be mistaken. Physicians do not esteem stimulation of the patient by any form of drugs nearly so much as formerly. Such drugs are very illusory in their effects. They affect the patient favorably for the moment, but the subsequent depression more than makes up for the previous exaltation of spirits and apparent increase of vital force. On the other hand, food in its easily assimilable forms has come more and more into favor. From the time when Graves declared that he wanted no better epitaph on his tombstone than the words "He fed fevers," the necessity for keeping up the strength of the patient in order to increase his vital resistance has become of greater significance to physicians. There used to be considerable prejudice with regard to milk, because occasionally it did not agree with particular patients; but this was a matter of idiosyncrasy, and in spite of isolated, unfavorable experiences milk has come to be looked upon as the most important element for preserving strength and renewing tissue loss that the physician has at his command.

There are not a few physicians who insist, for instance, that even the popular use of stimulants for the purpose of throwing off colds, as the little infections of the winter time are called, and other ailments due to fatigue and exposure, is entirely without foundation in our modern knowledge of therapeutics. The quinine and whisky popularly employed for this purpose probably does more harm than good. The quinine has no *raison d'être* at all, because now it is known to produce its good effect in malaria not by any general tonic qualities, but by its power to kill the micro-organisms which cause the disease. Formerly it was much used in general medicine, but now it has dropt out almost completely except for the treatment of malaria and in the hands of the older physicians, who still cling to its use because of custom. The whisky in the quinine-whisky remedy only serves to disturb the patient's general condition and give him headache and depression on rising the morning after, if he is unaccustomed to its use.

In a word, alcohol is going out in medicine, and tho, as is the case with nearly all outgrown medical remedies, it still retains a place of supposed importance in popular estimation, this is not justified by the experience and the careful observations of trained medical minds. Its use is in most cases a superstition in the real sense of that word. It is a survival—*superstes*—of a previous supposed state of knowledge which scientific advance has shown the fallacy of, but which many people cling to, partly from over-conservatism, but mainly from ignorance of the real state of affairs.

New York Politics

In the New York State campaign there are no prominent speakers in the field except the two candidates, Mr. Hughes and Mr. Hearst, altho it is said that Secretary Root, Secretary Shaw and Speaker Cannon will soon take part. Mr. Hearst asserts that Mr. Hughes is a corporation lawyer, nominated and supported by corporation influence. Mr. Hughes undertakes to prove that his opponent's journals are controlled by means of a network of corporations and holding companies, devised to escape taxation and to prevent the collection of damages sought in libel suits. Mr. Hearst denies that he is in alliance with Murphy, the Tammany leader, but does not attack him. His bitter denunciations of Murphy in past years are now cited by the Republicans for his discomfiture, together with his warm commendation of Hughes when the latter was engaged in the insurance investigation. The appointment of Mr. Sheldon as Treasurer of the Republican committee is criticised because he was rejected a few years ago by the party leaders as a candidate for Lieutenant-Governor on account of his connection with Trusts. Mr. Hearst in his speeches sharply attacks ex-Judge Parker, District Attorney Jerome and other prominent Democrats who opposed his nomination and will not vote for him. The disagreement of himself and of his followers with other Democrats in several cities have caused local complications. Thus, in Brooklyn and Buffalo, his Independence League will support local tickets of its own against the Democratic organization. In New York, where Mr. Murphy is the party leader, a final agreement does not appear to have been reached as to a division of the nominations—including that of thirteen judges—between Mr. Murphy and the representatives of Mr. Hearst. The latter is proving himself an unexpectedly successful public speaker. He pleases the crowds that hear him, and his replies to his newspaper critics are sharply effective. He denounces as lies, and with no evasion, many statements about his use of money in his campaign; and the chief attack upon him thus far is that he is inconsistent in attacking corporations when he is a chief owner and manager of corporations and holding companies. It is also true that he does not seem particularly subservient to Mr. Murphy and the Tammany crowd, indeed quite the contrary. The real complaint the people make of him is the sensational way in which he runs his newspapers, using his wealth of journalism for demagogic personal ends.

Digging the Canal

The Isthmian Canal Commission will have the Panama Canal dug by contract, if they can get contractors. That is the conclusion that has been anticipated from the beginning. A too much discredited engineer in charge of the work, who was discharged for his criticisms of the Commission, told them so. It began to be evident that the expense of digging the canal by a succession of Commissioners and engineers would not be conducive to economy of either money or time. Besides, there was the question of labor. Should the Government, if it did the work, employ Jamaicans or Martinicans or Chinese coolies or Italian Americans? To be sure, Congress has the right to say as to hours of labor and the diggers, but if the immediate responsibility can be put on contractors, so that they shall get the blame for what goes wrong, or is thought wrong, it would be a great relief to the Government authorities and, indeed, to the public. Further, this will save a great many charges of graft. Scandal is likely to follow scandal; charges of places made for incompetent attachés for politics' sake will be multiplied so long as the Government doles out the millions itself. Let the work be done by contract, and the public will have no interest in just how the contractors spend or save their money, so long as they hurry up the work, as they have been doing in the various subway excavations about this city. We believe in Government ownership and operation of public utilities, but it may be well to begin the experiments on a less gigantic scale; and, besides, ownership and the subsquent operation of the canal is not here affected—only the digging and building of the canal.

Senator Tillman's Prophecy

Few public men know his sort of South better than does Senator Tillman, and this gives alarming weight to his prophecy that within ten years, and more likely within five years, there will be a series of race riots, in both the North and the South, such as Atlanta has given us a sample of. Probably no one will ever know how many negroes were killed at Atlanta. We read in the Charlotte, N. C., *Observer,* a white paper, the statement of a Georgian visiting Charlotte, that the facts were withheld from the press. He says there were certainly as many as 150 slain, that six corpses were found in one heap the next morning and twenty-five in another. Every one was an innocent man except as he was guilty of his color. Senator Tillman said the whites are determined to rule, and that the negroes are beginning to demand equal rights. Now if such race conflicts are to occur who will be to blame? Who was it that began the killing in Atlanta, the whites or the blacks? Men of which color were allowed to get all the arms they wanted, while the others were disarmed? Is it not the side that does the lynching that will begin the general killing? If so, is there any doubt where the blame will belong? But we do not believe that these race riots will be at all general so as to prevail, altho the possibility may make us very serious. We believe that the decent white men in the South, the men who have so roundly condemned this Atlanta riot, who condemn lynching everywhere, will arouse themselves to suppress the reckless mob element, even as they have condemned the shameless paper which was so much responsible for the Atlanta outbreak.

Closing Atlanta Saloons

In the refluxes of advancing civilization good may always be expected to come out of evil, whether in Russia or the United States. What is the good that will come out of the Atlanta riot? The Rev. John E. White, D. D., pastor of one of the largest white Baptist churches in that city, tells the readers of a Southern Baptist journal. First he characterizes the riot; says one policeman was killed because the negroes thought it was the mob; says that not a negro criminal suffered; says the police sympathized with the mob; declares the city is disgraced before the world by these brutal murders. But there will good come out of it:

"The spirit against the whisky traffic is terrific. The license of every saloon has been revoked by the city council. We are going to close up all dives and barrooms that attract negroes and low-browed whites. Then we are going to move against the saloons of the more respectable type. Whatever the reforms we get, we have paid very dearly for them."

That is better than the cry of some Atlanta papers to send to the chain gang the negroes that hang about these saloons.

"Vox Populi Vox Dei"

There are those who utterly reject the saying that "the voice of the people is the voice of God"; they agree rather with the Western orator who blundered in his eloquent peroration and thundered it out *"Vox populi nux vomica!"* Abraham Lincoln did not believe that the people could be deceived all the time, but that their final conclusion would be right. A view very disparaging to popular majorities is expressed by the Archbishop of Westminster, who, in a recent address on French conditions, said:

"I know there are some who would attach to the will of a passing Parliamentary majority a sacredness, an inviolability, nay, an infallibility, greater than that which belongs to any other declaration on earth. I cannot share these views. But in France, where vast numbers of people take no interest in political life; where the best and the ablest regard political careers under present conditions as unworthy of honorable and self-respecting men; where Government is so centralized that elections can be very effectively controlled; where the secrecy of the ballot is not beyond suspicion; where State officials are oftentimes expected to sacrifice conscience, or to forego promotion; where a man's private concerns are spied upon and delated to his official superiors—I confess that I cannot regard the Ministry or the Chamber as representing in any true sense the articulate and conscious voice of the great French nation."

This is pretty rough language to utter as to the honesty of French elections. It sounds much like what we hear of in Cuba. The Archbishop admits that the

French people have supported the present laws which are offensive to him "by increased majorities at every Parliamentary election," and we wonder how he can expect a more "articulate" voice. Of course the motto *"Vox Populi Vox Dei"* is not literally and always true, but it is a general expression of the great faith that truth is mighty and will prevail; *"Magna est veritas et prævalet."*

We heartily agree with *The Churchman* when it says:

"We feel that in the end, and considering the whole country, those connected with religious and charitable affairs lose more than they gain by accepting passes and rebates, just as we think they lose more than they gain by accepting clerical discounts from tradesmen."

They lose it in their own self-respect, and in the respect of the public, and in the confidence of the common people in them. "Why should they get favors that we cannot get?" asks the workingman. "Is it for influence?" "Is it given, as Senator Depew said, 'to create an atmosphere of good feeling?'" But the prejudice against the clergy for taking rebates bears also against relieving churches of taxation, or in England supporting religious schools from the rates. We would we were clear of the whole thing.

Can a watering place, where rich people go for recreation or health, such a place as Saratoga or Newport, have a successful season without gambling? So people begin to believe, as we have seen in Saratoga; and now the Arkansas Hot Springs people, in Arkansas, have risen in their might and driven out all the gamblers at short notice, five hundred of them, and sent all their half million dollars' worth of paraphernalia out of town. We venture to say that both profit and ethics united in this conclusion after forty years of free gambling.

To imprison and flog a minister for a prayer is somewhat unusual, and yet that is what was lately done in Natal. An "Ethiopian" preacher, so called, is said to have offered a seditious prayer in a native village. It was to the effect, as reported, that the Lord would "give the natives strength to drive the whites across the sea." For this offense he was sentenced to six months imprisonment and twenty-five lashes. We very much doubt that he offered such a prayer, and, further, that any white witness heard or understood it. The "Ethiopians" are simply a sort of African Methodist Church, and the whites are desperately afraid of them, and forbid natives to hold a religious service without a white minister present. These are not the generous ways that induce loyalty.

In a valuable historical article in *The Outlook,* President Wheeler, of the University of California, opposes the reformed and simplified spelling of three hundred words chiefly because reform should be first agreed upon by all English-speaking people. That would make long delay. Of all the suggested changes, the one which most offends him is *thru,* for he says the prevailing sound of long *u* is *yu,* as in *use.* But it is a fixt law of English phonetics that *u,* when following *r,* never has the sound of *yu,* but of *oo.*

Senator La Follette did not get much encouragement in the Senate when he attempted to persuade that body to withdraw coal lands from free public entry. But now the President is issuing the order, to prevent the great evil by which the rich railroads are by hook and crook buying up these lands. We heartily endorse the action of the President and Secretary Hitchcock and welcome the news that he will cancel large patents to such land obtained by irregular means.

The Prussian Diet has brought a libel suit against an Erfurt newspaper which alluded to it as the "house of shame." It is now in order for the United States Senate to bring a similar suit against all the magazines and newspapers of the country that have alluded to it in disrespectful terms.

Insurance

The Mutual's Axe Still Working

THE agency committee of the Mutual Life Insurance Company, of which Mr. Henry H. Rogers, of the Standard Oil Company, is chairman, at a meeting held on October 4th canceled a contract the company had with Colonel Briscoe Hindman, of Louisville, as general agent for Tennessee and Kentucky. Colonel Hindman is nominated for trustee on the third ticket. Like Messrs. Fell, Paige, Sutton and Ferre, whose cases were touched upon in this department last week, Colonel Hindman was considered lukewarm toward if not actually hostile to the company, and his connection with the company was thereupon severed. A statement issued by the Agency Committee, following its cancellation of the Hindman contract, disclaims any attempt looking toward the coercion of agents or other employees. At the same time the Mutual's preliminary requirement of every employee "wholly and unreservedly" to sustain the administration ticket has been in nowise abrogated. It has rather been strengthened and fortified by the circulation of a blank furnished to the managing agents in the several States, with directions for prompt return with the signatures of ten prominent policy-holders. The text of what has been termed the Mutual's "certificate" is given below.

To the policy-holders of the Mutual Life Insurance Company of New York in the State of ———:

The thirty-six candidates for Trustees named by the Mutual Life Insurance Company of New York are all men of noted ability and unimpeachable integrity, twenty-one of whom, constituting a large majority, were not members of the board during the days of the old *régime*. The remaining fifteen have been Trustees for some years, constituting the members of the old board who, with their nine associates elected during the reorganization period, eliminated abuses, changed the old management, enacted new by-laws and regulations, and instituted new economies and reforms that will effect a saving of millions yearly for policy-holders. These fifteen old Trustees, with the nine additional members referred to, constitute an experienced body of twenty-four able and trustworthy men, who, with the twelve entirely new candidates, likewise men of the highest character and business ability, are entitled to our confidences and our suffrages. We, whose names are hereto affixed, beg our fellow policy-holders to consider well before substituting for this ticket the names of opposing candidates. Our interests are too vast to be entrusted to a body of new men, who lack experience in the company's affairs. The movement which brought about their nomination through the so-called policy-holders' committees, was, in each instance, inaugurated and is now manipulated by designing men, who are spending large sums of money to gain even an indirect control of the company. Again we urge you to protect your own interests by sustaining with your votes the present administration. We beg you not to disfranchise yourselves in advance by signing away your rights to proxy hunters, but to cast your ballot personally or by mail, as provided by law, voting directly for the administration ticket.

The action of the Agency Committee in dismissing Colonel Hindman seems likely to result in some action on the part of the State of Kentucky regarding the matter. Henry R. Prewitt, Commissioner of Insurance for Kentucky, on the day following the dismissal of Colonel Hindman, telegraphed President Peabody of the Mutual Life, and summoned him to Frankfort to account for his action in this regard. The intimation was given that, if telegraphic reports of his action proved to be correct, the license of the Mutual to do business in Kentucky will be revoked.

....D. S. Creamer, the State Fire Marshal of Ohio, in an official circular, dated September 30, sounds a warning note regarding the fire hazard to be looked for in the heating apparatus of churches. These, Mr. Creamer suggests, should be inspected now, before wintry weather calls for their use. Numerous fires take place because of defective flues, caused by iron work that has rusted during the summer time. An autumnal inspection would disclose damage that often arises during the heated term, when heating is quiescent. A fire in a church is likely to result in a total loss, because of the lack of partitions to hold back the flames and the draft which arises because of the spire that looks so picturesque, but which acts as a dangerous flue when a fire starts. Acetylene lights are a fire menace, as are also the gasoline light machines that find frequent use in rural districts. Heaters and lightning rods are also to be named as special fire hazards.

Financial

Great Sale of Iron Ore

After long delay, the contract of the United States Steel Corporation relating to the iron ore deposits owned by James J. Hill and his associates was signed on the 6th inst, the Corporation thereby obtaining control of a body of ore variously estimated to be from 400,000,000 to 700,000,000 tons. While the property sold or leased includes 35,000,000 tons belonging to the Northern Pacific, and 30,000,000 owned by J. W. Longyear, the bulk of it has been an asset of the Great Northern Railroad Company, whose shareholders will be the chief beneficiaries of this important transaction. It is said that Mr. Hill holds a majority of the Great Northern shares, which are now selling for for nearly three and one-half times their par value. About $150,000,000 of stock is now outstanding. The ore lands came into his hands years ago with the road, which, he says, was "a wreck." They cost little or nothing. For the ore in them the Steel Corporation may eventually pay $500,000,000 or even $1,000,000,000. The price for the first year is $1.65 per ton, for ore delivered by rail at upper lake docks. This is to be increased by 3.4 cents in each succeeding year. By agreement, the minimum taken out and paid for is to be 750,000 tons in 1907. Each year 750,000 is to be added until 8,250,000 is reached, which is to be the minimum thereafter. The payment of at least $92,895,000 within the coming ten years is therefore assured. Nearly half will go to the Great Northern for railway transportation. Eighty cents, out of the $1.65 or more per ton, will be paid for carrying the ore from mine to dock. The minimum to be paid by the Steel Corporation in 1917 will be about 11 per cent. on the Great Northern's present stock.

In 1905, the Corporation mined about 18,500,000 tons. Its ore holdings have been estimated at 1,200,000,000 tons, or enough for 60 years. This purchase adds enough, probably, for 25 years at least. Mr. Hill thinks the lands contain 700,000,000 tons. In comparison with the Corporation's ore property and resources in the Lake iron region, the combined holdings of all other corporations or persons are now of little weight.

Currency Questions

Committee reports from the New York Chamber of Commerce and the American Bankers' Association give fresh prominence to the subject of currency reform. The Association committee's project, which is to come before the approaching convention at St. Louis, calls for a permanent national Currency Commission of seven persons, empowered to permit a national bank to issue credit currency in any amount not exceeding 50 per cent. of its bond-secured circulation, upon the deposit of approved securities to an amount exceeding the desired new circulation by 10 per cent. The Chamber of Commerce's special Committee on Currency—composed of John Claflin (chairman), F. A. Vanderlip, Isidor Straus, Dumont Clarke and Charles A. Conant—has made an excellent report, which presents clearly the problem to be solved. Holding that the ideal project would be the creation of a great central bank of issue, the committee admits that the establishment of such an institution is out of the question. Its alternative is that any bank whose bond-secured circulation equals 50 per cent. of its capital shall have authority to issue additional notes equal to 35 per cent. of its capital, these resting upon assets alone and being subject to a progressive tax, rising from 2 to 6 per cent. and designed to cause early redemption. With this are recommendations of less importance. These propositions will be thoroughly discussed at the convention and in coming meetings of the Chamber, and the results should promote legislation for imparting needed elasticity to our currency system.

. . . . It is generally understood in Mexico that the principal object of Finance Minister Limantour's trip to Europe is to bring about the acquisition of the Mexican Central Railway by the Mexican Government.

. . . . Dividends announced:

Amer. Tel. & Telegraph Co., quarterly, $2 per share, payable Oct. 15th.

U. S. Rubber Co., quarterly, 2 per cent. 1st Preferred; 1½ per cent. 2d Preferred, payable Oct. 15th.

Guanajuato Cons. M. & M. Co., 1½ per cent., payable Oct. 31st.

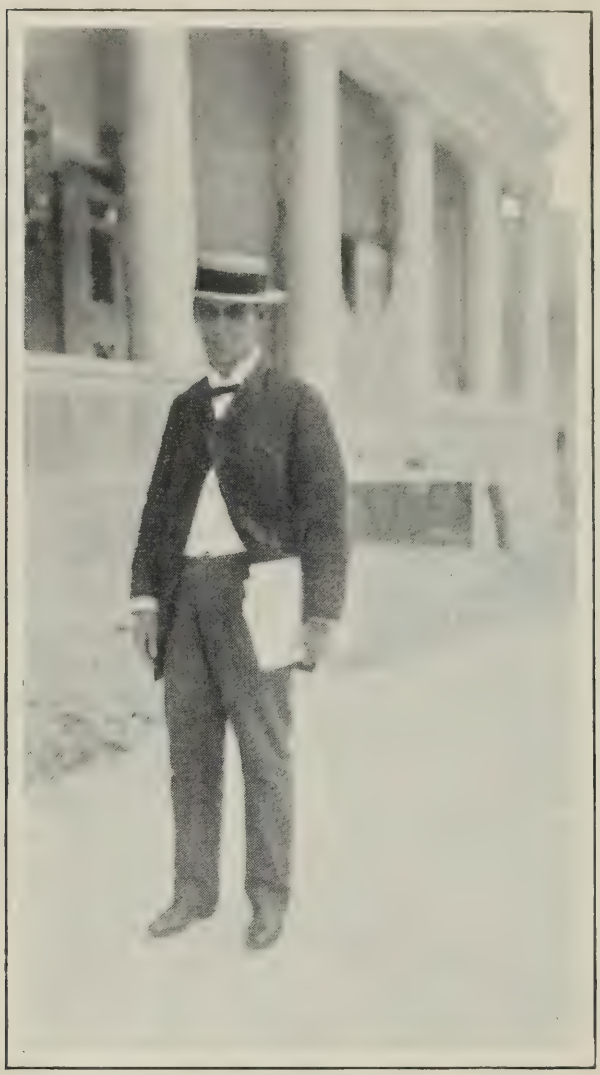
The Independent

VOL. LXI. NEW YORK, THURSDAY, OCTOBER 18, 1906 No. 3020

Survey of the World

The Situation in Cuba

Governor Magoon and Brigadier-General Bell arrived at Havana on the 9th, and on the same day Secretary Taft issued a proclamation of amnesty and pardon "to all persons who directly or indirectly participated in the recent insurrection, or who have given aid and comfort to persons participating therein, and for all offenses of a political nature committed in the course of said insurrection prior to the disbandment." This included, it was explained, the killing of Congressman Villuendas at Cienfuegos in 1905, and the killing of Rural Guards at Guanabacoa by insurgents in Februin 1905, and the killing of Rural Guards ary last. The action directed with respect to these two affairs (it was said in the proclamation) was not to be construed as in the slightest degree justifying or palliating the offenses, both of which were most deplorable, and, under ordinary conditions, would call for prosecution:



"But the present high state of political excitement and the danger of public disturbance growing out of the emotions which would be excited by trial for these offenses, and by either the conviction or the acquittal of the accused, make it vitally important in the public interest and to secure the greatest good to the greatest number that the prosecutions should be quashed and that oblivion should follow."

On the same day an order relating to the duties of the American troops was issued. These troops, the order said, were not expected to take part in any active way in the suppression of disorder unless an extreme emergency should make it absolutely necessary for them to protect life and property:

"Their duty generally is limited to tendering their good offices between the conflicting elements and in preventing friction that in the high state of tension between the political parties is inevitable during the present crisis. It is expected that their presence in the community will create such a sense of security that the Rural Guards and local police will be able to suppress any disorder that may manifest itself. The President of the United States deems it of the utmost importance that the American forces here be not engaged in any conflict with the Cubans, but that disorders by Cubans be suppressed by Cubans. It is also expected that officers and men, both in the Army and in the Marine Corps, will exert every effort to manifest all the courtesy possible to Cubans of all parties, and avoid injuring their sensibilities."

A party of revolutionists and Liberals, led by Señor Zayas and General Jose Miguel Gomez, called upon Secretary Taft and asked him for a declaration of the intentions of the United States and of the Provisional Government's policy concerning appointments to public office. For an answer to the first inquiry he referred them to his proclamations, saying that the Cubans could hasten the establishment of those conditions which must precede the withdrawal of troops. There must be an honest election, with the results of it peacefully accepted. As to public offices, complaints against incumbents would be heard; good officers would not be dismissed. Señor Zayas and his companions had explained that they had no personal desire for office, but were unwilling that unworthy officers should be retained and that the Government should continue in the form and character against which there had been armed revolt. By decree, Congress will be in recess during the term of the Provisional Government.——To a group of delegates from the Isle of Pines, Secretary Taft said, on the 12th, that it would be impossible to admit for a moment that the island, as a part of the Cuban Republic, was not completely under the juris-

diction of the present Government. Separation would be a violation of the sacred trust imposed upon that Government. It was pointed out that the executive authority of the United States had declared that the island belonged to Cuba, and that this declaration had been embodied in a treaty now pending. Twenty-five marines were sent to the island.——Secretary Taft and Mr. Bacon left Havana on the 13th, sailing on the battleship "Louisiana," and escorted

Photo, Underwood & Underwood, N. Y.

Senator Alfredo Zayas, the leader of the Liberal Party, and principal spokesman of the rebel cause.

out of the harbor by many Liberals. The customary salutes to the Cuban Republic were fired on the battleship, and were answered from Morro Castle. Following were the "Virginia" and the "New Jersey," the first of these bearing General Funston. Their bands were playing the Cuban National Hymn. While it was officially stated that General Funston had completed the work of his mission, it was understood that if he had remained in command he would not have been acceptable to prominent Cubans, who had not forgiven him for his withdrawal from their revolutionary army nine years ago. Upon assuming office, Governor Magoon issued the following proclamation:

"The policy declared and assurances given by my predecessor, Secretary Taft, will be strictly adhered to and carried out. As Provisional Governor I shall exercise the powers and perform the duties provided for by the Third Article of the Appendix [the Platt Amendment] to the Constitution of Cuba, for the preservation of Cuban independence and for the protection of life, property and individual liberty. As soon as it shall prove to be consistent with the attainment of these ends, I shall seek to bring about a restoration of the ordinary agencies and methods of government under the other general provisions of the Cuban Constitution. All provisions of the Constitution and laws the application of which for the time being would be inconsistent with the exercise of the powers provided for by the Third Article of the Appendix must be deemed to be in abeyance. All other provisions of the Constitution and laws continue in full force and effect."

Flight of a Cuban Financier

An interesting incident related to the insurrection and the change of Government in Cuba has been the flight of Manuel Silviera, the head of the banking house of Silviera & Co., of Havana, with a large sum of money, probably about $1,000,000, which was due to the old and well known banking firm of J. M. Ceballos & Co., of New York, whose representative in Havana Silviera was. Owing to this loss, Ceballos & Co. made an assignment on the 10th, with liabilities of from $3,000,000 to $4,000,000. Silviera, with his wife and children, sailed from Havana on the 2d on one of his own boats, the "Carmelina," having sent word to Ceballos & Co. that he was coming to New York to settle his accounts and take a rest. It is believed that he went to Venezuela (with which country Cuba has no extradition treaty), where he had been in partnership with a brother of President Castro in the cattle business. The firm of Ceballos & Co. is sixty years old, and has been largely interested in development projects in Cuba and Porto Rico—colonies, sugar estates, railroads, steam-

ship lines, etc. It has also dealt largely in the pay warrants issued to soldiers of the Cuban revolutionary army. The Government has paid out nearly $50,000,000 on account of these warrants, but at first the soldiers sold them at a great discount, and it is said that they have realized not more than 50 per cent. of their full value. There was much profit in the purchase and the collection of the warrants, and Silviera is said to have carried away $600,000 due to Ceballos & Co. on account of them. He was a very active and prominent promoter. Dispatches from Havana say that he quarreled with Palma because the latter declined to use his influence in favor of the purchase by the Government of the Tacon Theater property, which Silviera had bought; that he thereupon employed Jose Miguel Gomez (unsuccessful Liberal candidate for the Presidency) as manager of his great sugar plantation, where 5,000 men were at work; that the Government feared the influence of Gomez upon these men and demanded that Gomez be discharged; that Silviera discharged him and sought to regain the favor of the Government by betraying the negro insurgent leader, Quintin Banderas (whom the Rural Guards killed on one of Silviera's estates); that thereafter Silviera was in danger of assassination; and that he feared the intervening Government would increase this danger by disclosing his duplicity—for it is said that he helped the insurgents with money. At last reports, positive information as to the landing of Silviera in Venezuela or elsewhere had not been obtained.

Railroad Rate Questions

Eight additional indictments in the sugar rebate cases were reported to the court by the Federal grand jury in New York on the 9th. The defendants named are the New York Central Railroad Company, the Delaware, Lackawanna & Western Railroad Company, the Western Transit Company (engaged in freight traffic on the lakes west of Buffalo, and said to be controlled by the New York Central), the Northern Steamship Company (operating boats on the lakes), the American Sugar Refining Company, the Brooklyn Cooperage Company (said to be controlled by the Sugar Refining Company), C. Goodloe Edgar, and Edwin Earle, the last-named being wholesale sugar merchants of Detroit. It is charged that rebates, ranging from 2 to 19 cents per hundred pounds, were granted by the transportation companies to the Sugar Refining Company (commonly called the Sugar Trust), which is also to be prosecuted for accepting the same.——The trial of the New York Central upon similar indictments found some months ago was begun in New York on the 15th.——According to recent dispatches, Commissioner Prouty says that the Union Pacific Railroad Company has obtained possession of large tracts of coal land in the public domain by unlawful entry, thru the agency of a subsidiary coal company.——It is announced in Chicago that plans have nearly been completed for a great railway equipment company, to be capitalized at $100,000,000, which is to take the place of the private car companies in furnishing refrigerator cars to the railroad companies. The project is in the hands of J. W. Midgley, the well-known expert in questions of special car service.

Various Notes

The petition of Senator Burton, of Kansas, for a rehearing in the case in which he is under sentence of imprisonment was denied, on the 15th, by the United States Supreme Court. It is said that, in a communication to his attorneys, he has asked that his term of imprisonment shall begin at the earliest possible moment.——Attorney-General Moody intends to leave the Cabinet on January 1st next. It is thought that Secretary Bonaparte will be his successor.——The withdrawal of coal lands in the public domain from entry will be deferred until the Geological Survey shall have furnished reports as to the location of coal deposits. Recent disclosures as to the fraudulent acquisition of large tracts of coal lands by railroad companies have confirmed the determination of the President and Secretary Hitchcock to withhold, if possible, from the railroad companies such coal lands as have not been taken. Suits against railroads to recover a part of the land fraudulently acquired are now pending in Utah and elsewhere.——The contest

over the street railway lines in Cleveland has been taken into court by the old company, which asks that the grants to the new one be declared null and void, and that all work on the new company's lines be stopped by injunction. One of the defendants is Mayor Tom L. Johnson, against whom the charge is made that, being financially interested in the new company, he procured franchises for it in violation of law.——The second of the Pennsylvania Railroad's two tunnels under the Hudson River at New York was opened on the 9th for the passage of a party of invited guests and reporters. It is expected that trains will be running thru each of the tunnels within eighteen months.

Prosecution of Trusts

During the trial, last week, at Findlay, Ohio, of the case of the State of Ohio against the Standard Oil Company (of that State) for violation of the Anti-Trust law, surprise was caused by the discovery that the Manhattan Oil Company (which is also to be tried at Findlay, and which has been regarded as a Standard Oil corporation) is owned by the General Industrial Development Company, Limited, of London, England, a company hitherto unknown to the public. The prosecutors had procured the admission of much documentary evidence relating to prosecutions of the Standard by the State of Ohio in recent years, and designed to support their contention that the combination or Trust, reported to have been dissolved by order of the court in 1897, was still in existence, thru the agency of the central corporation in New Jersey. Among the witnesses was President Cuthbert, of the Manhattan Oil Company (a pipe line concern), who admitted, testifying under a promise of immunity, that in places where he had competition he was paying 90 cents a barrel for oil which he was afterward selling to a buying agency of the Standard for only 85 cents. He also testified that he had been elected president by the votes (cast by himself, under a power of attorney) of 1,496 of the entire number of 1,500 shares, which were owned by the General Industrial Development Company, of London. Of the remaining four shares, he holds one, and one is held by each of the three local directors. He knew nothing about that company, he said, nor had he seen any one connected with it, but he had remitted money to its secretary, J. W. R. Francis. Inquiry in London showed that the company was domiciled in one small room; the only officers, the secretary and the managing director, were absent. It was registered in 1899, to carry on an investment business. This use of a foreign holding company is regarded as a new device which will make difficult the prosecution of combinations under the Sherman act, because the connecting link is buried or obscured in a foreign land. There are said to be several such companies in London and in Paris, and the existence of some of them, it is reported, recently became known to the Government at Washington. It is said that on this account the Government may decide to prosecute the officers of combinations, rather than the corporations. Attorney General Moody is soon to decide whether the evidence which the Government has collected is sufficient to warrant a prosecution of the Standard Oil Company under the Sherman Anti-Trust law.——It is reported that the prosecution of the Chicago beef packers under this law will not be continued. In case of conviction, the penalty would be only a small fine for each defendant corporation.——The combination of bridge companies in Ohio has been broken up by the recent prosecutions. Five of the companies have surrendered their charters, and several others have withdrawn from the State.——The Attorney-General of Kansas, enforcing the Anti-Trust law of that State, has begun a criminal proceeding against the International Harvester Company.

Bids for Panama Canal Work Invited

Contractors have been invited to submit proposals for the completion of the Panama Canal. It is provided in the form of contract that each bidder must undertake to do the entire work of construction. The association of several corporations will be permitted, but they must be legally organized in a single body with which the Government can deal. Each bidder must have an available capital of $5,000,000, and must submit a certified check

for $200,000. All bids must be in before noon on December 12th. The percentage plan has been adopted. Proposals will be expressed in terms of percentage upon the estimated cost, and the estimate is to be made by a board of five engineers, three representing the Government and two representing the contractor. This board will also estimate a reasonable time for the completion of the work, and will provide a system of premiums and penalties relating to this period. All the Government's plant for actual construction is to be placed at the disposal of the contractor; it will be maintained by the Government, which will also supply raw materials. The Commission will retain control of all engineering work, with all municipal engineering, the police, sanitary, hospital and commissary departments, mess houses, quarters and the operation of the railway. In a letter to Secretary Taft, defending the contract plan, Chairman Shonts says that, "because of the unprecedented and greatly extended industrial activity of the time, and the consequent violent competition for all classes of superintendents, foremen, sub-contractors, skilled mechanics, and even ordinary laborers, it would take the Commission years to secure men and build up departmental construction organizations which would equal in efficiency those now controlled by the leading contractors of the United States." The percentage method of payment is to be preferred, he says, because the Government "will get the benefit of the combined efforts of the best contractors in the world, each in charge of a department in which he is a specialist"; because, by retaining control of the work, the Government will protect itself against cheap and faulty construction, and because, if it should be necessary to terminate the contract, an effective resumption of the work would be made easier to the Government. It is expected that bids will be received from England, Belgium, France and Germany.

Smuggled Chinamen

The schooner "Frolic," for which immigration inspectors and revenue officers had been searching along the New England coast for two weeks, entered Providence harbor at midday on the 9th. She brought forty-two Chinamen from Newfoundland and succeeded in landing twenty-seven of them. Only by accident was the schooner identified and the work of the smugglers interrupted. Some time after midnight, a laborer, employed on a wharf near the spot where the schooner lay, stumbled upon two of the Chinamen, who had just come ashore. Twenty-seven had already been taken into the city; fifteen were captured on board, and four of the twenty-seven have since been caught. The schooner sailed from Boston on August 29th, for Placentia. Her captain and the members of her crew were Boston men. They are now under arrest. Two brothers named Lehnemann were interested in the project. One had charge of the Chinamen in Newfoundland, after their arrival from the Pacific Coast; the other awaited their arrival at Providence. The latter now tells the police that smuggling ventures of this kind have been made for some years past, and that the profits of each trip were about $15,000. Each Chinaman paid in advance from $300 to $1,000 for his passage from Newfoundland. Alfred Ames, a member of the crew, says that he was employed as cook on the schooner "Bonita" when she, not long ago, landed thirty-five Chinamen at Marblehead.

Venezuela and Santo Domingo

President Cipriano Castro, of Venezuela, is said to be alarmingly ill, altho no official bulletins are allowed to be given out in Caracas. It is known that the General has been ill for over a month and a half, but what the illness is and whether it is getting worse or better only rumor can say. He has been for the past few weeks in the mountains confined to his bed, but last week he was removed to Caracas, and every one is denied to him except his Cabinet Ministers and his physicians. The people, however, are in a state of feverish excitement and the worst is feared. In the meantime the continued presence of Vice-President Gomez in the Capitol excites attention, as he usually spends his time on his cattle ranch in Maracy. If the President's illness is prolonged, Gen-

eral Gomez will probably have to assume the Presidency, so as to keep down the revolutions that are now becoming active in Curaçao and Trinidad. According to the Constitution of Venezuela, Gomez cannot assume the Presidency unless called to do so by the President himself, or, if the latter is incapacitated, by the Cabinet. In case of Castro's death, General Gomez will be the next President. ——Commander Southerland, cabling from Santo Domingo on the 10th, reported that the insurgents near Monte Cristi had decided to lay down their arms and make a lasting peace. It appears, however, that they changed their minds, for on the 13th he sent another message, saying that they had withdrawn to the woods and were making impossible demands. Continued insurrection may prevent a negotiation of the new refunding loan by which the Government hopes to adjust the foreign debt.

The Hohenlohe Diary

Germany is greatly stirred up over the revelations of statecraft given in Prince Alexander Hohenlohe's volume of Memoirs. These Memoirs give an intimate account of Emperor William's quarrel with Bismarck, and the Emperor is greatly enraged over the disclosures, and is credited with having in preparation his own version of that extraordinary event. When Dr. Geffcken published without authority the diary of the Emperor Frederick without permission from Emperor William he was severely punished, and similar action is threatened against Prince Hohenlohe. The revelations of these Memoirs are not a little offensive in both Russia and Great Britain. Prince Alexander Hohenlohe is a younger son of the Prince Hohenlohe who was the third Chancellor of the Empire. The Emperor has expressed to the elder son his indignation at the publication of a private interview of his own with Chancellor Hohenlohe, and this elder son has replied that he agrees with the Emperor that it was an act of great discourtesy to make the publication. The Emperor has added that it is an indiscretion for a public man in such an office to keep a diary. The excerpt from the diary which contains the interview with the Emperor gives a report of a conversation between the Emperor and Prince Hohenlohe on April 24th, 1890, during a drive to the shooting box at Sufflenheim. "For a whole hour without stopping, the Emperor told the Prince the whole story of his breach with Bismarck." The estrangement had begun in December, 1899, when the Chancellor opposed the Emperor's desire to take up the labor question. The Emperor had urged that unless the Government took the initiative the Reichstag —which meant in this case the Socialists, the Clericals and the Radicals— would take matters in hand and the Government would have to follow their lead. The Chancellor wanted to renew the expiring Socialist law and, if the new Reichstag did not vote it, to dissolve. If disturbances ensued Bismarck meant to act energetically. The Emperor opposed this policy, "because," he said, "if his grandfather (William I.) after a long and glorious reign had been compelled to take action against rioters no one would have taken it amiss. But with himself, who had not yet achieved anything, the case was different. He would be taunted with having begun his reign by shooting down his subjects. He was quite ready to act, but he wanted to be able to do it was a good conscience after trying his best to remedy the legitimate grievances of the working classes." Bismarck had worked against the labor edicts of the Emperor in the Ministry, and he had also tried to influence diplomatists and foreign Powers against the Labor Conference. He had tried this with Roth, the Swiss Minister in Berlin (Switzerland had previously been going to convoke an international Labor Conference in Berne), but Roth's straightforward behavior had frustrated the intrigue. Bismarck had threatened to resign in February, but, to the Emperor's disappointment, had subsequently intimated that on reflection he had changed his mind. Then there was the Cabinet order incident, and there was the incident of Windthorst's visit to Bismarck. "The last three weeks of Bismarck's Chancellorship were, in any case, full of disagreeable discussions between the Emperor and the Prince. It was, as the

Emperor himself put it, 'a beastly time' (*eine hanebüchene Zeit*), and, as the Emperor further remarked, the question had been whether the Hohenzollern dynasty or the Bismarck dynasty was going to govern. As to foreign policy, the Emperor asserts that Bismarck went his own way and kept a great deal from his knowledge. Indeed, he says that Bismarck sent word to St. Petersburg that the Emperor wanted to pursue an anti-Russian policy. 'I have no proof of this, however,' added the Emperor." The final interview of Bismarck with the Emperor was so violent that the Emperor afterward said: "He was very near throwing the inkpot at my head." The Emperor, it appears, mistrusted Bismarck's foreign policy and suspected that he was working in the direction of abandoning Austria and the Triple Alliance and effecting an understanding with Russia. According to the account which the Emperor gave to the generals of Bismarck's resignation, Russia had wanted to occupy Bulgaria and to assure herself, in that event, of Germany's neutrality. The Emperor added that he had promised the Emperor Francis Joseph to be a faithful ally and that he would keep his promise. A Russian occupation of Bulgaria would mean war with Austria and he could not leave Austria in the lurch. Prince Hohenlohe comments: "It looks more and more as if differences about Russia's plans had led to the rupture. Bismarck wished to leave Austria in the lurch. The Emperor wants to go with Austria, even at the risk of being involved in war with France and Russia."

Russia's Solvency

The publication of a private letter by M. Kokovtsoff, the Russian Minister of Finance, to the Chancellor Stolypin, in which he warned the latter against the danger of financial bankruptcy, has made great concern, especially in France, where so large an amount of Russian bonds is held. In reply, it has been claimed that this letter was intended, in an exaggerated way, to warn M. Stolypin of the importance of economy. A letter of grave significance has been published in the London *Times*, on the financial situation in Russia, by a high authority, Mr. Lucien Wolf, who fears "an unparalleled financial catastrophe." He says that the deficit for the current year will be at least 160,000,000 rubles, and next year, when the impaired taxable capacity of the people, brought about by the bad harvest of the present year, makes itself felt, the deficit will probably be much greater. No country, and least of all Russia, can stand an indefinite succession of such deficits, and yet there is no prospect of stopping them. After a careful study of the note issue and the gold reserve, he declares that over 700,000,000 rubles of the 1,260,000,000 rubles of the note issue has no metallic guarantee whatever. In these circumstances, it is easy to see how disastrous may be the consequences of even a small panic, and in Russia's present condition a panic on a large scale is at any moment possible.

Opening of the Persian Parliament

Persia seems to be in advance of Russia in the peaceful inauguration of its Parliamentary system. The Shah has now opened the Parliament with great state, altho his impaired health did not allow him to read his speech, which was read for him, in his presence, by the Governor of Teheran. He said that for the last eight years a constitution for Persia had been his dream and he now believed that the people were ripe for self-government. He was satisfied that they would not abuse the freedom and that Parliament would give active support to the Government in its efforts for the happiness, progress and power of Persia. The speech was received with the greatest enthusiasm, and in the evening the city was illuminated. The ceremony took place in the great court of Teheran in the presence of the diplomatic corps, many high officials, army officers and the entire priesthood, whose agitation had been effective in the gift of Parliamentary government. But the Shah has accepted it very gracefully, and in another address declared that he recognized that the principal foundations of imperial power and progress rested on an alliance of the Government and the people, and he had made the strengthening of this alliance the chief object of his reign. He expressed the hope that the gift of the Constitution would ever be preserved.

The Parliament consists of four deputies elected by the princes of the royal caste, and separate elections by other classes, such as the clergy, the traders, and the workmen. The clergy in Tabriz and Resht who took refuge in the British Consulate have been pacified and have left that retreat.

China's Railroads

The Chinese are beginning to find that it requires something more than a patriotic impulse to build and manage railroads. A year ago, in compliance with the demand of the Chinese Nationalists for the cancellation of all concessions for railroads, mines and other internal improvements, the Government bought back the franchise at a cost of $6,750,000 from the Belgian and American financiers, prominently King Leopold and J. P. Morgan, who held it. The line is intended to connect Canton with the capital, as the section from Pekin to Hankow is already in operation. Now, after the undertaking has been for a year in Chinese hands, the Chinese president of the proposed railroad has resigned, stating in a speech at Hongkong that the Chinese engineers in charge of the work are incapable of building it, and recommending that English, American or Japanese engineers be employed. On the other hand, the first section, 32 miles, of the railway from Pekin to Kalgan has been completed under a Chinese engineer educated in America. The road will be 140 miles long and it is expected to cost $4,500,000. Yuan Shih-kai, Viceroy of Pechili, intends to extend the road thru Mongolia and connect with the Trans-Siberian, thus bringing Pekin within twelve days of London. Japan made a formal offer to China to participate in the South Manchurian Railway Company, but China did not have the money to invest in shares, and, as the time of the option has expired, Japan obtains complete control of the railroad system in the southern part of Manchuria, and will have the right to guard it with Japanese soldiers to the number of fifteen per kilometer. Japan has asked Russia to open the Amur and Sungari rivers to international shipping. There is no likelihood of the concession being made, as the present arrangement by the treaties of 1857 and 1881 between Russia and China is eminently satisfactory to both these countries. Russia grants the right of navigation up the Amur from the sea for 626 miles thru Russian territory to Chinese vessels, and in return for this privilege China permits Russian vessels to ascend the Sungari into Manchuria.

The Natal Rising

Martial law has been formally withdrawn in Natal, South Africa, where there was so much fear because of the rising of the Zulu tribes. After the killing of two officers who were collecting the tax, and the attempt to arrest those who killed them, the army, as has already been reported in these columns, attacked the Zulu camps and ravaged the country. A missionary who has traveled through the greater part of the territory covered by the rebellion reports that the bodies of the natives slain in the operations are still unburied, in accordance with the native superstition against touching the dead. The regions visited are described as desolate. The chief crops have gone, and food is so scarce that some of the people are gathering edible leaves. The gardens cannot yield any supplies for five months. Many of the men and boys who but for the rebellion would be earning a subsistence for their families, have been killed or imprisoned. The remainder are engaged in building huts with what scanty material is available. The cattle fever quarantine adds to the difficulty of procuring food. The missionary appeals strongly to the public to send supplies of food, blankets and clothing, as otherwise many may die of starvation. The withdrawal of martial law does not withdraw the rule forbidding Zulu Christians to hold services without the presence of a white man. The prejudice against color is so strong that it includes also the laborers from India, of whom there are thousands in Natal, and they are protesting against the humiliating position in which they are kept under an ordinance. They do not see why they, who are British subjects, should be discriminated against. They have made a protest to Lord Elgin

The Peasant's Revolution

I.—The Peasant Gives His Orders

BY WILLIAM ENGLISH WALLING

[This is the first article of an extremely important series of three entitled, I, The Peasant Gives His Orders; II, The Peasant Finds His Voice, and III, The Peasants Organize, by William English Walling, who up to the present time has written for us anonymously under the title of "Our Special Representative in Russia." No American could be better equipped to understand the ferment of the Russian people than Mr. Walling. His articles in THE INDEPENDENT and elsewhere before he went to Russia have already made him an authority on labor and social conditions in the United States, and his residence in the University Settlements of New York and Chicago, and his intimate personal acquaintance with all the prominent labor leaders and radicals in the country, have made him sympathize as few rich and highly educated men can with the mind and the heart of the masses. For the past year that Mr. Walling has been in Russia he has made himself familiar with both sides of the great conflict. In St. Petersburg and Moscow he has interviewed not only the Ministers and moderate leaders, but also the leading revolutionists. In the provinces and villages he has talked with peasants, as well as with school teachers, village popes and doctors; in the provincial capitals he has sought the opinions both of revolutionists and of presidents and officials of the Zemstvos or local government boards, editors and former members of the Duma. He has just returned from an extended visit to the famine-stricken and revolutionary Government of Volga. It will also interest our readers to learn that, like his fellow residents at the University Settlement in New York, J. G. Phelps Stokes and Le Roy Scott, the author of "The Walking Delegate," he has recently married a brilliant young Jewess and Socialist, Anna Strunsky. —EDITOR.]

SINCE the Duma was dissolved it has become more than ever clear that the great revolution is something far deeper than a struggle against the absolutism of the Czar. If the root of Russia's ills were the mere absence of political liberty, the Duma, in that case comparatively harmless to the Government, would never have been dissolved.

It is true that there has been growing up for more than a generation a strong agitation for political freedom—of the American or Western European type. It culminated in the general strike, the Czar's October manifesto, the Constitutional Democratic party and the Duma. But it could never have brought about the widespread mutinies of the peasant soldiers or the peasant outbreaks in every part of the Empire.

Until the eve of its dissolution, the Duma busied itself with political rather than social questions. Let full justice be done to the revolutionary labors of the Constitutional Democrats, who were in control. Their program was political rather than social, but it was certainly revolutionary. They set up as their ultimate goal a democratic republic—with direct elections, a single legislative chamber, direct legislation by the people, a responsible cabinet—a more democratic system in all respects than that of the United States. They demanded for the near future a constitutional assembly—they proposed to take Russia from unlimited despotism to the full sovereignty of the people. But they avoided the social problem—the question of the ownership of the land. In their party congress they had even omitted the land question from their program, passing a mere resolution on the subject. In the Duma they postponed it to the last.

When, a few days before the Duma's end, the clamor of the peasant population, agrarian disorders and the direct pressure of the peasant deputies forced the Constitutional Democrats to take up the question that underlies the whole titanic revolt, they at once left the revolutionary tactics they had followed when purely political issues were at stake. From political revolution they passed, not to social revolution, but to mere social reform. They proposed very radical measures—to provide the peasants immediately with more land, to seize all the larger estates for this purpose, to pay for them without considering in their evaluation the abnormal rents extorted from a hungry people, to abolish absentee landlordism and limit the amount of land a man can own to that he can himself

superintend, and to see that each peasant was provided, "as nearly as possible," with the alimentary norm of land—enough for food, shelter, clothing—and taxes. They denied, thru the mouth of the murdered Herzenstein, the possibility of giving the peasant *more* than the alimentary norm, or of "providing work for all the people." They hope, that is to say, that the peasant will not have to starve, but they despair of setting him on the road to prosperity. They expect that he will still be condemned to much enforced idleness for the lack of land—they deny the possibility of the rapid improvement of agriculture, since they say that he cannot hope to have enough land to accumulate a surplus capital of his own. At the same time they proclaim the sacredness and inviolability of private property and assert that they stand, not for social revolution, but for social reform.

But the Russian Revolution is not a mere struggle for emancipation from an archaic form of government—it is a movement of the masses of the people to regenerate Russian society. An old order is doomed, its government, its ruling caste, its ruling ideas, its religion, its property, its forms, its economic methods and its economic power. It is a world event. The new order cannot by any possibility be ushered in by merely political changes modeled on the political institutions of England or the United States. With the autocratic form of government will go many of the social wrongs that weigh down both the Russian and relatively more prosperous and more educated peoples. Because the peasants are poor and ignorant of books is no reason why, in the great transformation that is taking place, they should lose all the lessons of modern industrial development and the other social teachings of the hundred years that have passed since the revolution in France.

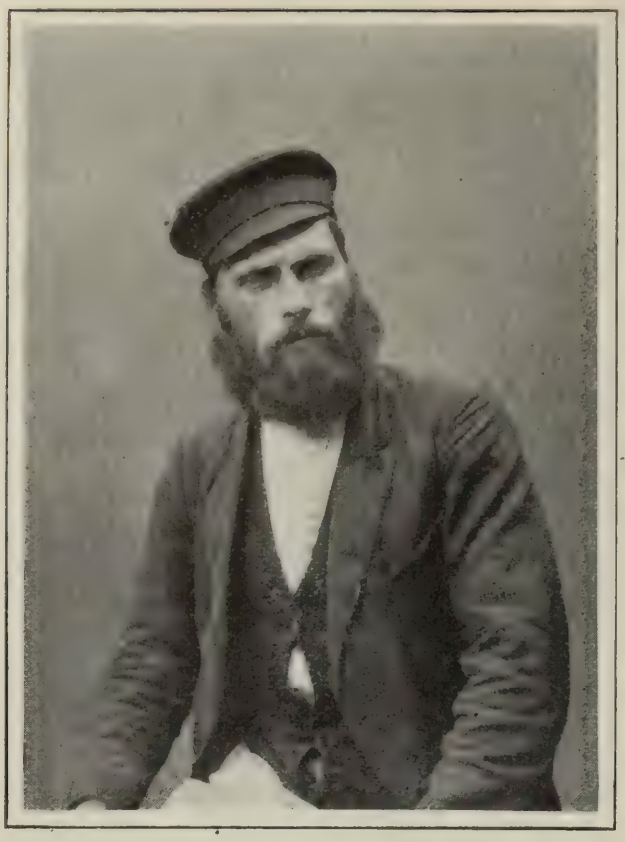
History is indeed preparing *new forms of human society,* as the peasant leader Anikin claimed. All the great forces of modern life are present in the nation, while the usual counter-forces are melting away. The greatest retarding forces, in all lands—the national traditions, political, religious and social—are already comparatively lifeless. The Revolution is beating out of them what vitality remains. The national character is not one of the fixed habits of age, but that of adaptable youth. The character of the individual peasant is almost as flexible as that of a child. Both absorb readily every new and useful idea. The peasant is not poor and uneducated because he is idle or slow to learn. He is physically and mentally inefficient because he is physically and mentally underfed. He grasps and devours a friendly book or newspaper with as much avidity as a loaf of unaccustomed wheat flour. With the same appreciation of his needs, he adopts and learns the use of modern agricultural implements and every modern agricultural method, when they happen to fall within his miserable means. The ignorance and poverty of the peasant do not constitute a national tradition, as is claimed by the incredible Pobiedonostzef, so long the Czar's favorite adviser and head of the national Church, who preaches that ignorance and poverty are the normal and natural conditions allotted by God to the human race. The peasants are as anxious to improve their condition, spiritual and material, as were the poor and uneducated pioneers that built up the United States. Their inertia is a resisting medium; it is not a reactionary force. It can only delay the time of the final outbreak, and increase its intensity and profundity in proportion to the delay.

Among the Russian people positive reactionary forces are conspicuous only by their absence, and to overcome the resistance of mere inertia there are at hand, on a greater or lesser scale, all the forces of modern civilization, and a public spirit new in the history of the great nations. Even the material development is backward only in the country and less accessible sections.

Very many of the factories, mills, railroads and steamships are most modern; so are many of the hotels, public buildings, theaters, many of the public institutions and schools, and nearly all the ideas, aspirations and theories of the truly educated class. The professors have brought to educated people all the best results of modern culture—in history, science, sociology, political economy and jurisprudence. I venture to say that no nation

in history has ever been so familiar with foreign languages and cultures, or so deeply and earnestly studied the economic and political systems of other states. And no educated class in the world's history has ever made such a general, persistent and heroic effort to reach the people. A considerable proportion of the Russian peasants and the larger part of the Russian workingmen have been familiarized with the most important movements and ideas of foreign lands in the form of a sea of forbidden, and therefore all the more valued, popular literature. From the agrarian movements of Europe to our People's party, and from the conservative trades unions of Great Britain to the revolutionary socialism of the Continent, there is no great movement or social idea that has not been, in this way, brought to the people. The people have responded well. I do not believe that there is anywhere any such deep and varied study of all that goes to make up modern Socialism as among the Russian working class.

The Russian upheaval is then both a conscious and a social movement—and this is why it may develop into the most portentous historic event up to the present time. Like former revolutions and civil wars in France, England and the United States, it claims for all citizens the political rights of man. But unlike any preceding national cataclysm, it calls for social as well as political rights, for economic equality, for the right of every man to as much land as he can use and of no man to more, the right of all the people to all the land forever.



The Duma was dissolved not on account of the revolutionary political measures or the radical social reforms of the constitutional democratic majority, but because the peasant deputies were making ominous preparations for social revolution. The "labor group" proposed not the expropriation of the richer landlords, but the abolition of all landlords, along with their dependents, the tenants and agricultural laborers; not the temporary suspension of the sacred right of private property in the time of a great social crisis, but its abolition for all time. They proclaimed the duty of society to provide work for all the people. Therefore, they proposed to provide every peasant laborer with all the land he could work with his own hands—or to come as near that standard, "the labor norm," as conditions will allow.

Now, it is answered, there is not enough land in Russia to keep every tiller of the soil fully employed. But it is just for this reason, retort the peasant deputies, that the land question has become a social problem. If there were enough land, each individual could be provided with his quarter section and left to fight it out with nature, as in the United States. Every man would cultivate as much as his brain and body allowed. Competition in the marketing of products there would be, but not cut-throat competition for the means of production and livelihood—the land. Russian agriculture is facing already a crisis that all agriculture will have to face in the end, when there is no more free land, and the nations will have either to take the land for all the people or leave it a monopoly in the hands of a larger or smaller social class.

If the country's fund of land is too small now, argue the peasants, even after the expropriation of all the landlords, why allow the right of every individual further to decrease that fund? No, there is to be no private property, no man is to own an acre in fee simple, and even his right of possession is to be restricted, not to what he can personally superintend, as the Constitutional Democrats suggest, but to what he can work with his own hands or in co-operation with fellow laborers. In the words of Anikin in the Duma:

> "We need the land, not for sale or mortgage, not for speculation, not to rent it out and get rich, but to work on it. The land interests us not as a merchandise or commodity, but as a means to raise useful products. We need the land only to plow it, therefore we do not want private property."

But if economic equality is to be maintained, there must be either periodic redistributions or a progressive tax. The peasant's deputies adopted both ideas. If there is a rapid rise in land values, the surplus product is forthwith to be taxed away. If the rise is sufficient, there may also be a redistribution of the land. With an increase in the cost of living or the size of the "alimentary norm," the individual may demand a larger share, and

Delegate sent by his village to "observe" the behavior of their Duma representative and to report back to the village. The picture was taken at a secret conference in Helsingfors. Unpublished photograph.

always a landless worker may claim his allotment. The problem of the unemployed is to be solved in that every laborer is to have the right to a farm.

As the maximum and minimum of landholding that the peasants propose to establish are the same—no man to have more and every man to have as much land as he can work with his own hands—nothing less than a practical economic equality is their goal. Some margin is to be allowed for variations of exceptional individuals from the average in their capacity for labor, but this margin is not very wide. Numerous peasant resolutions give an accurate numerical measure. The peasants of the poorer lands, judging from the poverty of their soil, would allow a man to hold from 56 to 132 acres, those of more fertile districts from 24 to 66 acres. Few farmers, in either case, would be twice as well off as their neighbors. A practical equality in riches would result. The Russian people are asking for economic equality as well as the abolition of profits, rent and capitalism on the land—an innovation of such magnitude that it has not been conceived, much less instituted, in other nations. It is indeed true, as Anikin claimed, that new forms of human society are in the making.

"When we have the land we will be the masters," said the Tula delegate at the first congress of the peasants' union just one year ago. The peasants know very well they are asking for no simple social reform. They knew that they

Another of the 600 delegates sent to watch over the peasant deputies. He was at first refused admission to the Duma building, because he had insisted on wearing his peasant's costume. Unpublished photograph.

were not likely to see their strivings of half a century satisfied in a single session of the Duma. The Government has deceived them before. The "instructions" they sent to their deputies were filled with a sense of the probable bitterness of the coming conflict.

"Fight on, you fighters," they say. "Fight to the bitter end. Go forward fearlessly for the people's cause. Many millions of dead-worn and tormented peasants look to you and wait. As long as you are with us we will stand by you." These are the exact words they use. The deputies have obeyed. In the Duma they denounced the Government and all its

works; when the Duma was closed they called the people to armed rebellion. They fought to the bitter end—prison and the shadow of the scaffold. And the peasants have kept their word, too, as far as their power allowed. They have frequently offered their lives and liberty to prevent their deputies' arrest.

The peasants know that the fight will be bitter, because they know that it is a fight for mastery—the control of the country, the government and the land. The nakase of a Samara village typifies thousands:

"We assembled here to write to you, and after a discussion we came to the conclusion that the famine, the misery, and the ignorance of the Russian people, the shameful war with the Japanese, the unheard of troubles, the

Duma Representative Onipko of the "labor" group, on trial for his life for complicity in the Kronstadt mutiny. Unpublished photograph.

continuous insurrections, come from the fact that the best lands of our country belong to *gentlemen proprietors,* to the Crown, to the State and to the Monasteries. In spite of ourselves we are forced to rent these lands and pay for them every year thirty rubles a dessatine ($5.62 an acre)."

"Until now we have not been allowed to think even of our rights. They confiscated our property, laughed at us as much as they pleased; and since the organization of the institution of the officials called Zemski Natchalniki, we have fallen completely into the hands of the *gentlemen bureaucrats.* We cannot take a single step without the authorization of this little despot. Our private and community affairs, family and property matters, must all be submitted to their sanction. Some of them often tell us that they ought to be to us both "God and Czar."

The gentlemen proprietors and the gentlemen bureaucrats are one. Governmental despotism and private property, equally hated, are traced to a single cause and are to be overthrown by a single movement.

This nakase continues:

"So we fear that all the ills of our poor country come from the fact that we are in the power of a *little group* of gentlemen, rich people and bureaucrats. We have had enough. We are at the end of our patience, and we *order* our delegate Chouvalov to demand in the Duma:

(1) The right to send to the Duma as our representatives men whom we esteem and with whose convictions we are familiar. These representatives must have constitutional power perpetually, as in the English Parliament. They must be elected by a *direct,* universal, equal and secret ballot.

(2) The confiscation of State, Crown, monastery and *private* land and their transmission into the hands of the whole people on the condition that every citizen may make use of

Duma Representative Anikin, more influential within the "labor" group than Aladin himself, perhaps the most promising leader yet developed from among the people themselves. When a village school teacher he was a member of the socialist revolutionary party. Unpublished photograph.

it who works it with his own hands, with the aid of his family, or in co-operation."

The other demands are the repayment by the landlords and the State of all the money the peasants have already paid for their lands, the replacement of customs duties and excises by a progressive income tax, a general amnesty of political prisoners and exiles, the abolition of the death penalty, the election of all local officials, compulsory education and *the carrying out* of all the liberties promised by the manifesto of the 17th of October. Another nakase shows more clearly the cry for real equality—not a theoretical, political equality, but a genuine concrete, economic equality. It argues in this way:

"Some tens of thousands own the land and live in luxury, while tens of millions must go half starved and work for them their whole life thru. We human beings are all alike and all brothers. We must enjoy equally the nature God has created, and therefore we have decided to ask the Duma to confiscate all the land and have the State take charge of it, and to allow only those to have access to it who will till it with their own hands. We rely upon the deputies we have elected to do all that is *possible* to relieve us from all kinds of misery and from the Cossacks. The Duma can count on our doing *whatever will be required.*"

The men the peasants trust and to whom they sent their nakases and delegations are revolutionists. When the Duma was in session they insisted on a peaceful revolution, an immediate constitutional assembly. But they expected and predicted that the Duma would be dissolved before anything could be accomplished. When this happened they turned to overt revolution, accused the Government of treason, called on the army to mutiny, on the population to disobey the officers of the law, on the peasants to take the land. When the Duma was in session they proposed local commissions, elected by the equal vote of the people, to report to the coming constitutional assembly on the question of the land. I was told by one of their leaders before the Duma met that they expected the people to seize the land before such commissions could report.

The peasant group were also Socialists —often former members of the Socialist Revolutionary or Social Democratic parties. They sent their chief, Anikin, to represent them officially at the Socialist Interparliamentary Congress. They are independent of formulated party programs, they are true democrats who believe that the peasants themselves will force the country in the direction of Socialism. They have good cause for their confidence. The program they proposed in the Duma was not their own, but that already worked out by the Peasants' Union a year before and endorsed by thousands of villages in the fall. With this program as a starting point, with the aid of some *twenty thousand "instructions"* they received from the villages while the Duma was in session, and with the advice of the six hundred delegates the peasants sent to St. Petersburg, they can surely claim to know what the peasants want.

The cry of the Peasants' Union, of the twenty thousand villages, and of the peasant deputies in the Duma, has swollen from the old negative demand for "land and freedom" to the slogan of the social revolution, "To the people *all* the power and *all* the land."

Russia's desperate struggle is not a mere reaction against hunger and the Czar. It is a world event of unparalleled significance, a giant effort to win for Russia, and perhaps other nations as well, what no nation has ever yet attained—unrestricted democracy in government and equality in possession of the land—the fulfilment of the French Revolution, the limit of purely democratic evolution, the conquest of the last of the rights of man; at the same time a fierce attack at the roots of private property and the foundation for a Socialist state.

This is the cause that Russians die for, the faith of the Revolution—to the people all the power and all the land.

Moscow, Russia.

A Father's View of the Home

[I notice that THE INDEPENDENT has four-line biographies of its writers. I prefer to write my own. I was born in New York and went to Boston to be born again. For the first twenty-one years of my life I was known as the son of my mother; for the next thirty as the husband of my wife, and for the last ten years as the father of my daughter. I claim, therefore, to be a family man.—AUTHOR.]

I HAVE just read with the deepest interest the debate, conducted by Mrs. Charlotte Perkins Gilman and Mrs. L. H. Harris, in THE INDEPENDENT of October 4, on the future of the family. It is so highly charged with electricity that people who are afraid of being shocked must handle this number with rubber gloves. I am not surprised that the editor of THE INDEPENDENT did not wish to decide which one of the debaters gets the better of the argument.

With enlightened discretion I do not purpose to discuss the question of the family from a woman's standpoint; first, because, compared with the two brilliant electric lights that have preceded me, I am but a little tallow candle, pale with insignificance; and, secondly, because, not being a woman, I am anatomically, physiologically, emotionally and psychologically disbarred and disfranchised from this realm of superiority. On the other hand, however, I have one humble coign of vantage not granted to Mrs. Gilman and Mrs. Harris: *I am a man, a husband and a father.* Insignificant as these qualifications are in themselves, they have some significance on Election Day and when you order a suit of clothes. *Neither Mrs. Gilman nor Mrs. Harris is a man nor a father, and neither of them ever has known or ever can know the feelings of a father.* They may know that a man has a heart under his waistcoat, but they cannot tell how it beats by feeling their own pulses. I ask liberty, therefore, to make a few observations, not in the way of rejoinder, but of adjoinder.

Some years ago our Shaker friends undertook to abolish birth, and now the Christian Scientists have undertaken to abolish death. If these questions ever become political, as they have been religious issues, I shall vote against abolishing either. I consider them both beneficent institutions when rightly conducted. The same is true of the family. I am, therefore, much relieved to find that neither of the ladies in this debate proposes to abolish the family.

Mrs. Gilman truly says that "the family is our best means of reproducing the race." Why? Because, in the method of Nature, children are not born into the world full grown. Adam and Eve were the only children thus honored. It is, therefore, necessary to provide some one to feed the child from the start and to carry it until it is able to walk. Nature seems to have given this matter the most careful attention. In the case of a pair of birds which I watched rearing a brood this summer, they looked after their young with wonderful fidelity. In the case of the human family, Nature has endowed the mother with a special physical capacity for feeding the child. But the physical provision is only a part of Nature's scheme. From the very beginning of life she has in mind the shaping of a soul. In the birth of a child she is shaping the soul not only of the child, but of the mother and the father. Deep fountains of experience are touched, great sentiments awakened. Even the father and mother bird I saw seemed to have a great joy in raising their young. It is in such primal instincts that profound ethical relations have their origin. The very beginning of altruism is in the maternal instinct. The father love may not be as strong, but when awakened it is a rich moral experience.

Of course, there are human beings, as there are animals, in whom these primal ethical instincts are weak or apparently lacking; they do not represent normal relations; they call for exceptional treatment.

The child is not consulted about coming into the world, society is not consulted. It is fitting, therefore, that the man and the woman who *are* responsible for bringing the child into being should

face their own duty and fulfill it, and get, too, the joy and the pain and the strength and the development. Hence I have no use for a socialism which weakens either the conjugal or the parental tie and dissipates the family in a socialistic mass.

Society must indeed often intervene to save the child when parental care is lacking, but it is a loss to the child and a peril to society when it intervenes so as to destroy or disturb this moral relation. It is a fundamental axiom today in our philanthropic work: Do not break up the home unless it is absolutely necessary. Children who are brought up without natural or foster parents are robbed not only of the parental love which may go out to them, but of the love to be kindled in their own hearts. We have tried the plan of congregating homeless children in vast establishments. We have found that these social caravanseries do not develop individual initiative nor the primal affections, and the tendency, not only in this country, but in France, Belgium, Switzerland and Hungary, is to establish institutions on the cottage system, with a good father and mother for the homeless child. We are building, not institutions, but *homes,* for child saving, and we are placing them out in good homes already made. On the other hand, it is just as true that the father and mother who are deprived of the joy of sharing the love of their child lose not only a blessed privilege, but an experience necessary for the development of character.

Jean Jacques Rousseau was a good writer, but a poor father. He sent his children to asylums as fast as they were born. I have never seen any apology for his conduct which did not impeach his intelligence or his fatherly affection, and it is a curious parody on his conduct that an opera melody which he wrote is used in this country as a lullaby!

Many of our social evils grow out of a weak or imperilled family life. A large number of young men go to prison because they have no family ties; others go because of bad homes. There is vastly more intemperance among those peoples where the father and the son spend their evenings in the saloon than among peoples who take their social enjoyments *en famille.* On the other hand, there is the great body of wife deserters, who have no conjugal or paternal feeling and whose conduct disintegrates the family.

Hence to do our duty to society and from the standpoint of civic welfare we must keep the family strong. The permanence of the family is guaranteed because it is a natural, not an artificial, institution, and because it furnishes an unequaled opportunity for the development of the primal and the ultimate sentiments and affections.

All this is fundamental, but it is not final. Having recognized the family for what it is, it is important that we should see what it is not. It is not an institution established for its own sake. The prime object of Nature is to develop the individual and preserve the type. The family is the instrument, not the end. And we may well ask, Is not the family relation destined to some modification which will better enable it to fulfill its mission in our own day? Let us consider a few points:

1. Tho the family is the social unit, it cannot, in our day, under a democratic system, be the political unit. Under the patriarchal system the father expressed the will of the family. He had absolute power over his children. Today our franchise is based on the individual. But we have not broken away completely from the family idea of government. In a democratic system, based on individual liberty, the wife must vote as well as the husband, and the daughter as well as the son. The logic of democracy is that all citizens, without regard to sex, should be placed on the same footing of political equality.

2. Under the oldest criminal code that we know of the family was punished as a unit for the offense of one of its members.

This practice long continued. Our modern legal system is supposedly based upon the idea of individual responsibility; but we still cling to family responsibility where we ought to abandon it, and we have abandoned it where we ought to return to it. We unconsciously cling to it when we impose a sentence on the husband and father, and then arrange our penal system so that the main punishment shall fall upon the innocent and

suffering wife and mother. On the other hand, we have pressed individual responsibility to absurd extremes when we have sentenced children twelve years old to State's prison for the sins of their parents. In a number of States the new children's court laws provide that parents and guardians shall be held responsible under certain conditions for the delinquency of their children or wards. Our child labor laws mean a fresh conception of parental and social responsibility.

3. Modern economic and industrial conditions will powerfully affect the family. Women are to achieve a greater degree of economic independence. Daughters are already earning their own living. The earning power of the wife will more and more be added to that of her husband. The result will be a better standard of living.

4. The higher education for women establishes a new intellectual standard for the home and enlarges the field of intellectual companionship for husband and wife. In a similar manner the thousand occupations now opened to women have done more to make homes than to break them.

5. A better organized social life will make it easier to fulfill the routine duties of the home, this bother of cooking and dish-washing. Co-operative housekeeping and improved tenements can help the home without disorganizing it, leaving more time for civic duties and for self-culture.

As to the question which Mrs. Gilman raises and which seems to be the bone of her contention, whether the family must not sometimes be sacrificed for the sake of the nation or the larger human family, it hardly seems to admit of discussion, and all the lessons of martyrdom are lost on us if we do not bow to the higher law and accept the higher duty. But a question less exceptional and with a wider and more constant application to everyday people and every day life is:

Can we not fulfill our duties to the family without neglecting our duties to society and the state; and can we not fulfill our duties to society and the state without neglecting or disorganizing the family?

I might answer this question abstractly, but it is more interesting to get some concrete experience which is reinforced and endorsed by my wife.

We married at an early age. The usual rule is to get your education first and get married afterward. We inverted it. If we had waited to finish our education we should never have been married at all.

A year after our marriage my wife went abroad to study medicine. When she had finished her course I took three years of professional training myself in this country as a doctor of souls. Then we spent a year in Germany studying in our different fields and taking our little baby with us and laying for her the foundation of a good pronunciation of German. We are still getting our education.

As to the economic side, we started with nothing in the way of money. We pooled our earnings. We did not learn to save; more important, we learned how to spend. When my wife was studying medicine abroad I supported her with my earnings; when I took my university course she supported me and nursed our baby also. With a good healthy mother there is no sterilized milk that is equal to that which is vitalized and motherized. I lay great stress on this point that she did not neglect her children. It is a questionable service which a mother renders to society when she neglects her children to fulfill it. While getting our education we were separated necessarily a good deal from each other, but the mother was never separated from her child.

The question of eating and drinking, of washing dishes and keeping house, which is made the weak excuse for the non-performance of social and civic duties, never seemed to give my wife the least trouble. It has taken but a small fraction of her time. One reason is because we live simply. Another reason is because she is a born cook, and because she makes use of every modern convenience to lighten domestic labor for herself and her servants.

Now as to public duties. Of course it is recognized that the man has them and that he can fulfill them without abandoning the home. But why not the wife? Mine has fulfilled many and varied public duties. An eminent Secre-

tary of State of the United States once said of her that she knew more about our foreign relations at that time than any woman in the United States. She has lectured, she has edited a paper. Her contributions to the literature of philanthropy are on the shelves of every great library in this country and in Europe.

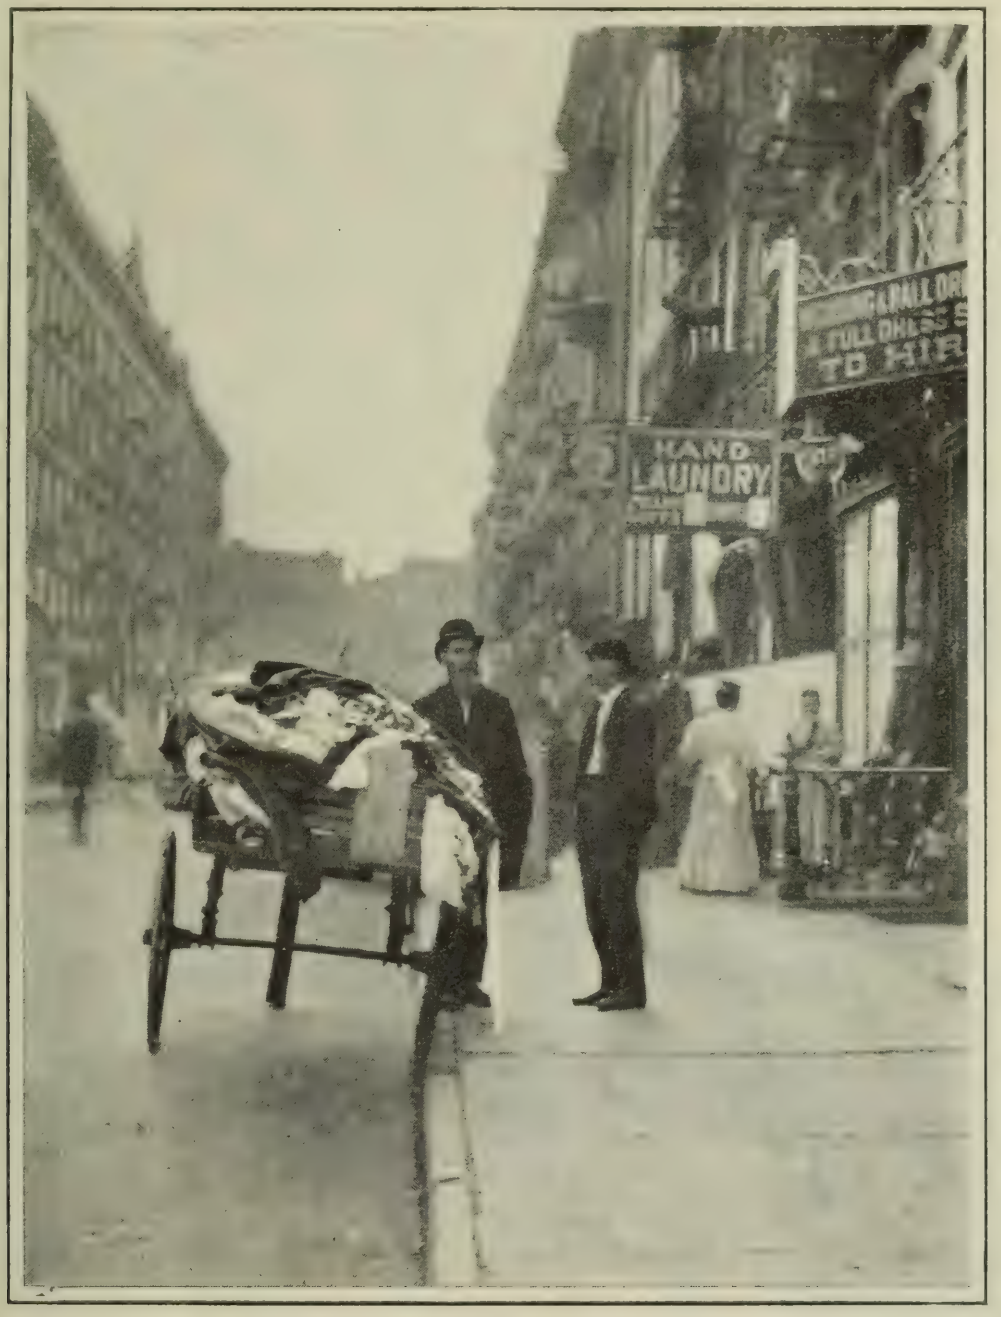
Our home has had its private side, as every home should, but it has also been brought into relation with a great many other homes and lives. Our own family was small, one of each kind; but it was very easy to enlarge it. I do not dare to say just how many sons and daughters, nephews and nieces, we have adopted. Some of them have spent a long time in our home and still longer in our hearts. They are now on three continents; but the mother's heart goes out to them, and when a sad message came of the serious illness of one of them in Germany, it took her but a couple of hours to pack her bag and leave the next day for Europe. And he was not a son of our own race.

We have tried to have our home in touch with the many sides of the great human family, to make it cosmopolitan. Beginning with a native American Indian boy, children of eight or nine different races have been numbered in these adoptions and in these fellowships. Sometimes on a Sunday evening we have had French, German, English, Greek, Armenian, Russian, negro and Hebrew, all represented at the same table.

Mrs. Harris may be shocked at this, but it seems simple and natural to us, since they are all refined and intelligent specimens of humanity. It would seem very strange to us to select our household circle simply by the color of their skins, and it seems curious and even a little absurd that Mr. Upton Sinclair, in establishing his communistic, co-operative household, should exclude from membership refined and intelligent colored people. We should as soon think of excluding them on account of the color of their clothes. The fact that the Armenians are a dark-skinned race has not prevented the mother heart of our home from going out to them in their distress, and so there are scores of that race who know her as "Mayrik," the "Little Mother."

If the social distinction against color is absurd, still more is the political distinction founded on sex. I have been with my wife to the polls and we have voted together for the school committee, but it has seemed to me a gross injustice and an extremely ridiculous feature of our suffrage that some ignorant loafer, along with respectable and intelligent men, can go to the polls and vote for every office from school committee to President, and my wife in this and a majority of the States is shut out.

Put me down then as thinking not that the home is in danger because loving and intelligent motherhood radiates its influence in society, but that society is in danger when it withholds from motherhood a voice in our municipal and national housekeeping.



I agree with Mrs. Gilman that every child should be fitted not only for the little home, but for service in the larger human family. I say "Amen" to her prayer for peace and brotherhood. The training for social service and for good citizenship cannot be begun too early. The school, the Church, the discipline of work must supplement the home; but the home is also a fulcrum from which power over the larger life of the world may be exerted, and in which we may cherish and develop tender relations of brotherhood and duty in the great family of mankind.

The Pushcart Peddlers of New York

BY ARCHIBALD A. HILL

Secretary of the Commission Appointed to Investigate the Pushcart Problem.

THE casual observer has seen the carts in Broad, Fulton or Hester streets, but unless his progress was impeded, he has thought of them merely as giving a touch of picturesque-

Typical Peddler, Forsyth Street Near Grand.

ness to the somber streets. And they are picturesque. Many of the carts are filled with bright colored fruit, and are so beautifully aranged that they attract and hold the attention. At the dismal corner of Allen and Rivington streets a cart was recently seen which had over it a canopy of luscious grapes arranged in huge bunches—red, green and purple—with cool green leaves interspersed with the fruit. As it was near the Jewish feast when booths are erected in the yards and on the housetops, in commemoration of the sojourn in the wilderness, one could not but think that this had been in the

mind of the peddler in arranging his cart. At night, too, the carts give a gay effect to the streets, for the peddler's work does not stop at dusk. When the census was taken it was found that there were only seventy-one more carts on the Lower East Side streets between the hours of 11 a. m. and 4 p. m. than there were at 10 p. m. The lights that hang on the carts make Essex, Orchard and Norfolk streets look as if a carnival were in progress.

On the other hand, this picturesqueness exists at the expense of traffic facilities. One realizes that the "push-cart problem" is acute when he learns that in one year, 1904, 5,124 peddlers were arrested. The causes for the arrest run all the way from obstructing sidewalks and streets to having a peanut cart with a whistle on it that disturbed the worshippers in a certain church. One of the most frequent causes of arrest is for standing more than thirty minutes in one place. The ordinance requiring this would be more honored if it were possible to enforce it, but it is no uncommon sight to see the peddlers solemnly, yet hastily, push their carts around a short circle as the officer appears, and then settle back in almost the same location as he passes on. It is said that a well-known clergyman, who noticed the number of arrests for this cause and wished to reduce them, purchased two hundred alarm clocks and gave them to that many peddlers. The alarm was so set that it would sound every half hour. When the alarm sounded the peddlers in line moved up ten feet, for this met the law's requirements, and stopped to remain until it sounded again. It is sad to relate that apparently, after a few days, the clocks got on the peddlers' nerves, and they preferred the occasional alarm of the coming policeman to the constant alarm of the clock. Such an unenforceable ordinance as this gives the policeman a heavy club over the peddler, and the more conscientious the peddler, the heavier the club. As one man, an American, said to the commission: "It ain't gettin' my head

Clam Seller in Mulberry Street.

Lemonade Seller, Hester and Ludlow Streets.

broke that I mind. It don't cut no ice no how. It's the constant naggin' of the officer."

But there are other evils than the impeding of traffic. While the commission was investigating the problem it received a communication from the storekeepers of an East Side street, complaining that the number of peddlers in that street had greatly reduced the profits, "and this, your honors, is hard on a man with a five-membered family." This communication when received was fastened together with baby blue ribbon! Tho quaintly worded, the letter brings out another phase of the problem, for the peddler who pays no rent can undersell the storekeeper whose rent runs from $35 to $75 per month.

On the other hand, the menace to health is not so serious as had generally been supposed. In Manhattan and also in Brooklyn food was sold on 69 per cent. of all the carts found on the streets. When the inspectors from the Board of Health examined this food in Manhattan, they found that only forty-four carts, or $3\frac{1}{2}$ per cent. of the number they examined, contained bad food. But the amount of such bad food was only $\frac{1}{4}$ of 1 per cent. of the total amount on the forty-four carts. This was in marked contrast to the little stores examined, where it was found that 20 per cent. contained some food unfit for human consumption. The reason for this difference between the two stocks of goods is probably that the pushcart peddler has to buy in small quantities, as he has no storage room, and also for the same reason he must sell quickly, hence his goods are always fresh.

About 2,500 carts are on the Lower East Side; that is, east of the Bowery and south of Fourteenth street; approximately 1,000 in the corresponding district on the West Side, and about 700 above Fourteenth street. In Brooklyn only about 700 carts were found, and these mostly in the Jewish sections of Brownsville and the Sixteenth Ward, and in the Italian district of the Sixth Ward. In

Queens, the Bronx and Richmond they are so few that they may practically be disregarded.

The idea prevails that the peddlers are all newly landed immigrants who do not know enough to do anything else. In fact, it was told to the Commission that 75 per cent. of all the immigrants who land at this port immediately go to peddling. The man who made this assertion evidently got his statistics from "his own inner consciousness," for it must be remembered that about one million immigrants land here in a year. "Inner consciousness" is not a safe place to obtain figures, for in Manhattan 27 per cent. of the men had been here over ten years, 27 per cent. over five years, while only 3 per cent. had been here one year or less. It must be remembered that the present law requires a man to have been a resident of New York one year before receiving his license to peddle. The police got all the personal details of a man's history and then asked to see his license. Alas for the frailty of human nature, it was sometimes found that Nicolo Stragenza, only landed three weeks ago, was peddling on a license issued nine months before to Stephen Margolowski. Many men in New York have been peddlers for twenty years or more, and this is especially true of the more successful.

The largest number of the peddlers are Jews, Italians and Greeks, in the order named. These three nationalities in Manhattan make up 97 per cent. of the total. Ten other nationalities were found, the largest percentage among them being the American, who number about one and two-thirds per cent. of the total.

Mulberry Street, North From Hester.

It is most frequently stated that these men are desperately poor, yet the president of their organization testified that he had been in the business twenty years and was sure that the average earnings were $15 or more per week. Recently a peddler was arrested and fined $1. He claimed that he was too poor to pay the fine, but when searched $550 in cash

was found in his pockets, besides jewelry valued at $310. It is true, however, that some of the peddlers make much less than this. A number of Italians volunteered the information that they earned under $10 per week.

The peddlers are well organized, having about 3,000 in the United Citizens' Peddlers' Association. Their president looks after their interests in innumerable ways. If they are arrested he hurries to court to offer bail or to try to reduce the fine. If a landlord tries to drive one peddler from in front of his premises in order to let another stand there who has paid him "rent" for space in the city's streets, the president must take it up. He invented a rather clever method of handling one of these landlords who had complained to the police that a peddler was stopping in front of his house. It was suspected that another man wanted this privilege and had paid more for it. Therefore the president said: "If that landlord does not want one man to stand there, he must not let another." The result was that the space was kept entirely free and the landlord was deprived of all his graft. One man whose rent for a corner drug store had been $70 per month had it raised to $200. The reason for this was that the owner discovered that the druggist had nine lessees for space in his cellar from whom he derived $150 per month. As none of these men used any space in the cellar, it was only a subterfuge for allowing carts and stands in the streets in front of his store. The owner now gets from the increased rental the lion's share of this "honest graft," so the druggist is willing to tell the story. When asked what excuse the owner gave for this great increase, he said with a shrug: "Oh, he needed the money." The reason the peddler was willing to pay $10 a month for this privilege was that he was thus assured of a place for his cart on one of the most crowded "push-cart streets." This means a great deal. It means peace of mind and several hours extra sleep a night at certain seasons of the year. One man who lives in Harlem keeps a small crockery store on Ludlow street. He found that a peddler came each day in front of his store and undersold him in the same line of goods. To do away with this competition the storekeeper rented a cart and placed it in front of his own store. Then began a fierce rivalry for position. The peddler arrived at 7 a. m. The next morning the storekeeper was on hand at 6.30. So it went until for the holy days the storekeeper arrived at 2 o'clock in the morning. This was too much for the peddler, who departed to find a crockery shop whose proprietor had not heard of the strenuous life. At the corner of Rivington and Suffolk streets during the last holy days a peddler placed his cart and never left it for eight days. When the night trade ceased he curled up in a near-by doorway and slept with one eye on his cart.

At these holy days the number of the carts increases marvelously. Every cart that can be borrowed, rented or appropriated is put to use. Long before the demand is satisfied the supply is exhausted. Then dilapidated baby carriages, children's wagons and even invalids' chairs are pressed into service. Every conceivable plan is adopted to display goods. The noise and confusion becomes greater, men pound on the crockery to show that it is not cracked, and beat upon the agateware and shout to attract attention. Inasmuch as the Board of Aldermen has in the past suspended all ordinances during these days, the traffic conditions become worse than ever. The peddlers crowd around the corners of the streets until literally one has to thread his way in and out between the carts. A comparison of the number of carts on the most crowded streets of the East Side on the day the census was taken and on one of these holy days showed that there were 68 per cent. more carts on the holy day than on the ordinary day.

A peculiar feature of the peddling is the growth of what is called the Stablekeepers' Union. The members of this union are the men who own most of the carts used by the peddlers. They have, for the use of a cart that originally cost about $10, a minimum fixed charge of ten cents a day. To understand why the peddlers are willing to pay such a rental, one must remember the tenements of New York, in which there is no room to store a cart. Even if there were space

in the family rooms, they are most frequently upstairs, and the peddler would have to remove his stock, and in most cases the wheels of the cart, to get it up the steps. On the other hand, the "stablekeeper" rents a basement with wide steps down which it is easy to get the cart. If you are a regular customer and your goods are not perishable they can stay on the cart over night and be all ready for you the next morning. These "stablekeepers" are well organized, and report good and bad customers

number of unrented carts in the stable, what is to hinder the owner from seeking the man out of work and suggesting that he begin peddling. If the man has no license that also is easily arranged, for the stable keeper has not only carts, but also licenses. A friend has taken out a license for which he no longer has use, and the stablekeeper gathers it in. Then, for 25 cents a day, a cart and a license can be secured, even if one's name is changed in the process.

If one who has seen the pushcarts only

Corner of Hester and Suffolk Streets.

to one another. If you have in the past rented a cart from the stable at 49 Ludlow street and desire to rent one from 64 Forsythe, you have to bring word from the first stable before you can rent a cart from the second. If you have not paid all you owe to the Ludlow street owner you will not get a cart from Forsythe street.

But these stablekeepers are a most pernicious influence in "exhilaratin' trade," as one policeman stated. If there are a

in the financial district were asked what is sold on them, he would undoubtedly say fruit, lunches and candy. But even if he went as far north as Fulton street he would have to make a new list of articles. When our list of goods sold was complete, we felt it would have been easier to make a list of things that were not sold. The Americans sell lunches, the Greeks fruit and ice cream almost exclusively, while the Italians widen the list by adding vegetables. But the Jew-

ish peddlers sell practically every conceivable thing. The ordinary foods and vegetables were found on the carts, but also some not to be expected; for example, grape fruit, artichokes, egg plant and olives. All the men who sold clams were found in the Italian districts, as the Jewish ceremonial does not allow shell fish. Among the Italians, too, were found the only peddlers of cheese and of dandelion greens.

But on the East Side one finds the greatest variety of goods. Hats, caps, "goods left over thirty days in the laundry," furs, shoes, pictures, postal cards, hardware, groceries and even bedding and the omnipresent Welsbach burners. One can but wonder at some of the things sold. Why should mattresses, or what one policeman called "sul-sar-warter," be sold from a pushcart? The incongruity of some of the things is most apparent, as one man was found selling crucifixes on Rivington street. One would not expect him to find a market for his wares in a section almost wholly Jewish, but he stated there were many buyers. An Italian at Thirteenth street and First avenue had a most unique collection, for on the self-same cart was a supply of toy balloons, gaudy whirligigs, candy crucifixes and shrines of the Madonna. It was difficult, too, to tell which was his best selling article. The writer found him so engaging that he bought one of each! The seasons bring out new men, as the lemonade man in summer, and the hot potato and hot corn man in the fall. The hot potato man has an oven that looks like a steam road roller, which he laboriously pushes about. Inasmuch as he moves it with the fire up, one feels him to be perfectly capable of borrowing a red-hot stove." The hot corn man has a charcoal fire under a pot and the corn is hot, tho late in the day rather overdone.

From the standpoint of the general public, the commission's most interesting recommendations are to divide the city into districts known as "traveling districts" and "restricted districts." In the "traveling districts" the peddlers can move about from place to place as they choose. They cannot form long lines and remain long periods. In the "restricted districts" there are to be no more than four carts on one block, and these are to stand 25 feet back from the corner. No carts are to stand on streets in which there are car lines. In order to do away with all chance for favoritism, the stands on the corners in "restricted districts" are to be auctioned and sold to the highest bidder, whether he be a citizen or not, tho the minimum fee of $10 must be paid in each case. The bidder then receives a license to put his cart at a given corner, and also receives a sign to be attached to his cart, which shows where he is to stand; thus, "Northwest corner Rivington and Allen streets." This will do away with all lines of carts, facilitate traffic, enable the streets to be cleaned, protect the peddler from extortion by landlords, street cleaners and policemen, and provide a sufficient number of stands for all peddlers now in such districts, and a sufficient number of carts to meet the demands of the surrounding population. There are many other recommendations, but these are the most important.

New York City.

The Romance of Folk-Lore

BY SAMUEL TINDALL, M. A.

THE study of folk-lore, altho not a science of very high standing, has, of recent years, been receiving a considerable amount of attention. Its object is to collect and classify survivals of popular beliefs and superstition and trace them, if possible, to their original source. Superstition is not yet dead, nor will it ever be dead so long as we cannot define the limits of truth and error, for a man will ever be carried away with a longing for the incomprehensible, and will invent explanations if there are none to hand. It has existed at every time and in every race; its form changes with changing scenes and times. The people of mountainous regions such as the Basques are always more prone to believe in the marvelous than the dwellers in less elevated regions, because they are constantly surrounded by the wonders of nature and the marvelous works of the Creator, from which it is but a step to a belief in the impossible.

The old stories of heroes and gods were at first believed with the most implicit faith. Then came the first attempt to explain them. This was first started by Grimm—well known to schoolboys by Grimm's Law—and others, and has till recently found favor with many students of folk-lore. He explained these legendary tales as nature myths, which are a result of the disease of language, just as the pearl is a result of the disease of the oyster. This school argues that at some far distant period men spoke in a curious style of highly-colored language, and their children forgetting the meaning retained the phrases. Hence the growth of myths about supposed persons whose names were originally nothing but the appellations of the chief objects in nature, such as, sun, moon, cloud, wind or sea. They tell us that generally the myth sprang up in one spot, and among a particular people, by whom it was carried away as they separated into different communities and migrated from their original home. This being granted, we must not expect to find the same myth among races which are too remote to have ever had dealings with one another. Take as an example the Greek legend known as "the myth of Cronos," which runs as follows:

In the beginning Earth gave birth to Heaven, later Heaven became the husband of Earth. They had many children, the youngest of which was called Cronos, "of crooked counsel, who ever hated his mighty sire." Now Heaven used to hide his children from the light in the hollows of Earth. So Earth and her children conspired against Heaven, and the former brought forth iron to avenge her children's wrongs. Cronos maimed Heaven with a sickle made of this metal, and the latter was compelled to allow his children to come forth and behold the light. Cronos afterward wedded Rhea and had many children; but their father was jealous of them, having been warned by Heaven and Earth to beware of his heirs. Not being able to think of a better plan, he swallowed them as they were born. His youngest son, Zeus, was born in Crete, and the mother when asked by Cronos for the baby, gave him a stone wrapped in swaddling clothes. Even this was not too tough a morsel for him, for he swallowed the stone. But Zeus grew up and administered a dose to his father which compelled him to disgorge; first

came the stone, then the children, all alive and well. The stone, it is said, was long preserved and could be seen at Delphi, even at the time of the Christian Era. Such is the "myth of Cronos." There are many explanations of it, no two of which are alike. No doubt some of our legends are nature-myths, altho it is hard to say which. It is possible to argue so as to appear to prove almost anything to be a myth. To take an extreme case, it has been said that such a person as Napoleon Bonaparte never existed, and the accounts concerning his life are mere nature-myths that have clustered round the god Apollo; that is, the sun. We are told that Apollo and N-apol-eon are the same name in a slightly different form. Both are connected with an island in the Mediterranean—the one with Delos, the other with Corsica. Both proceed from east to west. Half way between Napoleon reaches the zenith of his power, and like the sun, sets in the west. Hence we are to conclude that the history of Napoleon is nothing but a myth of the old Greek sun-god. A very ingenious explanation, no doubt, but utterly worthless. Such is the method adopted by Grimm, Max Müller and others known as The Philological School.

But there is another and far more rational way of explaining our folk-lore tales. In 1870 an English Folk-lore Society was started. It had for its object "the preservation and publication of popular traditions, legendary ballads, local and proverbial sayings, superstitions and old customs and all subjects connected with them." This school originated in Mr. Andrew Lang, who believes that the fundamental bases of popular belief are everywhere the same—whenever an apparently senseless and meaningless custom is found in any country to search for another country with a similar practice. The Greeks used to dance in a ring with harmless serpents in their hands. When we find that the red Indians dance with living and poisonous serpents in their hands as a test of courage, then the otherwise meaningless Greek custom is explained. The idea is that similar conditions of mind and similar needs evolve similar practices, apart from any identity of race or borrowing of customs and manners. Hence this method compares the apparently meaningless customs and legends in civilized countries with similar customs in uncivilized races which still retain their meaning. The Maoris have a myth almost identical with that of Cronos; yet to suppose that their ancestors had any intercourse with the Greeks is impossible. The fact is, the Maoris are in a state of semi-barbarism from which the Greeks were emerging five and twenty centuries ago. The ancestors of the refined and cultivated Greeks must, in the dim and distant past, have been cannibals. Plenty of instances of the "swallowing trick" are to be met with in the folk-lore of savage tribes. The Bushmen and the Kaffirs have their "swallowing myth." Among the Australians there is the same myth, the eagle in this case being the supreme power.

Whatever may be said in favor of these two schools and their method of procedure, our folk stories deserve to be remembered, not merely for their beauty, but chiefly for the light they so often throw on social and political history. What should we know of the early history of the Greeks, those pioneers of refinement and culture, were it not for the legends presented to us in the poems of Homer? The early history of Rome would be a complete blank were it not for the legends that gathered round her early history. It is from an examination of these that facts concerning the social and political condition of the people can be gleaned.

The nursery stories of "Cinderella," "Beauty and the Beast," "Jack the Giant Killer," are to be found in almost all countries with slight variations, and it is to the ancient Norsemen that we owe most of the stories. It was Grimm who first observed the widespread similarity that exists in our common folk tales. Whether the story comes from Arabia, India, Egypt, Ireland, Norway or England, we always look for and invariably find gloomy castles, with fair maids imprisoned in them, heroic lovers, false brides, huge giants with fair daughters, and so on.

Before going on to describe a few folk customs and superstitions, I cannot do better than quote from Lady Wilde's book on "Ancient Cures, Charms and

Usages of Ireland." She describes how: "The boatmen on one of the islands of Brittany are sometimes required to act as ferrymen for the departed spirits. At dead of night, on a certain day of the year, they hear voices at their doors, bidding them get ready their boats to cross to the mainland. At once they obey the summons, and when they have reached the shore and are ready to put off, they feel, tho they see nothing, that their boats are being filled by presences who, one after another, are taking their seats. These are the dead, who desire to pass over to the opposite land. When their passengers are got on board, the boatmen begin to row. No form is visible, but they know that their vessels are heavily laden. At last the shore is reached, and then the ghostly company whom they have been ferrying depart as silently as they came, leaving no trace behind them save the money for their passage." The imaginative element in this tale is at white heat, and produces an impression infinitely more weird than that of ghosts with skinny arms and "lean, lifted forefingers." Of Lady Wilde's collection of stories, the most powerful is that which concerns the "death ride" at Whitsuntide. The Irish peasants believe that on a particular day at that season of the year all those who have been drowned in the sea come up and ride over the waves on white horses and hold strange revels. Another remarkable and extremely picturesque superstition is the belief that if any person of Irish noble blood should die abroad, so anxious is the deceased to be at home that his dust flies on the winds, over sea and land, blasting every green and living thing over which it passes, till it reaches the burial ground of the race and there rests in peace. This baneful blast is called by the people the "red wind of the hills," and is held by them in the utmost dread.

One of the stories connected with May Day relates how the ancient Kings of Ireland on that day arise from their graves and "gather together a great army of the dead, horse and foot." They tell their troops that the hour has come to fight for their country, and that "they must be ready to march as commanded," and their words are "echoed by the clashing of shields and the wild cries of the shadowy host." It is said that the last time the Kings came back to earth was in 1848. Then their "drums and tramplings" were distinctly heard, and on all sides their watch-cries resounded thru the hills. When, however, those who had heard these shrill alarums of war rushed to the places whence "came the noise of the spears and the shouting of the captains," they found that the warrior specters "had made themselves air" and "become invisible to mortal ken."

To pass on to the second part of our subject, that of folk customs and superstitions. There are customs and superstitions from which no stage of human life is free. To begin at the very outset of life, let us look at some of the folk-lore connected with birth and infancy. In some places great importance is attached to the day of the week on which a child is born, as seen from the following:

"Sunday's child is full of grace,
Monday's child is full in the face,
Tuesday's child is solemn and sad,
Wednesday's child is merry and glad,
Thursday's child is inclined to thieving,
Friday's child is free in giving,
Saturday's child works hard for his living."

"Great riches, long life and happiness" are supposed to be in store for those born on a Sunday. To come into the world with a thin membrane or caul on one's head is supposed to be a sign of good fortune. David Copperfield, it may be remembered, came into the world with his head cased in that auspicious appendage. It indicates that the possessor is not to be drowned. The very presence of a caul on a ship will prevent wreck. Some advocates are said to pay a high price for a baby's caul, in the belief that it will endow them with eloquence. The practice of suspending a carving-knife point downward over the head of the baby is supposed to preserve it from harm. The Sussex peasants have the following rhyme:

"If you rock the cradle empty,
Then you shall have babies plenty."

It is important also that a child should go up in the world before it comes down; hence it must be carried up to the top story of the house. If it is born in that story the nurse overcomes the difficulty by standing on a chair and holding the young hopeful in her arms. Schoolboys and schoolgirls have a great number of

curious rhymes, *e. g.*, the one which is supposed to influence the weather:

"Rain, rain, go to Spain;
Fair weather come again."

or another:

"Rain, rain, go away,
Come again another day."

Another version most unkindly has it:

"Rain, rain, go away,
Come again on washing day."

In the north of England boys give to thunder the peculiar name of Rattley-bags, and in stormy weather give way to a most ungallant wish:

"Rowley, Rowley, Rattley bags,
Take the lasses and leave the lads."

But there is perhaps no part of life with so many superstitions and beliefs as that of marriage. Nothing connected with matrimony has not its charm. Nuts and apples are very favorite tests. Place a nut on the bar of a grate and utter the following:

"If he loves me pop and fly,
If he hates me live and die."

Great is the dismay if the nut, instead of making the long wished for "pop," dies without making a sign. Of all the days in the year St. Valentine's Day is the most propitious for love-making. Birds were supposed to choose their mates on this day, and lovers thought they must follow their example. The custom of choosing valentines was probably a survival of an old Roman custom at the feast of the Lupercalia. On All Hallow Eve again is practiced the cracking of nuts referred to above. Devonshire young ladies place great faith in St. Valentine's Day. If so disposed, they go to the churchyard at the "witching hour" of night with some hempseed in their hands. After walking round the church a certain number of times, they go back home, repeating to themselves a charm and scattering hempseed as they go. The lover they believe will appear in a winding-sheet and pick up the seed. The month of May has always, from Roman times, been regarded as an unlucky one in which to get married. "Marry in May and you will rue the day," says the rhyme. That this advice is pretty generally acted upon can be seen by observing the notices of weddings in the daily papers for that month. Marriages in June, on the other hand, are considered very lucky. The day of the week is just as important as the day of the month. Friday, more than all other days, is reckoned as a day of ill-omen, while Sunday is most auspicious. In Scotland the curious custom of lifting the bride over the threshold of her husband's home, to avoid the risk of stumbling, is resorted to. Corn, old shoes, rice, have always entered into the marriage ceremony, and at one time symbolical corn was worn by the bride, and afterward came to be made into small cakes, of which our bride-cake is a survival.

There are many interesting superstitions which gather round our every-day life. One's nose cannot itch, nor one's ears burn, without it foreboding something. In the former, the arrival of a stranger is denoted; in the latter, that some one is speaking of you, either well or ill, according as the ear in question is left or right. In some parts of England meeting eyebrows are very unlucky:

"Trust not the man whose eyebrows meet,
For in his heart you'll find deceit."

To have teeth widely set is a sign of prosperity. Many omens are associated with the hand:

"If your hand itches, you're going to have riches,
Rub it on wood, sure to come good;
Rub it on iron, sure to come flying;
Rub it on brass, sure to come to pass;
Rub it on brick, sure to come quick."

Singular virtues are supposed to be attached to a "dead hand." In Brynn Hall, in Lancashire, there is to be found a dead man's hand, said to have been one of a Father Edmund Arrowsmith, who was executed at Lancaster for being true to his faith. It was kept in a silk bag, and many persons resorted to it to obtain a cure for their diseases, and pilgrims came from all parts of the country to receive its touch. One person who was afflicted with the smallpox is said to have had this hand in bed with her for six weeks.

Our articles of dress, commonplace as they are, have their share of superstition:

"At Easter let your clothes be new,
Or else be sure you will it rue."

The people of Suffolk have the follow-

ing doggerel, by which they foretell a person's lot from the wear of his shoe:

"Tip at the toe, live to see woe;
Wear at the side, live to be a bride;
Wear at the ball, live to spend all;
Wear at the heel, live to spend a deal."

An almost infallible cure for rheumatism is to lay your shoes across each other. A story is told of an old lady in Sussex who did not obtain a cure, so she was at a loss to understand why her "rheumatics was so uncommon bad, for she had put her shoes crosswise by the side of her bed ever since she felt the first twinge."

There are many superstitions that have to do with the table, such as salt spilling, crossed knives and so on. The popular beliefs concerning ghosts, witches, dreams, etc., are all included under folk-lore, and can be indefinitely extended.

The two points, however, which I wish to emphasize concerning folk-lore are:

1st. That the study of folk stories is useful as well as interesting.

2d. That altho many of our customs and beliefs are absurd, yet they deserve to be remembered and studied, because they constitute an important element in our social life, which in future years will be of great use when studying the character of the English people.

My Hybrids

BY LUTHER BURBANK

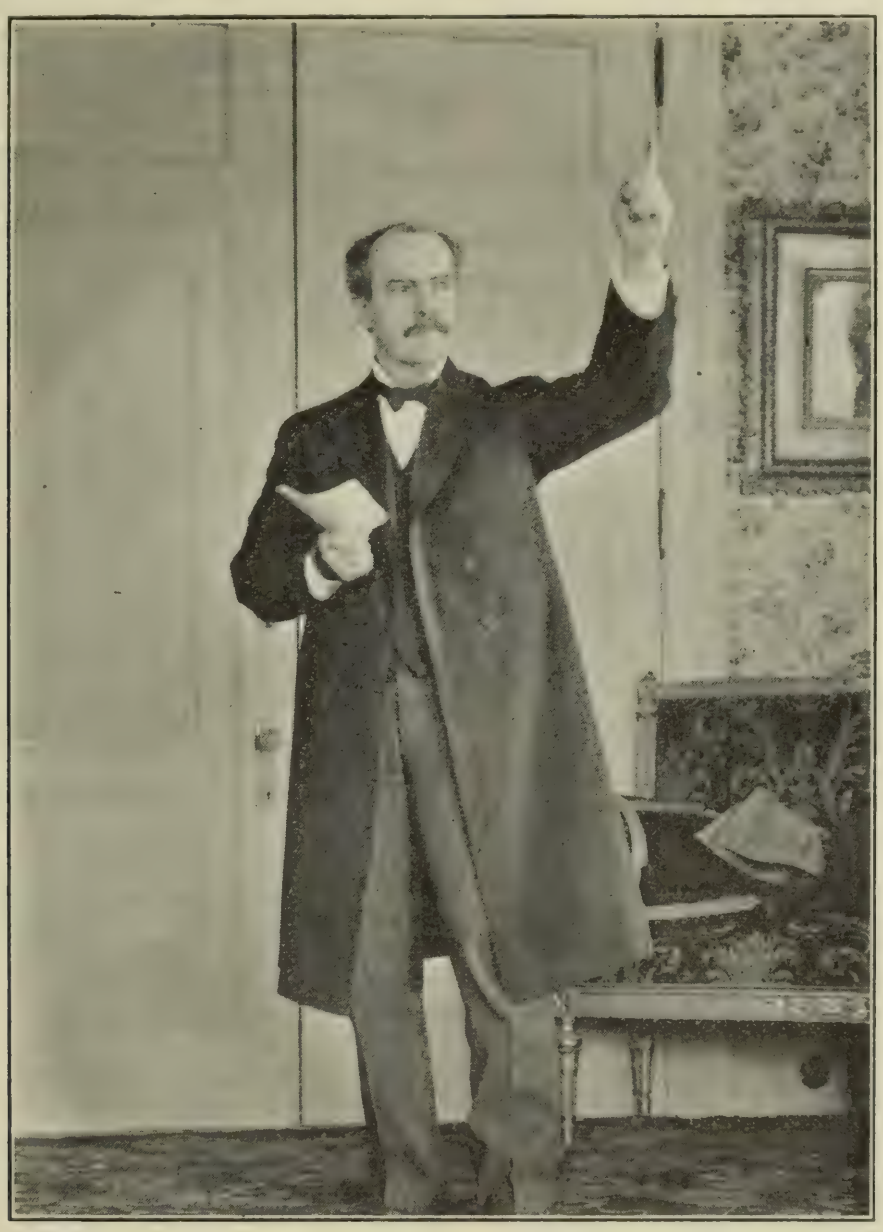
I HEARTILY thank you for your thoroly sane and impartial editorial, "Science Applied," in the issue of THE INDEPENDENT for September 27. There are two or three mistakes, however, which I have never before taken the trouble to correct. These mistakes were originated in extreme jealousy by certain would-be plant breeders. The strawberry-raspberry which you mention as one of my productions was an original species produced by Nature herself, and was discovered in Central China and introduced by a well-known Eastern seedsman. It is a pest, as you truly say. I tested it and discarded it as a fruiting plant before the United States public had generally even heard of it. I never introduced a plant, never sold a plant, never raised a plant of it for sale. As I said before, jealous competitors have laid this at my door for reasons which you may understand. The white blackberry was stolen from me outright and 50,000 plants of an unfinished product offered by outsiders before I had ever offered a plant myself. About the raspberry-blackberry hybrids: My "Phenomenal" is one of the best, most productive and most profitable berries ever grown on this earth in climates suited to it, especially along the Pacific Coast. It is being today planted more extensively than any other berry on this Western Coast.

No one fruit thrives everywhere, and it takes a little time to find where a new variety thrives best. Not a plant, not a fruit, not a nut, which I have ever sent out, and I have sent out scores of them, has ever in a single instance proved to be a pest or a failure. Not a single one of my productions has ever been sent out which is not now, this very day, one of the standard varieties somewhere. I do not often have time to hunt fleas, having more important work on hand, but you seem so sane and fair in this editorial that I feel like setting this one matter, at least, right.

I have better reason to know these facts than any other person living, as I have thousands on thousands of letters from every part of the civilized earth giving the facts which I have stated above in no uncertain language. I shall be pleased to have any person attempt to prove these statements untrue in any respect whatever, and stand ready to bring overwhelming evidence to verify them at any time.

SANTA ROSA, CAL.

Our Fight for Municipal Ownership



BY EDWARD F. DUNNE, LL.D.

Mayor of Chicago.

IN recent years perhaps no subject has engrossed so much of the attention of the public in the great cities of this country, and in Chicago particularly, as the question of ownership and operation by the public of public utilities. By these I mean street cars, gas works, electric light plants, telephones, telegraphs, railroads and other enterprises, the operation of which requires the possession and use of public property.

No subject is of more vital interest to the inhabitants of cities, who are compelled, day by day and year by year, to make use of and pay for these utilities, whether they like them or not.

A resident of a city may dicker, bargain with and change his butcher, his baker, his haberdasher, his tailor, his lawyer, his doctor, if he is not satisfied with his services or charges, but when he comes to pay his street-car fare, his electric light or telephone bill there is

Mayor Dunne.

room for neither dicker, trade nor change. He must stand up and deliver, no matter how unreasonable the charge or unsatisfactory the service.

If he objects to the street car service or the price, he is thrown off the car. If he demurs to the service or price of gas or electric light, it is shut off. If he criticises his telephone bill, his 'phone is pulled out. He has learned by experience that individual protest or objection is unavailing.

The existence of grave and scandalous abuses, both in the service given and the price charged for such utilities, and the recognition by thousands of the utter helplessness of citizens, as individuals, to help themselves or correct these evils, which have become over-burdensome and intolerable, have brought about in many of the great cities of the world an unrest and public agitation for the correction of these evils.

In Chicago a citizen is charged from $40 to $175 for the annual rent of a telephone, and the service is not overgood at that. The same service is given in Stockholm, Sweden, for $20 a year, on the average; in Christiania, Norway, for $22 a year, on the average; in Trondhjem, Norway, for $13.50 a year, on the average; in Berne and Zurich, Switzerland, for $10 and upward; in Berlin for $36 per annum; in Copenhagen from $27 to $48, and in Paris, France, for $78.

The same disproportion obtains in the cost of the other utilities. In Chicago the shortest ride a man can take on the street cars costs him five cents, and then he rides a great part of the way hanging to a strap, jammed, jostled and jolted about in a manner that is irritating to his fellow passengers and indecent to the gentler sex. The fare paid in other great cities of the world, outside the United States, is about one-half that amount.

This state of facts and figures in Chicago and elsewhere is causing the people to endeavor to find the reason for this condition of affairs, and to find a remedy.

On the threshold of this inquiry the people of Chicago have discovered that all these public utilities furnished to the citizens of the city of Chicago are owned and operated by private corporations, organized and conducted for private gain. On stepping over the threshold into the vestibule of the investigation they have also found that in all the cities where public utilities were furnished at a cheaper price, these public utilities were generally being owned and operated by the public—in other words, by the municipality itself.

Must or must we not conclude that the difference in ownership and operation is the cause of the wide discrepancy in the cost of these absolutely essential necessaries of life to the residents of cities?

These facts and their significance had long engaged my attention, in common with that of other thoughtful men of Chicago, when my election as Mayor in April of last year gave me opportunity to help in the solution of at least one of these problems. I refer to the traction problem, which sooner or later must confront every growing city in the land. Conditions in Chicago were especially bad, so much so that my campaign was conducted on a municipal ownership platform, and the people at the polls declared emphatically in favor of the acquisition and ownership of the traction systems of the city. How far the present administration has been able to carry out the wishes of the people in this direction doubtless will be of interest everywhere to foes as well as advocates of the municipal ownership idea.

At the time of my inauguration a great strike of teamsters was in progress. It lasted one hundred and five days, and presented sufficient problems of its own to keep the administration engrossed until July 5th, 1905, when I took the first step toward carrying out the wishes of the people as expressed at the polls. I submitted to the council a message offering two plans by which the city could acquire possession of the traction systems.

One of these plans provided for an ordinance under which not to exceed $75,000,000 worth of "Mueller certificates" should be issued, subject to the approval of the people. These certificates were to be in the nature of income bonds, payable out of the receipts of the traction system, and not a general

obligation of the city. The theory was that they could be disposed of readily and would yield the money necessary for the purchase of the street railway properties or the building of new roads. This became known as the "city plan."

The second plan, known as the "contract plan," offered a twenty-year franchise to five or more citizens who would agree to accept a charter, issue the necessary bonds and construct a modern electric system covering the entire city. These proposed bonds would bear 5 per cent. interest and be used solely for the acquisition of the street railway properties. The net receipts of the system were to be turned into a sinking fund to the credit of the City of Chicago, to be used ultimately for the purchase of the system by the city.

Under this plan the enterprise would be undertaken on a purely patriotic basis, for the good of the city, the company receiving no benefit beyond salaries for the board of directors and interest on the bonds.

On the submission of these plans to the council, they were promptly referred to the committee on local transportation, which unfortunately was not in sympathy with the municipal ownership idea. This committee held up the plans for several months, and, notwithstanding my repeated protests, invited the traction companies to negotiate with the city for an extension of their franchises. By December 5 these negotiations had so far proceeded that the committee had agreed upon and recommended to the city council ordinances which would have extended the franchises and postponed municipal ownership many years.

During this period litigation was pending in the Circuit Court of the United States, involving the validity of the companies' claims that their franchises, under the so-called 99-year act, would not expire until 1958. This claim was viewed with alarm by all parties, as giving the traction companies practically indefinite rights in the streets of Chicago, and formed the basis of most of the arguments in favor of granting some franchises by ordinance to the traction companies then and now in possession of our streets.

It was apparent that nothing could be accomplished by the administration until a final decision of the courts in this matter could be obtained. Immediately upon entering office I had appointed Mr. Clarence S. Darrow as special traction counsel and Glen E. Plumb and Edgar B. Tolman as assistant traction counsel. These gentlemen, together with the corporation counsel, Hon. James Hamilton Lewis, pushed the pending suit with great vigor. On March 12, 1906, the highest tribunal in the land, the Supreme Court of the United States, declared these so-called 99-year claims without foundation. The city thoroly defeated the companies at every point.

In January, 1906, it became evident that the ordinances extending the franchises would never be ratified by the people, even if passed by the council. Prominent citizens and newspapers who at first had opposed the mayor's policy now advocated the defeat of the ordinances extending franchises which had been framed up in committee. The spring election was approaching. This was the situation when unexpectedly, on January 19, 1906, on receipt of the report of the transportation committee, the council passed the ordinance framed by the mayor, authorizing the submission to the people of the question as to whether the Mueller certificates proposed should be issued.

The issue for the spring election was thus clearly defined and was fiercely contested before the people. Two ordinances were submitted for approval at the polls. One authorized the Mueller certificates; the other, the operation of the road when acquired by the city. Notwithstanding the solid opposition of the Republican party, the opposition of the press and the hostility of Democratic leaders, the ordinance authorizing the certificates carried by about four thousand majority. The ordinance authorizing the operation of the railroad lacked the requisite number of votes, 60 per cent. being needed, altho it received a majority of about twelve thousand.

Immediately after this election I instructed our traction counsel, Messrs. Walter L. Fisher and Samuel Adams, to test in the courts the validity of the Mueller certificates as authorized by the popular vote, and of the statute which

authorized the city to own and operate street cars. The Circuit Court of Cook County upheld the validity of the certificates, the ordinance and the Mueller law. An appeal has been taken to the Illinois Supreme Court, which I am confident will uphold the decision of the lower court in every particular.

When this is accomplished our long and successful fight will be over, for I have no doubt that we shall negotiate the certificates readily and be able to purchase the railway properties with the proceeds.

At the present time the city is negotiating with the traction companies in accordance with a letter which, as mayor, I addressed to the chairman of the transportation committee. In that letter I suggested that, pending the litigation which would settle the validity of the Mueller law and ordinance, if the present companies were able and willing to enter into an agreement to sell to the city all of their tangible property and unexpired franchises and rights, at a price to be fixed at once, and to undertake the immediate improvement of their service, the city would be prepared to enter into negotiations on the basis of paying the fair cash value of the tangible and intangible property and actual cost of improvements, together with reasonable interest thereon. Pending payment, the roads were to be operated by the companies so as to provide for a sinking fund out of the proceeds to apply on the purchase price.

The companies, in response to my letter, assented to the carrying on of negotiations on these lines, and have placed an excessive value upon their properties, some $73,000,000. The city has employed competent engineers to value the plants, the commission consisting of Professor Cooley, dean of the engineering college of the University of Michigan; Bion J. Arnold and A. B. duPont. Failing to reach an agreement with the companies, we shall offer to arbitrate, in accordance with provisions in the ordinances under which the companies have been operating. Should an agreement become impossible, we shall place our certificates on the market for sale and with the proceeds build new modern lines.

Upon the maturity of these certificates, all of them, in my judgment, can be paid in full, and the people then owning their plant, can proceed to reduce fares to the lowest possible cost, as has been done in all the great cities of England and in many of the great cities of Germany, Austria-Hungary, Australia and Italy.

Corruption of public officials, the stealing of public property, favoritism in the selection of employees, strikes, inefficient service, exorbitant charges and insolence toward and defiance of the public has marked the history of private management of public utilities in Chicago and elsewhere in America. The people have called a halt. The demand of the people to place a check upon public corruption by and with the referendum, at first feeble and unheeded, has swelled into a roar whose reverberations are heard in the council chambers of the land, as well as in the temples of finance.

In my judgment the people are in no condition to be longer trifled with; no longer will they be despoiled and flouted as they have been in the past, and the legislator, councilman or alderman who remains deaf to the cry of the people and heedless of the popular demand for municipal ownership under honest civil service rules and the referendum, may as well prepare for sepulture under a stone upon which will be written the epitaph, "He served the corporations—not the people."

CHICAGO, ILL.

A Roman

BY W. G. BALLANTINE

'Twas in the crowded avenue; o'erhead
Thundered the trains; below, the pavement shook
With quivering cables. Everywhere the crush
Of horses, wheels and men eddied and swirled.
A river of humanity swept by
With faces hard as ice. I stopped beside
A little push-cart filled with Southern fruits
And dickered with the huckster, "Three for five?"
"No, two," in broken English. There we stood—
He shabby, stooping, wolfish, all intent
Upon a penny, I to him no more
Than just another stranger from the throng
Trampling each other in this fierce New World.

Then looking in his sordid eyes I said,
Using the tongue of Plato and of Paul,
"Art thou a Roman?" Never magic word
Of wizard or enchanter wrought more sure.
The man erect, transfigured, eyes on fire,
Lips parted, breath drawn fast, thrust in my hands
His double handful. Huckster? No, a king!
"Could I speak Roman? Did I share it all—
The memories, the pride, the grief, the hope?"
Then welcome to the best of all he had.

Wouldst know, self-glorified American,
The name that sums the grandest heritage
Race ever owned? 'Tis "Roman" spoke in Greek:
Romaiós they call it. Constantine the Great
Fixed his new capital where East meets West,
Brought Rome's imperial law, the Cross of Christ,
The art and tongue of Greece—the whole world's best;
And in that fairest spot new Christian Rome
Reigned queen a thousand years, until the Turk
Fell like a blight, and darkness shrouded all.
But still that name lives in the exile's dreams.
All glories, Hebrew, Christian, Roman, Greek,
Blend in that one unequalled *Romaiós*.
Abraham, Moses, Homer, Phidias,
Cæsar, Paul, Chrysostom, Justinian,
Bozzaris, Ypsilanti, Byron, all
Are his. O blest America, these men
That come in rags bring jewels in their hearts
To shine resplendent in thy future's crown!

SPRINGFIELD, MASS.

Reminiscences of Wendell Phillips

BY G. W. PEPPER

THE distinguished agitator and orator, Wendell Phillips, has been dead for many years, but his memory is still warmly cherished by thousands in this and European countries. Massachusetts has given many a great citizen to the state—none, however, who rendered more valuable services to the cause of civil and religious liberty than that of the famous man whose name heads this article. Proudly, bravely, without spot or stain, he went thru his unparalleled labors and trials, and few men hold a more honored position in our roll of illustrious agitators and philanthropists.

Personal reminiscences of such benefactors are of invaluable service. Thru this channel a vast amount of information upon important subjects is disseminated concerning those whose labors have left their footmarks in the history of their times.

Meeting him on one occasion in Ohio, he said to me: "If you ever speak within twenty miles of Boston, let me know; I will come and hear you." When the opportunity came I remembered Mr. Phillips's words, and he was appointed to preside at the meeting when I lectured at South Boston. He could not come, but wrote a letter giving the reason as the sickness of his wife, and asking me to visit him the next day. This was the last letter he ever wrote. I found him in his library. He was in a conversational mood, and gave me his recollections of the eminent men he had met in England and the United States. I had recently returned from the Old World, where I met and conversed with some of the Russian exiles. The address of Mr.

Phillips at Harvard, in which he justified and glorified the rough methods of the Nihilists, was translated into all the Continental papers. The bold conspirators read this speech with emotion, and told me of their admiration and love for the author. I told Mr. Phillips of the ecstasies of these brave but mistaken advocates of liberty when I informed them of my personal acquaintance with him, kissing my hands with many terms of endearment. He was pleased to know that his words had traveled across the sea, giving comfort to these people. "Russia," he said, "has been carrying on a war against humanity for centuries. The barbarism of the Russians was shown in burning off the feet of the champions of liberty and shooting them down like dogs. I trust that some mighty leader will start up among the Russians who will avenge the martyred Nihilists and lead them to success." After speaking thus upon the subject, he told me this incident, which occurred before the speech was delivered. Colonel Higginson and others were apprehensive that the address would be very radical. Higginson, therefore, called privately upon Mr. Phillips and said: "Wendell, mix a little honey with the vinegar." "I will speak my sentiments or I will not speak at all," was the reply.

I asked him his estimate of Webster and what he thought was his masterpiece. He believed that the noblest specimen of his eloquence and the most profound sample of his reasoning powers was contained in a lecture before the Mechanics' Institute in Boston. He quoted a whole passage, commencing: "A history of mechanical philosophy, however, would not begin with Greece." He said that nature was lavish to Webster—his broad, clean temples, his massive head and majestic body were all expressive of the concentrated force of will which marked the great Greeks and which Lavater admired. His self-possession, his splendid presence, his learning, his ardor, his dramatic manner of stating a case, all added impressiveness and power to his utterances. When he commenced to speak he was strained and laborious, and his first sentences resembled the effort to get a heavily laden vessel under way. His words were not winged, but appeared as rough hewn out of some mental quarry. The two best known and popular of his speeches were the two delivered at Plymouth Rock and Bunker Hill. He questioned Webster's sincerity. To him, he said, might aptly be applied the language of Sallust, in speaking of Catiline: "He could with equal skill pretend not to be what he was and to be what he was not."

France was mentioned, when Mr. Phillips became very enthusiastic in describing the people of that land. "I was there when all the enthusiasm which had been restrained broke forth in a torrent. 'Mourir pour la patrie,' no matter who governs, is still the sweetest death to a Frenchman. Neither materialism nor bourgeois prosperity have been able to erase this beautiful blossom from the French heart. He quoted with rare power Vergniaud's proud saying:

> "'The nobility—what does that mean? The nobility—that means one class born to rule, another class born to be ruled—one class born to be masters, another class born to be slaves. The very term is an insult to the human race and blasphemous against the living God.'"

He spoke with delight of the French character and his belief that the Republic was an assured triumph. Of Béranger, the rebellious poet, he was full of praise, repeating his words:

> "Peuples, fermez une sainte alliance
> Et donnez vous la main."
> (Oh, nations make a holy alliance,
> And give to each other a friendly hand.)

In the presence of this greatest master of eloquence I was anxious to have his views upon this subject, and inquired if the following anecdote was true: A statement had gone the rounds of the press some years before which represented Mr. Phillips as, in his superb way, while fixing his eyes on Faneuil Hall upon the motto of the State: "God save the commonwealth of Massachusetts," he thundered out: "God damn the commonwealth of Massachusetts!" He said it was true and that he received hundreds of letters from clergymen remonstrating. He laughed like a boy and gave the history of the circumstances which called it forth: A slave girl had made her escape from Carolina under the most distressing dif-

ficulties, when, on arriving in Boston, she was immediately arrested and remanded back to slavery. An indignation meeting was called. Frederika Bremer was present and indignant that such an outrage should be committed on the sacred soil of the Pilgrims. I did then utter that malediction," said Mr. Phillips. "You are a clergyman. Would you not have repeated it?" I replied that if I had not said it I would have thought it. Mr. Phillips laughed for a few minutes and then gave me a copy of the Harvard oration with his autograph.

I called his attention to his recent lecture upon Charles Sumner, and inquired which of the Senator's speeches he considered the best. He answered: "It is very difficult to decide; for strength of denunciation his speech upon the barbarism of slavery is the most thoroly prepared, the most forceful and the most exciting of all his addresses in the Senate. But the first address he ever delivered upon the "Grandeur of Nations" bears evidence of great study. It has the glow of genius, and I believe history will place this effort as, perhaps, the greatest of all, in literary preparation and excellence."

Here a suggestion was made that Mr. Phillips and other agitators might have accomplished more effective work by accepting public office. "Oh, no," was the quick response, "the best method for reformers, if they sincerely desire the public good, is never to accept office. All the great reforms of the last few years were achieved by men who never took office. It was William Wilberforce who abolished slavery; it was O'Connell who abolished Catholic slavery; it was Cobden who abolished the taxes upon food; and never has Gladstone appeared in a nobler attitude than when he pleaded the cause of the Bulgarians and Neapolitans. All these public benefactors were out of office at the time."

He had nothing but contempt for Disraeli, describing him as a charlatan, and saying the best portrait of him was found in one of his own novels:

"He became habituated to the idea that everything could be achieved by dexterity and that there was no test of character except success—to adopt all opinions and possess none."

He asked me if I heard Bright and what was my opinion of his style. I answered: "Very simple." "Yes," he said, "his style is simple and perhaps he has spoken the finest English in this age, but he seems to have abandoned all his early progressive ideas and gone back upon his friends, upon liberalism. Now he sees in every party, a faction; in the enlightened progress toward justice in Ireland, a malignant insult; in all her efforts at local self-government, a sectarian cry. The great place he filled, the great reforms in which he participated, the timely friendship for us in the war—all are to be remembered with gratitude. But his opposition to prohibition and woman suffrage and other reforms shows that he has become an antiquated imbecile. He has splendid and undoubted talents, but if any of the sacred fire of his earlier and purer days is left in him, he must feel degraded and politically dead."

Gladstone's name was mentioned, when Mr. Phillips interrupted me by this estimate: "Gladstone possesses all the elements of the most persuasive eloquence—logic unsurpassed, commanding personality, vast and profound learning, and a free and fearless manner." Reference to the English statesman's change of front upon the suffrage question, and that his enemies charged him with demagogism, elicited the reply: "No, he is no demagog. A demagog follows, but does not lead the masses; he flatters their follies and prejudices, while the reformer and statesman attacks both at the mandates of his convictions. He transfers the benevolent spirit of Christianity from the pulpit to the platform."

He rapidly sketched the prominent traits of several orators of his own time. Of Clay he said: "His rush at a subject had all the rapidity of a mountain torrent." Calhoun was "always cool, his voice low in tone and small in volume, but when he was excited, his words fairly hissed." Everett's eloquence was like a "stuffed doll—an artist using mere words in place of paint." The perfection of eloquence was fervid thought in direct language! No orator can tell the thing within him. Rhetoric is a mummy—no great truth goes by art. Every orator has his mannerisms and his own style. It was the fashion of Addison and Burke to polish,

alter and refine up the sentence and adopt the last and best finished.

I spoke of his sympathy for Ireland and told him that in Dublin he was almost as well known as the Irish leaders themselves; that his speeches were read all over the land. "Ireland has my support," he said. "It is nigh a hundred years that the greatest political essayist that ever lived, Junius, wrote in one short sentence the history of misgovernment in Ireland: 'The people of Ireland have been plundered and oppressed.' This has been the epitome of Irish history for hundreds of years."

Parnell was then in the fullness of his fame, and of him Mr. Phillips said: "He is the truest and noblest type of an Irish patriot since O'Connell stirred the heart of Ireland like an earthquake and swayed her mind by his eloquence as the sun rules the planets. No Irish leader has been a truer exponent of Ireland than Parnell." Here he incidentally referred to the labor problem, repeating with earnestness the observation of one of the fathers: "Great wealth is not to be expended for personal enjoyment, but in promoting the glory of God and the happiness of His creatures."

But it was for O'Connell that he reserved his highest praise. He dwelt upon his generous and effective sympathies with the Protestant Dissenters, securing for them the lands which guaranteed them civil and religious rights; his noble advocacy of abolition and his broad, comprehensive views, adding: "It is curious enough, in watching the course of events, to mark how every strong passion which takes hold upon a nation embodies itself in a suitable leader, who stands forth from his fellows as master of the situation. O'Connell was Ireland embodied." He then related many anecdotes of O'Connell's eloquence, wit and blarney. He referred to the time he heard O'Connell, in one of his speeches in Dublin, say: "I was delighted at the activity and my heart grew warm admiring the beauty of the dark-eyed maids and matrons of Kildare. Oh, there is starlight sparkling from the eyes of a Kildare beauty that is scarcely equaled in all the world, and remember that you are the husbands of such women, and a traitor or a coward could never be connected with any of them."

I asked him about his great lecture on O'Connell. He said Dr. Blake, of Boston, called upon and asked him to speak a few words for a charity. He protested that he had not studied the Irish question, when Dr. Blake said: "Tell us what you know of O'Connell." He had a volume of O'Connell's speeches, which he took down from the shelf, and read to me this sentence from one of them: "We want no ascendancy. We repudiate it. I had rather die upon the scaffold—I say it with all the solemnity of truth—than to consent to a Catholic ascendancy for Ireland." Mr. Phillips spoke long and earnestly upon O'Connell, describing him as the father of agitation, and saying that his was a sublime close of a political career the most successful and the most morally glorious.

Frequently during this conversation he referred to his Irish friends. He knew and loved Boyle O'Reilly and said that he "opened the drawing rooms of Boston to Ireland's sad history" and that "his songs carried with them a pure and ennobling influence." Patrick Ford was also spoken of in terms of admiration: "I read his paper every week. It is a great journal, but Ford is a hundred years ahead of the times."

As I rose to leave he begged me to stay just a little longer." At that moment a painful cough was heard from the next room. It was Mrs. Phillips. "Oh, Mr. Pepper, it is my poor wife—how she suffers!" said Mr. Phillips, with tears in his eyes. "We are distressed now—we are distressed now."

This was the last time I saw him. In a week he was numbered with the immortal dead. The tongue upon which delighted thousands hung with rapture was silent forever. The burning eloquence which inspired the glowing periods of many an oration, or thrilled in the tender strains of passionate appeals for human rights, shall never again be heard by mortal ear.

"Now is the stately column broke,
The beacon light is quenched in smoke,
The trumpet's silver sound is still,
The warder silent on the hill!"

CLEVELAND, OHIO.

Literature

Sir John Constantine

Sir John Constantine was a country gentleman of Cornwall. In this volume we have his memoirs, written by his son, Prosper Paleologus, and "edited by Quiller-Couch."* This is enough said to indicate the charm and quality of the tale. Sir John was another Don Quixote of the eighteenth century. He loved a noble Corsican maid in his youth. But affairs of state prevented their union. She was married to a brand-new scamp King, and Sir John returned to his home in Cornwall. Twenty years later the King was in pawn in Old Fleet, and the Queen was imprisoned in one of the island castles by the Genoese. It is at this juncture that the story begins, when Sir John goes to the rescue with all the ardor of a man "who would set the world on fire, and only for love."

If we were denied all classical fiction we could easily compromise upon Quiller-Couch's novels. He has preserved, perhaps as no other living writer of tales, the spirit of the past, its noble simplicity, its effulgent human, not yet sharpened into modern wit, and, above all, he has preserved the honor of the past, that peculiar point of view which made men sack a city or dare unimaginable dangers for the sake of a vow, or a woman's smile. They lacked the sense of proportion, those old knights; the forfeit was too great, the wage too small, but the fact remains that modern sense produces no such heroes. The question is, How does Quiller-Couch reckon with them so really, how does he produce a literature that is not literal of life, but higher—a sublimated form of memories that comes to the reader like the fragrance of centuries, sweet and familiar, too elusive to hold, too dear to lose? Hear Sir John tell his companions how to make wine with the royal heart:

"Choose first of all a vineyard facing the south, between mountains and the sea. Let it lie so that it drinks in the sun the day thru; but let the protecting mountains carry perpetual snow to cool the land breeze all night. Having chosen your site, drench it for two hundred years with the blood of freedmen; drench it so deep that no tap-root can reach below its fertilizing virtue. Plant it in defeat, and harvest it in hope, grape by grape, as though the bloom on each were a State's ransom. Next . . . dropping the grapes singly into vats of sea water . . . full fifteen fathoms deep in a spell of halcyon weather and left to stand for the space of one moon . . . and then call for your maidens to tread them with hymns under the new moon. Oh, and yet you may miss! For your maidens must be clean, and yet fierce as tho they trod out the hearts of men, as indeed they do. A king's daughter shall lead them, and they must trample with innocence, and yet with such fury as the prophet's who said, 'Their blood shall be sprinkled upon my garments, and I will stain all my raiment; for the day of vengeance is in my heart, and the year of my redeemed has come.'"

This is not a receipt for making wine. The man has lifted it up into a sacrament to love and honor and virtue. He has packed away into it the heart-beats of many generations, and made a beaker of it the elegy of a brave nation.

By the way, can any such alchemy be made of the adulterated, machine-pressed modern wine? And must a man, with the true literary sense of things, cast his scenes back a hundred years or so into the past in order to get the right atmosphere for the spirit and beauty of the truth he tells? Is it not possible that we realists, with all our science and common sense, have lost the spirit's way to some of the higher altitudes of thought and action? But for Margaret Deland we might think so. As it is, we can only regret that more of our novelists do not follow either her example or that of Mr. Quiller-Couch.

Guarding a Great City

No division of public service in city life commands so much space in the metropolitan papers as the police department, but it is rarely that anything even resembling actual information concerning the real problems of police administration comes to the public thru the press. This fact gives Mr. McAdoo's book* great value, for it is a close-range study by a former New York Police Commissioner of police problems, to the

* Guarding a Great City. *By William McAdoo.* Harper & Bros. $2.00.

solution of which he makes many important practical contributions. The one side of the police question about which the public knows practically nothing is the policeman's side. Not the least valuable feature of the book is the plain picture which Mr. McAdoo gives of the effect of loose general denunciation of the police on the attitude of the police toward the public. In the chapter on "Solidarity and Prejudices" Mr. McAdoo reports, for example, a significant conversation which he had with an honest policeman to whom he had said: "Why don't you policemen who are honest and clean and straight get together and run the crooks out? Come down and tell me all about them. Go to the court—drive them off the force." The policeman replied: "We don't get any show in the courts and the public make no differences between us. They think we are all crooks. . . . Now, Commissioner, you know it to be a fact yourself that if any man, no matter who he is, gets up and calls the policemen grafters, thieves, crooks and murderers he gets applause, whereas if he stood up for them, you know better than any one what he gets. No, I am not going down to the Court House unless I have to." There is much in this chapter from which the above is quoted to furnish food for thought for that not inconsiderable number of publicists who think the police problem can be solved by denunciation. Moreover, it will be somewhat of a surprise to the average New York reader to find some of his grounds for upbraiding police management taken from him by a flat denial of newspaper stories on which his complaint was founded. Some of us who still remember our indignation over the curfew law, which a police captain was some months ago reported to have made, directing the arrest of all women alone in the street after nine o'clock, will be surprised to learn from Mr. McAdoo that the story was entirely a newspaper canard, which, however, has never been retracted.

Quite apart from its value in the discussion of purely administrative problems of police management, the book is very readable. Mr. McAdoo knows his subject and handles it with great directness. One criticism which might be made is that when discussing the problems of the police he assumes that his readers possess rather more information regarding the police organization than they are likely to have, but these lapses are only occasional. The chapters on "Vice in New York," "The East Side," "Chinatown" and "The Pool Room Evil" are admirable, and give clear pictures of city life from the police standpoint. Mr. McAdoo is a believer in the segregation of vice as a practical method of handling the social evil, and whether the reader agrees with him or not the chapter in which his views are expressed deserves to be read and its argument fairly considered.

Religious Education

THE problems of religious education, especially thru the Sunday school, are receiving thoro attention from some very capable and sensible writers. The best manual for a training class we have seen is that of Miss Margaret Slattery,[1] of the Normal School of Fitchburg, Mass. Miss Slattery has rare gifts as a teacher of teachers, a pleasing personality, an unusual supply of common sense, and the ability to convey a considerable quantity of truth and facts in a small space. She does not undertake in eighty pages to impart an entire body of psychology, together with an introduction to both the Old and New Testaments, but her modest endeavor to supply suggestions for making an ordinary layman or lay-woman a better-equipped teacher of religious truth is well accomplished. There is nothing cheap, nor weak, nor amateurish about Miss Slattery's suggestions. Her purpose is evidently to bring Sunday school teaching into line with the best modern educational practice. The book will be found profitable for individual study, but is especially well adapted to be used as a text-book for a class of teachers.

The essays[2] edited by Mr. Greenwood,

[1] TALKS WITH THE TRAINING CLASS. *By Margaret Slattery.* Introduction by *Patterson Du Bois.* Boston: The Pilgrim Press. 60 cents.

[2] SUCCESSFUL TEACHING. Fifteen Studies by Practical Teachers, Prize Winners in the National Educational Contest of 1905. With an introduction by *James M. Greenwood.* New York: Funk & Wagnalls Co. $1.00.

of Kansas City, are the results of prizes offered by the publishers for the best essays on such subjects as "Advantages of Memory Work," "The Place of Biography in General Education," etc. The essayists are American teachers from grammar and high schools as well as colleges, and the contributions are of varying merit, tho on the whole excellent. The series relates to teaching in general rather than to religious education in particular, altho most of the material is applicable to Sunday school teachers.

Mr. Haverstick's infant room method[3] would seem to be well adapted to High Church kindergartens, as is evident from the catechism question and answer: "How does Jesus take us to heaven? Jesus takes us to heaven by His Church"; and the following verse to be sung to the tune of "London Bridge":

"This is the way we cross ourselves,
Cross ourselves,
Cross ourselves,
This is the way we cross ourselves
When we enter church."

Dr. Van Dyke has furnished the text[4] for an excellent reproduction of some twenty of the most famous paintings of the nativity and childhood of Jesus. His brief essay does not treat of the particular paintings, but the general subject of the Christ child in art.

Pastor Koenig's *Bible History*[5] is a sincere attempt to present to Bible classes, even those composed of children of the junior period, the results of the higher criticism of the Old Testament, or rather to teach those views of the development of Hebrew religion and literature which historical criticism has justified. A myth is called a myth and a legend a legend, and endeavor is made to place the prophets in the forefront, where they belong. A boy instructed according to this manual would not only understand what the Old Testament really is, as do few schoolboys now, but he would have very profound respect for it as a religious book, and especially would he be spared those struggles and doubts which arise so often when the truth has been kept hidden and a false notion of the Bible inculcated.

That educational problems are no new questions in Church circles is shown by Miss Hodgson's study of the attitude toward learning in the early Church and the pedagogical methods of the early Christian centuries.[6] The author's purpose is to refute the charge of Gibbon and J. A. Symonds that the Fathers "despised all knowledge that was not useful to salvation" and regarded the classics with hatred and distrust. Miss Hodgson finds much to say by way of rebuttal of this view, but her description of the educational practices of the early Christians is not sharp and defined. She has searched the sources diligently, but not always used them critically, nor constructed from her mass of material a consistent and orderly edifice of fact.

President King's Letters[7] are addressed to Sunday school teachers only as persons likely to be interested in the fundamental problems of religious belief. They are a sort of theological primer, a plain, non-technical argument for the leading articles of Christian faith. President King has the right spirit of approach to these questions: he is frank and honest, and tries to keep hard by reality. His theology is that of Herrmann's "Communion of the Christian with God," put forward in a clear and convincing manner. He writes in the full assurance of faith, starting from the surest realities of personal experience and endeavoring to lead up to established conviction in those articles of belief which are essential to the healthful life of the spirit. There are many questions concerning Christian doctrine which President King does not attempt to answer, his effort being not to equip one with a system of theology, but rather to supply the necessary basis and then show how the superstructure may be reared by one's own hard thinking and earnest living.

[7] Letters to Sunday School Teachers on the Great Truths of Our Christian Faith. *By Henry Churchill King.* Boston: The Pilgrim Press. $1.00.

The Persia of Zoroaster*

This is not a book of political history, past or present. Not a word can be learnt from it as to the character of the present Government in Persia, or as to the rival designs of the Russians and the British. Nor is it a treatise on geography or ethnology or physical science. It considers Persia from one central point of view—it was the seat of the religion of Zoroaster. There Zoroaster was born, there reigned Cyrus, Darius, Xerxes and the other Akhæmenian kings. There arose, centuries later, the Sasanian kingdom and the Pahlavi writings. And there the fire-worshippers were cruelly slain and almost exterminated by the Mohammedan invaders, even as, they would have it, the Babylonian tyrant Zohak had oppressed them until they were delivered by Feridun. This is the Persia which Professor Jackson visited and describes. It is such a book as Layard might have written if he had possest the scholarship of Sir Henry Rawlinson.

Professor Jackson is one of the most profound Iranian scholars living. His "Zoroaster" tells us all that is known or guessed as to the life of the great reformer, whose religion has more points of contact with Christianity than any other except Judaism, while Judaism itself, in its later development, probably borrowed not a little from Zoroastrianism. As one reads in this volume the story of the feast in honor of Feridun's victory over Zohak, he cannot help comparing it with the Jewish feast of Purim. Professor Jackson was first called to Columbia University as adjunct to the chair of English Literature, and his literary taste and knowledge are always to be observed. Then he took his own chosen department as Professor of Indo-Iranian Languages, with a first preference, we judge, to the Iranian Avestan over the Sanskrit, altho the latter literature is the larger and has more students. But the Avestan has closer relations to classical history and to all Western religion and institutions. In 1901 the author had visited India, giving special attention to the Parsees, who had fled to India from Moslem persecution, and are now, tho few in number, among the most honored and prosperous and progressive of the people of India. The visit of 1905 to Persia had for its object to follow the footsteps of Zoroaster and learn the condition and religious rites of his followers, who have now sunk to less than forty thousand souls. Another especial object was to visit the rock-sculptures of Darius at Behistan, and investigate the doubtful readings of that king's great inscription, as copied by Sir Henry Rawlinson seventy years ago.

From Rawlinson to Jackson no scholar had collated this great inscription. Hardly a mountain goat can climb to it. There are three great columns, in three different cuneiform languages, and Rawlinson gave up promise of most honorable promotion that he might remain in Baghdad for years visiting the monuments and deciphering the three languages. It is only the first column, the Persian, that Professor Jackson is interested in and has now collated. The others are Semitic, Babylonian and Elamite. It is the danger of climbing some five hundred feet above the plain which has deterred scholars from repeating Rawlinson's feat. But there were questions of reading to be solved, and the task appealed to Professor Jackson, even tho Messrs. Coste and Flandin, deputed to the spot by the French Government, with express instructions to copy the inscriptions, returned unsuccessful, saying that they were absolutely inaccessible.

We have indicated what was the author's purpose in his visit to Persia, and the book tells of his success. He verified the marvelously correct copy of Rawlinson, suggests corrections, and makes a charming story, while satisfying the technical scholar. For while there are chapters that are purely technical and the foot-notes are replete with much learning, a good part of the work is the story of the traveler, but a traveler whose eye is always looking back to Zoroaster, and spying for fire temples or tombs for the dead. Wherever there are any of the ancient people he seeks them out and reports their condition, their customs and their paucity of manuscripts.

The reader is struck by the wealth of

* The Persia of Zoroaster. *Persia Past and Present.* A book of travel and research, with more than two hundred illustrations and a map. *By A. V. Williams Jackson.* 8vo, pp. xxxi, 471. New York: The Macmillan Co. $4.00.

out-of-the-way knowledge everywhere evident, tho not displayed. For there is a gentle modesty about it all which recalls the fact, not noted in the book, that when—the first visitor to see it—he saw Rawlinson's name scratched on the rock under the arrowheads, he was inclined to put his own name under that of the great master, but refrained from doing so. If he should visit the place again we hope he will exercise less self-restraint. We remember that the names of a French explorer and his wife were to be seen some years ago in great, staring, painted letters on the fallen blocks of the temple of Osiris at Palmyra, while almost invisible, penciled minutely on a lintel over the doorway of a subterranean chamber of a tomb, remain the names of two famous English travelers, carefully hidden away from the vulgar eye, who visited the site a hundred years ago. Professor Jackson's ethics also appear in his great care to give the fullest credit to every one who has given aid or from whom he has borrowed a fact.

The wealth of illustrations is very great. The author took many photographs, which he has here reproduced, and has added many from sources not usually accessible. In all, he has given us one of the most instructive and equally one of the most interesting and unusual books of travel and research that have appeared of late years. We await from him a study of the religion of Ahura Mazda.

Buchanan's Wife. By Justus Miles Forman. New York: Harper Bros. $1.50.

The publishers of this story claim that it is "a striking piece of fiction, full of surprises and dramatic climaxes." And they do not claim too much. The mantle of Wilkie Collins has fallen upon the author, and he has stolen Dr. Conan Doyle's burglar's "jimmie" besides. If he could have got in a bull fight and managed to fling the heroine into a deep well by way of conclusion, Mr. Forman could have conscientiously boasted that he had made every combination of circumstances impossible in real life. He begins with a sad lady of the blessed demoselle type who hates her husband and loves another man, not because her husband really is hateful, you know, but because she loves the other man. Presently, while you are trying to make out why everybody is so bad and so blameless, the night thickens, absorbs the obnoxious husband, and the blessed demoselle comes very sweetly and innocently into the possession of another husband—that is, she feels innocent about it, because she hated the other one, and doesn't know what has become of him. Then what promised to be an up-to-date society novel changes into a weird tale. The plot thickens, curdles. Buddha grins. The author gets Buddha into the story as easy as a Frenchman would have got a dancing bear; knives flash in the dark; somebody uses the "jimmie" and somebody else goes crazy. The men take turn about getting the "drop" on one another with pistols which the author keeps handy for the purpose. At last, while one of them is dying, another tied to the chair by his mortal enemy, a dog cuts in, seizes the mortal enemy by the throat and bites him to death before he can shoot. Now this is a dog that *is* a dog. Before this time he has been playing some gentleman's part under a dog's skin in stories like "The Bar Sinister," but here we have the hound put to his elemental uses. And the effect is unusual. But to go on, the lady with too many husbands comes upon this scene at midnight. Fortunately her favorite husband is the one left bound in the chair. She unties him, they go out and live happy ever after, altho there is no reason why they should. Really a most remarkable tale, told in a forked lightning literary style, that is very shocking to the reader's nerves.

The Leader. By Mary Dillon. New York: Doubleday, Page & Co. $1.50.

Now Mary Dillon has lost the tune—that rare gift she had for sweetening memory with her stories as if she were recalling old songs and happy days to every reader's mind! The star character in this new novel is a political leader with a platform presence and a hero voice. He swayed the multitude like a green bay-tree in a strong wind, but was defeated because he was generous and honorable; therefore more glorious in defeat than anybody else is crowned

with the laurels of victory. The same old thing. The author declares in a "fore word" that she makes no claim to historical accuracy, and this is well, for she has taken many details from Mr. Bryan's political career and added something to it in the way of a love affair that would doubtless be a great surprise to Mrs. Bryan. The incidents which make up the book are taken from the last Democratic Presidential campaign, and contain some secrets from behind the scenes of the St. Louis Convention, all worked out with a good eye and ear to the general political situation. One feature of the book, however, is distinctly offensive; that is, the affectation of British phrasing for the common details of American life. And it is characteristic of more than one new novel. For example, the hero "tubs," and too much is said about his "grooming" afterward, just to show how much like an Englishman he feels about wearing clothes. As a matter of fact the author of a story of English high life never "tubs" and "grooms" his hero in this public fashion, and our writers do it in order to say "tubbing" instead of bathing. It is word-snobbery and ought to be discouraged. We have slang enough of our own without "tubbing" with an aquatic Englishman. Least of all should William Jennings Bryan be made to tub by a lady novelist. Bryan is an American, a Nebraskan at that, with a few misguided political notions, to be sure, but enough of a native to go out and thrust his head under a pump in the back yard if he must perform his ablutions before the public.

A Hundred Years Hence. The Expectations of an Optimist. By T. Bacon Russell. Chicago: A. C. McClurg & Co.

We do not agree with those who think such books as these are a waste of time. On the contrary, we think that much more attention could profitably be paid to the possibilities of progress than is now given to the subject, but it requires a man of wider information and greater intuition than Mr. Russell to contribute anything to our knowledge of the future. So far from being in advance of his age in his ideas, he has not caught up with it. He criticises H. G. Wells for not knowing what has already been accomplished, but on the next page and many others he makes the same mistake by ascribing to some indefinite date in the twentieth century what was done in America in the nineteenth. In some respects Mr. Russell's ideas are quite antiquated—for example, he speaks of sewer gas and the odor of decaying seaweed as producing disease, thinks that cannonading causes rain, and says that whole-wheat bread is more nutritious than white flour, altho what experimental evidence we have is to the contrary. Very unluckily he begins his book with a manifest absurdity, that water will be the source of power after our coal and oil are used up, forgetting that it must, under any circumstances, require just as much energy to decompose water into oxygen and hydrogen as they can produce when burned together. However, his book is not all as bad as this. He has an open and unprejudiced mind and makes many interesting suggestions. His picture of the future is certainly optimistic enough; wars shall cease, alcohol be prohibited, vegetarianism universal, wealth immensely increased and equitably distributed, wisdom ruling in politics, manners and religion, little vice and no dirt, no horses, and all our clothing soft, supple, porous, light, warm, clean and fastened with one button.

Consumption. Its Relation to Man and His Civilization, Its Prevention and Cure. By John Bessner Huber. Philadelphia: J. B. Lippincott Co. $3.00.

There is so much curiosity at the present time with regard to all details of information available as to consumption that this book of Dr. Huber's should meet with a hearty welcome. It is not exhaustive of the subject, tho it has over five hundred octavo pages of information on consumption. It is extremely suggestive, however, and its chapters on predisposition to tuberculosis, the *rôle* of heredity in the disease, its prevention and cure are of themselves quite sufficient to assure many readers for it. There are other portions of the book, however, of very special interest. The questions of the place of the disease in evolution, the possible previous *rôle* of the bacillus tuberculosis as a harmless fungus, its

well-known tendency to pick out a shining mark for its ravages in the shape of the young, and especially those in whom the mental life predominates over the physical. The chapter on literature and the arts in their relation to consumption will attract many readers because of this viewpoint. Doubtless the most interesting chapter in Dr. Huber's book for general readers will be that on the economics of consumption, the opening words of which give a good idea of its contents:

"Tuberculosis causes annually more than 150,000 deaths in the United States at the average age of thirty-five years. At this age the normal after-lifetime is about thirty-two years, so that the real loss of life covered, measured in time, is represented by 4,800,000 years per annum. If we assume that the net value of a year of human life after the age of thirty-five years is at least $50, the real loss to the nation resulting from the disease (a large proportion of which is known to be needless) may be estimated at $240,000,000 per annum. These astounding and most incomprehensible figures are far from being an exaggeration; but let us assume that only one-half of this mortality is preventable, and we have a net possible saving to the nation of over $120,000,000 per annum."

A recent German critic of American ways says our most prominent national trait is the reduction of everything to a basis of dollars and cents. This has been done very effectively for consumption, and the result, far from minimizing, emphasizes beyond all other methods of consideration the awful significance of the dread disease, that yet is, as Dr. Huber shows, quite amenable to modern medical science if the proper regulations be but enforced.

Peasant Life in the Holy Land. By C. T. Wilson. New York: E. P. Dutton & Co. $3.50.

This interesting book is not so much, as the author claims, a contribution to the folk-lore of Palestine, altho some stories are given, as a description of the peasant life. We do not find any new contributions to our knowledge of Palestinean customs and folk-lore, but we have here conveniently put together and in a pleasing form such knowledge as is commonly possessed. The book is of value to the Bible student from the frequent reference to Bible customs which the author often happily elucidates by what he has himself seen and heard. It is true, as Mr. Wilson says, that there is little provision made by the Moslems of Palestine for the education of girls, but there is one noteworthy exception, namely, the government school in Jerusalem, which has been in existence for years and is frequented by nearly 400 Moslem girls of all classes under the excellent management of ladies of the American colony. It may also be pointed out that the ploughshare (p. 204) is not quite correctly drawn. It is a mere stick shod with an iron spike, never a "share" in any sense of the word. The book is well illustrated.

Jane Cable. By George Barr McCutcheon. New York: Dodd, Mead & Co. $1.50.

Mr. McCutcheon certainly hits the American taste in romance. His novels begin without hesitation and move along like an automobile on a country road. Incidents flash by like the pickets on the fence until the end of the book is reached. There is never any strain upon the attention or exertion of the intellect. All the reader has to do is to turn the leaves and keep his eyes on the page. Mr. McCutcheon does the rest. The present volume deals with a clandestine marriage and a blackmailing lawyer.

The French Blood in America. By Lucian J. Fosdick. New York: Fleming H. Revell Co. $2.00.

To those who hold the notion that the colonies were transplanted bits of England, the proofs that one-quarter of New Amsterdam's burghers, a goodly number of Virginia squires, and even John Alden and Priscilla were but one remove from France, will come as a revelation. Mr. Fosdick gives so good a book that we sorrow that it is not much better. The title (tho it should be "The Huguenot Blood in America") promises a valuable historical work, but we find instead a discursive genealogical compilation. By reason of loose arrangement, repetition and undiscriminating admiration we lose a notable chapter of American history. Romance and eulogy, stories of privation and high courage, of sacrifice and martyrdom, these, with which the book teems, are its most readable and inspiring features. The illustrations generally have a distinct use and fit the work,

but what shall we say of Millet's "Huguenot Lovers," Hoff's "The Huguenots," Boughton's "John Alden and Priscilla"? (By these fancy pictures one gets faith that the early Huguenots were a handsome and impressive race and quite human withal.) And what of the photographs of the presidents of the Huguenot Society? Such may have a pictorial or personal interest, but hardly illustrate the story of those brave fugitives of whom the names Revere, Faneuil, Jay, Marion, Bayard, Hamilton and Girard but head an honored list. Briefly and vividly Mr. Fosdick tells of the Huguenots in France, and the Roman Catholic persecution of them from the day of Joan of Arc, whom, if we read aright, he regards as the first Huguenot and "The Spirit of France," to the bloody curfew of Saint Bartholomew and after. America's debt to France is, however, the main theme. The French factor was great in our colonial and national life, in New England, New Amsterdam, the Carolinas, Pennsylvania and Tennessee; and in this wide field Mr. Fosdick has worked with enthusiasm, tho not with care. Why, for example, is the Twenty-second street home of the Eglise du Saint Esprit omitted, and why should the French settlers along the Connecticut, the Bonfoeys, l'Hommedieus, the Parmelees, be forgotten? And, turning back, is the author quite sure that the great massacre was signaled from the Palais de Justice and not from St. Germain l'Auxerois?

The Evolution of a Great Literature. By Newton Mann. Boston: James H. West Company. $1.50.

The great literature whose evolution is here described is the Hebrew and Christian Scriptures. The author lays no claim to original investigation; his aim is to popularize the results of scholars and to bring the fruits of wide reading of the works of specialists into brief compass and readable form. His chief authorities are critics of the extremely radical school, with the unfortunate consequence that theories yet in debate are presented as established results. Ordinary readers of the Bible, unfamiliar with recent discussions in higher criticism, will be treated by this volume to a greater shock than is at all needful, and will derive an incorrect impression of the views now held by the majority of independent biblical critics. For example, Van Manen's theory of the Pauline Literature, which denies any of it to Paul, is accepted by Mr. Mann, and presented as if it were the consensus of scholarship, whereas only a few of the authorities to whom Mr. Mann appeals in his preface would subscribe to Van Manen's articles in the "Encyclopedia Biblica." Juelicher, one of the scholars named, is teaching his classes today that all the letters which bear the name of Paul, save the pastorals and possibly Ephesians and Colossians, are authentic. Mr. Mann's book is further unfitted for its purpose by its lack of references, both to the passages of the Bible under discussion and to the authorities used; also by occasional inaccuracies due to too sweeping statements, and still more by lack of reverence in speaking of things long held sacred.

The Story of Organ Music. By C. F. Abdy Williams. London: Walter Scott. Imported by Charles Scribner's Sons, New York. $1.25.

Mr. C. F. Abdy Williams, whose little book, "The Story of the Organ," was reviewed in THE INDEPENDENT of June 30th, 1904, has written now another volume for the Music Story Series—*The Story of Organ Music.* A recognized English authority on the subject, he has prepared what he modestly calls a mere outline, but which in reality constitutes a treatise that is of genuine value to the student and lover of organ music. A complete history of the rise and development of organ music would extend probably to several volumes. In this small book the author describes briefly a few of the works of some of the leading representatives and presents facts concerning organ virtuosi, from the fourteenth century, when their work seemed a mere groping after artistic expression, down to the present era. Beginning with Italian organ players, who were the writers of organ music, the history follows the German, French, Spanish, Dutch, Belgian and English organists, noting the contribution of each toward the modern music for the instrument.

He points out that the history of organ music revolves around the gigantic personality of Johann Sebastian Bach, all earlier compositions seeming to exist almost solely to make his possible, and since his time no valuable work has been produced which does not show his influence—the real modern organ music begins with him. In the last thirty years an immense number of organ pieces has been produced, many of a sentimental or commonplace character; yet to deprecate this class of music Mr. Abdy Williams considers a mistake. There must be music as well as literature for all sorts and conditions of men, and there is consolation for the musically cultured in the knowledge that this stuff will die out, as the "fashionable" music of past ages has done. Interesting as well as scholarly, the book is one of the best in a series that has varied noticeably in merit.

Ancient Records of Egypt. Historical Documents from the Earliest Times to the Persian Conquest. Collected, edited and translated with commentary, by James Henry Breasted, Ph.D. Vol. IV. The Twentieth to the Twenty-sixth Dynasties. 8vo, pp. xxviii, 520. University of Chicago Press. $3.00.

This fourth volume concludes the complete historical records of Egypt from the beginning of its literary history to the time of the last independent kings, including the biblical Necho and Hophra and Tirhakah and Shishak. Professor Breasted has achieved a magnificent task, and now the historian has before him the materials from which to reconstruct the story of the ancient empire. It was in the reign of Tirhakah that Ashurbanipal, the last mighty king of Assyria, swept over Egypt. Of this humiliation we need expect no Egyptian record. Professor Breasted has accomplished a very difficult task never before accomplished, and one which is greatly to the credit of himself and of the Chicago University. There remains to appear, in order to complete the entire scheme, the corresponding volumes of the ancient records of Babylonia and Assyria, edited by Prof. Robert F. Harper, and those of Palestine, Phenicia and Syria, which, it was announced, was to be prepared by President W. R. Harper, whose lamented death leaves the work to be taken up by another hand. Nor must we neglect to recall Professor Breasted's "History of Egypt," which may be said to belong to the same series.

Literary Notes

A good edition of Sir Joshua Reynolds's justly celebrated and still valuable *Discourses Delivered to the Students of the Royal Academy,* with helpful introductions and notes, by Roger Fry, is issued by E. P. Dutton & Co. ($2.50). Paper and print are what they should be. The thirty-three illustrations in half-tone have been chosen wisely. There is a good index. In short, the book is an altogether admirable reprint, except for the binding. The execrable cover design, stamped in white ink on pale green cloth, is enough to make Sir Joshua turn in his grave.

....The best edition of the *Complete Works of Abraham Lincoln* for a library is that edited by John E. Nicolay and John Hay, and now being published by the Francis D. Tandy Company, New York. The four volumes that have just appeared complete ten out of the twelve, and contain, besides speeches, letters and telegrams of Lincoln, a number of illustrative material, such as Sumner's eulogy, Whitman's "My Captain," Beecher's sermon, Bancroft's memorial address, and Ingersoll's essay. We have reviewed, at some length, the earlier volumes of this "Gettysburg Edition."

....*The National Gallery, London—The Flemish School* is the first volume of a new series to be called "The Art Galleries of Europe," projected by George Newnes, the London publisher, who already has lain art lovers under tribute for many an artistic monograph. The book is made up of sixty-five full-page plates—good half-tone reproductions of carefully selected pictures by Flemish painters—introduced by a short essay by Frederick Wedmore, and a list of the painters and their pictures arranged in chronological order. The idea is a good one, and this first volume makes a brave showing, for the school of Flanders is represented generously in the English National Galley. (New York: Frederick Warne & Co. $1.25.)

....We are aware none the less of impressions—that of the ponderous, proud Senate, for instance, so sensibly massive; that of the Supreme Court, so simply, one almost says so chastely, yet, while it breathes supremacy, so elegantly, so all intellectually, in session—under which the view, taking one extravagance with another, recurs rather ruefully to glimpses elsewhere caught, glimpses of authority emblazoned, bewigged, bemantled, bemarshaled in almost direct defeat of its intention of gravity. For the reinstated absentee in these presences the mere recovery of native privilege was at all events a balm—after too many challenged appeals and abused patiences, too many hushed circuitous creepings, among the downtrodden, in other and more bristling halls of state.—*From "Washington," by Henry James, in the North American Review.*

Editorials

A New Device for Combinations

An interesting discovery was made in Ohio last week, at the beginning of the trial, for violation of the State's Anti-Trust law, of a corporation alleged to be a branch of the Standard Oil Company. Testimony was given, under a guarantee of immunity, by the president of another corporation (the Manhattan Oil Company), which is soon to be tried upon a similar charge, the State asserting that the Standard owns or controls it. President Cuthbert's admission concerning the practices of his company tended to support this assertion. But when he was asked for the record of his election, he showed that the votes of 1,496 of his company's 1,500 shares of capital stock had been cast for him by the General Industrial Development Company, Limited, of London, a corporation then for the first time introduced to the American public, and one whose two officers he knew only by name. When inquiring journalists called on the following day at the office of the company in London, the two gentlemen could not be found in the small room where the corporation is domiciled. It is not denied, however, that either for themselves or for others they control this oil company in Ohio, which, not long ago, was owned or controlled by the Standard.

This advent of the foreign "holding company" straightway became the subject of much discussion. In the Northern Securities case, the holding company by which the unlawful combination had been made was a New Jersey corporation, a domestic company as to which there was no concealment and which was easily accessible for purposes of prosecution. An English holding company, possibly controlled by another of the same kind, is something quite different, from a prosecutor's point of view. It is asserted that others like this one in London can be found there and in Paris, quietly controlling the affairs of American corporations which are commonly believed to be members of American combinations. If our Trusts are resorting to this device, what will be the effect of a skillful use of it?

With respect to Federal or State authorities who attempt to enforce anti-combination laws, a use of foreign holding companies by combinations will unquestionably make successful prosecution extremely difficult, because it is possible thus to conceal abroad—for a considerable time, at least—the link that connects a subsidiary company with the central corporation. In case of prosecution, the offense to be proved is the combining; other acts of the attacked company may be legal. If the evidence of combination is hidden in a London holding company, or in a chain of such companies, how is it to be procured for use in an American court?

For example, if we suppose, for the sake of argument, that the Standard Oil Company has a fatherly or proprietary interest in this General Industrial Development Company, in London, how can the prosecutors in Ohio prove this when they set out to try President Cuthbert's Manhattan Oil Company? London is not New Jersey. We do not say that, after much endeavor, it would be impossible for our Federal Government to procure the facts for use in court, but lawyers familiar with international procedure in the search for such evidence can show how great the difficulties are. The use of such a device interposes obstacles which must seriously retard, if they do not prevent, successful prosecution, so far as the offense of combining is concerned.

The effect upon the American public of a resort to such a device will be somewhat exasperating. It must intensify the popular disfavor in which great combinations are held. It will suggest the enactment of new and severe laws for the restraint and discipline of great corporations that thus seek to evade existing statutes. Neither the present Congress nor the President is in a mood to regard such an evasion of American laws with a sense of amusement.

Nothing could more effectively promote legislative projects for restraining and regulating great corporations by

means of revocable licenses, or more distinctly suggest measures for a more intimate knowledge of the affairs of such corporations on the part of the Federal Government and for a grant of power for the sure control of them in the public interest. Attempts to thwart the Department of Justice, or to evade the requirements of law, whether they be made on the railroads, or in the beef trade, or in the oil industry, will surely, in the present temper of the American people, bear fruit in the shape of legislation increasing the Government's direct and active interest in production and distribution. This is what the great corporations desire to prevent.

The use of such devices must increase the unpopularity of those able gentlemen who are known as corporation lawyers. It is reported that the existence of certain foreign holding companies for the benefit of American combinations became known a short time ago to the Government at Washington, having been discovered by the Department of Justice while it was collecting evidence for use in important cases which it intended to take up. Possibly the President had this in mind when he said, on the 4th, in his address at Harrisburg:

"If we fail thus to increase it [the power of the Federal Government] we show our impotence and leave ourselves at the mercy of those ingenious legal advisers of the holders of vast corporate wealth who, in the performance of what they regard as their duty, and to serve the ends of their clients, invoke the law at one time for the confounding of their rivals and at another time strive for the nullification of the law in order that they themselves may be left free to work their unbridled will on these same rivals, or on those who labor for them, or on the general public. In the exercise of their profession and in the service of their clients these astute lawyers strive to prevent the passage of efficient laws and strive to secure judicial determinations of those that pass which shall emasculate them. They do not invoke the Constitution in order to compel the due observance of law alike by rich and poor, by great and small; on the contrary, they are ceaselessly on the watch to cry out that the Constitution is violated whenever any effort is made to invoke the aid of the National Government, whether for the efficient regulation of railroads, for the efficient supervision of great corporations or for efficiently securing obedience to such a law as the national eight hour law and similar so-called 'labor statutes.'"

An eminent member of the New York bar recently discussed, in an address before the Bar Association of New Hampshire, the duties of lawyers with respect to corporations, and explained why, as he said, "our profession has in late years suffered a distinct loss of prestige in its relations to public life, a real diminution in its hold upon the public sentiment of the American people." At the approaching election in the City of New York a considerable number of judges are to be chosen. In the campaign it has been shown that with the masses the most effective criticism of a candidate is that which is based upon his employment in the interest of corporations. Much of this criticism is unjust; in many instances it is insincere, being used by politicians or candidates who have themselves resorted to the methods of corporate evasion and deception which they loudly denounce, or who support candidates for the bench who have served corporations with little or no regard for the public interest. But, as we have said, it is effective, and this is so because of the work known to have been done by lawyers of exceptional ability for corporations and against the public.

This work has been done for public service companies, for the railroads, for the great industrial combinations, for the life insurance companies, and generally in support of privileges, many of which were wrongfully acquired and have been wrongfully used. Great numbers of people reason that without the aid of expert legal counsel these corporations could not have committed with impunity what they regard as unpardonable offenses.

If great combinations now seek to evade the laws and to baffle Federal and State prosecutors by this new device of a foreign holding company, undoubtedly they have had the advice of able and shrewd attorneys with respect to both the project itself and the difficulties which confront those who would defeat the purpose of it. Such service is attractive to many, because of its large pecuniary rewards. But it excites the hostility of a majority of the servitor's fellow countrymen and has been the chief cause of that "loss of prestige" which was deplored in the address before the Bar Association of New Hampshire.

The Scandal of Criminal Journalism

We don't know just how it will be done, but we predict that it will be done The day will come, and we predict further that it will come soon, when the sleek and dignified proprietor of some American newspaper with a pretty big circulation, a bigger advertising patronage—a large share of which is derived from crime of one kind or another—and a brag and a bluff that are bigger than circulation and advertising put together, will be hustled off to his own place to stay there for five or ten years. That "place," we presume our readers understand, is the State prison.

The scandal of a great deal of our American journalism has become too grievous to be borne tamely much longer. Neither the reputation of worthy men nor the virtue of pure women is any longer safe from the bloodhounds of a gang of newspaper thugs, fully half of whom are millionaires, and some of whom pose as philanthropists. As observers of what is doing round about us, we are looking to see what will happen when one of these beasts of prey inadvertently attacks the home of a person unexpectedly powerful, with good tiger fighting blood in him, who will turn and take the bloodhound by the throat. The thing is bound to happen as surely as the world turns round. The sooner the better.

A few days ago a lady widely known for her interest in education, a trustee of one of the leading colleges for women, told the story of her personal experience with one of these defamers of character. Assuming that she stated the whole truth and nothing else, the newspaper that lied about her did so wantonly, in full possession of the actual facts. Cash damages amounting to five thousand dollars were paid and accepted. That this lady should have compromised so easily we think was most unfortunate for the interests of society. She should have pushed her case until somebody was landed behind prison bars.

It is disappointing that the victims of criminal journalism have thus far submitted so tamely to these outrages. It is yet more disappointing that reputable newspapers have not unitedly taken action, within their competence, to drive from the community the creatures that are making a great profession a by-word and a curse to the American people. There is no more reason why the men who control newspapers that are both decent and powerful, and control also the avenues through which news is obtained, should not "clean up" their environment as effectually as the vigilants of California and of Montana cleaned up theirs in the days of the cutthroat gangs. It would not be necessary to resort to midnight lynchings in order to achieve this end.

We wish to put it straight to the proprietors and editors of journals like the New York *Sun*, the *Times*, the *Tribune*, and the *Evening Post*, the Chicago *Tribune*, and the *Record-Herald*, and a score of other journals, both powerful and reputable, covering every part of the American Union. Do you see no way to bring your forces unitedly to bear to stamp out this infamous evil? Are you doing absolutely all that you can do to hold your own reporters and editorial writers to a high and strict standard of honor? If you are, is there nothing else that you can resort to? You are supposed to voice the opinion and the conscience of the American people. And you must know by now that that opinion and that conscience are getting very tired of this disgraceful buccaneering conducted under the flag of liberty of the press In our own humble way we have various means of testing the public temper, and we assure you that unless you express and represent it in this matter, it will find some other way to make itself felt.

"It's up to you," gentlemen, to do something, and to do it soon.

A Hundred Years of Missions

It was well that the American Board of Foreign Missions should celebrate the one hundredth year since the beginning of organized Protestant foreign missionary work. To be sure the American Board was not organized till five years later, but the origin of it and its necessity were laid when a little company of young men in Williams College one hun-

dred years ago resolved that they would go as missionaries to the heathen, and would stir the country to its duty; and when they declared, "We can do it if we will." That is the kind of enterprise that crystallizes dreams into facts.

It is an immense work which that mission enterprise, begun a hundred years ago, has achieved. But it must not be imagined that all of it is the work of the American Board and the other organizations that have grown out of it. If we speak only of Protestant missions, the English were before us. It must have been the example of Carey, the father of modern Protestant missions, that kindled the ardor of Mills and Judson. And there were other scattered organizations that had a limited purpose. But it is to the shame of Protestantism that it was so slow in taking hold of foreign missions. The Jesuit and other missionaries were centuries before Carey and Judson. Hence it is that not only are the native races of Mexico and South America mostly Catholic, but in pagan Asia and Africa there are twice as many Catholic as Protestant converts. To be sure the old Catholic enthusiasm for missions has much decayed, and the Protestant increase is much greater now and more substantial than the Catholic, due in good part to vastly better methods, especially in education, but the first credit is due to the Catholic orders, Jesuit, Franciscan and Dominican, who went all over the world preaching Christianity to the heathen, and among others to the Philippine tribes, while the Protestants were quarreling over their theology.

But in the last hundred years Protestantism has waked up. It has gone everywhere, and with intense devotion and enthusiasm, making new conquests, while the Catholics have done little more than to hold their own. The married missionaries, with their families and their unmarried women, have, perhaps, not been so many more in number, but they have done much more in education and civilization. Everywhere they have reduced languages to writing, have translated the Bible, have produced a literature, have trained native teachers and pastors, and have brought arts and learning. In India, in China and Japan it is their work that has awakened and stirred the people. They have been in advance of the British government in India, and of commerce in China. In Japan every one knows that it is the mission schools that have taught the way to Occidental civilization. Now, when China wishes to establish colleges in every province to teach Western learning, it is missionaries that are chosen to guide and control, and students sent abroad are put under missionary care. A dozen native Protestant Christians are among the leaders in the Japanese Parliament. When we turn from the great continent to the islands of the Pacific, we find them civilized and Christianized, because in this last century every island has been visited, and nearly all of them have yielded to Christian civilization.

But there is another side to it. The work has not all been one of peace and good will. Somehow these missionaries have been unwilling stirrers up of strife. It is impossible that it should be otherwise. Even Jesus said that he had come not to bring peace but a sword; that he had come to create dissensions in families, and to provoke persecutions. It was so in the first centuries; it is so now. There is scarce a land where this gospel of freedom has gone in which it has not produced a fermentation, if not revolution. The most extraordinary example is Japan, where the teaching of Christian lands was welcomed, with the result we see, a nation born of full stature that could hold its own with the Giant of the West. In China the late rebellion was directed against all native Christians, and hundreds of thousands were martyred. In India the education in which missionary colleges were the pioneers is now creating an unrest which shows itself in native congresses and demands for rights hitherto denied. Already Britain begins to fear not Russia nor the confines of India, but the Hindu himself. It is not only in Asiatic Turkey that the hated missionaries are dreaded by the Sultan, where the Armenians, arising in their new sense of liberty denied, have endured the massacres they had provoked; but in European Turkey free Bulgaria is the product of a missionary college. Even in South Africa the fear of Ethiopianism is explained by the sense of self-respect which has been taught the natives by missionaries working for them. To be sure

those missionaries desired none of these outbreaks, sought no revolution, but the sense of independence and brotherly self-respect, taught by men and women who loved them, has its necessary fruit in opposition and friction, if not violence and death, as lately among the Zulus of Natal. We know how it is in our own country that those who go from the North to teach in negro schools in the South are charged with being fomenters of discord, and often are refused the courtesy of recognition. They are told that their teaching is mischievous and tends to stir up race conflict.

Shall we then cease sending missionaries to unevangelized lands? These uprisings are not what is desired, but they must and will come. We are not to reject progress because progress is resented. The cases are very few where, as in Japan, the rulers of a quick-witted people are eager to learn better ways. If the leaders refuse, the good work must go on just the same against their will. It may be thru persecution, it may be thru war, but after the storm will come the sure peace and freedom and Christian enlightenment.

This hundred years of missions has changed the face of the earth. It has been a chief factor in the reorganization of the pagan world—not the only factor, to be sure, for commerce has done its secondary part, and political ambition has followed as missions have opened the way. Before the partition of Africa there had to be Livingston's opening of the great continent. No other influence like missions has made the more inaccessible portions of the earth known to us. Missions have taught our people the fraternity of the world. They have brought a larger view of humanity. By friends and neighbors gone to foreign lands, by the reports published and read in many thousands of churches of mission work in Asia and Africa, in Hawaii and New Zealand, they have widened our intelligence and broadened our sympathies. These hundred years of foreign missions have been a factor second to none in the magnificent development of the century. Commerce has done much; the march of science and invention has done much; political rivalry has done much; but we put none of these before that pervasive, quiet work which has preached individual obligation and responsibility everywhere, and has carried everywhere, with school and college, the fruits of Christian civilization.

The First Baby

Not enough has been said upon this subject, because we do not realize the peculiar predicament of being a first baby. As a matter of fact almost any other has a better chance. Having no other standards by which to go, young parents are apt to harry their firstborn according to their anxieties or according to rules laid down by cold-blooded scientists who take merely a paidological view of the situation. Now, far be it from us to cry out against the books, but it is hard on the baby to take them too literally. And so, a few general observations which are the result of experience and common sense will not come amiss to those fathers and mothers who are facing this young phenomenon for the first time.

In the first place, do not be alarmed or offended when the friend calls who insists that every baby bears the evidence of an ape ancestry. He will undertake, even at the risk of the child's life, to prove this by showing that it will clasp its tiny hands around his thumbs and swing, bearing all of its own weight. There is nothing wrong with the child. All babies can do that, and not one of them ever grew into an ape, whatever they may have grown out of, and this is the only thing that matters. The trouble is with your friend, who takes advantage of new born stupidity to prove his own hairy-clad ancestry. Some people are that way. They would rather convince you that they descended from an orang-outang than from the greatest hero who ever lived. They belong to that class of clever perverts who are rapidly acquiring monkey-tailed souls. Next, do not attempt to bring the little one up by the clock, whether or no. You can do it, of course, but after all an automatic digestion which depends upon the time of day is not the best kind to have. Besides, a child is hungry when it is hungry, whether the clock confesses the right hour or not, and it should be nourished. The fat old-fashioned baby was brought

up by this plan, and he afterward reflected great credit upon the nation and his mother in wars and affairs generally.

If, however, the child cries because it is bored, there is no help for it. Few realize the hardships of infancy from this cause—nothing to do, nothing to think, nothing to remember, and too young to expect—no wonder he sometimes awakens at midnight to rail at the universe. But have patience, the mood will pass. Presently he will yield once more to his earthly fate and fall asleep with a stronger pair of lungs for having exercised them so well. And do not be afraid to "rock" him to sleep. Some very great men have been thus coddled by their mothers, and no evil results followed. On the other hand, some very stupid ones have been sent to sleep according to the modern method of darkness and silence by mothers afraid of addling their brains. A child whose brain is so easily addled will not count for much anyhow.

It is not the cradle that spoils the baby, it is the ideas he gets or fails to get. Coddle him to your heart's content, but watch the impressions you let pass into his little milk-bottle mind. However, do not try to make him smile too soon, nor think when he does that it is an evidence of extraordinary intelligence. A kitten can chase its own tail with all the sophistry men employ in a great argument by the time it is four weeks old, which is a far greater evidence of mental development than a human baby's smile. Besides, nature never intended that we should be intellectual in infancy; so do not try to teach the little follow self-control too soon; teach that to yourself and leave him alone as much as possible; remembering that a baby does not need much self-control if everybody else behaves as he should. And in any case you do not know how much patience he has already acquired in learning to endure the mistaken kindnesses of his elders.

And now we come to the most difficult part of the subject—the ethics of infancy, so to speak. Do not burden him with too much of it. You can give a young child a moral indigestion easier than you can any other kind. And it is harder to cure. Do not believe that your beautiful firstborn is depraved, conceived in sin and born in iniquity when he begins to act on the first idea that comes to him, right or wrong. No child is conceived in sin that is born in holy wedlock. And after that, it is well to bear in mind that a baby is the only kind of human being that can do wrong as innocently as it can do right. Your first duty in teaching is to show the difference without bothering its self-consciousness with an adult conviction. A child may be destroyed spiritually by having thrust upon it a sense of moral obligation out of all proportion to its capacity to perform. The wisest thing to do is to give it a taste for goodness. And this is easy, for all children develop the heavenly mind first if we give them the opportunity, and they preserve it even in the midst of their gross little iniquities. They belong to God in the spirit with a sort of automatic predilection toward the devil in conduct.

Do not frighten him with the imposition of a guardian angel at the head and foot of his bed at night. Nobody wants to sleep with even winged spirits watching him all the time. And what may be a mere sentimental doctrine to grown people may be a terrifying reality to a nervous child. Besides, no one likes the surveillance which these angels are said to exercise over children, even when their parents are not looking. It is a witless cruelty not to comprehend that a little child is also entitled to its privacy of soul, that it is distressing to be kept in an angelic limelight all the time. We know of one small girl who shrewdly rid herself of this heavenly embarrassment. The mother, who had long ruled little Minnie with a rod of iron by this means, even when out of sight, assured her one day that if she "sinned" her guardian angels would forsake her. The information had the opposite effect from that desired. Minnie went out and "sinned" wilfully to the limit of her capacity, being resolved to deliver her little soul from the bonds of an indefinable moral slavery.

And, finally, do not impose duties upon a young child too soon, but once imposed, there should be no release. For it will not be the catechism lesson that he learns at your knee that makes a man of him—many a shiftless wight knows his catechism from end to end—

but it will be the duty he performs faithfully day after day till it sits like a golden harness upon his spirit. The little boy who has the "leg ache" whenever he is asked to bring in wood should not be excused on that account. Do not question the pain, but let him know that the world does not excuse a fellow because his bones ache. When this gets to be a conviction in him, he will have fewer "growing pains." And half the neurotic, ever-bedoctored women owe their cowardly physical condition to the fact that when they were little children they were allowed to stay away from school, excused from common household duties because they had a headache or a cramp somewhere. Every girl child should be taught from the beginning that a woman's heroism consists in snubbing the pains she is heir to, and even those she does not inherit. This is her one natural and sure chance to prove her courage, and no mother should neglect to teach her the moral importance of embracing it.

Now these are not the only things to be taught your first born, but they are meant to be beacons along the way you and he have to go. You may, for example, undertake to teach him to tell the truth, but it takes a long time to teach any human being to tell the truth, and a longer time still about *how* to tell the truth. Some people begin to bungle at it when they are babies confessing their sins, and they bungle it so long as they live. The greatest possible wisdom is required in knowing that one simple thing—*how* to tell the truth, *how* to be honest without being a fool, *how* to be long suffering without being a coward, *how* to be just and yet have mercy. Be careful to teach the *How* to your first born.

Seedless Apples

"Much ado about nothing" might as well be our heading. In the march of improvements it is certainly desirable to reduce the size and number of seeds, as Nature is also reducing the number of fruits on the tree. Quantity and number rule in the wild; but quality rules in the cultivated. However, in making her progressive steps, Nature follows chiefly along this line, that new sorts come from seeds, while the best seedlings stand the best chance, where man can oversee the work—the poorest are eliminated. When something fine is secured it stands no better chance than the most crabbed if in the wilderness; but it is retained and propagated if man is around to do grafting or make cuttings. These cuttings and grafts simply retain what has been secured, but make no more progress. It is to seeds that we must appeal for better things. If you can bar seeds out altogether, you bar out all future progress. If your seedless apple is so very, very good that you can rest content to make no more advances, then, of course, you would be willing to accept it as the finality. But, so far, nobody has given anything near an ideal apple without seeds. Even if we have a tolerably good apple that is seedless, it is not likely to be reckoned as good fifty years hence. The march of the seeds will go right by it, steadily introducing something new, in its hunt for something better; and we have learned to know that that something better is going to come about.

Some of the best grapes are very nearly seedless, and we are selecting raspberries and currants that have few seeds. And the reason for this is plain—we do not need a superfluity of seeds in order to secure progress. The wild fruit goes more largely to seed, because, in the wild, such a large proportion of plants from seed are destroyed. Superior pears and apples without seeds are not inevitable. Do we want them? Let us have small cores and plump seeds, full of vital promise. We must note also that in the line of progress Nature has given lately apples and pears that have greater promise in their seeds. The horticulturist preserves them with a great deal of care, because he learns that there is a deal of promise rolled up in each one. The Fameuse or Snow apple illustrates this break in evolution, or, rather, this sharp turn; for its seedlings, instead of reverting to the wild, afford us novelties of high rank. This Snow apple is constructing a splendid family of high-grade apples, already including the Walter Pease, a magnificent fruit; the Princess Louise, delicious and deli-

cate; the Shiawasie Beauty, beautiful indeed; the Crimson Beauty and the McIntosh Red, two varieties nearly at the head of early and late apples—and the list is growing. It would be a pity to snap off all hope of better things to come by eliminating seeds from all these sorts. A horticulturist can ask for no better chance than to work with seeds of this family. The probabilities are almost certainties that during the next twenty-five years there will be half a hundred more splendid children of the Fameuse or Snow apple—all from seeds.

What could man do with the quince and the Japan quince, the persimmon and the pawpaw, the viburnum and the cranberry, the huckleberry and the elderberry, if there were no seeds, by means of which to secure crossbreeding and improvement? The gooseberry has lately been on a wonderful march, and so has the currant. We are confident that the Industry gooseberry and the white grape currant only point to progeny of a better sort. Even more fully does the grape illustrate the marvels of seedlings. The Concord and the Delaware were chance seedlings. Rogers gave us over half a hundred, and Munson another half hundred sorts, by crossing hothouse varieties with the wild. Seedlings of seedlings, they tell us, are even more promising, and so on without limit. Reduce the seeds, but do not eliminate them. Burbank burns a million seedlings gladly, if he can get one that has a forward look. The Government Agricultural Department is just now distributing seedlings of the orange and grape fruit, which it promises shall be hardy as far North as the corn belt, while in quality there shall be steady progress. We have fine oranges without seed, but that ends all progress on that line. If all oranges were seedless we could never get a better orange. It would put an end to the hopes of securing a breed of hardy fruit fit to be grown alongside our apples.

In plants, and animals, man included, the problem is never perfection, but progress. Perfection means death. A completed thing has come to its end. A walk through the garden and orchard will surprise more from crowding of improvements than from the real achievements already attained—great as they may be. We thought at one time that the Early Rose potato was all that we could ask for; we no longer ask for it. A few of the older Pippins and Greenings, among the rest the Spitzenburg and the Swaar, outlive all changes; but we no longer say that we ask no better apples. The Baldwin did not secure a place of prominence in our orchards until Horace Greeley offered a prize for the two best apples; it was taken by the Baldwin and the Hubbardston. At the display in Horticultural Hall, in St. Louis, three-fourths of the plates represented apples and pears, plums and grapes, unknown fifty years ago. The time is coming when every farmer or suburbanite will expect, not only to cultivate the old, but to create something new. A new strawberry may be profitable as a creation, and we have sold a single carnation for thirty thousand dollars. Of course most of this work must be done for the love of it—the enthusiasm of creating; but it can go with bread-winning.

A marked feature of this progressive work is the lifting of pestiferous plants into utility. Burbank is turning our wild plums into magnificent fruit for the table. A noted chemist says, "I believe there is not a by-product, or a residuum, or a weed in our fields, that will not be found to be of value to human beings." The finest feature of this whole movement is that we are convinced that scientific evolution has only begun its achievements. The best of today will be of secondary importance tomorrow. Ideals reached only point to ideals ahead. Richer flavor, larger size, and longer keeping quality suggest fruits that are very much reduced in their number of seeds, as well as more beautiful and excellent, while extending the fruiting season through the whole year. Twenty strawberries to a quart seems to be the ultimate demand as to size, and the quality will have to be equal to the Marshall. Our currant bushes will stand eight feet high. The Bartlett pear is already yielding ground to better sorts; and the Concord grape is losing its grip on general culture. So it is that Nature has folded up in every fruit that she has created these little seeds, which say to us, Take us, and improve everything that grows—the humblest grass to the loftiest orchard tree.

The Legal Working Day of Women

THE Supreme Court of Oregon handed down, on June 26th, a decision sustaining the statute enacted in 1903, which restricted the labor of women in any factory, laundry or mechanical establishment to ten hours in one day. The statute has been attacked as unconstitutional under the Fourteenth Amendment to the Constitution of the United States, the Illinois decision of 1895 in the case of Ritchie vs. the People being cited in support of the contention against the Oregon law

Oregon thus follows the good old precedent of Massachusetts, established in 1876, when the Supreme Court of that State made this decision:

"There can be no doubt that such legislation can be maintained either as a health or police regulation, if it were necessary to resort to either of those sources for power. This principle has been so frequently recognized in this commonwealth that reference to the decisions is unnecessary.

Oregon is the third of the trans-Mississippi States to follow Massachusetts in this position. The Supreme Court of Nebraska upheld the statute of 1899 providing that no female shall be employed in any manufacturing, mechanical or mercantile establishments, hotel or restaurant in this State more than sixty hours during any one week and that ten hours shall constitute a day's labor. The court said:

"Women and children have always to a certain extent been the wards of the State. Women in recent years have been partly emancipated from their common law disabilities. They have now a limited right to contract. They may own property, real and personal, in their own right, and may engage in business on their own account. But they have no voice in the enactment of the laws by which they are governed, and can take no part in municipal affairs. They are unable, by reason of their physical limitations, to endure the same hours of exhaustive labor as may be endured by adult males. Some kinds of work, which may be performed by men without injury to their health would wreck the constitutions and destroy the health of women, and render them incapable of bearing their share of the burdens of the family and the home. The State must be accorded the right to guard and protect women against such a condition; and the law in question, to that extent, conserves the public health and welfare.

The State of Washington, in 1901, followed Nebraska with a similar measure duly upheld by the Supreme Court, which said:

"It is a matter of universal knowledge with all reasonably intelligent people of the present age that continuous standing on the feet by women for a great many consecutive hours is deleterious to their health. It must logically follow that that which would deleteriously affect any great number of women, who are the mothers of the succeeding generations, must necessarily affect the public welfare and the public morals. Law is, or ought to be, a progressive science. While the principles of justice are immutable, changing conditions of society and the evolution of employment make a change in the application of principles absolutely necessary to an intelligent administration of government."

This third repudiation of the authority of the Illinois Supreme Court as affording a precedent to all limitation of the hours of labor of women is of great importance, not alone to the women of Oregon, but to all women who earn their living in this country. For it indicates that the Supreme Courts of the States are to follow the line of reasoning laid down by the Supreme Court of the United States eighteen months after the Illinois decision was promulgated. In Holden vs. Hardy, decided at Washington in February, 1897, the Supreme Court of the United States held that the hours of labor of men employed in mines, factories and smelters may be restricted to eight in one day and forty-eight in one week.

This decision was, of course, in no way retroactive, and did not in any degree reverse the Illinois decision. Women in Illinois may, therefore, still be required to work, on the pain of dismissal, as long as they can be kept awake, or until they faint at their task, as has happened more than once since the decision in the case of Ritchie vs. the People. But the Federal decision made it easier for all courts having to do with similar statutes to differ from the Illinois decision and revert to the humane and enlightened precedent established long ago by Massachusetts.

It is a strange chapter in industrial history which records the fact that the New York statute upon this important subject, altho enacted twenty years ago, has never until the present year been enforced with sufficient vigor to incite any employer to test its constitutionality.

Mr. Hearst's Inconsistencies

Mr. Hearst tells us that there are good corporations and bad. Doubtless, and one of the good corporations must be that surprising one of his Independence League. The members of the League have no voice in it, but are under the control of the directors, chosen by the incorporators, and they cannot put up a separate ticket if they would. Here is an example for the Republican and Democratic parties, if their bosses wish to eliminate the voters from all authority. On another matter which is brought as a charge against Mr. Hearst our sympathy is rather with him. He is charged with employing Chinese on his ranches in California, for picking grapes. But why should he not; and why should he resent the charge? There is a sort of wager in it, he agreeing to pay a thousand dollars for a charity if it can be proved that he thus employs Chinese instead of white people—Americans, Irishmen or Italians. But what if his foremen do get yellow men to pick grapes? They do good and honest work, and have the same right to live and work as other men. We are ashamed of those who bring this charge against Mr. Hearst, even if they succeed in proving that his acts do not fit his words.

Anti-Militarism

It is not strange that the growing feeling against war, and the efforts for a system of arbitration, should find much sympathy of an active kind among the French Socialists, who are on the best of terms with the German Socialists, and make much of international comity. This feeling has gone to an extreme in Paris and Rouen, where demonstrations have been made against conscription into the army. Placards have been posted up on the barracks and in several parts of the town. They are addressed to the conscripts, and they state that if the latter think they cannot bear the insults, the punishments and all the vexations connected with barrack life they should desert. That would be better than to serve as playthings of drunken brutes and uniformed raving madmen to whom they are subordinate in the "military galleys." Women are invited to found a society to intimidate bloodthirsty despots and rulers. In this movement M. Jaurès, lately the Socialist member of the Cabinet, has been active thru his journal, *Humanité*, opposing all "wars of aggression, adventure and pillage." It is thru such a union of the philanthropists and the workingmen that war must be discredited and the military profession stript of its glory.

Church Union

Two striking illustrations of the movement for Church union were given at the General Conference of the Methodist Church of Canada, which has just ended its sessions at Montreal. First, that Church gave cordial consent to its oldest and most successful mission in Japan to unite with the missions of the Methodist Episcopal Church of the United States and of the Methodist Episcopal Church, South, forming a common Methodist body for the whole empire. More noteworthy still was the action of the Canadian Conference with reference to the proposed union with the Presbyterian and Congregational Churches. It will be remembered that last Christmas a joint committee of these Churches prepared a common basis of doctrine and polity, and that last June the Presbyterian General Assembly made a proposition for a still wider union, embracing also the Anglican and Baptist Churches of the Dominion. The Methodist General Conference, the highest court of that Church in Canada, at its recent session adopted, without a dissenting voice, a strong resolution in favor of this comprehensive union, including also the Evangelical Association, which has a large German membership in Canada. The whole subject is now remitted to the individual Churches, which constitute the final court of appeal. The Presbyterian and Congregational fraternal delegates to the General Conference expressed their hearty concurrence in the proposed union. The Congregational churches, with remarkable energy and enterprise, have been paying off their church debts, till now there are only five churches in the whole Dominion on which any debt remains.

Professor Petrie on Bible History

Egyptology has been a rather hard nut for the biblical critics to crack, and no very successful efforts have been made to co-ordinate Egyptian and biblical history since the time of Hengstenberg. Meanwhile an immense amount of material, from the Sargon king of Assyria to the code of Hammurabi, has kept the critics busy with much illustration and confirmation of the events and customs mentioned in the Bible. In a paper before the Anglican Church Congress the other day Professor Petrie took up the Egyptian side of the task, and as he is a scholar well versed in both history and exploration, and one of those who seek, like Professors Sayce and Hommel, favorable archeological evidence, it is interesting to see what he has found in Egypt. To begin at the latest period, during this past year there has been found at Tel-el-Yahudiyeh the ruins of the temple which the Jewish colony built at the time of the flight from the persecutions of Antiochus Epiphanes. It is probably of the dimensions of Zerubbabel's Temple, and copied from it. Going back to the period of the Jewish kings, there has been a difficulty about the date of Tirhakah's campaign (701 B. C.). But we now know that he was acting as regent in the Delta nine years before he became sole king, which removes this difficulty; and a similar case relieves another chronological difficulty as to the kings So and Shishak. Professor Petrie's discussion of the period of the Exodus and the Judges is very interesting. He notes the fact that in the period of the Judges there is no sign of Egyptian influence. This binds us to set the period of the entry into Canaan as later than the withdrawal of Egypt from Palestine, or 1140 B. C., which would put the Exodus not earlier than 1230 B. C. But this makes a very short period between the Exodus and the reign of Saul, about 1030 B. C. This period of the Judges Professor Petrie shortens by arguing that these were all local judges, ruling each over one of the three divisions the north, the west, and the east of the Jordan. Each of which, if we add their several periods, amounts to about 120 years. It was before the Exodus that the inscription of Merenptah recorded that "the people of Israel is laid waste, their crops are not," which shows that there were Israelites who remained in Palestine or returned before the Exodus. Professor Petrie makes Abraham one of those "desert princes" related to the Hyksos invasion of Egypt. He believes there was a "documentary basis of the account of the Exodus, which was probably re-arranged and enriched by each generation of the tribal record-keepers."

Because the State of Alabama proposes to put in Statuary Hall, at the Capitol, a statue of Dr. J. L. M. Curry, who was a Confederate soldier, members of the Grand Army make objections. They may be appeased, for Dr. Curry's record is not that of his service in the Confederate army, but of his grand work for education, and for repairing the injuries done to the South in the war. He deserved well of the whole country.

We trust the Government will take most positive and drastic action in the charges of peonage in Florida. They affect both white men and negroes. Immigrants have been taken to Florida and held by violence, whipt or shot if they try to escape. The stories are not too shocking to be believed after what we have known of peonage in other States.

Luckily, the university centennials do not come every year, or the world would be swamped with honorary degrees. At the late quater-centenary of Aberdeen University there were eighteen Doctorates of Divinity conferred, and over a hundred Doctorates of Laws, which seems to show how cheap an honor the LL.D. is coming to be in these days.

Whatever may be said—and much can be said—in favor of Greek letter societies in our colleges, very little can be said for them in high schools and academies. The Supreme Court of the State of Washington has decided that school authorities have the right to enforce rules against such societies, and the evidence against them is strong.

Insurance

The Mutual Life: More Criticisms

THE Mutual Life Policy-Holders Association, in a letter sent to President Peabody of the Mutual last week, directly charged him with following in the footsteps of his predecessor, Richard A. McCurdy. Still another investigation into the much investigated company's affairs was proposed, which was to be "amicable if possible." The association wants this proposed inquiry conducted by a committee of five—two members to be chosen by the company, two to be chosen by the association, and the fifth to be chosen by the other four. A number of counts figure in the charges presented against the Mutual's president. Coercion to obtain the election of the administration ticket is one of these. It is contended by the association that the agency force is being destroyed and that the calling on agents and managers to "sustain the administration" was an "act of intimidation and coercion toward thousands of managers" and other employees. The very recent cases of agents Fell, Paige, Hindman, Sutton and Ferre are cited as pertinent examples in this connection. Some of the official acts and methods of President Peabody are referred to as highhanded and it is alleged that they parallel those of Mr. McCurdy. The attempt on the part of Mr. Peabody and the Insurance and Agency Committees to foist the election of the present office holders upon the company, according to the association, amounts to but little short of malfeasance in office. And thus the merry war of words goes on. The summons on the part of Commissioner Prewitt, of Kentucky, to President Peabody to appear in person at Frankfort and answer for his dismissal of Col. Hindman has been answered, and President Peabody, possibly to the surprise of the Kentucky commissioner, has telegraphed in reply thereto that the attitude of the Mutual has been misunderstood and welcomes the offered opportunity to appear and make the company's position plain to all concerned. The hearing has accordingly been set down for October 16-20.

Insurance Course at the University of Pennsylvania

THE University of Pennsylvania announces for the coming year a special course in Life Insurance. The sessions of the class begin this month. The course, as formulated, is to be practical in every sense. It is designed as a technical training in a profession that has grown rapidly in its importance during the last few years. It will, undoubtedly, afford a most excellent theoretical training for those who are contemplating life insurance as a business. The plan and scope of the course contemplates systematic instruction in the following:

(1) History of Life Insurance. (2) Economic and social utility of insurance. (3) Mortality tables. (4) Calculation of the net premium for pure endowments. (5) Annuities. (6) Term and whole life insurance. (7) Limited payment insurance. (8) Endowment insurance. (9) Instalment insurance. (10) Return premium insurance. (11) Joint life insurance. (12) Semi-annual and quarterly premiums. (13) The Gross Premium Loading. (14) The insurance reserve. (15) The surplus. (16) Surrender values. (17) Policy loans. (18) Policy provisions. (19) A concise but exhaustive summary of the law of life insurance. (20) Fraternal insurance. (21) Industrial insurance. (22) Organization of an insurance company. (23) Investment of life insurance funds.

Dr. S. S. Huebner, of the University, will have general direction of the course, but he will also have the assistance of eminent specialists in the various departments named.

During the past year the National Board of Fire Underwriters, thru the Committee on Construction of Buildings, has prepared a careful and complete building code designed to secure uniform building laws thruout the country. The object aimed at is to prevent the recurrence of such a calamity as the destruction of the Iroquois Theater in Chicago, whereby 600 persons perished, and to materially reduce the appalling waste of property by fire, which during the last five years has averaged the enormous sum of over $170,000,000 annually. The recommendations of the board are now published by them in neat cloth binding.

Financial

Profits of the Ore Sale

We said last week that the enormous deposits of iron ore sold or leased by James J. Hill and his associates, or the Great Northern Railroad Company, to the Steel Corporation, came into Mr. Hill's hands with a broken-down railroad and cost little or nothing. The *Iron Trade Review* now says:

"The bulk of the Hill holdings were secured by the purchase, seven years ago, of the Wright & Davis lands and the Duluth, Mississippi River and Northern Railroad, a line built by Wright & Davis for carrying out a logging contract. The lands, bought for their pine timber, stretched across and along the ore-bearing formation, and included the Mahoning and Stevenson mines. The price paid for these mines, and the railroad, as well as the enormous and very profitable logging contract held by the road, was a trifle under $4,000,000."

Mr. Hill, or his railroad there, the Eastern Minnesota, enlarged the area of his holdings by some purchases at low prices. Now they are leased upon terms which require a minimum of $92,895,000 to be paid in ten years, which cannot call for less than $500,000,000 eventually, and which may yield even $1,000,000,000. The price, now $1.65 per ton, will be $2 ten years hence, and there are not less than 300,000,000 tons. Mr. Hill thinks there are 700,000,000. That investment of seven years ago was a profitable one. While Mr. Roosevelt is withdrawing the coal lands of the public domain from entry and sale, he should have an eye to iron ore lands as well.

Corn and Wheat

It is shown by the Government's October crop report (issued on the 10th) that we are to have the greatest crop of corn ever harvested in this country. Condition remaining at a very high average, a crop of 2,780,068,000 bushels is indicated. The wheat crop, while exceeding that of last year by 47,000,000 bushels, will not make a new high record, owing to the effect of very hot weather and moisture after the closing days of July. For this reason the September estimate must be reduced by about 20,000,000 bushels. The Government's estimate of the spring wheat average yield per acre is only 13.7 bushels; the winter wheat yield was 16.7, but that was the highest ever known. Spring (246,449,000) and winter (493,434,000) make a total of 739,883,000, which falls but little below the highest mark. That was reached in 1901, with a crop of 748,460,000 bushels.

The Government's advices from Europe point to a loss of 120,000,000 bushels of wheat in Russia. Small gains in Germany and Italy more than compensate for a slight decline in France. Spain rejoices in remarkable abundance, her cereal crops, as compared with those of last year, having increased as follows: Wheat, from 92,000,000 to 154,000,000; barley, from 45,974,000 to 91,185,000; oats, from 22,305,000 to 45,632,000; rye, from 26,500,000 to 31,828,000.

....The Illinois Central's annual report, issued last week, shows that the earnings, for the year ending with June, were as follows: Gross, $51,636,405; net, $18,455,924. After the payment of fixed charges, the amount available for dividends was $12,131,366. In dividends, $6,652,800 was distributed, $4,164,739 was appropriated for betterments, and $1,313,826 was carried to the surplus dividend fund. Entrance to Nashville was obtained during the year by the acquisition of 84 miles of road, and arrangements have been made for an entrance into Birmingham by means of trackage agreements and the construction of new lines.

....According to Bradstreet's index number, the average of prices is higher than ever before, the gain having been 1.2 per cent since September 1, and nearly 4 per cent. since October, 1905. The advance since July 1, 1897, has been 46 per cent.

....The valuation, for taxation, of the special franchises of New York's public service corporations is now $427,931,000, an increase of $71,121,000 over the valuation in 1905. New York City's total has been advanced from $302,196,000 to $361,479,000.

....Dividends announced:

United Copper Co., quarterly, common stock, 1¼ per cent. and extra ½ per cent., payable Oct. 31st.

The Independent

VOL. LXI. NEW YORK, THURSDAY, OCTOBER 25, 1906 No. 3021

Survey of the World

Rebate Convictions in New York

In New York, on the 17th, the trial of the first of an interesting series of rebate indictments ended with a verdict of guilty. The trial took place before Judge George C. Holt, in the United States Circuit Court, the defendants being the New York Central and Hudson River Railroad Company and Frederick L. Pomeroy, now general traffic manager of that company. He was the manager's assistant at the time the offenses were committed. His superior officer, Nathan Guilford, now a vice-president of the company, was also indicted, but, owing to his illness, his trial was postponed. Complete documentary proof was submitted by the Government. It was shown by the original correspondence that, on April 11, 1904, Lowell M. Palmer, the head of the traffic department of the American Sugar Refining Company (the Sugar Trust), asked Guilford for a rate of 18 cents per 100 pounds on sugar to be shipped to W. H. Edgar & Son, in Detroit, the tariff rate being 23 cents. The explanation was given that Edgar & Son, being in a trying position, owing to the competition of Michigan beet sugar, proposed to have sugar shipped to them by canal to Buffalo, and thence to Detroit by steamship. For this route they could have a rate of 13 cents. Palmer told Guilford that he thought he could retain this traffic for the railroad if the rate should be reduced to 18 cents. The evidence included a "private and confidential" reply from Pomeroy, saying that the railroad would handle shipments to Edgar & Son at the rate of 18 cents, "all shipments to be billed at tariff rates, and refund to be made by voucher." It was shown that claims for refunding were duly presented, and were paid in drafts to the credit of Palmer. Counsel for the railroad company offered no evidence, but argued against a conviction. The jury was out only one hour, and at no time was there any disagreement. On all of the six counts the company and Pomeroy were found guilty. Whereupon counsel for the company said: "It is impossible to successfully defend rebate cases in the present state of public opinion." On the 19th, the customary motions for a new trial and an arrest of judgment having been denied, Judge Holt sentenced the company to pay a fine of $108,000 (almost the maximum provided by law, which would have been $120,000), and required Pomeroy to pay $6,000. Having pointed out that the crime had been deliberate and premeditated, Judge Holt said, in passing sentence:

"Such a violation of law is much more heinous than the ordinary, common, vulgar crimes usually brought before the criminal courts. Those are crimes of sudden passion and temptation. These crimes we are dealing with were committed by men of education, business experience and standing in the community, and as such they should be expected to set an example of obedience to the law, on the maintenance of which the security of their property depends.

"This corporation received large and valuable public privileges. It was under the highest obligations to treat all citizens alike, and not to grant any unjust discriminations.

"This was a secret crime, the proof of which was difficult to obtain. The law was originally passed nearly twenty years ago. Complaints of the granting of rebates by railways have been frequent and insistent. Congress passed amendatory legislation, but so difficult was the securing of the necessary proof that this is the first case brought in this court, and, with the exception of one recently in Philadelphia, the only one in the East. But few have been tried in the West.

"Under these circumstances, and for an offense so clearly flagrant, it is the duty of the court to impose a penalty commensurate with the gravity of the crime. The principal penalty should be imposed upon the corporation. The individual defendant acted without advantage to himself, in accordance with what he deemed to be the policy and wishes of his employers."

Counsel for the company will appeal, and it is said that they will test the constitutionality of the Elkins law in the Supreme Court. The conclusive documentary evidence in this case was obtained by William R. Hearst and by him turned over to the Government. There remain to be tried several indictments involving similar rebates on sugar, the defendants being the New York Central (thirteen counts), the Sugar Trust, the Lackawanna Railroad, certain lake steamship companies, and the Detroit merchants who received the sugar.—— Additional indictments against the Standard Oil Company for taking rebates were announced in Tennessee last week, one at Jackson with 1,524 counts, and another of 1,294 counts at Memphis. On the 19th, arguments on demurrers against the similar indictments recently found at Jamestown, N. Y., relating to oil shipments from Olean to Vermont, were heard in Buffalo. Officers of several of the great railways of the Northwest have been called to testify before a grand jury at St. Paul concerning rebates.

Conviction of the Ohio Standard Oil Company

The Standard Oil Company of Ohio was found guilty, in Findlay, on the 19th, of violating the Anti-Trust law of that State. When the jury went out, on the 17th, the case had been on trial for seven days. At first there were nine jurors for conviction and three for acquittal. After the jury had been out thirty-two hours the last of the three yielded to the majority. All were singing hymns during the closing hours of their long session. The penalty provided by law is a fine of from $50 to $5,000. This may be imposed for each day in which the defendant has violated the statute. As it was charged, in this instance, that the company had broken the law since July 6, 1903, the court is permitted to impose fines amounting to nearly $6,000,000. The customary steps for a new trial and for an appeal will be taken. Upon appeal, the case must go to the Court of Common Pleas, then to the Circuit Court, and finally to the Supreme Court of the State. One question to be settled is whether the court in which the case was tried (the Probate Court) had jurisdiction. It is said that the last Legislature gave it jurisdiction over misdemeanors, with which the offense in question has been classed by recent statutes. An unusual method of procedure was employed in this case, the prosecutor proceeding by information and affidavit, instead of by grand jury indictment. Neither the similar case against John D. Rockefeller nor those against three other oil companies controlled by the central Standard Oil Company (of New Jersey) will be taken up until final action upon the appeal in this case shall have been reached. Attorney-General Ellis of Ohio says he has no desire to drive the companies out of Ohio, but they must obey the laws and respect the public policy of the State. He hopes the decision will put an end to decoy and fictitious companies which are in fact owned by the Standard, but which pretend to be independent and are used as concealed weapons to destroy competition. The Standard, he adds, should take over openly and frankly the companies in Ohio which are parts of the Trust, "absolutely owned and controlled by the same men who organized the original conspiracy against trade twenty-five years ago."——According to dispatches from London, the holding company (General Industrial Development Syndicate, Limited), which owns the Manhattan Oil Company (one of the companies accused in Ohio) has two officers, a secretary named Francis, who remarks, in answer to inquiries, that he "has no information to communicate," and a director, H. M. Johnson, who is absent on a shooting trip. The door of the small room bears the names of seven other Syndicates, and Mr. Johnson is director of two or more of them. The six recorded shareholders of the General Industrial are described as persons apparently of small means who hold humble positions in the business world.—— An attorney in Baltimore has been em-

ployed by certain merchants and manufacturers to direct the attention of President Roosevelt and Attorney-General Moody to evidence which, it is alleged, indicates that the Distillers' Securities Company is a combination controlling the alcohol and spirits trade in violation of law.——Reports from Bremen say that a combination called the European Petroleum Union has been organized there, with the support of the Rothschilds and the Nobel Brothers, whose purpose is to contend against the Standard Oil Company by uniting all the oil selling agencies of Europe.

Senator Beveridge on Great Fortunes

In an address delivered at Dunkirk, Ind., on the 20th, Senator Beveridge discussed questions relating to great fortunes and corporate wealth. Marshall Field's fortune, he said, having been left in trust for fifty years, would amount to not less than $1,000,000,000 at the end of that period. It was believed, he continued, that John D. Rockfeller's wealth now amounted to $800,000,000, and those who should know had told him that it was more nearly $1,000,000,000. It would descend to a single person, and if this person should live the allotted life of man, the fortune inherited by him would probably amount to $2,000,000,000 before his death:

"All this is wrong. It is dangerous to the republic. I am not the enemy of wealth. I believe in fostering and encouraging that enterprise which makes men accumulate money. But when a fortune reaches a point where it is no longer the result of individual effort and thought and thrift, but accumulates of its own force, it ceases to become a blessing and becomes a curse.

"No man ought to own $1,000,000,000. No man ought to own $100,000,000.

"No man in a republic of free and equal men ought to have the immeasureable power that the possession of such tremendous riches gives him.

"It is bad enough from every point of view, but the deadly thing about it is that the managers of this great wealth constantly interfere in and with the people's government. That is manifest in our Legislatures, it is apparent in our elections, it is present in our primaries, and it has got to be stopped."

There must be an inheritance tax, he said, and perhaps an income tax, for the protection of the people.

Cuba's New Government

After his return to Washington, Secretary Taft said to representatives of the press that he did not know how long it would be necessary for the American forces to remain in Cuba. "Certainly," he added, "we shall not withdraw until there is complete tranquillity." He explained that Gen. Funston had been needed for the negotiations with the revolutionists, because of his acquaintance with Cuban commanders, gained while he was in the Cuban army. It had not been intended that he should take command of all the American troops. Our Government's regard for Gen. Funston, and its estimate of his ability, the Secretary continued, had been shown since his return by his assignment to the command of an entire division, the Southwestern, something without precedent for a Brigadier General in time of peace.——All the departments of the Cuban Government will be subjected to searching investigation by Commissions under the direction of Gov. Magoon. The first of the Commissions will inquire as to the recent election and will report concerning a revision of the election laws. The judges have appealed to Gov. Magoon for legislation that will enable the courts to be independent, with respect to the executive branch of the Government, which is said to have controlled them. There is still much complaint on the part of Liberals and revolutionists because of the retention of Moderates in national and local offices, to which, it is asserted, they are not entitled, and in which their conduct has not been good. Charges against such officers will be heard, but no officer will be removed, it is said, except for cause that is not political. By order of Gov. Magoon, under the direction of President Roosevelt, the American forces on the island are to be known as "The Army of Cuban Pacification." Nearly all of the 2,400 marines will be withdrawn, and the number of soldiers (now 5,600) will be increased to 7,000. The Liberals are raising a fund for the erection of a statue of President Roosevelt in Havana. Gov. Magoon inspected the national asylum for the insane and found it to be in a deplorable condition; 1,660 persons of both sexes were crowded together in filthy and dilapidated buildings having a capa-

city for only 400. Congress appropriated money for improvements, but it has not been used. The Governor will erect additional buildings.——At a large mass meeting of Liberals in Havana, last week, the leading speakers were Juan Gualberto Gomez and Señor Zayas. The first of these denounced the Palma Government, which, he said, with $20,000,000 in the treasury, thought it could buy enough Cubans to drown the protests of the majority against tyranny and fraud. He was confident that the Americans would go, after establishing a new Government. Señor Zayas spoke in the same strain. In his opinion, Anglo-Saxons would have rebelled long before the Liberals did. Secretary Taft, he said, had not desired to intervene, but had been forced by the Palma Government to do so.——It is now known that Manuel Silviera, the absconding banker, arrived at Willemstad on the 8th, then proceeded to Puerto Cabello, and is now in Caracas. The ship that carried him has returned to Havana. ——At last reports, there were thirteen cases of yellow fever in Havana, four in Cruces and two in Cienfuegos. Cruces and several adjoining towns have been placed under quarantine regulations.—— The Rev. W. A. Jones, president of the Augustinian College in Havana, has been appointed Catholic Bishop of Porto Rico. The Augustinians in Havana are Americans, and the new Bishop is a native of Albany.

Various Topics

It is understood in Washington that upon the retirement of Secretary Shaw in March, Postmaster-General Cortelyou will take his place, and that George von L. Meyer will be appointed Postmaster-General. ——The selection of a successor to Associate Justice Henry B. Brown, of the Supreme Court, who retired in May, has been the subject of recent conferences at the White House. It is reported that a final declination of an appointment to fill this vacancy has been received from Secretary Taft.——The Federation of Labor has ceased to oppose the re-election of Representative Longworth, owing to the protests of workingmen in Cincinnati, who desire to express their regard for the President by voting for his son-in-law.——W. H. Ellis, a contractor at the Charlestown Navy Yard, has been tried for violating the eight-hour law and found guilty. Labor leaders accused him of employing men for nine hours a day on Government work. ——Of the 189,064 immigrants who entered Canada in the last fiscal year, 57,-919 came from the United States. The increase for the year was 42,798. In Manitoba and the Northwest there were 34,645 homestead entries.——By the grand jury of the United States Circuit Court in New York, James Gordon Bennett, the New York *Herald* Company, and Manley M. Gillam, advertising counsel of the *Herald,* have been indicted for violating the law forbidding persons to send in the mails printed matter of an obscene or indecent character. Each of the three indictments has eight counts. The objectionable matter in question was found in the *Herald's* "personal" advertisements, many of which are reproduced in the indictments. The prosecution was begun upon evidence furnished by William R. Hearst, who was assisted by certain societies for the suppression of vice, and it was taken up by the Post Office authorities, who found legal evidence in the copies of the *Herald* sent to the Librarian of Congress to secure copyright. The penalty is imprisonment or a fine, or both.

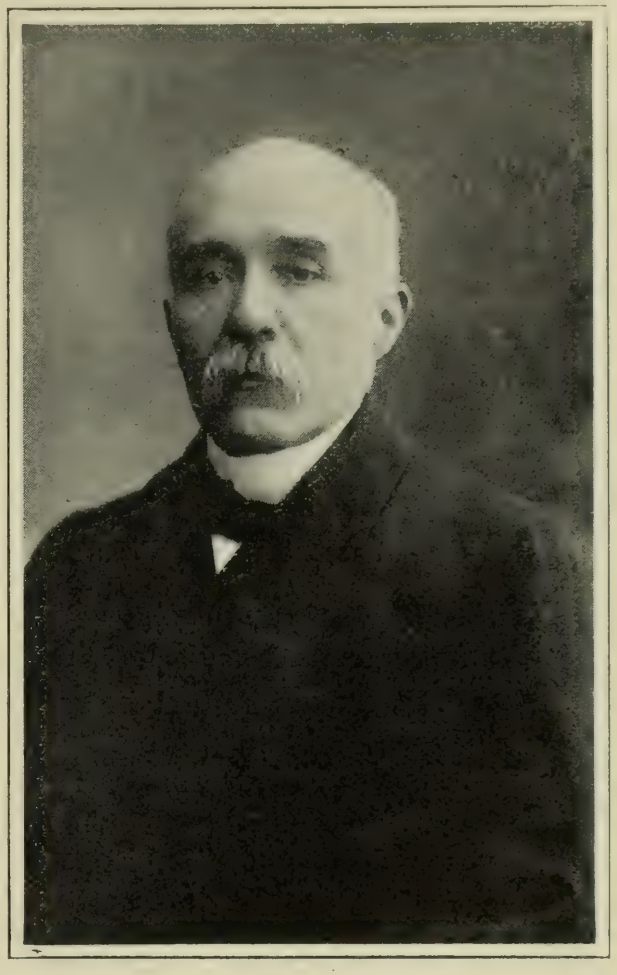
The Panama Canal

Herbert G. Squiers, formerly Minister to Cuba, will be appointed Minister to Panama. Judge Magoon (now Governor of Cuba) was Minister as well as Governor of the Canal Zone. It is said that Chief Engineer Stevens will hereafter act as Governor.——There has been published a brief interview with Chairman Shonts concerning the employment of Chinese on the canal route. He hired no Chinese, he says, nor did he make contracts for hiring them, but he did invite bids. No Chinese are employed now in the Zone, he adds, except, perhaps, as laundrymen, "and none will be." It does not appear, however, that the contract forms recently issued by the Government forbid contractors to employ Chinese. ——Secretary Root recently spent two days on the Isthmus, inspecting the canal work. After he had given to the Presi-

dent in conversation an account of what he saw, he was asked to put it in the form of a letter. This he has done. The heads of the departments, he says, impressed him very favorably as being first rate specimens of clear-headed, active and competent Americans, intensely interested in their work. About 25,000 persons were employed daily.

"The amount of actual excavation which had been done, and was being done, in and near the Culebra Cut, both gratified and surprised me. I saw, I should think, thirty steam shovels at work eating into both earth and rock with a capacity and power which made the little old machines left by the French company seem like toys; 245,000 cubic yards were taken out in August, and 289,000 were taken out in September. I understood that half as many more steam shovels were set up and ready to be put into operation as fast as the opening up of the work should make room for them.

"A big reception was given by the American employees and their families on the evening of my sailing for Cartagena. At a rough guess there were 1,000 to 1,500 in attendance. I left them dancing on the great roofed pier at Cristobal, as healthy and happy looking a lot of young American men and women as one could find in the United States."



The contract forms recently published were prepared, he says, after consultation with the leading contracting firms of the United States and many eminent outside engineers, in order that the requirements, while adequately protecting the Government, might be acceptable to responsible bidders.

"The greatest danger in the way of canal construction now seems to me to be lest the really good and able men who are competent to handle it, and who can get profitable employment anywhere, should be unwilling to continue in the service under indiscriminate misrepresentation and abuse."

——It is now expected that the President will sail for the Isthmus on November 8th, on the battleship "Louisiana," the armored cruisers "Washington" and "Tennessee" serving as convoys, and that he will be absent about three weeks.

Clemenceau and Picquart

The change in the French Cabinet involves one of those dramatic reversals which make French politics so interesting. M. Clémenceau, who has spent most of his life as a sharp newspaper critic of the Government, becomes the head of the Government, and Picquart, who was a few years ago denounced in the Chamber of Deputies as a traitor by the Minister of War and dismissed in disgrace from the army for exposing the conspiracy against Dreyfus, now becomes Minister of War. Clémenceau has been the real head of the Sarrien Cabinet ever since its organization, and has, somewhat to the surprise of his friends and his enemies, proved himself

Eugene Georges Benjamin Clémenceau, Premier of France.

not only an able politician, but an energetic and tactful administrative officer. The moderation and firmness with which he restrained the riotous strikers in the coal mines and maintained order at the last election amid great excitement has won the respect of widely different political factions. M. Sarrien offered his resignation to President Fallières on the ground that his health was not rugged enough to endure the strain of the approaching session of the Chamber of Deputies, a plea which is doubtless true, altho the Parisian wits say that the illness of the ex-Premier Sarrien should

be diagnosed, not as enteritis, but as Clemencitis. The new Cabinet has not been completely formed. Picquart, who, after the vindication of Dreyfus, was restored to the army with the rank which he would have held if he had never been suspended, and has been since promoted to the rank of General of a Division, will be made Minister of War. This will place him in authority over the officers of the General Staff who conspired to convict Dreyfus by means of forged testimonies, and the power of authority. Clémenceau and Picquart have been friends for many years, and fought together to prove the innocency of Dreyfus. Clémenceau has often said that if he ever became Prime Minister he would make Picquart a member of his Cabinet. The appointment will have the effect of provoking the Clericals to still greater fury. M. Briand will probably remain in the new Cabinet as Minister of Public Instruction and Worship. He is the author of the law for the separation of Church and State, and will, therefore, have charge of its enforcement next December. A new Ministry of Labor will be created, and M. Viviani, an independent Socialist Deputy, will have the post. M. Poincaré, who has been Minister of Finance, refused to enter the new Cabinet, and the place will be filled by M. Cailloux, who was Finance Minister in the Waldeck-Rousseau Cabinet. M. Poincaré has given a safe and conservative administration of the finances, but he is not in favor of some of the semi-Socialistic measures proposed by the Government, as these involve the expenditure of more money than the French Treasury can conveniently afford. In order to secure more revenue the Government will endeavor to have an income tax law passed by the Chamber of Deputies. In addition to this measure, which will be hard to get thru because it affects the interests of such a large proportion of the population, and especially those influential in political affairs, the enforcement of the law for separation of Church and State will involve many difficulties, since it meets with the united opposition of all bishops of France. M. Clémenceau's well-known hatred of ecclesiasticism and the personnel of his Cabinet promises that the law will be carried out rigidly without compromise if the Government refuses the support of the Chamber. M. Breton, a Socialist Deputy, will offer a resolution on the assembling of Parliament demanding

"that the Government suspend entirely the payment of the pensions of priests, insist that all ecclesiastics present themselves at the barracks and fulfill their military obligations, that all Church property be turned over to the communal charitable establishments, and that the buildings be apportioned among their real owners—namely, the State Departments and communes."

——A misunderstanding in the starting of the horses in Sunday's races at Longchamps precipitated a riot in which the lawless element attacked the betting booths and carried away the money. The police were powerless to stop the disorder and the race track had to be closed.

——The submarine boat "Lutin," which went down off Bizerta, Tunis, in making some submersion trials, failed to rise owing to the springing of a leak in the stern. Fourteen men and two officers on board were drowned. It has not yet been found possible to raise the boat from the bottom of the sea.

The Burgomaster of Koepenick

An incident that has both its humorous and serious sides is the trick played upon the Burgomaster of Koepenick and the robbery of the town treasury by making use of the awe inspired in the German by a uniform. An unknown man dressed in the uniform of a German colonel entered the City Hall of Koepenick and charged the Burgomaster with financial irregularities and demanded that the city funds be turned over to him. When the Burgomaster offered opposition, the bogus officer ordered the soldiers to put him under arrest and he was escorted by them to Berlin in a carriage. The City Treasurer, on being threatened with removal from office, opened the safe and gave the "Colonel" the books and cash, for which the "colonel" gave a receipt in due form, but with an illegible signature. All attempts to identify the thief have been fruitless. His official military scarf was found in a field and his sword at the railway station, where he represented himself to the station-master as an officer

who wished to go to the capital for a little fun and wanted to leave his uniform. The station-master showed him to a room where he put on citizen's dress. Burgomaster Langerhans was so chagrined at being deceived and humiliated by a reprimand from the Emperor and the ridicule that was heaped upon him by the press that he resigned his position. The citizens of Koepenick, however, expressed their sympathy for him by a banquet, a torchlight procession and a public meeting, which passed resolutions of confidence. The Liberal newspapers are making the most of the incident as a text against militarism.

Spain and the Vatican

The anti-clerical conflict in Spain has assumed a riotous form, and in Valencia a mob shouting "Death to the Archbishop!" tried to attack the Archbishop's palace and the troops had difficulty in checking it. The Archbishop was summoned to Madrid to prevent further disorder. The Archbishop of Valencia being a Senator is not liable to prosecution by the courts, except by permission of the Senate, therefore the Government cannot proceed against him, as it did against the Bishop of Tuy, for his pastoral letter declaring the civil marriage authorized by the recent law to be merely concubinage and denying Christian rites to those who accepted it. The Bishop of Tuy wrote a letter to Count Romanones, Minister of Justice, explaining that his intention in issuing his pastoral letter was merely to defend the rights of the Church and the interests of religion, and that he had no intention of offending the Minister or attacking the Government. This statement was accepted by Count Romanones as a sufficient apology, and the legal action was withdrawn. The Bishops of Burgos, Leon, Vittoria, Santander and Palencia have addressed a letter to the Government protesting

"against the anti-clerical projects and the campaign led by the secular press. The politicians seek in this way to distract the people and to turn their attention from the national disasters of which they are the cause. The people have no need of liberty and rights which they do not use. What they want is bread, that they be not forced to emigrate."

The anti-clerical press, on the other hand, declare that it is necessary to check the growing power of the Church, which is strangling the nation, and that to fail to do this would be to ruin Spain and make of it a mere colony of the Vatican. The movement it chiefly directed against the friars who took refuge in Spain on their expulsion from France. The young King is giving his support to the Liberal Cabinet, now in power, and the Ministers have prepared a bill, to be presented to the Cortes when it meets, October 23d, bringing the religious orders under the control of the Government. So far as it has been divulged its chief provisions are the following: All religious orders must be authorized by the Cortes, and this authorization may be withdrawn at any moment by the Minister of the Interior from any congregation which is inimical to morality and public tranquillity. The Government will protect with all its power any member of a community who wishes to renounce his vows. Members of a community are to be limited to a fixed amount of property, and will not be allowed to receive any personal gifts or legacies. The community can hold no property except what is necessary for its purposes. Those engaged in manufacture and commerce must pay the ordinary taxes. All associations composed of foreigners or under a foreign directorate are to be immediately dissolved. The civil authorities are to have the right to enter convents and monasteries at any time without obtaining ecclesiastical permission. Friars will not be allowed to engage in teaching unless they have university degrees.——While thus closing the church schools the Government is preparing to take upon itself the duty of education. Minister of Public Instruction Gimento will ask the Cortes for a loan of $10,000,000 for the establishment of 5,000 primary schools, in the next five years.

The Battle for the Duma

Now that violent revolutionary movements are to a considerable extent quieted for the present, the Government and the Opposition are absorbed in the struggle for the control of the future Duma. The convention of the Constitutional Democrats, held at Helsingfors, Finland, since it was prohibited on Rus-

sian territory, showed a moderation, sanity and firmness as remarkable as commendable, considering how difficult is their present position. The chief feature of the convention was the report of Professor Miliukov on the political situation. He frankly admitted that the Viborg manifesto, issued by the members of the Duma just after their dissolution, advising a policy of passive resistance by refusing to pay taxes and serve in the army, has proved ineffectual, altho it was right in principle and justified by the circumstances. It had been extensively circulated by means of the revolutionary press, and had produced a great impression upon the people, but the few and scattering attempts to put the policy into practice had been fruitless. Very little money is obtained by the Government from direct taxes, and the diminution from this cause was more than compensated by the increase in the revenue from the Government monopoly of the sale of alcoholic liquors, which has largely increased. Besides, the refusal to pay taxes cut off the revenue of the zemstvos, whose money is spent for local purposes, and most of the zemstvos were already practically bankrupt. Professor Miliukov recommended that passive resistance be kept in reserve as a weapon of last resort in case the Government refused to call a Duma, and that the Constitutional Democratic party adopt as its platform the Reply of the late Duma to the Address from the Throne. The convention approved of his recommendations.—— Immediately on the adjournment of the convention the Government began its attacks upon the party. The 182 members of the late Duma who signed the Viborg manifesto were arraigned for treason, and this disqualifies them for election to the Duma. Muromtseff, who was president of the Duma and of the Helsingfors convention of the party, has been excluded on this ground from the Moscow Municipal Zemstvo. The defense of the members will be that the act of signing was done on Finnish territory, and therefore out of jurisdiction of the Russian courts. The Government has declared the Constitutional Democrats a revolutionary party, and any public functionary who belongs to the party or assists it in any way will forfeit his position and all claims to a pension. This will force all professors in the universities and schools and members of the zemstvos to renounce the party or lose their positions. No opposition party is allowed to hold public meetings, but the parties supporting the Government have the use of public buildings and their literature is printed and circulated by the officials. Another movement which on the face of it is an important reform, but which under the circumstances looks like a political maneuver, is the ukase removing all class distinctions regarding employment by the State, and releasing peasants from the communal system. Peasants have hitherto been regarded as members of the local commune wherever they resided, and were held responsible for the debts and taxes of their birthplace, and were liable to be sent back there at any time. Now they are free to choose their residence, and the poll tax will be abolished after January 1st, 1907. This, however, will shut out from the next Duma the educated and traveled peasants who founded the Group of Toil in the last Duma, for they will not be eligible for election from a commune unless they are actually living in it as peasants. The Octobrists have issued their political platform, which condemns the Constitutional Democrats for their attitude of uncompromising opposition, but, on the other hand, declares against the general policy of the Government. The proposed addresses of sympathy and approval signed by prominent Englishmen and Frenchmen which were to be carried to St. Petersburg by delegations of influential men have been abandoned, because the movement aroused such violent opposition in Russia that it was thought that it would do more harm than good. On the whole the situation in Russia at the present time contains many problems that call for the exercise of the greatest conservatism. Many changes in the ministry are reported from time to time as pending, and the finances of Russia are also engaging the closest ministerial attention. The *Novoe Vremya* and other Russian papers denounce the Atlanta massacres as more brutal and inexcusable than the massacres of the Jews in Russian cities, tho due to the same cause—racial animosity.

The Annexation of Cuba

BY JOHN W. FOSTER, LL.D.

Ex-Secretary of State

THE action of President Roosevelt in directing the intervention of the civil and military authorities of the United States in Cuba has met with the hearty and general approval of the country. In the recess of Congress there was no other course left open to him, in view of the obligations which we have assumed toward the Government and people of that island. To a proper understanding of the future relations of our Government toward them and to the part it may take in shaping the destiny of that island, it may be well to examine the character of the obligations we have assumed, and, in doing so, to recall some well-known facts.

The joint resolution of Congress of April 20th, 1898, which was a virtual declaration of war against Spain, contained the following provision:

"Fourth.—That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island [Cuba], except for the pacification thereof, and asserts its determination, when that is accomplished, *to leave the government and control of the island to its people.*"

This enactment was not only a notice to Spain and to Cuba, but a declaration to the world of our determination and purpose.

After the war and when the United States was proceeding "to leave the government and control of the island to its people," Congress, in the act of March 2d, 1901, to that end, adopted the following, being a part of what is known as the Platt Amendment:

"III.—That the Government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the Government of Cuba."

The primary object of the intervention thus authorized is "for the preservation of Cuban independence." It is to be noted in connection with the last clause just quoted that while in the treaty of Paris, Spain "ceded" to the United States the Philippine Islands and Porto Rico, it simply "relinquished" its claim of sovereignty over and title to Cuba; hence the United States has never acquired a permanent title to Cuba. At the instance of the United States Article III. was ratified by the Cuban Government and attached to its Constitution, with the other articles of the Platt Amendment. Additional solemnity was given to these articles by a treaty entered into between Cuba and the United States in 1903, two years after the independent government of Cuba had been established. Article VII. likewise provided that, "to enable the United States to maintain the independence of Cuba," coaling or naval stations should be leased by Cuba to the United States; and in 1903 leases were made and signed by the Presidents of the two countries, in which the stipulation "to maintain the independence of Cuba" was recited and approved.

It is thus seen that the United States has in the most impressive and binding manner five times announced its determination and its duty to maintain the independence of Cuba: First, in the declaration of war against Spain; second, in the enactment by Congress of the Platt Amendment; third, in requiring the Cuban convention to make it a part of its Constitution; fourth, in taking a lease of the naval stations; and, fifth, in its formal treaty. It is gratifying to know that the Executive department of our Government fully realizes this determination and duty. Language could not be more explicit and decisive in this spirit than that used by President Roosevelt in his letter to Minister Quesada. The judicious conduct of Secretary Taft in seeking to avoid intervention made it clear that he was animated by this spirit. The proclamations of Secretary Taft and Provisional Governor Magoon, issued under the President's

direction, show that the only purpose of the intervention forced upon them is "to maintain the independence of Cuba."

But there is danger, unless checked, that a hastily formed and unwise popular sentiment may take possession of our country, and greatly embarrass the administration in its effort to keep faith with the people of Cuba and show to the world that we are animated by a policy of sincerity and disinterestedness. We read of statesmen high in public favor who announce that the American army now in Cuba will never leave it, and that the island is bound to be annexed to the United States, and the sooner the better. The same view is taken by many journals of influence. American planters, commercial men and promoters in Cuba seem anxious to have the United States assume outright and permanently the burdens of Cuban government. The advocates of "manifest destiny" believe the time is ripe to take one step further in southern expansion. These and other influences will oppose the withdrawal of our present control; and if another opportunity is given the Cubans to conduct an independent government and they again fall into disorder, the demand from these influences for permanent annexation may become almost irresistible.

Will such a demand be reasonable? Will it be consistent with our plighted faith and our publicly proclaimed purpose? Secretary Taft reached the heart of this question in his admirable address in the University at Havana. He made it clear that the Cubans should not be tested by the same standard of self-government as the people of the United States; that we had centuries of experience behind us and the Cubans were now for the first time being afforded an opportunity to govern themselves; and that if they stumbled and fell they must be helped up again and put on the road to self-government.

It is opportune to recall the experience of the Latin-American republics. Take the most successful of them. Argentina's history for fifty years after independence was a series of revolutions, violent changes of rulers, and defalcation in public obligations. Chile had much the same history, and only a few years ago a President was displaced by revolutionary means and the country distracted by civil war. The turbulent condition of Mexico for fifty years following its independence is well known. The condition of anarchy became so great that President Buchanan requested Congress to confer authority on him to send, in his discretion, an army into Mexico, for the protection of the lives and property of American residents; but this Congress declined to do. Later, thru our intervention, the French were required to leave Mexico, but their departure was followed by several years of civil disorder, and the present successful ruler of our neighboring republic came into power by revolutionary methods. The condition of affairs in Cuba does not approach the disorders thru which Argentina, Chile and Mexico have passed, and it becomes us to be patient, forbearing and reasonable toward this youngest of American republics.

There seems to be a widespread feeling in this country that if Cuba makes another failure in government, the only alternative will be annexation. This conclusion takes it for granted that annexation is desirable and would be advantageous to the United States. Is not this at least a debatable question? Let us briefly make an examination of it. The considerations which enter into a decision of this question are of two kinds, political and economic.

The political considerations. Some of these are the following:

1. How are we to annex Cuba? By force and in violation of our public promises, or by the consent of its people freely given? If by the latter course, then we must make the island a part of the territory of the Union and create out of it one or more States, for under no other conditions would the people of the island consent to annexation. It is true, we could disregard their wishes and our own public declarations, make of Cuba a *dependency,* and govern it as we do the Philippines or Porto Rico. But are the American people so enamored of that policy that they desire to complicate the unsolved problem by adding new obligations and burdens in that direction?

2. Does Cuba contain a population which it is desirable to incorporate at this time into our Union? Out of its one

million six hundred thousand people, only from one to two hundred thousand have any scholastic education. To the great mass of the voting population of today the common school is an unknown institution.

3. A large proportion of the population is of negro or mixed blood. Cuba was the last of the American countries to abolish slavery, the final act being in 1887. With the negro problem in our Southern States pressing upon us for solution, and (if we are to accept the conviction of one of their ablest and best informed Senators) a race war is there threatened, do we desire to aggravate the situation by adding a million more of the despised race to our voting population?

4. The people of Cuba are almost in their entirety the adherents of one religious faith. The Catholics in the United States are among our most patriotic and useful citizens, but it would not be desirable to have one or more of our States composed entirely of them. Our experience with Utah in the government of a hierarchy cautions us to avoid, for our own civil peace and credit, further experiments in that direction.

5. The annexation of Cuba without the consent of its people will make necessary the employment there for some years to come of a large contingent of our army, and even by any method of annexation, for many of its people have been in almost continuous insurrection for years, and it will require a strong military force to accustom them to the ways of peace and industry. Many of the peace-loving people of the United States lamented the necessity in the Philippines which called for an increase of the army, and they will lament still more a further increase on account of the annexation of Cuba.

The economic considerations. I shall only attempt a brief mention of some of these.

1. The sugar production. The soil and climate of Cuba are specially adapted for this cultivation, and, owing mainly to the political situation in the past, only a fraction of the land suitable for this product has as yet been brought under cultivation. The annexation of the island, with its cheap labor, will menace the destruction of the cane sugar industry of Louisiana, and the infant but increasing beet sugar cultivation of the Central and Northern States.

2. Much the same statement may be applied to the tobacco industry, with the added fact that the large number of tobacco factories scattered all over the United States would have to compete with the cheap labor and better quality of tobacco of the island.

3. Cuba has not as yet developed fruit growing and exportation to any great extent, but it has a soil, climate and labor well adapted to a large production of citrus fruits. With the tariff barrier broken down the island may well compete with the fruit growers of Florida and California.

4. Similar remarks may be made as to garden products. A large, growing and profitable industry has in late years been created in the seaboard Southern States for the supply of the Northern markets in the winter and early spring months. It may seem to the advocates of "manifest destiny" an insignificant matter to put these considerations forward as an obstacle to annexation, but the representatives of the many thousands of our people who are dependent upon the industries mentioned will reflect upon them seriously before they give their consent to the annexation of Cuba.

The most notable event in our recent diplomatic affairs has been the visit which Secretary Root has just made to the South American republics. It was a most opportune visit, was wisely conducted, and has had a most salutary influence in disabusing the minds of the influential statesmen and people of those republics respecting what was believed by many of them to be our aggressive and grasping policy. No utterance of a Secretary of State in many a day has breathed a more exalted spirit, or, let us hope, was a better exposition of genuine American sentiment, than the address of Mr. Root at Rio de Janeiro. From that address I make this extract, as appropriate to the foregoing discussion:

"We wish no victories but those of peace; for no territory except our own; for no sovereignty except the sovereignty over ourselves. We deem the independence and equal rights of the smallest and weakest member of the family of nations entitled to as much respect as those of the greatest empire, and we deem the

observance of that respect the chief guaranty of the weak against the oppression of the strong. . . . We wish to increase our prosperity, to expand our trade, to grow in wealth, in wisdom, and in spirit, but our conception of the true way to accomplish this is not to pull down others and profit by their ruin, but to help all friends to a common prosperity and a common growth, that we may all become greater and stronger together."

In a spirit of impatience and by a refusal to allow the Cubans the same chance as Mexico, Chile and Argentina have had to grow into strong and stable governments, let us not destroy the good seed which Secretary Root has sown. Let us not demonstrate to the world that our most solemn protestations and stipulations are but a mockery of sincerity and fair dealing.

WASHINGTON, D. C.

Gambling With Medicines

BY W. CRAWFORD HIRSCH

LATE DRUG MARKET EDITOR OF THE "OIL, PAINT AND DRUG REPORTER."

[This exposure of the speculative methods by which the price of drugs necessary to the sick are artificially raised and fluctuated for the benefit of dealers is, unfortunately, of importance to almost every family.—EDITOR.]

BAD enough and sad enough when the battle that is constantly on between the "bulls" and "bears" who "operate" in the necessities of life results in a victory for the former and prices of food products go soaring upward.

But the healthy man can at least offer passive resistance. The human stomach is versatile. If the price of pork is prohibitive for the poor man's purse, fish and potatoes will as efficiently appease hunger.

Not so with the sick man. There are many cases of sickness in which the physician prescribes a certain medicine the place of which nothing else can take. The saving of hundreds of human lives depends therefore upon the unrestrained supply of the cardinal drugs of pharmacy.

And yet two attempts to "corner" opium are part of the history of the drug trade, and speculation in this drug is as rampant today as ever. How vital a drug opium is may be seen from the following description of its medicinal properties, as given in the United States Dispensatory:

"Opium relieves pain more speedily and effectually than any other medicine taken into the human stomach. If possessed of no other property than this, it would be entitled to a high consideration. Not to mention cancer and other instances of painful disease which are not only temporarily relieved, but entirely cured by the remedy, there is scarcely a complaint in the catalog of human ailments in the treatment of which it is not occasionally demanded for the relief of suffering, which, if allowed to continue, might aggravate the disorder and protract, if not prevent a cure."

That the speculators think no less of opium than the physicians is conclusively proven by the fact that some years ago they sent prices within a single week from $4.67\frac{1}{2}$ to $7 a pound. The present wholesale "market" price is twice that of 1892 and ten per cent. higher than in the early part of the year. As an explanation for this continual fluctuation in the price of opium, the speculators have recourse to the threadbare phrase of the law of demand and supply and the uncertainty of the opium crop in Turkey, from which country all medicinal opium comes. Both explanations are not valid. During the past eighteen years a total of 114,530 cases of opium have been grown in Turkey, an average of 6,363 cases a year. The world's demand is between 4,500 and 5,000 cases a year at the most, so that, as a matter of fact, there is a considerable surplus of the supply over the demand. Millions have been made and lost in opium speculation, and it is not

an unusual thing to read in the so-called market reports of the drug trade papers that "stocks of opium are well concentrated," which means in effect that if an epidemic were to cause a large demand for opium, the price of saving human lives would be arbitrarily fixed by one or two speculators.

While there is in New York no regular drug exchange, such as that in Mincing Lane, London, the speculators are kept in touch with one another thru the medium of brokers who execute buying and selling orders for drugs much as the Wall Street broker does for stocks and bonds. Without fear of contradiction, the broad statement can be made that not a single crude drug passes into the hands of the druggist on the basis of cost plus a legitimate profit, as one would suppose. That hazy institution, "the drug market," which is dominated by speculative interests, dictates what you shall pay to get well, if you are sick.

In some instances the "bears" have been known to worst the "bulls." Quinine today sells wholesale at 14½ cents an ounce. Some years ago the market price was $5 an ounce. Allowing for the 20 per cent. duty which was then imposed on quinine, as well as for the comparatively slight decrease in the cost of manufacture, there still remains a difference of several dollars an ounce between the present price of quinine and that of twenty-five years ago. Into whose pockets did those $2 or $3, for each ounce of quinine traded, flow? Largely into those of speculators. And who paid them? The sufferer from fever or malaria. As late as five years ago quinine was quoted at twice its present price and yet the cost of manufacturing was no greater than today. A London speculator who figured that quinine would go up, bought one million ounces a year or so ago. His losses to date amount to $10,000, but he is still holding the million ounces for a rise, as they say in Wall Street parlance.

Cod-liver oil may be appropriately termed a poor man's medicine. It is one of the most valuable allies which the physician has in fighting or at least preventing the spread of the white man's plague, consumption. This year's yield of Norwegian cod-liver oil is 15 per cent. larger than that of 1901, but quotations are 20 per cent. higher and the "bulls" prophesy still further advances.

When measles are epidemic, American saffron flowers are a much sought after drug. A few years ago these flowers were quoted at 30 cents a pound. The prevalence of measles caused the "bulls" to take a kindly interest in the drug, and they sent the price to $1.35. A short time ago the "bears" had their inning, and for a time 80 cents was the prevailing quotation. At the present time the speculators rejoice in what they are pleased to call "a recovery of values"; a bad time for your little ones to get the measles!

Cocaine, the most popular anesthetic of the present day, was recently taken in tow by the "bears," and, as a result, quotations are about half of what they were five years ago. On the other hand, the "bulls" have doubled the price of cascara sagrada, a drug that many practitioners consider as the most valuable laxative known to medicine.

The most high-handed maneuver in recent years was that engineered a few months ago, when a speculator cornered all available stocks of pink root (spinzelia), the most powerful anthelmintic known to medicine. In January the root could be had at 45 cents a pound. The speculator who succeeded in cornering the market sent the price to $1.25, sold his holdings at that figure, and today quotations are once more at the normal figure of 55 cents.

Guarana, a valuable drug, first prescribed by Dr. Gavrelle, physician to Dom Pedro, the late Emperor of Brazil, could be had a few months ago for 75 cents a pound. A speculator managed to concentrate stocks in his hands and to double the price.

Potassium bromide, a medicament which has been employed in almost all diseases to which human flesh is heir, and which is still esteemed by physicians as one of the most valuable drugs in nervous ailments, epilepsy and convulsions, can be had today at half its last year's price, because the "bears" have proved more powerful than the "bulls."

One might extend this list of "doctored" values to include almost every

drug of importance. The few that are not the object of speculation are controlled as monopolies by powerful interests that fix prices arbitrarily. The most conspicuous example of this kind is iodine. Aside from the fact that the price put on this drug by the syndicate that controls its production is out of all proportion to the actual cost, there are only a few favored firms to whom the syndicate will sell direct, and these must pay for their purchases long before they receive them. The price of mercury is, as every one knows, fixed by the Rothschilds, whose word is law with the American miners of quicksilver.

It is no exaggeration to say that fortunes are made and lost every year in drug speculation.

And who foots the bill?

The unfortunate sick who are too proud to partake of the charity of a free hospital and the taxpayers who have to pay for the medical treatment of the indigent.

The Pure Food and Drug Law, which goes into effect next year, will remedy one great abuse—that of adulterated drugs. One need not be a Socialist to wish for legislation that would put a stop to gambling with drugs.

Drugs are not a commercial commodity; they are a humane necessity.

The standard of civilization of a people is justly measured by their regard for human life. Surely Americans do not want to see the means of saving or prolonging human life the playball of the most despicable variety of speculation extant.

New York City.

The American People and Universal Suffrage

BY EDWARD EVERETT HALE, D.D., LL.D.

[The following article by the famous author of "The Man Without a Country" is taken from an address recently delivered before the Brooklyn Institute.—Editor.]

THE People of America are the sovereign of America.

"We, the People of the United States, ordain the Constitution of the United States."

These are the words at the beginning of our written Constitution. I wish I knew who placed them there, but I do not. They are central, and every boy and girl at school should be made to comprehend their force and meaning.

It is, however, nearly impossible to make any persons educated under feudal institutions take in the meaning of these words. When the shipwrecked boy McDonald, as early as 1850, was asked by his Japanese inquisitors whether any one was superior in America to the President of the United States, the boy answered proudly that the people was his master and that the President was the officer of the people.

"But of this," he said, "they could make nothing."

I have lived what is called a long life, and till now I have never met but one person educated in Europe who believed that the people is the sovereign of America or even knew what the words implied.

Clouds come and showers come, or sunshine comes or fogs come, but the eternal heavens do not change. So there come Congresses and administrations, there come landslides and what are called revolutions, but the American nation is unchanged and the same.

And so it is that we, the people of America, are the rulers of America. We choose our Chief Magistrates. They do not rule us, however. But we rule them.

To say this seems a mere commonplace of electioneering. Well, it ought to be, for here is the reality which makes this half the world wholly different from the other half; so that their language misleads us. For men do not

speak of "government" without the false notion that there must be a governor sitting on a throne somewhere and that we are the governed. And the common definition of a democracy is a form where the people choose the governors. Thus they try to make us believe today that France is a democratic republic because in France the people choose the officers who are to rule them.

But we are to remember that whether this were or were not the meaning of "government" by the people in Athens, it is not what we mean now.

We mean this, that the duty assumed by a Cæsar, a Trajan or any emperor or king in the older histories, is assumed and taken by us, by the People.

A good enough instance is in that phrase, "the fountain of honor." The King in a feudal country like England is the fountain of honor.

But with us the President is not the fountain of honor, the Governor is not the fountain of honor; the People are the fountain of honor. Certain people create a certain college, like Union College, or Yale College, or Princeton College. Directed by these people, the officers of that college give the degrees of honor which are the only degrees which the republic knows. We do not ask the President's leave to give it; they need not ask leave of the Governor of New Jersey or of Connecticut. The People are the fountain of honor. Or, on the other hand, in France, in Spain, or in Germany, five and twenty of us want to worship in a particular way. We want to sing certain hymns or not sing them. We want to burn incense or not burn it. We must meet together, we must state our wish, we must ask certain governors somewhere if we may build a meeting house for this purpose, or if we may meet for this purpose; and they say yes or no. With us here no such thing happens. We, the People, worship God as we choose. If this needs the union of twenty persons, those twenty persons meeting in a back parlor, put their hands in their pockets and take out their pocketbooks; they subscribe whatever they want for the meeting house, and they build the meeting house. The People govern.

Or Mr. Crœsus and Mrs. Midas and Mr. Myriad want to build a roadway for their autos to run from Mr. Merriman's castle in Weissnichtwo, fifty miles across the country to Little Peddlington. Well, they build it. If they think it is for the public good, and want to take private property for the public good, they have to ask the People for the right—all the People. They do not ask the King of Weissnichtwo, nor the Emperor of Long Island—they ask the People and the People say yes or the People say no. If I think I have something to tell John and Andrew and Philip and Dorcas and Irene and Tryphosa, and a thousand other of the people, of whatever language, race or lineage, what I have to do is this: In our very fine vernacular phrase, I have to "hire a hall." Then I have to print a poster, by my own hand or by somebody else's hand, to announce that in my hall, at such a time, I shall proclaim this truth, and that Dorcas and Tryphosa and the rest may come. They may pay ten cents, or they may pay nothing at the door, but that is for me to say. No pope nor cardinal nor bishop nor priest nor deacon nor elder says I shall or shall not. The People govern in this business, and the good God, in his infinite methods, but nobody else this side of Him.

Or if I want to establish a carriage factory, I may take my own saw and chisel, I may buy my own lumber, I may hew and cut and plane my own spokes and the rest, and I may make my own wheels. I do not have to apply to any guild of wheelwrights to give me permission. If I were in London I should have to, for England is neither a democracy nor a republic. If I want, I may make square wheels. No guild of wheelwrights can direct me to make them round. Nobody but the People can decide whether they shall buy my wheels or no.

And this thing runs very far out in every incident of our lives. John and Thomas and Zebedee and I have moved up into the Adirondack country; we have our four or five holdings there. There are, thank God, five and twenty children among us, and we mean to have those children taught to spell and read and write. We need not wait to be a township. We get together in John's kitchen some Sunday evening and we agree to

ask that nice Lucy Ruskin, who lost her right hand in the fire, to come and teach the children in Zebedee's barn. And she comes and teaches them, and we all chip in and pay her. We need not write to Albany to ask them to send us a certified teacher of the eighth grade, who has received such and such a degree from such and such a university. In other places or in other homes it may be convenient for us to send such an order to some of our servants. And if we do we shall find that our servants serve us very well. But up in the Adirondacks, there we may choose to do this thing for ourselves, and we do it.

I choose these instances because they are so typical. From one end to the other, literally in a thousand of such instances, we are governing ourselves.

I do not mean to say that there are not exceptions—many exceptions in detail, to a statement or theory so comprehensive. Some people will tell you that the feudal institutions have greatly multiplied in America in ten years. It is certainly true that you hear their importance distinctly avowed. It is not a week since I met an intelligent American lady who has lived in Germany for the last three months. She seemed ready to throw over all our constitutions, to throw over the memories of the Revolution and the Declaration of Independence, because the young Emperor of Germany does his work so well. I think the particular charms of his rule which had impressed her were that she saw no orange peel lying in the roadway in the Black Forest, and that the porters at the railways touched their caps to her. But all the same, the genuine American feeling is the other way. In a genuine American community they say, Let us do it ourselves. It is a matter of ridicule when, in a novel, Quasha tells Quagga to tell Sambo to tell Peter to pick up a pin. At bottom, We the People want to manage our own affairs. We do not like to be advised. As every grandfather thinks he knows how to suck an egg and does not want his grandchild to advise him, so every village thinks it knows best how to bridge the brook and does not want to be instructed by any headquarters.

Not to discuss the contrast in words, between the feudal constitutions and our constitution, the difference in practice is this: That in Europe a man may do nothing unless he is specially licensed to do so, and in America a man may do anything unless he is forbidden by the law.

Now, of course, when the ruling classes are angels and archangels, when they select with infinite wisdom the officers of administration, and when, with equally divine wisdom they make the laws, the European system works as well as ours.

But if, on the other hand, the selection of the governing class is left to such accidents as the military success of Napoleon, or the hereditary right of Nicholas, it is better not to intrust either the law or the administration to such directors if you can help it. And if, in the course of centuries, you have trained people, as we have done, to the habit of cutting their own coat from their own cloth to fit themselves in the wearing of their clothes, you had better not create with your eyes open a class of hereditary and exclusive tailors, who give you six regulation patterns of coats and bid you choose one of the six.

Let us remember all along that there are certain laws written with a very large L at the beginning, which exist for this world and for all worlds. Laws! It is indeed a refreshing discovery of recent science that in such physical things as can be measured by tape and compasses, the laws in the stars of Orion are the same as the laws in the planet Neptune or Uranus, and that that same law governs this planet of ours. It is almost certain that when you and I find out that there is this unity of law for light, for electricity, for the fall of an apple, we shall find out that the same is true of the law which governs my relations with my son or my daughter, or my man servant or my maid servant. Perhaps some day we shall find out that, because there is such a ruler as this, all lesser rulers would do well to take more modest names.

As things stand, and this is the matter which we now want to consider, it is very clear that for us who are living in America, our place is to bring the great common law of the universe into our affairs. And to do this we want to fetter

in every way the presumption of the quack who talks of *me* and *mine,* of *my system,* or of *his system,* as if our little systems could be anything unless they could be made large enough for all mankind.

Sometimes there comes one of those great tide waves in human affairs which for a thousand years reveal to every person flung upon the surface of the ocean what that common life is which binds us all together in one.

A low-spirited pessimist, discouraged by some ill-success, was chattering these skepticisms to my friend Dr. Bowditch. And this was his wise reply: "George, you do not think that the great uprising of 1861, in which thirty million people united to preserve this nation—you do not think that that was the concentaneous action of thirty million eight-day clocks?"

There is a fundamental law. That fundamental law asserts itself in ways which may be described or may not be. A world of sons and daughters of God is a world of men and women who have these fundamental or divine laws stored away somewhere among their possessions. When We the People ordain our Constitution we do so because We the People expect and demand the allegiance of each of the People to this fundamental law.

Quite central in this business, We the People, even without knowing it, ordained universal suffrage. The old line neither believed in it or expected it. Gouveneur Morris did not expect it, the early Clintons did not expect it—I doubt if even Aaron Burr expected it—but it came. One qualification of property and another was dropped from the requisitions for suffrage, until now in practice every man who pays any sort of tax is permitted to vote.

Just there and then, dainty people like Matthew Arnold, who talk about the "margin," or Old World people like the old gentleman in Knickerbocker, say in a condescending way: "You will not let the man in the street mend your watch for you; why do you let the man in the street make your laws for you?" And in the face of the high and mighty people who talk about the "margin" and educational tests and property qualifications, universal suffrage has to stand and defend itself. May I borrow the magnificent phrase of the criminal courts when a prisoner seeks justice?

"This prisoner throws himself upon the country"—which country, gentlemen; which country, ladies; which country, boys and girls—you are.

Well, the simplest, the crudest defense of universal suffrage is this: That the ballot is better than the bullet. If I know that a hundred thousand men voted for Jefferson to be President and only ninety thousand voted for somebody else, I do not rise in arms as a Spaniard would do because I want somebody else to be President. No! I say: "Their side counts more men than we count; they have ten thousand more guns than we have; they have ten per cent. more cartridges than we have, and we will wait." You cannot call out every man in twenty counties "agin' Burgyne" in 1777, you cannot compel him to march and go to battle and take his chances of being killed and then say to him when he comes back, that he shall not vote for the magistracy which sent him there. If you make him die for you, you must let him vote for you. In this happy moment of the religious history of the world my clerical friends around me will permit me to say that in that great political conflict Calvinism died in America. You could not say that the man who died for you in battle was incapable of good. And as time goes on you stop saying so. As I said, the men who wrote the Constitutions of 1780 and of 1787 did not yet know this, and they did not yet dream it, but all the same it was true. And we had to give the ballot wherever men took the chances of the bullet. The ladies sometimes ask why they did not give the ballot to them. If anybody cares for the true answer, it is because the women did not serve in the militia.

This is, as I say, the concrete or visible answer which universal suffrage first makes when it is tried before the great tribunal, the great tribunal of the People! Which People you are. But this is not the fundamental answer. This is only the answer which appears to the eye. The real answer is this: The success or the failure of this land or of any

land depends upon the moral forces and not on the physical forces. In the long run, that government succeeds which does right, and that government fails which does wrong. America succeeds, on the whole, because, on the whole, its people wish to do right; and Russia fails, on the whole, because, on the whole, Russia is not making the same endeavor.

Now who is it in practice, in the intimacies of daily life, you rely on most confidently for moral purpose or moral endeavor? You had in your parlor last night a lady who spoke four languages, who quoted very prettily to you from Tasso and Schiller and Victor Hugo, and you were called out from her visit to pay the washerwoman who brought home your husband's shirts. Are you in the least confident that the Countess Beauregard has a keener sentiment of right or wrong than Mrs. Flaherty has? Would not you trust Mrs. Flaherty with a ten-dollar bill as readily as you would trust the Countess with a thousand? The Norwegian who transplanted my rhododendrons for me the other day was an uneducated man; I do not know what church he went to, he brought me no certificate from any agricultural department, but all the same I gave him the money he needed to pay the nurseryman with absolute and perfect confidence. I could not have had more confidence if I had waited for half an hour in two anterooms which brought me nearer and nearer to Mr. Mortimer Fitz Mortimer.

This is to say, in private life, when we have an issue of right and wrong, we do not suppose that that issue is to be decided any better by the master of languages or the mistress of millions than by any other pure-minded child of God who wants to serve him.

They tell us that what we gain after a well-contested election is, according to our theory, the decision of the average man. This is not true. It is not true for this reason: that the average man loves and honors his superior; the average pikeman from Navarre loved and honored Henry the Fourth and would rather have him King of Navarre than his own brother or his own cousin. But I am not afraid, not ashamed, to accept the sneer and to say that our average man does choose the street sweeper, the constable, the inspector of immigrants—the average man does appoint the magistrate. And when I assent to this I say at the same time that the average man loves virtue and hates vice. As Mr. Jerome said a year ago, the average man wants his daughter to marry a good man and not a bad man. The average man employs an honest butcher, and will not employ a knave.

Now, at bottom, we all have to remember what the feudal writers always forget—that, first of all, we want *good* government. First of all, we do not ask for elegant government, as my Black Forest lady did, nor for wise government, as Matthew Arnold did, nor for a government of landowners, as the English aristocracy does. We want *good* government. We want a government which shall not steal. We want a government where men shall be honest; we want a government where men shall tell the truth. We do not ask, first, whether our magistrates are well up in their Vattell or their Burlamaqui. We do not examine them on the Justinian Code; no, nor on the Code Napoleon. We do ask whether they tell the truth, whether they steal, whether they have one wife or two, whether they live for themselves or live for mankind. All these are moral questions. They are questions which one son of God can determine just as well as another son of God. What we do, then, in arranging our suffrage is to say, first, Can this man read so that he can know the truth about Abraham Allison at the top of the alphabet and Zebedee Zoroaster at the bottom? Second, Can he read the English language in which our laws are written? Third, Has he been in the penitentiary? If he can stand these tests he can stand in the next booth to me as we vote the Australian ballot.

From such considerations I must turn abruptly. But I hope I have said enough to show how largely our language, in discussing politics, is vitiated by the feudal systems. The European writers without an exception speak of society as a pyramid. I believe I said here many years ago that, according to them, the multitude of the very poor and ignorant are at the bottom of the state and the

better-trained classes are higher up. Then there is some sort of sovereign at the top. From this conception, that the drudges who have nothing but their muscle and weight to use are the vast majority in the state, there springs the dread of universal suffrage which you find at bottom in all the writers of the Continent of Europe. Let me, if only for convenience, use the word *laborer* as describing the man who has nothing but his weight and muscle to use, and to speak of the *workman* as he who controls matter by his spiritual ability. This is the proper distinction between labor and work, and it is a pity that the writers for the press are ignorant of it or disregard it freely. Now, it is true that in Russia, for instance, the mere peasant, the man who cannot read or write, the man who can only turn up the sod with a spade—he makes the vast majority. But because he is, it does not follow that the majority is made of such as he here. And in point of fact, in America, the educated workmen, the men who use spirit to control matter, outnumber by a vast majority the men who can only dig and fetch and carry. Boulton and Watt, Corliss and Edison, the McCormicks and the other inventors have not lived in vain. Your system, more than imperial, of common schools has not worked in vain. The satirists like to say that society rests on the mud-sills at the bottom; and in the gilt-edged discussions you will find it taken for granted that the majority in your election is made up of men who can neither read nor write nor think nor remember. But, in truth, the number of the unintelligent laborers, I might almost say, is a trifle in comparison with that of the workmen who may fairly say that they are above the others in the social order. In speaking of this subject twenty years ago at Brown University, I told the gentlemen before me, who I suppose controlled the fortunes of twenty or thirty flourishing manufacturing towns, that the proper outline for our social constitution is that of an elegant Greek vase, where the lower lines are comparatively small, where the vase becomes larger and larger as you go up, till half way up you have it in its full circumference, and then as matter of population, as we come into the circles of magistrates, of directors of whatever kind, the vase grows smaller and smaller. I told them that our social order is not a pyramid with an apex at the top, and that it does not rest on any mud-sills at the bottom.

What is more, I proved this by statistics of Rhode Island and Massachusetts at that time. Mr. North has now favored me with the statistics of today from Washington, and they show a constant increase in the numbers of men who bring their brains and hearts and souls to control their daily work. Fifty years ago, at your granite quarry, there were fifty unintelligent laborers standing in a line and lifting their drills and letting them fall. Today, in place of those fifty churls, you have a young man controlling a set of intelligent machines while he writes a note to his sweetheart or reads Tennyson or Browning for his entertainment.

A cynical friend of mine used to say that the price of liberty is perpetual slavery. He meant that before he ate his breakfast in the morning he had to think of some matter outside himself in which that day he was bound for the service of the whole. For public spirit says what it pretends to say. Public spirit is the *spiritus*, the breath on which the nation lives. If public spirit ceases for an hour the nation dies, as a man dies when for an hour he does not draw into his lungs the life of God. That is a very bad choice of words which calls this public spirit slavery—as in his epigram my dainty friend called it.

Do not neglect what they tell you—that at a time like this you ought to go to ward meetings, you ought to attend at primaries. But do not think that your duty as a citizen, be you man or woman, be you boy or girl, begins and ends for two years in the November election. There is not a day in your life when you are not a part of the Government of this country. There is not a woman, as she watches over her children, as she puts them in order to go to school, as she attends to their evening lessons, but is bearing her part, which, as I say, archangels might envy her. There is not a man but can say something or do something to the errand boys and porters whom he employs in his princely ware-

house which shall tend to the elevation of the State, to the education of the sovereign who rules him. I do not speak to a motorman or a car conductor, to the porter on a ferryboat, or to a street sweeper, but whose daily business, from November around to October, from 1906 to 1960, may improve the public spirit of this nation.

"The sovereignty of the nation is from God and of the People," these are Mr. Mulford's words. "The People is invested with this sovereignty by Him, transmitted thru no intermediate hands. Blended with the traditions of the past, it passes sacredly from the fathers to the children."

BOSTON, MASS.

What Is Esperanto?

BY GEORGE ALLAN ENGLAND

[THE INDEPENDENT takes some pride in the fact that it published, August 11th, 1904, the first article explaining Esperanto, written for American readers by the inventor of the language, Dr. Lazaro Ludiviko Zamenhof, of Warsaw. Since then we have received such frequent letters of inquiry regarding Esperanto that we are sure that this account of its construction and progress will be welcomed by many. Whatever may be the extent of our faith in its future, it certainly is an interesting, laudable attempt to fill a want felt by the human race ever since the work stopped on the Tower of Babel.—EDITOR.]

AGAINST the profound argumentation and ponderous finality of many learned ones who sneer, who proclaim such a thing as a purely artificial language impossible, impracticable and foredoomed to failure, Esperantists oppose the simple statement that Esperanto is already a proved success; that forty journals are now published in Europe alone, devoted exclusively to the interests and the propoganda of the idiom; that many business houses are issuing advertisements, trade circulars and catalogs in Esperanto; and that its spheres of influence are widening without cease, like rings upon still water. Every day greater and greater numbers of men all over the world are coming into the family of mutual understanding.

What, then, is this new thing which overleaps all objections as tho they were not, which knows neither national boundaries nor international prejudices, which is being everywhere adopted by scientists, linguists, Socialists, thinkers and workers all, which bids fair within the next decade to become a universal secondary speech for the entire world? The purpose of this article is briefly to answer and explain.

Nobody should be better fitted to define Esperanto than the Esperantists themselves. According to their "Oficiala Difino," adopted August, 1905, at the International Esperantist Congress (Boulogne-sur-Mer), it is a

"Neutral Language, which, while neither intruding upon the interior life of the nations or in any wise aiming to do away with existing national languages, will enable men of different nationalities to understand one another, will serve as a pacific language in those countries where diverse peoples are at strife on account of language, and in which can be published works that have an equal interest for all peoples. . . ."

In other words, it is an auxiliary international idiom, available for all purposes of trade, science and intercourse between persons otherwise possessing no common linguistic meeting ground. We may perhaps compare it roughly to medieval Latin in the capacity which that tongue enjoyed as a common language for the educated classes in all countries of Europe. Again, it may be likened to an international code. But, as we shall presently see, it is much more than this; it possesses literary possibilities which far exceed those of a code; and its vitality, its power of unlimited expansion and word formation place it (to my mind, at least) far above the corrupt Low Latin of the Middle Ages.

Esperanto offers several immediate advantages of indisputable worth: It

lays open the whole world of thought and expression in whatsoever corner of the globe; it breaks down barriers, and procures for its possessors in every land a multitude of persons who are able to exchange ideas and services with them. By means of the little penny "Keys," now printed in over twenty languages, perfectly intelligible correspondence can be carried on between persons otherwise absolutely out of reach of each other. Suppose that you want to write to a Greek, a Russian, a Japanese—strangers to you, it may be—and that you know only your native English. All you have to do is write your letter in Esperanto, enclose a key in the appropriate language, and, presto! the business is done. Anybody of ordinary wit can readily translate your letter with the key.

To be successful, a vehicle of expression must be as easily spoken as written, and must, moreover, be readily learnable by anybody of moderate education. That Esperanto has these qualifications I believe nobody who has ever looked into the subject will deny. On good authority it is said that one hour's study a day for three months will put the average person in excellent command of the language. A student already versed in two or three foreign tongues finds the task ridiculously simple, for then practically every word is recognizable at a glance, and as grammar counts for almost *nil,* the reader finds himself, as it were, in possessions of Esperanto almost without an effort.

There occurs to me the case of a gentleman who began the study of Esperanto at three o'clock one afternoon—"for play, not for work," says he—and who found that at four he "could read without much trouble." That same evening he wrote a letter in the new language. Says he: "I feel perfectly sure anybody could do as well, perhaps better"—a remark which may serve to give some insight into the extreme simplicity of the idiom.

Very naturally the question now arises: "What manner of thing *is* Esperanto, anyway, for which such marvels are claimed? Kindly omit eulogies and get down to some specific information." All very well; but before we can fairly understand the language itself we must take a look at the history of this new birth. Comparatively few people have heard of Dr. L. L. Zamenhof; yet his name is one assuredly destined to become recognized in time as that of a real benefactor to mankind.

Dr. Zamenhof was born forty-eight years ago in Bielostok, Russia, a town of 50,000 inhabitants, speaking at least four different languages—Russian, Polish, German and Yiddish. The consequent misunderstandings, recriminations and bad blood engendered by this diversity of speech troubled him even as a boy, and he came to believe that Babel everywhere bred discord. As he grew and studied he became imbued with the ambition of creating a language to be used and understood by all; and so, after having finished his medical studies, he devoted himself extensively to the perfection of his idea.

In 1887 he published his first brochure: "An International Language," in which his name appeared as "Dr. Esperanto," *i. e.,* "The One Who Hopes." Progress at first was slow, due partly to the competition of Volapük—*de mortuis nil nisi bonum*—but gradually the new language made its way, first in Russia, then in Sweden, Norway, Austria, Germany. These various steps, however interesting, must not detain us. In France, thanks to the efforts of M. de Beaufront, Esperanto's language, which had now adopted its author's name for want of a better, grew with astonishing rapidity. Beaufront had, by the way, already invented a language of his own, but abandoned it immediately on becoming acquainted with this superior work, and generously founded the first Esperanto gazette in France. The language was introduced into England in 1902, and, thru the support of such men as H. Bolingbroke Mudie and W. T. Stead, has reached a prominent position. Not only are there several journals published in England for this work, but more than thirty clubs and groups are affiliated with the British Esperantist Association.

Our own country is at last waking up to the tremendous possibilities of Esperanto. There exists already a flourishing organization here, with headquarters

in Boston,* and branches are to be found in many of our cities and universities. Notable among these latter is the Harvarda Esperanto Societo. The very latest word thus far seems to have been said by Oklahoma. Only the other day I received the first issue of *L'Amerika Esperantisto*, published in Oklahoma City. Westward the star of—Esperanto takes its way!

A representative list of eminent men in various branches of scientific, philological, socialistic and literary work affiliated with the movement would make dry reading, so I will spare all but passing mention of Sir William Ramsay, Berthelot, Gaston Moch (the social reformer and champion of international peace), Poincaré, the late Max Müller, Prince Roland Bonaparte, Becquerel, Ostwald, Tolstoi. M. Moch recently addressed the Peace Conference at Luzerne in this new language, of which the grammar has already been translated into twenty-eight tongues. Time, money and enthusiasm are being spent to propagate it. Clubs and societies which come in contact with other countries are adopting it officially. Its introduction into our own Naval Academy has been discussed, and it will probably be presented to the great Congress of Academies of the World for their consideration at the next meeting. Selections from Molière, Shakespeare, Leibnitz, Homer, La Fontaine and many other masters have been translated, and the work is still going on; the range and capabilities of Esperanto are apparently equal to any expression of human thought. It has found a place on the program of the London Chamber of Commerce, and is being taught in commercial schools in France, Great Britain, Germany and Sweden. Even in Bulgaria and the South American republics it is taking root. Last winter 400 students in Okayama, Japan, took up the study. Everywhere it is to be found—there is no copyright on Esperanto. Freely is it given to the world for the use of everybody, without money and without price—if we except the purchase price of a "Key," one cent. A free gift, fully accepted; already 300,000 persons in practically every country of the globe, are reading, speaking and studying the new language of "The One Who Hopes."

We seem to have assured ourselves that Esperanto is very far from a chimera, but is, on the contrary, a vital and growing reality, a language with a rapidly expanding literature and *clientèle*, a world-idiom which has come to stay and to fulfill a momentous work for the races of mankind. We may therefore pass with a certain degree of assurance to an examination of its actual forms and methods of expression.

Esperanto, differently from any natural language, "started fair," and is in consequence unburdened with those illogical, irregular and archaic forms which prove thorns in the flesh of everybody who undertakes to learn a foreign language. In distinction from any existing speech, it presents thruout a perfectly consistent and precise uniformity in all its rules of vocabulary, grammar and syntax. It is spelled with our own alphabet, omitting q, w, x and y, and adding five accented characters, the sounds of which exist in English. (Esperanto has no sounds peculiar to any one language; none, in fact, which do not exist in all.) Thus there are no "foreign sounds" to learn and blunder over. The writing is, of course, absolutely phonetic; one sound, one letter, and no more. The accent falls invariably on the penult. The vowels are pronounced as in this sentence:

A E I O U
Father made me go too.

The only consonants that require mention are C=ts (bits); G, hard as in "go"; J y (young); S, like the initial in "system"; Ĥ, like ch (loch); Ĝ, like the initial in "gem"; J, like the "s" in "pleasure"; Ŝ=sh (she); Ĉ=ch (church).

There is no indefinite article; the definite article, "the," is always *La*, which sometimes abbreviates to *L*.

As for the vocabulary, it is built on the principle of already-existing internationality in a very large number of words; that is to say, every word already existing in familiar forms in two or more languages is at once absorbed

* The American Esperanto Association may be reached by addressing J. F. Twombly, Box 21, Boulevard Station, Boston. The Harvard Esperanto Association is also glad to give information thru its secretary. Other cities where organizations have been made are: New York City, Philadelphia, Chicago, Seattle, Portland, Me. Colleges: University of Missouri, University of Ohio, Cornell, University of Pennsylvania, University of Toronto, Dartmouth, Mt. Holyoke, Wellesley, Johns Hopkins, Leland Stanford, Jr., etc.

into Esperanto with only such slight alterations as are necessitated by the uniform and phonetic spelling. Such, for example, as *telefono, teatro, kliento,* and many, many thousands of others, all instantly apparent to the large majority of dwellers in Europe and America. The similarity between the three principal Romantic languages swings the vocabulary in a distinctly Latin direction, with the result that Esperanto gives one the impression of Portuguese set in an Italian printing-office by a Spanish printer while alcoholically trying to hum French ditties. Before the result went to press an Englishman and a German seem to have dabbled with it, to say nothing of several other personages of mixed breeds; yet the result, on the whole, is perfectly comprehensible, and possesses a scientific adherence to rule that outdistances any natural language a thousand miles.

Where certain words possessed no "internationality," Dr. Zamenhof selected them impartially here and there, so as to give everybody a fair chance, as it were. These words (a large minority) are most of them familiar. Such, for example, as *sed* (but), *kaj* (and), *brak* (arm), *daktil* (date), *ĉiam* (always).

So much for the elements of the vocabulary, forming about 2,000 root words upon which the enormous number of compounds and derivatives is formed—four times as many, I am told, as in Spanish, for example. One fact that may be borne in mind is this: that no word occurs arbitrarily in Esperanto. The language contains no word which does not exist already somewhere in some other language.

By the aid of seventeen grammatical terminations and some thirty suffixes and prefixes, Esperanto extends its vocabulary freely to meet any demands of expression. Dr. Zamenhof claims that it can convey any shade of thought which can be expressed in words at all. A complete statement of these grammatical particles is beyond the boundaries of this present discussion; we can do little more than glance at a few by way of illustration.

Every word in Esperanto that ends with "o" is invariably a noun; that ends with "a" an adjective: with "e" a derived adverb; with "i" the infinitive of a verb. Thus: "La teruro," terror; "terura," terrible; "terure," terribly. Or, again, "La parolo," a word; "parola," oral; "parole," orally; "paroli," to speak. Simple, isn't it? The particle "mal" inverts the meaning in every case. "Fermi" means to shut; "malfermi," to open. "Granda" signifies large; "malgranda," small. Final "j" marks the plural; "n" final indicates the accusative. Feminines are formed by interpolating "in," as, for example: "Onklo," uncle; "onklino," aunt. "Eg" conveys the idea of enlargement: "Domo," a house; "domego," a mansion. "Ec" forms abstractions, as "amika," friendly; "amikeco," friendship. "Il" is the sign of instrumentation: "Razi," to shave; "razilo," a razor. "Ar" expresses collectivity, as "arbo," a tree; "arbaro," a forest. By means of "ist" the professions are denoted: "Drogo," a drug; "drogisto," a druggist. "Id" makes diminutives: "Kato" and "katido" are, respectively, cat and kitten — and so on almost *ad infinitum.* With all the various particles in all their possible combinations and permutations no thought is fine or subtle enough to escape the range of Esperanto—at least, so claim those who know it best.

Without further specification it may be of interest to present here a few of the compounds of some simple word like *ox,* as given in the little booklet "Do You Know Esperanto?"*:

Bovo	Ox
Bovino	Cow
Bovido	Calf
Bovaro	Herd
Bovineto	Heifer
Bovpatro	Sire
Bovisto	Herdsman
Bovarigi	To herd
Bovapasti	To graze
Bovviro	Bull
Bovpatrino	Dam
Bovajo	Beef
Bovoj	Beeves
Boveto	Steer
Bovetviro	Bullock

It strikes me that even the much-vaunted flexibility of Greek can do little better in the matter of word-formation than *that!*

The personal pronouns are Mi, I; Ci, thou; Li, he; Ŝi, she; Ĝi, it; Ni, we; Vi, you; Ili, they; Si, reflexive third person; Oni, one, "they," corresponding

* British Esperanto Society, London, 1906.

to the French "*on*." Possessive pronouns are formed simply by adding "a."

The numerals are unu, du, tri, kvar, kvin, ses, sep, ok, nau, dek, cent, mil. Fractions and multiples are readily formed by the use of *On* and *Obl.* "Duono," a half; "Kvarobla," quadruple. Ordinals are made by adding "a"—"unua, dua, tria," and so on.

As for the verb, that black beast lurking in every grammatical forest, Esperanto hales it out into the sunlight and makes it white by eliminating all irregularities. The various moods and tenses are formed simply by adding to the root As, Is, Os, Us, U and other simple terminations. Thus are formed with absolute ease and certainty the present, past, future, conditional, imperative and all the others. The verb remains unchanged in each tense; only the pronoun shows the person.

So much for a part—only a small part—of the ingenuities of Esperanto. In this new linguistic house everything is spick-and-span from cellar to attic, with no dusty "irregular" corners, no cobweb "exceptions." The penny Key contains the whole language, with *all* the root-words and *all* the grammar in twenty-four pages, as against two hundred for even the simpler foreign idioms. Think of a language the entire grammar of which can be printed well nigh on a postal card! the entire dictionary of which weighs one-fifth of an ounce! Esperanto is language in capsule form, to be swallowed and digested "while you wait."

"*Oni parolas Esperante*" is coming to take its place in many European shops alongside of "*Ici on parle Français*" and "English spoken here." Business houses are beginning to advertise for clerks able to handle the new speech. Last year, at Boulogne-sur-Mer, the first Universal Esperanto Congress was held, attended by 1,200 delegates, from twenty-two countries, representing fifteen different languages. There Dr. Zamenhof was decorated with the ribbon of the Legion of Honor; there for a week speeches were made in Esperanto exclusively; there plays were acted in Esperanto by actors of all the principal nationalities, meeting for the first time in the world's history on one common ground of communication.

The Second Congress has just been ended at Geneva. Over 1,000 delegates were present. Dr. Zamenhof in his address urged the members to bear in mind that the most important object of the movement was the promotion of international fraternity and peace. Plays were again given, hymns sung and special sessions held of scientists, Catholics, Protestants, Socialists, musicians, doctors, Freemasons and promoters of peace.

"I have just received a letter from a gentleman who resides in Philadelphia," writes Mr. Twombly, secretary of the American Esperanto Association. "This gentleman is visiting Esperantists in France. He recently attended a dinner where thirty-five persons were present, and during two and a half hours nothing but Esperanto was spoken." The language lends itself readily to speech, and is extremely euphonious, resembling Italian in sound.

"It is almost incredible that the whole essential grammar of a language can be given in a paragraph," says Sir William Ramsay, "but it is none the less true. . . . An English child could learn Esperanto in six months so as to be able to read, speak and write it."

"There is no royal road to learning, but what can be done to smooth and shorten the road is done . . . in Esperanto." Such is the good word of Israel Zangwill. A Russian physician writes that he is now corresponding by means of it with persons of seventeen different nationalities. And so on; the testimonials are innumerable.

What does Esperanto look like? Let me quote a passage from a recently issued manifesto:

"SOCIALISMO

"La Granda Internacia Movado
por Plibonigitaj Socialaj Kondiĉoj.

"Se vi ne estas unu el la favoritaj malmultaj, kiuj vivadas senlabore per la produktaĵoj de la laboro de aliaj; se vi estas rabata de la monopolioj en la vendado de viaj produktaĵoj kaj en la aĉetado de viaj provizaĵoi; se vi kredas je pli mallongaj laborhoroj kaj pli grandaj salajroj, je pli bonaj prezoj por viaj produktaĵoj de la farmo kaj je pli malaltaj prezoj por viaj bezon; se vi kredas je pli da

kaj pli bona edukado por viaj infanoj, kaj je la forigo de la laboro de la infanoj en fabrikoj; se vi havas kore vian propran bonstaton kaj la bonstaton de la societo, tiam estas via devo.

"Baloti por la Socialista Nomaro."

"Plibonigitaj" means "Improved." The rest of the title is self-explanatory. The reader will have no difficulty in pronouncing if he remembers that "j" has the sound of "y." As for the text, that says: "If you are not one of the favored few who live without work (*sen labore*) on the products of the labor of others; if you are robbed by the monopolies in the sale of your products and in the purchase of your supplies; if you believe in shorter (more less-long) hours of labor and higher pay; as well as in higher prices for your farm products and lower prices for your necessities; if you believe in more and better education for your children and in the suppression of child-labor in factories; if you have at heart (*kore*) your own welfare and that of society, then it is your duty to vote the Socialist ticket."

One more quotation and I am done—a quotation which will prove readily comprehensible without translation:

"Simpla, fleksebla, belsona (euphonious), vere internacia en siaj elementoj, la lingvo Esperanto prezentas al la mondo civilizita la sole veran solvon de lingvo internacia, ĉar (since) tre facila por homoj nemulte instruitaj, Esperanto estas komprenata sen peno de la personoj bone edukuitaj. . . ."

BRYANT'S POND, ME.

The Many-Sided Missionary

BY THE REV. FRANCIS E. CLARK, D.D.

PRESIDENT OF THE UNITED SOCIETY OF CHRISTIAN ENDEAVOR.

[In view of the Centenary of the American Board of Foreign Missions, now being celebrated, the following article by the founder and President of the United Society of Christian Endeavor is most timely.—EDITOR.]

THE idea does not prevail today, as in former years, perhaps, that a missionary's only duty is to plant himself under a fruitful cocoanut tree while the eager and scantily clad natives gather around to hear him preach the gospel which they were all ready to accept.

Some ancient pictures of our childhood were responsible for this impression. If ever there was a grain of truth in this view, it now contains scarcely that grain, for the missionary today is the most many-sided man in the world. He does everything from mending a leaky kettle to giving to the world a new language.

He is a scholar and a man of affairs, a preacher and a translator, a bishop and a curate, a financier and a devotee, a banker and a saint. In fact, it is far more difficult to tell what a successful missionary is not than to tell all that he is.

The veteran Dr. Cyrus Hamlin is perhaps the best illustration of the many-sided missionary; but I have, during a recent visit to Japan and China, found many of these versatile geniuses in the ranks of the missionaries, and I doubt not they are just as numerous in other lands.

When in Nagoya a missionary of the Methodist Protestant Church excused himself from attending the Christian Endeavor Convention there for the very good reason that he had been summoned into court to answer a trumped-up charge of the Japanese police, preferred because he had been too active to suit them in a crusade against the houses of prostitution of Nagoya.

Another missionary in the same city has become captain of a baseball nine of foreigners who meet a nine of Japanese students on the diamond; thus gaining an influence over them which he could not possibly gain in any other way.

Under similar circumstances Mr. Lewis, the efficient secretary of the Y. M. C. A. in Shanghai, answered a delegation who came to urge him to be captain of their baseball team:

"Look here, boys! I will be captain and I will promise not to open every game with prayer, if you will promise

that there shall be no swearing on the baseball field."

The conditions were accepted and the compact lived up to.

Sunday schools do not all, by any means, meet in well-appointed buildings, with classrooms and blackboards and Peloubet's notes on the desk. In Mr. Curtis's home in Kioto, Japan, I found a Sunday school swarming all over his house, upstairs and downstairs and in my lady's chamber. For the opening exercises all the furniture was cleared out of the sitting room, and on the soft matting, without chairs or settees, squatted fourscore children, mostly from Kioto's slums, who sang as lustily and behaved quite as well as tho they came from Kioto's Fifth avenue. After the opening service they adjourned to the piazza and the dining room and the kitchen with their different teachers, who forthwith proceeded to unfold the lesson.

Mr. Curtis also, for his "knitting work," if he will excuse the expression, frequently takes a railway ride in a Japanese third-class compartment, making sure to have a large bundle of Bibles and portions of the Bible with him. The third-class cars are always crowded, and, standing up, he tells his auditors something about his book, and then offers it for sale.

He usually finds many eager purchasers. When he has supplied the demand in one compartment he goes into another at the next station and sells more Bibles. Thus, in one short trip, he has sold at the regular market price as many as 140 copies of the Scriptures.

Mr. Sneider, of the Presbyterian Mission of Sendai, who inaugurated this method of evangelism, disposed of ten thousand copies of the Bible in a single year, if I am not mistaken.

Mr. Bartlett, of Tottori, had just reached Kioto when I was there, after a month's tour across the mountains, mostly on foot,where the snow in some places was near the top of the telegraph wires. The roads were impassable to jinrikishas, and the only way to go was on Adam's original velocipede. Mr. Bartlett well remarked that when the people saw him trudging along from one station to another, with his pack of Bibles, thru the deep snow and over the mountain passes, they really felt that he was more concerned for their souls than when he came drawn by two jinrikisha men. So the missionary today is a road-breaker literally as well as metaphorically.

Rev. Otis Carey, of Kioto, goes out every day to find his own congregation. Taking his baby organ, he plays until a crowd assembles in the rear of a store kept by a Christian man, and then preaches to his changeable congregation of forty or fifty souls.

Rev. George Allchiss, of Saka, has had great success with his lantern views, and has now a deserved reputation thruout Japan for his illustrated lectures. Throngs flock to hear his lecture on the Prodigal Son, a thousand or two thousand people crowding a theater for a single lecture. The pictures of the prodigal are most unique, and are all from the Japanese standpoint. Pigs and Chinamen are an abomination to the Japanese, and when the prodigal goes to Yokohama to feed a Chinaman's hogs he can descend no lower in the scale. Then he comes to himself and returns to his father's house.

Dr. J. H. Pettee has made for himself a fragrant name in connection with the orphanage at Yokohama, giving it his time and thought and love now these many years, and raising thousands and thousands of yen for its support.

He, like Mr. Ishii, who is its Japanese head, is known thruout Japan as "the orphan's friend," and he has reared for himself a monument more lasting than brass in this most useful and blessed asylum, even tho it has been only one of the "side issues" of his work.

Mr. Ishii, the Japanese head of the orphanage, is equally versatile, and sometimes assumes the *rôle* of an ammah, or shampooer, and goes out to give a man a good "rub," at the same time getting an opportunity to preach to him the good gospel.

Miss Bradshaw, of Sendai, has formed a Christian Endeavor society among the young men of the Post and Telegraph Department of that city, which meets every week in her own home and does great good in many ways.

Dr. J. H. De Forest, of Sendai, like many another missionary, is bishop of an immense diocese. Dr. J. D. Davis, of Kioto, is guide, counselor and friend to

all the mission and all the Japanese. Dr. D. C. Green has large influence with the Japanese officials, and his frequent articles on questions of the day have great weight with all classes of foreigners and natives alike.

In China I find the missionaries equally active and equally versatile.

I have time to mention the work of only two or three from the scores whose varied services I would like to record to illustrate my theme.

Rev. G. F. Fitch, of the Presbyterian Mission press, is at the head of a great printing establishment, which, last year, turned out nearly a million copies of books and periodicals that numbered their pages by scores of millions.

Moreover, under his direction type is cast, electrotypes are made, and all the multitudinous operations of a great printing-house are carried on.

A Chinese composing room is no small affair. Each font is a little room by itself, some eight feet square, and containing more than six thousand different characters, and requires two typesetters to wander around and pick out the right character.

The oversight of such an establishment seems at the furthest possible remove from the primitive picture of the long-gowned missionary under the cocoanut tree, and yet who will say that it is not quite as genuine missionary work and as dear in the Master's sight.

A modern missionary must have all his wits about him to meet the exigencies of a sudden situation, as did the missionary of the English church in Foochow, who heard that a Chinese widow was about to hang herself as a special act of merit in honor of her deceased lord and master (a very unusual thing, by the way, in these days in China).

The woman had invited all her friends to this last exhibition of herself, which she was about to make. They had come from far and near, in chairs and on foot, to see the ghastly exit of the devoted wife, who had already taken opium enought to deaden her senses; when, suddenly the missionary arrived upon the scene, took the suicide, already benumbed with opium, into her care, and indignantly tried to disperse the sightseers.

But they were not so easily to be spoiled of a sensation. They had come a long way to witness an unusual sight, and did not propose to be cheated.

Besides, they had paid their coolie hire and would be out of pocket if the hanging did not come off. So this devoted and generous missionary actually had to pay the chair hire of a large number of ghoulish relatives who had come to gloat over the death struggles of the widow, before she was permitted to save her from her own rash hands and take her to the beautiful mission home, there to nurse her and care for her and lead her a knowledge of the better way.

The peculiar vices and absurd fashions of China provide a mission for many a missionary. Some of the hospitals are full of opium smokers who have come to be cured of the hasheesh curse, and patience and unwearied care are the lot of the beloved physicians who try to create a new manhood or womanhood in the battered human hulks who come to them for repairs, and who often, humanly speaking, seem to be beyond all hope of permanent reform.

It is estimated that one hundred million of the women of China have bound feet, many of them pinced down almost to a point, so that a little shoe two inches in length will cover the portion of the big toe on which they walk. Of course they can only hobble, often with the help of a cane on one side and a half-grown child on the other.

All this self-inflicted torture only makes more work for the missionaries, who have not only a great task in showing their sisters the absurdity and folly of this self-mutilation, but often take them into their homes while they loosen their bandages and "let out" their bruised toes to some semblance of a human foot.

New conditions, as well as new times, teach new duties, and at the recent remarkable Christian Endeavor Convention for all China, held at Foochow, one of the good citizenship resolutions related not to the rumshop or the brothel, as would be the case in America, but to the hoary absurdity which Dame Fashion has imposed upon Chinese dames, and read:

"Whereas, we believe that foot binding is one of the great hindrances to the true ad-

vancement of this country; we, therefore, earnestly entreat all to do their utmost to do away with this custom."

The impression prevails in some circles that the days of missionary heroism have passed away with the picture of the missionary under the cocoanut tree, but this is by no means the case, as America and China have lately testified. One of the most beautiful faces that I have seen in China is that of an English missionary—a face seamed and scarred and gashed by Chinese spears and tridents—one of the few survivors of the recent horrible Kucheng massacre. Suddenly, without warning, the so-called Vegetarians broke in upon the defenseless missionaries. Parents and children alike were slaughtered, until twelve had fallen victims to the rage of the ignorant haters of foreigners.

While grown men and women and infants alike were being cut down, a clear, unwavering voice was heard above the awful din, crying out: "Be brave, be brave. In five minutes we will all be in heaven."

Then she who uttered this swan song of courage and faith sank down, bleeding from many wounds, under a heap of her slaughtered companions. But her day for translation was not yet. The murderers left her for dead, but she recovered, and for months has been working in the same field, and beautiful, with her scarred face—scars more honorable than any soldier has received in battle—was one of the leaders at the recent Christian Endeavor convention of which I have just spoken.

But I need not multiply illustrations of the many-sided missionary.

"No slacker grows the fight,
No feebler is the foe."

Courage, energy, versatility, adaptability, consecration will be required in the missionary of the twentieth century, as they were in the earliest days of the nineteenth. The missionary field demands the best and wisest we have to give. "Grace, grit and gumption" are nowhere more needed than on the mission field today.

All the powers of brain and brawn are here called into play. If I should try to catalog all the different kinds of work which a missionary may be called to undertake I should have to chronicle minutely the lives of the hundreds whose work I have seen and admired. As I think of this noble and infinitely varied work in school and college, in hospital and home, in city and country, in comparative civilization and in the midst of rank heathenism and barbarism, I feel like echoing and underscoring the words of America's eminent minister plenipotentiary to Japan: "The East owes more to the missionary than to all other foreign influences combined."

AUBURNDALE, MASS.

In the Long Fight

BY GRACE SHOUP

ALL ages dead and splendid,
All masters that are past,
All hero figures vast—
By hate and scorn attended,
By Death and Time defended—
As with a bugle blast
Cry out to us, "Stand fast!
All's well when all is ended!"

Across the gulf of ages
We send our answering hail:
"O poets, heroes, sages,
We lift to you a beaker
Filled to the very brim;
The Lord's cause is no weaker
Than when you died for Him;
Tho long the battle rages
The victory shall not fail—
Right shall at last prevail!"

INDIANAPOLIS, IND.

Two Kinds of Radicals

BY FREDERICK DWIGHT

[This thoughtful article is by one of the younger members of the New York Bar. We especially commend it to the conservative people who desire that the evils recently exposed shall be removed without a social revolution.—EDITOR.]

THESE appear to be halcyon days for reformers. Under normal circumstances they deliver their protests and fulminations before a few followers only, and their influence is confined within very narrow limits. Today, however, it is not difficult for an energetic man to obtain a national or even international hearing, altho his repertoire consists only of denunciations of the existing *régime* and some hazy visions of reconstruction. Let any one come forward with a panacea for social woes and it will be strange if he does not command an enthusiastic attention.

At such a time it is only natural that the conservative men, who dislike the term "radical," and are opposed to extreme views on principle, should be more than ever reluctant to assume any attitude that would seem to be an endorsement of the views of the unsteady or the unscrupulous. They feel driven rather to act the negative part of brakes upon the body politic and so prevent some catastrophe.

But everything has its place, and it appears that there are occasions when it is not only excusable, but one's duty to advocate radical measures. And if some distinctions are observed there is nothing revolutionary in so doing.

It seems to me, therefore, that it would be well to emphasize the existence among us of two different kinds of radical thought, which have little or nothing in common, and, indeed, are diametrically opposed so far as ultimate aims are concerned. Of the upholders of the one who, like the poor, are always with us, there are quite too many for the present time. Of those who maintain the other, and who are largely the product of latter-day developments, the number is entirely too small, and they are over-restrained in the expression of their views. For convenience, the distinction that is sought to be drawn may be described as being between those who contemplate radical ends and those who merely advocate radical means. An illustration will make clear the difference.

Fourier protested, not against an accidental or temporary excrescence upon society, but against the entire structure. With his phalansteres and his harmony of the passions he proposed to establish a new earth—to roll away the mists of competition and selfishness and blend humanity into a tranquil whole.

But when Luther inaugurated the Reformation by posting his ninety-five propositions upon the door of the Wittenberg church, and burned the papal bull in the market place, he had no startling object in view. His acts, however radical in the eyes of his contemporaries, were not an onslaught upon the normal constitutions of society, nor did he seek to uproot tendencies and aims which the history of mankind had shown to be deep-seated in human nature. He proposed merely a bitter draught for purging the Church of a corruption and profligacy that represented the accumulation of centuries.

One of these reformers attempted to banish the evils which he noted in the world by abandoning forever the old theories of society and creating arbitrarily new systems and new lines of activity. The other sought to achieve a reconstruction of a mighty institution by driving out the offenses which had crept into it, but preserving the original structure intact. Both found the objects of their solicitude in ditches by the roadside. The sociologist thought, by going over into the fields, to find a better road without trenches. He failed utterly, and is forgotten save as a well-meaning, but uninformed, theorist. The theologian undertook merely to draw the Church back into the well-traveled highway which had long existed, and initiated one of the greatest movements in history.

They who have radical ends in view

resemble Joseph's coat in the varied colors of their opinions. A few are intellectual and thoughtful men who deem the present constitution of society remediable as well as unjust, and have elaborated plans for regeneration. But many are stormy characters, who find a pleasure in opposition and would overturn every convention like a decaying log, to inspect what lies beneath. And to these must be added a vast body of the embittered and the unfortunate who see no chance of happiness for themselves under present conditions, and desire change, no matter how irrational or illogical it may be. Finally, there are the dangerous men who see in the propaganda of violent social convulsions the opportunity to forward their own ambitions. The anarchists and Socialists propose, after the overthrow of the established order, either to dwell happily in the resulting chaos or to effect some reorganization upon a different basis. They certainly do not expect to return to the social theories that now obtain. The exposure of venality and lack of integrity interests such persons chiefly as a lever for the advancement of their ideas. They exult in corruption, as the more of it is unearthed the stronger becomes the indictment against conditions as they are, and the greater the chance that they will be able to induce people to listen to their proposals.

The others do not desire any such subversion of society. They believe that, with all its imperfections, the theory of the present system being the resultant of the slow growth of ages, is as well adapted to supply needs as could be expected in the undeveloped condition of human nature. But it may be possible to have in mind the most conservative ends and yet realize that the body politic has wandered so far from the path that extreme measures are needed to deal with the evils. Desperate diseases usually require desperate remedies, altho the aim is merely to restore the patient to his normal health and not to change his nature.

If this simple distinction be observed in judging the quality of the present public temper, it will be found, I think, that, so far as may be judged from actions, the people are entirely too conservative in their intentions. Indeed, the danger seems to be that powerful men and great corporations may not be made to feel sufficiently that the arm of justice is long enough to reach out and deal with them in an adequate manner, as it deals with lesser offenders.

We have become accustomed to huge organizations of capital, wealthy and vigorous beyond anything heretofore known. But we are only now awaking to the fact that the greater the corporation, the larger are its opportunities for evil as well as for usefulness, and the more severe must be the punishment meted out for offenses. Fagins may corrupt a few small boys and teach them to become pickpockets or bolder thieves. There is but one criminal to a crime, and so the question of who and how many to hold responsible does not arise. It is found more perplexing, however, to extend correction to large groups of influential men who, for their own purposes, have deliberately fostered corruption among bodies of legislators and officers of the state. There is a hesitancy in acting as we should with a single individual; there is a vague feeling that there must be a difference between the cases, even tho the only apparent distinction is in the comparative enormity of the crimes.

Indeed, when there are a number of participants, we are not able easily so to expand our conception of a transgression as to hold each one guilty of the whole. That is, a murder is a murder, whether one man commit it or a dozen. It seems to be a unit and each one of the guilty persons to be answerable for a *pro rata* share only. But, of course, in logic and in the eyes of the law, there is no such division, and each one involved is stained as deeply as is the single individual in an ordinary case.

In the same manner, every one believes that if a man steals anything he ought to serve a term in prison. And yet we find it difficult to avoid a feeling that when a score of trustees or directors have united coolly in much greater thefts, it is very harsh indeed to accuse, convict and punish every one of them. It is perfectly familiar to witness groups of financiers uniting to effect some scheme for the improvement of public

service, like the building of a railroad or the establishment of a national theater. If they did not do so the enterprise would fail. But to see such bodies carrying on an elaborate system of fraud by which to enrich themselves is so novel as to bewilder people while they are crying for vengeance.

This, however, is the problem that confronts us now. We have to realize that there is in reality nothing revolutionary in placing a large number of "reputable" criminals, if need be, where, for a time at least, they will be innocuous. An orgy of crime (and it is not said in a flippant spirit, but in all seriousness) should be expiated by an orgy of retribution.

There are many who say: "Don't be too rash. Go slowly and pay no attention to irresponsible clamor." This is undoubtedly good advice in the abstract, but it should not be pushed very far. A great deal of harm is done by those who stride into action without adequate preparation—who "go off half cocked," as we are accustomed to say. But perhaps even more evil is caused by those who make a parade of preparing to do something, and yet postpone the day upon which they expect to begin the actual work. At last many are disposed to feel that they have no intention of doing anything at all. The cry seems raised as an excuse for inaction, altho it really means little or nothing unless preparation for action is well under way and is making steady progress.

To fight fire with fire is old-fashioned but effective strategy. Quench radicalism with radicalism might be adopted now as an injunction for all the conservative men who are appalled at the recent disclosures in the financial world and at the skill with which the revelations are being turned to account by those who preach discontent and strange doctrines as tho they were sovereign remedies for all ailments. Perhaps one of the most striking lessons before us is the waste of opportunity for enlightened and honorable men to prove to their fellows of fewer advantages that they are disturbed at the developments and earnestly desire to see reforms instituted. They are closely watched by a great body of alert and prejudiced men, who have a keen eye for any default and are only too eager to add an argument or the semblance of one to their propaganda. Academic expressions of disapproval will not satisfy such reasoners. But their mouths would be closed and at least much of the discontent allayed if a steadfast, untheatrical determination appeared to punish all who were known to have been guilty of unworthy practices. And the power is one that lies ready for exercise by those who are sane and normal, and who believe that evolution rather than revolution is the surest road of social progress.

Yet what do we find? An undue reluctance to take any sharp and energetic action, unless, indeed, the public clamor has become so great as to compel attention. It is evident in our social life from motives of either sentiment or policy. Thus occasionally a dramatic catastrophe reveals to the public that some well-known man has for years been leading a life of profligacy and immoderate extravagance. At the same time he has been a member of many of the most "exclusive" clubs and other organizations in his city and elsewhere. No one doubts for a moment that at least many of his fellow members were aware of his dissolute habits. Yet who ever hears of any club taking the slightest action to discipine or expel such an offender? The power of expulsion, indeed, is exercised only for conduct with reference to the organizations themselves. A person's private character, when once he has gained admittance, especially if he possess certain attractive qualities, seems to be a matter of little concern. And yet it is certainly a poor sort of exclusiveness that judges the shortcomings of outsiders with severity, but is blind as a mole to the grossest defects of those within the pale. Such organizations assume to be the social censors of the community, extending a greater or less prestige to all upon whom they have set the seal of their approval. And in this aspect they certainly sustain an ethical relation to society at large, and might wield an important influence for good. But they are so fearful of scandal and notoriety, with the possible consequent injury to the organizations themselves, that scarcely ever is the salutary power brought into play. And then it is applied so secretly

that the lesson is largely lost upon the public.

There is doubtless much to be said upon the other side. The bond of an old and intimate friendship, the kindly hesitation to "hit a man when he's down," the memory of a better past—all these unite in making the task of discipline a heavy one. But the issues at stake are of the gravest import, and at such times men with the determination of a Brutus are needed. If one guilty of unpardonable wrongdoing were instantly expelled from his clubs, upon moral proof of culpability, even tho legal prosecution for the acts had not been begun or contemplated, a tremendous deterrent from crime would be added to the weapons of the right-thinking and right-acting portion of the community. Let such a man repent in sackcloth and ashes, and if his penitence be prolonged for a sufficient length of time, he might be reinstated. Sincere repentance would accept the punishment as just, and struggle to regain the confidence which had been lost thru the man's own default. But the good-humored tolerance which declares that by publicity the offender has been "punished sufficiently," takes no account of the vast difference between contrition and the natural chagrin of one whose sin has been exposed and who has thereby lost prestige.

Even in the extreme instances where action is taken, the wrongdoer is permitted to resign. It is a fundamental rule of club government that a member who is indebted financially to it may not withdraw until he has liquidated the account. And if he refuse to do so, his name may be stricken from the roll. How singular that the privilege of resignation is withheld and drastic punishment imposed for a merely pecuniary offense against the organization, while the far more lenient attitude is adopted when the conduct affects society as a whole!

In like manner, a prominent official of a large corporation became involved recently in an unsavory scandal which was widely commented upon in the press. The question was raised in the papers whether he would be obliged to resign his office. Thereupon a fellow officer calmly announced for publication that any such affair would have no effect whatever upon his standing in the company. It is little wonder if the supine attitude assumed in this manner by the alleged representatives of conservatism and stability should encourage the less balanced to increase their demands for hitherto untried things. They are scarcely blameworthy if they feel that there is no hope for reform unless the Augean stables be not only cleansed, but burned to the ground as unsuitable for the purposes of their construction.

One of the most serious phases of this particular question is the apparent failure to assign their due measure of responsibility for present conditions to the members of the Bar. It is a standing reproach to the legal profession that they are not more active in maintaining proper standards within their ranks. As a privileged class, owing special duties to the public and the courts, it is most desirable that, thru their associations as well as individually, they be alert in disapproving and punishing violations of ordinary ethical principles. A potent effect upon the public at large would be created if it were demonstrated that lawyers, no matter how broad their relations and exalted their professional reputations, could not assist infractions of the law and public morals without having severe discipline meted out by their brethren.

It is a familiar fact that every large corporation, every prominent financial house, has its general counsel or attorney, and no important transactions are undertaken except under their skillful advice. Particularly is this true when the matters in question involve elements of doubtful propriety or wrongdoing. The projectors are more anxious to avoid the consequences of unlawful acts than they are to engage in the undertakings themselves. And so the machinery is prepared the more carefully, that every step may bear the semblance of regularity and leave loopholes whereby those interested may escape if the enterprise prove disastrous.

It is impossible to doubt that many lawyers are involved in the extraordinary financial depravity that has been uncovered of late. Indeed, in some instances it has been alleged rather than denied. And yet, has one murmur of disciplinary

measures been heard? The powerful bodies that are able to investigate and punish faithless members have been silent, and men who are at least under suspicion of guilt remain high in their councils. Is there anything of a dangerous extreme in the demand that one who has been for years counsel for a great and corrupt company should be placed upon the defensive and prove to his fellows and the public that he had no knowledge of the frauds and bribery with which the path of his corporation is strewn? And if he assisted in the demoralizing of legislatures and suggested the spiriting away or alteration of records, is it very extreme to ask that he be punished in exemplary fashion?

Indeed, the advocacy of such methods is a radicalism of a kind, I think, that cautious men might adopt without fear. It does not want to enter upon an era of raw theories, springing from the frying pan of private mismanagement into the possible fire of municipal, State or Federal control. But it does believe that stupendous misconduct requires equally severe punishment, in order that a much-needed lesson may be impressed upon those who have had altogether too slender a realization of their responsibilities.

If we look around and summarize the punishments that have been meted out so far, or are even threatened, the totals appear very minute in comparison with the vast bulk of wrongdoing unearthed. A few indictments, some abortive, have been found, and languid suits for restitution begun in connection with the great insurance companies. The Federal Government has commenced to call to account some of the huge corporations that have brought the kindly word "trust" into disrepute. But the entire powers of law and social ethics are now being weighed, and if they be found wanting, it is difficult to foresee what the result will be.

A cool judgment must unquestionably be preserved. It has been well suggested that reformers are but too apt to mingle love of man with hatred of men, and, indeed, vindictiveness weakens every cause in which its influence is felt. But the time seems ripe for the conservative element to "steal the thunder" of professional agitators by proving that they, too, can be radical when occasion demands, and that we do not need new doctrines so much as a stern enforcement of the old.

NEW YORK CITY.

Socialism*

PART I.—THE RELATION OF THE MIDDLE CLASS TO THE SOCIALIST MOVEMENT.

BY H. G. WELLS

[Altho Mr. H. G. Wells is chiefly famous as a novelist of the future he is now becoming recognized as one of the leading constructive minds of the age. Indeed, his three recent serious books, "Anticipations," "Mankind in the Making" and "A Modern Utopia,' which deal with the society of the future, are unsurpassed in Utopian literature. Mr. Wells has just returned to England from a visit to this country, and his impressions, now running in *Harper's Weekly*, have stirred up the city of Boston, as well as interested all who keep abreast of the best current literature. Part II, Socialism and the Family, will be published next week.—EDITOR.]

IN this paper I am anxious to define and discuss a little the relationship between three distinct things:

(1) Socialism, i. e., a large, a slowly elaborating conception of a sane and organized state and moral culture to replace our present chaotic way of living.

(2) The Socialist movement, and

(3) The Middle Classes.

The first is to me a very great thing indeed, the form and substance of my ideal life and all the religion I possess. I am, by a sort of predestination, a Socialist. I perceive I cannot help talking and writing about Socialism, and shaping and forwarding Socialism. I am

* Copyright in all countries signatories of the Berne Convention, and in the United States of America.

one of a succession—one of a growing multitude of witnesses, who will continue. It does not—in the larger sense—matter how many generations of us must toil and testify. It does not matter, except as our individual concern, how individually we succeed or fail, what blunders we make, what thwartings we encounter, what follies and inadequacies darken our private hopes and level our personal imaginations to the dust. We have the light. We know what we are for, and that the light that now glimmers so dimly thru us must in the end prevail. . . . So, largely, I conceive of Socialism. But Socialism and the Socialist movement are two very different things. The Socialist movement is an item in an altogether different scale.

I must confess that the organized Socialist movement, all the Socialist societies and leagues and federations and parties together in England, seem to me no more than the rustling hem of the garment of advancing Socialist ideals. For some years the whole organized Socialist movement seemed to me so unimportant, so irrelevant to that progressive development and realization of a great system of ideas which is Socialism, that, like no end of other Socialists, I did not trouble to connect myself with any section of it. I don't believe that the Socialist idea is yet nearly enough thought out and elaborated for very much of it to be realized of set intention now. Socialism is still essentially education, is study, is a renewal, a profound change in the circle of human thought and motive. The institutions which will express this changed circle of thought are important indeed, but with a secondary importance. Socialism is still the incomplete, the still sketchy and sketchily indicative plan of a new life for the world, a new and better way of living, a change of spirit and substance from the narrow selfishness and immediacy and cowardly formalism, the chaotic life of individual accident that is human life today, a life that dooms itself and all of us to thwartings and misery. Socialism, therefore, is to be served by thought and expression, in art, in literature, in scientific statement and life, in discussion and the quickening exercise of propaganda; but the Socialist movement, as one finds it, is too often no more than a hasty attempt to secure a premature realization of some fragmentary suggestion of this great, still plastic, design, to the neglect of all other of its aspects. As my own sense of Socialism has enlarged and intensified, I have become more and more impressed by the imperfect Socialism of almost every Socialist movement that is going on; by its partial and limited projection from the clotted cants and habituations of things as they are. Some Socialists quarrel with the Liberal Party and with the Socialist section of the Liberal Party because it does not go far enough, because it does not embody a Socialism uncompromising and complete, because it has not definitely cut itself off from the old traditions, the discredited formulæ, that served before the coming of our great idea. They are blind to the fact that there is no organized Socialism at present, uncompromising and complete, and the Socialists who flatter themselves they represent as much are merely those who have either never grasped or have forgotten the full implications of Socialism. They are just a little step further, a very little step further, in the departure from existing prejudices, in their subservience to existing institutions and existing imperatives.

Take, for example, the Socialism that is popular in New York and Chicago and Germany, and that finds its exponents here in England, typically in the inferior ranks of the Social Democratic Federation—the Marxite teaching. It still awaits permeation by true Socialist conceptions. It is a version of life adapted essentially to the imagination of the working wage earner and limited by his limitations. It is the vision of poor souls perennially reminded each Monday morning of the shadow and irksomeness of life, perpetually recalled each Saturday pay time to a watery gleam of all that life might be. One of the numberless relationships of life, the relationship of capital or the employer to the employed, is made to overshadow all other relations. Get that put right, expropriate the idle rich, transfer all capital to the State, make the State the humane, amenable, universal employer—that, to

innumerable Socialist workingmen is the horizon. The rest he sees in the forms of the life to which he is accustomed. A little home, a trifle larger and brighter than his present one, a more abounding table, a cheerful missus released from factory work and unhealthy competition with men, a bright and healthy family going to and fro to the public free schools, free medical attendance, universal state insurance for old age, free trams, shorter hours of work and higher wages, no dismissals, no hunting for work that eludes one. All the world of collateral consequences that will follow from the cessation of the system of employment under conditions of individualist competition, he does not seem to apprehend. Such phrases as the citizenship and economic independence of women leave him cold. That Socialism has anything to say about the economic basis of the family, about the social aspects of marriage, about the rights of the parent, doesn't, I think, at first occur to him at all. Nor does he realize for a long time that for Socialism and under Socialist institutions will there be needed any system of self-discipline, any rules of conduct further than the natural impulses and the native goodness of man. He takes just that aspect of Socialism that appeals to him, and that alone, and it is only exceptionally at present, and very slowly, as a process of slow habituation and enlargement, that he comes to any wider conceptions. And, as a consequence, directly we pass to any social type to which weekly or monthly wages is not the dominating fact of life, and a simple, unthinking faith in Yes or No decisions its dominant habit, the phrasings, the formulæ, the statements and the discreet omissions of the leaders of Working Class Socialism fail to appeal.

Socialism commends itself to a considerable proportion of the working class simply as a beneficial change in the conditions of work and employment; to other sections of the community it presents itself thru equally limited aspects. Certain ways of living it seems to condemn root and branch. To the stockbroker and many other sorts of trader, to the usurer, to the company promoter, to the retired butler who has invested his money in "weekly property," for example, it stands for the dissolution of all comprehensible social order. It simply repudiates the way of living to which they have committed themselves. And to great numbers of agreeable, unintelligent people who live upon rent and interest it is a projected severing of every bond that holds man and man, that keeps servants respectful, tradespeople in order, railways and hotels available, and the whole procedure of life going. They class Socialism and Anarchism together in a way that is as logically unjust as it is from their point of view justifiable. Both cults have this in common, that they threaten to wipe out the whole world of the villa resident. And this sense of a threatened profound disturbance in their way of living pervades the attitude of nearly all the comfortable classes toward Socialism.

When we discuss the attitude of the middle classes to Socialism we must always bear this keener sense of disconcerting changes in mind. It is a part of the queer composition of the human animal that its desire for happenings is balanced by an instinctive dread of real changes of condition. People, especially fully adult people, are creatures who have grown accustomed to a certain method of costume, a certain system of meals, a certain dietary, certain apparatus, a certain routine. They know their way about in life as it is. They would be lost in Utopia. Quite little alterations "put them out," as they say—create a distressing feeling of inadequacy, make them "feel odd." Whatever little enlargements they may contemplate in reverie, in practice they know they want nothing except, perhaps, a little more of all the things they like. That's the way with most of us, anyhow. To make a fairly complete intimation of the nature of Socialism to an average decent, middle-aged, middle-class person would be to arouse emotions of unspeakable terror, if the whole project didn't also naturally clothe itself in a quality of incredibility. And you will find, as a matter of fact, that your middle-class Socialists belong to two classes; either they are amiable people who don't understand a bit what Socialism is—and some of our most ardent and serviceable workers are

of this type—or they are people so unhappily situated and so unfortunate, or else of such exceptional imaginative force or training (which is itself, perhaps, from the practical point of view a misfortune) as to be capable of a discontent with life as it is, so passionate as to outweigh instinctive timidities and discretions. Rest assured that to make any large section of the comfortable upper middle-class Socialists, you must either misrepresent and more particularly under-represent Socialism, or you must quicken their imaginations far beyond the present state of affairs.

Some of the most ardent and serviceable of Socialist workers, I have said, are of the former type. For the most part they are philanthropic people, or women and men of the managing temperament shocked into a sort of Socialism by the more glaring and melodramatic cruelties of our universally cruel social system. They are the district visitors of Socialism. They do not realize that Socialism demands any change in themselves or in their way of living; they perceive in it simply a way of hope from the failures of vulgar charity. Chiefly they assail the bad conditions of life of the lower classes. They don't for a moment envisage a time when there will be no lower classes—that is beyond them altogether. Much less can they conceive of a time when there will be no governing class, distinctively in possession of *means*. They exact respect from inferiors; no touch of Socialist warmth or light qualifies their arrogant manners. Perhaps they, too, broaden their conception of Socialism as time goes on, but so it begins with them. Now, to make Socialists of this type the appeal is a very different one from the talk of class war and expropriation, and the abolition of the idle rich, which is so serviceable with a roomful of sweated workers. These people are moved partly by pity, and the best of them by a hatred for the squalor and waste of the present *régime*. Talk of the expropriated rich simply raises in their minds painful and disconcerting images of distressed gentlewomen. But one necessary aspect of the Socialist's vision that sends the coldest shiver down the spine of the working-class Socialist is extraordinarily alluring and congenial to them, namely, the official and organized side. They love to think of houses and factories open to competent inspection, of municipal milk, sealed and certificated for every cottager's baby, of old age pensions and a high and rising minimum standard of life. They have an admirable sense of sanitation. They are the philanthropic and administrative Socialists as distinguished from the economic revolutionaries.

This class of Socialist passes insensibly into the merely Socialistic philanthropist of the wealthy middle class to whom we owe so much helpful expenditure upon experiments in housing, in museum and school construction, in educational endowments, and so forth. Their activities are not for one moment to be despised; they are a constant demonstration to dull and skeptical persons that things may be different, better, prettier, kindlier and more orderly. Many people impervious to tracts can be set thinking by a model village or a model factory. However petty much of what they achieve may be, there it is achieved—in legislation, in bricks and mortar. Among other things, these administrative Socialists serve to correct the very perceptible tendency of most workingmen Socialists to sentimental anarchism in regard to questions of control and conduct due to their social and administrative inexperience.

For more thorogoing Socialism among the middle classes one must look to those strata and sections in which quickened imaginations and unsettling influences are to be found. The artist is by nature a Socialist. A mind habitually directed to beauty as an end must necessarily be exceptionally awake to the ugly congestions of our contemporary civilization, to the prolific futile production of gawky, ill-mannered, jostling new things, to the shabby profit-seeking that ousts beauty from life and poisons every enterprise of man. There is an admirable paper by Oscar Wilde, originally published, I believe, in the *Fortnightly Review* ("The Soul of Man Under Socialism") and reprinted for private circulation by my friend Mr. Robert Ross, which puts the whole artistic attitude toward Socialism

with an admirable and persuasive lucidity. And not only artistic work, but the better sort of scientific investigation, the better sort of literary work, and every occupation that involves the persistent free use of thought, must bring the mind more and more toward the definite recognition of our social incoherence and waste. But this by no means exhausts the professions that ought to have a distinct bias for Socialism. The engineer, the architect, the mechanical inventor, the industrial organizer, and every sort of maker must be at one in their desire for emancipation from servitude to the promoter, the trader, the lawyer and the forestaller, from the perpetually recurring obstruction of the claim of the private proprietor to every large and hopeful enterprise, and ready to respond to the immense creative element in the Socialist idea. Only it is that creative element which has so far found least expression in Socialist literature, which appears neither in the "class war" literature of the working class Socialist, nor the litigious, inspecting, fining and regulating tracts and proposals of the administrative Socialist. To too many of these men in the constructive professions the substitution of a Socialist state for our present economic method carries with it no promise of emancipation at all. They think that to work for the public controls an advance toward Socialism would set up would be worse for them and all that they desire to do than the profit-seeking, expense-cutting, mercenary *making* of the present *régime*.

This is, I believe, a temporary and alterable state, contrary to the essential and permanent spirit of those engaged in constructive work. It is due very largely to the many misrepresentations and partial statements of Socialism that have rendered it palatable and assimilable to the workingmen and the administrative Socialist. Socialism has been presented, on the one hand, as a scheme of expropriation to a clamorous popular government of workingmen, far more ignorant and incapable of management than a shareholders' meeting, and, on the other, as a scheme for the encouragement of stupid little municipal authorities of the contemporary type in impossible business undertakings, under the guidance of fussy, energetic, legal-minded and totally unscientific instigators. Except for the quite recent development of Socialist thought that is now being embodied in the "New Heptarchy Series" of the Fabian Society, scarcely anything has been done to dispel these reasonable dreads. I should think that, from the point of view of Socialist propaganda, the time is altogether ripe now for a fresh and more vigorous insistence upon the materially creative aspect of the vision of Socialism, an aspect which is, after all, much more cardinal and characteristic than any aspect that has hitherto been presented systematically to the world. An enormous rebuilding, remaking and expansion is integral in the Socialist dream. We want to get the land out of the control of the private owners among whom it is cut up; houses, factories, railways, mines, farms out of the dispersed management of their proprietors, essentially, not in order to secure their present profits and hinder development, but in order to rearrange these things in a saner and finer fashion. An immense work of replanning, rebuilding, redistributing lies in the foreground of the Socialist vista. We contemplate an enormous clearance of existing things. We want an unfettered hand to make beautiful and convenient homes, splendid cities, noiseless great highways, beautiful bridges, clean, swift and splendid electric railways; we are inspired by a faith in the coming of clean, wide and simple methods of agricultural production. But it is only now that Socialism is beginning to be put in these terms. So put, the engineer and the architect and the scientific organizer, agricultural and industrial—all the best of them, anyhow—will find it corresponds extraordinarily to their way of thinking.

Not all of them, of course. A middle-aged architect, with a notebook full of bits of Gothic and a reputation for suburban churches, or full of bits of Queen Anne and a connection among villa builders, or an engineer paterfamilias who has tasted blood as an expert witness, aren't to be won by these suggestions. They're part of things as they are. But that is only a temporary inconvenience to Socialism. The young men do respond, and they are

the future and what Socialism needs. And there's another great constructive profession that should be Socialist altogether, and that is the medical profession—and especially Socialism claims the younger men who haven't yet sunken from the hospitals to the trading individualism of a practice. And then there are the teachers, the schoolmasters and schoolmistresses. The idea of a great organized making is innate in the quality of their professions; the making of sound bodies and healthy conditions, the making of informed and disciplined minds. The methods of the profit-seeking schoolmaster, the practice-buying doctor are imposed upon them by the necessities of an individualist world. Both these two great professions present nowadays, side by side, two types —the new type, highly qualified, official, administrative, scientific, public spirited; the old type, capitalistic, with a pretentious house and equipment, the doctor with a brougham and a dispensary, the schoolmaster or schoolmistress with some huge, old stucco house converted by jerry-built extension to meet scholastic needs. Who would not rather, one may ask, choose the former way who was not already irrevocably committed to the latter? Well, I, with my Socialist dreams, would like to answer no one, but I'm learning to check my buoyant optimism. The imagination and science in a young man may cry out for the public position, the valiant public work, the hard, honorable creative years. He may sit with his fellow students and his fellow workers in a nocturnal cloud of tobacco smoke and fine talk, and vow himself to research and the creative world state. In the morning he will think he has dreamed; he will recall what the world is, what Socialists are, what he has heard the wild Socialists say about science and his art. He will elect for the real world and a practice.

Something more than a failure to state the constructive and educational quality in Socialism on the part of the exponents of Socialism has to be admitted in accounting for the unnatural want of sympathetic co-operation between them and the bulk of these nobler professions. I cannot disguise from myself certain curiously irrelevant strands that have interwoven with the partial statements of Socialism current in England, and which it is high time, I think, for Socialists to repudiate. Socialism is something more than an empty criticism of our contemporary disorder and waste of life; it is a great intimation of construction, organization, science and education. But concurrently with its extension and its destructive criticism of the capitalistic individualism of today, there has been another movement, essentially an anarchist movement, hostile to machinery and apparatus, hostile to medical science, hostile to order, hostile to education, a Rousseauite movement in the direction of a sentimentalized naturalism, a Tolstoyan movement in the direction of a non-resisting pietism, which has not simply been confused with the Socialist movement, but had really affected and interwoven with it. It is not simply that wherever discussion and destructive criticism of the present conventional bases of society occur both ways of thinking crop up together; they occur all too often as alternating phases in the same individual.

Few of us are so clear-headed as to be free from profound self-contradictions. So that it is no great marvel, after all, if the presentation of Socialism has got mixed up with return-to-nature ideas, with proposals for living in a state of primitive virtue in purely hand-made houses, upon rain water and uncooked fruit. We Socialists have to disentangle it from these things now. We have to disavow, with all necessary emphasis, that gibing at science and the medical profession, at schools and books and the necessary apparatus for collective thinking, which has been one of our little ornamental weaknesses in the past.

It has, I know, kept a very considerable number of intelligent professional men from inquiring further into Socialist theories and teachings. As a consequence there are, especially in the medical profession, quite a number of unconscious Socialists, men, often, with a far clearer grip upon the more central ideas of Socialism than many of its professors, who have worked out these ideas for themselves, and are incredulous to hear them called Socialistic.

Literature

The German Empire

More than thirty years have elapsed since William I. was crowned and hailed as German Emperor in the palace at Versailles, amid the mementos of the glory of Louis XIV., and yet no de Toqueville, Bryce or Bodley has been found to give the English-speaking world an account of the institutions of the empire thus brought to completion. This cannot be explained by an absence of interest on our part, for, laying aside the sometimes fanciful and diverting analogies drawn between the Emperor and the President, the American people have many reasons for holding the German nation in high esteem.

In view of this, Mr. Howard's new book on the German Empire* is more than timely, tho in some measure it is disappointing. The title of the book has raised larger expectations than the contents will satisfy. Mr. Howard has not endeavored to picture for us German politics at work; he does not lay bare the real sources of power and action; the traditions and efficiency which caught the piercing glance of Bagehot in England have no charms for him. It is the formal side of the imperial constitution which he describes; his treatment is, therefore, juridical, and as such it must be judged. He prefaces his systematic chapters by a brief account of the legal steps taken in the formation of the empire after the dissolution of the Bund in 1866. The traditions embodied in the making of the constitution, the aspirations and personalities centering around its formation, the titanic labors of Bismarck, the social and economic conditions of the states, and the historical *rôle* of Prussia, call forth no literary diversions such as make Bagehot on the English constitution delightful summer reading. Mr. Howard is concerned with the law, and law he gives us—systematic, accurate and unadorned law. He tells us about the legal relations of the empire and the states, and the legal organization of the Government—Kaiser, Bundesrat and Reichstag. The general reader who wants to know about their legal relations, their powers and conditions of tenure will find all that is needful in Mr. Howard's book. The process of imperial legislation, the functions and powers of the Chancellor, citizenship under the constitution, judicial organization, imperial finance, the imperial army and Alsace-Lorraine form the topics of seven chapters, and the whole is concluded with a translation of the German constitution. Thruout the work there are abundant evidences of a full acquaintance with the best German publicists, a careful study of the original legal documents, and a persistent tho sometimes belabored accuracy. The lover of constitutional law in the form of political gossip will not find this volume pleasant reading, but it will be heartily welcomed by the serious student who does not read for himself Laband, Meyer and von Rönne. As things stand now it must go on our shelves with our Bryce, Bodley and Bagehot.

* The German Empire. *By Burt Estes Howard.* New York: The Macmillan Co. $2.00.

More Contributions to Our Philippine Symposium

The book by Mr. Freer, an American teacher in the Philippines,* was well worth publishing. Merely to deserve that verdict is some distinction among recent Philippine books. But Mr. Freer deserves distinction on other grounds too. He lived in the Philippines somewhat more than fifteen minutes, and he has, even so, undertaken to tell us only things coming under his personal experience. Occasionally, but only sparingly, he has "pointed a moral" in a political sense from his own relation of three years of teaching experience in the islands. In the main, however, the reader is not asked to consider our "Philippine question" at all, tho he has given graphic pictures of Philippine rural life which will contribute to the formation of a better informed opinion on Philippine conditions.

These pictures of Philippine life are

* The Philippine Experiences of an American Teacher. *By William B. Freer.* New York: Charles Scribner's Sons. Pp. xi, 344. $1.50.

incidental, of course, to the main object of the book—the setting forth of the American teacher's duties and experiences in the Philippines. There is no technical recitation of what constitutes the American educational program in the Philippines, but the "general reader" will probably get a better idea of just what that program is, and how it is actually being put into practice, from such straightforward narrative chapters as this book contains than from all the magazine articles, reviews and official reports thus far published. We quote one of the very few comments and opinions passed by the author:

Pp. 103-104: "An interesting fact in connection with this school [summer normal school in Nueva Vizcaya Province in 1902] was that the fifty young men and women represented three different peoples—the Ilocanos, the Gaddanes and the Isinays, the last named coming from the Dupax section. There was no one language that all could understand. A few spoke, read and wrote Spanish fluently, but these did not number more than ten; to the others Spanish was as strange a tongue as English. Hence, the announcements on the bulletin board, and verbal announcements as well, had to be rendered in the three dialects. In that way only could all the students be made to understand. When one reflects upon these linguistic conditions, obtaining in a very limited area among the civilized peoples, leaving out of consideration for the moment the several other dialects spoken by the non-Christian tribes within the same area, is it not surprising that men of education and character who have the welfare of the Filipinos at heart should object to our teaching them English?"

In short, an easily read, unpretentious, but informative and interesting book. The characterization "easily read" may be applied also to the latest of the books on the Philippines, written by an Englishwoman,* but her book cannot be called informative, nor is it unpretentious, and it ceases to be interesting long before the end is reached. Mrs. Dauncey went out to Iloilo, in the Philippines, as the bride of an Englishman who was an employee of one of the British firms which buy the Philippine crops, spent nine months of what seems to have been a very unhappy experience there, and besides this, knows no more about the Philippines than she learned from two hasty visits to Manila, where she made some calls on English and American ladies and attended one of Governor-General and Mrs. Wright's receptions. Yet she launches forth the most sweeping, likewise the most startling, comments and conclusions upon the Philippines and Filipinos, and, above all, upon American government in the Philippines and upon Americans and their ways in general. One speedily discovers that it is "hubby" who is speaking in these pages, which are merely reproductions of the letters home of a young bride amid unfamiliar and to her distasteful surroundings. If we add that the author seems to have been a precocious young person, whose doting parents and friends have encouraged her to think she has gifts as a writer, we have probably quite explained how this book came to be. Yet that does not explain how any publishing house should suppose that there was any need for the British or American public to see these letters, quite commonplace in all ways and practically valueless as bearing upon the Philippines.

Not entirely valueless, either. For at least the letters, filled with the views of "hubby," show us Americans what a typical Britisher in the Philippines thinks of our rule there, and of ourselves in general. The cockney attitude of superciliousness toward Americans and things American of these clerks as well as chiefs of the British commercial houses, themselves without education or social position to boast of, is well known to all observant Americans in the Philippines. Here is a typical instance of it in the book under consideration, in a description of the author's fellow passengers on a Philippine steamer (p. 13):

"I can understand the conduct of the free and easy soldiers, for such equality is not inconsistent with American social theories; but what puzzles me is the use of these astounding pedagogs, who are honest, earnest, well meaning folk, but their manners are those of ordinary European peasants. And as to the language they speak and profess, it is so unlike English that literally I find it difficult to catch their meaning when one speaks to me direct, and quite impossible when they talk to each other. Yet I could forgive them their dreadful lingo, if only they would not use the same knife indiscriminately to lap up yolk of egg or help themselves to butter or salt. Of course, these good people are fresh from America, and utterly ignorant of all things and people outside their native State (such ludicrous questions they ask!), but quite apart

* An Englishwoman in the Philippines. *By Mrs. Campbell Dauncey.* New York: E. P. Dutton & Co. 7vo, pp. xx, 350. $3.50.

from that, and the hopeless blunders they must make on that account, it seems a pity that such rough diamonds should represent to these natives the manners and intellect of a great and ruling white nation."

We may pass over the question of veracity raised by such a description of the manners of young American college graduates with the remark that it is a question which will occur often to the American who reads these letters, evidently meant to be piquant and picturesque. There are many other outbursts, too, about our "social equality" in the Philippines, and the author recites (pp. 112 and 172) instances where she was personally insulted by being treated by a Filipino as "an equal"—incidents related in a particularly cockney manner. The book is not worth detailed criticism, however; indeed, it is sufficient to say that scarcely a single general comment upon the Philippines or Philippine conditions is correct. But as one who was present, the reviewer must take the space to say that the letter (pp. 115-136) upon the visit of the "Taft party" to Iloilo in 1905 is an especially untrustworthy bit of narration. No such speeches as those ascribed to Secretary Taft and an American Senator were made on that occasion; many incidents of the banquet are sadly distorted. As the writer did not speak Spanish, it is charitable to ascribe her errors to some one's faulty interpretation.

Westermarck on Moral Ideas

"How far ought a bad man to be treated with kindness?" This question and the impossibility of obtaining any unanimity of opinion as to its answer gave the impetus to Dr. Westermarck's thoughts and researches which has resulted in the present treatise.* Under his examination, the problem expanded into the questions: "Why do the moral ideas in general differ so greatly?" "Why is there in many cases such a wide agreement?" and more fundamental still: "Why are there any moral ideas at all?" As yet only one volume of the two in which Dr. Westermarck plans to incorporate his answers to these questions has appeared, and it is manifestly impossible to criticise the unfinished work as tho all the reasoning were presented. As planned, however, the first part of the work comprises a study of the moral concepts, an examination into the nature and origin of the moral emotions, and the interrelation of these emotions and the moral concepts. Dr. Westermarck then takes up the phenomena to which moral concepts are applied—the subjects of moral judgments. In this part he deals with moral standards, giving a vast mass of carefully selected and relevant evidence to show how far, in widely separated nations and ages, moral standards have been in agreement and how far they have differed.

It cannot be conceded that Dr. Westermarck has given a complete or satisfactory account of the nature and origin of the moral emotions. The value of this section of his book is rather critical than constructive. He takes up and rejects as unsatisfactory the theories of many of his predecessors in the field, notably Herbert Spencer and Dr. Steinmetz, and he assembles a vast amount of data, all carefully authenticated, concerning the moral emotions of animals, children and savage or barbarous peoples. He defines clearly and acceptably moral emotions and distinguishes between emotions that are moral and those that are non-moral. He shows that moral feelings are cognate to the non-moral retributive emotions of resentment and gratitude, and that they represent these emotions with a generalized and altruistic application. He points out that the strength or the weakness of the moral emotion is not dependent on intelligence, and that the strongest possible moral resentment or condemnation may be felt on account of actions which, critically considered, could not be pronounced wrong—actions which are only breaches of long-established custom unquestionably accepted as the rule of life. He then proceeds to deal with the moral concepts of right and wrong, justice and injustice, duty, virtue and merit, and sets the bounds of moral action as distinguished from action that is indifferent. From the moral concepts he passes on to moral ideas as expressed in customs, laws and moral judgments. He shows how these ideas have varied from

* The Origin and Development of the Moral Ideas. *By Edward Westermarck, Ph.D.* Vol. I. New York: The Macmillan Co. Pp. xxi, 716. $3.50.

time to time, and how they are modified on the one hand by custom and law and on the other by intelligent criticism.

The latter part of the first volume is taken up with the consideration of moral ideas in relation to particular modes of conduct, homicide, human sacrifice, blood revenge, charity, hospitality, treatment of children, of wives and slavery. It is this section of the book that will appeal to the uninitiated reader—to the reader who cares more for the facts of human life than for theories concerning the nature of man. Dr. Westermarck has collected many facts concerning these matters of conduct which will be surprising and somewhat humiliating to those who pride themselves on modern Western civilization, and who think that barbarism, whether of modern days or of past ages, necessarily means lower standards of morality in all relations of life. In discussing the institution of slavery he comes to the conclusion that the cause of freedom owed little to Christianity, either in the days of the early fathers or in the later days of slavery in the United States. After Christianity became the official religion of the empire there was a pause of fully two hundred years in legislation ameliorating the conditions of slaves, and it is a matter of common knowledge that both in the British colonies and in the United States the clergy failed to range themselves in the bulk on the side of abolition. So also with regard to the position of women, after reviewing his evidence, Dr. Westermarck concludes that the condition of woman or her relative independence is no safe gauge of the culture of a nation, nor of its moral qualities in general; for the less cultured tribes often set an example to higher nations in their treatment of women.

Dr. Westermarck has collected the evidence concerning the attitude of different nations with regard to these matters of conduct from an unusually wide range of sources. It is easy to see that the subject has occupied his mind and been continually in his thoughts for years, and that every book that has come within his reach has been levied upon for its contribution. In order that he might be a better judge of the value of evidence concerning non-Europeon peoples he spent four years in Morocco, learned the language of the people, and made himself familiar with their folklore and their ways of thinking. It may be partly owing to this special study, but largely no doubt also to a remarkably sympathetic and candid turn of mind that Dr. Westermarck presents this heterogeneous mass of evidence with so much understanding, and avoids those hasty generalizations and those uncomprehending judgments of alien races that so frequently characterize many writers, even among those who have dwelt long among the people they describe. Many people who may utterly disagree with Dr. Westermarck's conclusions will find in these chapters material which will greatly aid in the formation of other judgments and conclusions.

Nevertheless, with all this careful work and research, and in spite of the detailed chapters devoted to the nature and origin of the moral emotions, Dr. Westermarck has yet to make clear the relation between the moral emotions and the moral ideas and judgments — the moral sense and the moral standard. In the first chapter he apparently denies to the intellect the predicating of a moral judgment, tracing all such judgments to emotion. In later chapters he clearly shows that moral ideas have been modified thru criticism and thru reasoned examination of conduct, and he shows that moral emotion may act even more powerfully under the guidance of false and imperfect moral ideas than it does under an enlightened and elevated judgment. But the decision as to whether he has succeeded in his aim of throwing light upon what he sets forth as one of the most important objects of human speculation must be suspended until after the publication of his second volume.

A Modern Slavery. By Henry W. Nevinson. New York: Harper Bros. $2.00.

This is a narrative of the writer's journey to the Portuguese province of Angola, in West Central Africa. Slavery still exists there, Mr. Nevinson tells us, but under all the forms necessary to appease and satisfy civilization. Slaves captured or bought from the chiefs of tribes in the interior are driven in gangs

to the coast. There the trader, while in fact selling his gangs to employers of labor, in theory does nothing of the kind. A contract is signed:

"Legally," says the writer "the system is quite simple and looks innocent enough. Legally it is laid down that a native and a would-be employer come before a magistrate or other representative of the Curator General of Angola and enter into a free and voluntary contract for so much work for so much pay. By the wording of the contract the native declares that he has come of his own free will to contract for his services and according to the forms required by law of April 29, 1875, etc. He signs and the benevolent law is satisfied."

The contract says it lasts for five years and calls for nine hours' work "on all days not sanctified by religion," with an interval of two hours for rest. But the "employee" is in the hands of his enemies. Says Mr. Nevinson:

"If he runs away he will be beaten, and if he goes back home he will probably be killed and almost certainly be sold again. In what sense does such a man enter into a free contract for his labor? In what sense, except according to law, does his position differ from a slave? And the law does not count; it is only life that counts."

But if we are to spit upon the law in this fashion (and it seems well enough when we are considering black men in far-off Africa), how shall we define slavery? Mr. Nevinson is free to admit that the theoretical freedom of the black man toiling under his "contract" in Angola or St. Thomé differs little from that of the white laborer in the coal mines in the Black Country—the Isle of Dogs, in England. Quite apart from its merits as a study of slavery, the book is fascinating in its descriptions of African life and scenery, and is a most admirable book of travel.

Beethoven. The Man and the Artist as Revealed in His Own Words. Compiled and Annotated by Friedrich Kerst. Translated and Edited by Henry Edward Krehbiel. New York: B. W. Huebsch. $1.00.

Mozart. (Same editors, publisher and price.)

Friedrich Kerst, an ingenious German writer on musical topics, has gone thru the various publisht utterances—letters, note books, diaries and recorded sayings—of two of the world's greatest composers, Beethoven and Mozart, and culled therefrom their significant words on the important events of their lives, their views of their art, estimates of other composers, opinions of their own work, religious views and kindred subjects. He has classified these, grouping them together under general headings, and has appended to each its date and an explanation of the circumstances in which it was spoken or written. It is a novel idea and the result is highly interesting. Each little book is a sort of autobiographic character study, and each is of real value to the student of musical history. Mr. Krehbiel's translations are admirable (that of the *Mozart* being especially praiseworthy for its faithful and delightful reproduction of the composer's colloquial and careless epistolary style), and his amplification of the notes adds considerable information that is both interesting and valuable.

Documentos Inéditos ó Muy Raros para la Historia de México, publicados por Genaro Garcia y Carlos Pereyra. Una Historia Militar y Politica, 1870-1874. By Antonio Lopez de Santa-Anna. **México Durante esa Guerra con los Estados Unidos.** Letters of José Fernando Ramirez. Mexico, 1905. Librería de la Vuda de Ch. Bouret. Each volume of the series, $2.00 Mexican.

There is a very healthy revival of interest in their own history among the students and public men of Mexico. Many new publications have been made, particularly in the history of the nineteenth century in Mexico, during the past few years. Two recent volumes in a series of small octavos, wherein Mexican historical documents hitherto unpublished or very rare are of great interest for the study of the history of our own country as well. These are the memoirs of General Santa Anna ("My Military and Political History, 1810-1874"), with some of that famous adventurer's correspondence during the rule of Maximilian, and a series of confidential letters written during 1845-1847 by a Mexican then prominent in politics, but not too prominent or radical to have contact with nearly all the conflicting factions of the time, this last collection being published under the title, "Mexico During Its War with the United States." Needless to say, Santa Anna has glossed over much and omitted more

of the incidents of his career. Nevertheless, his account of his campaign and capture in Texas, of his movement against General Taylor in 1847, of the late years of his exile in the West Indies, of the call made upon him by Secretary Seward in St. Thomas in 1865, and of his exploitation at the hands of schemers who probed his weaknesses during his visit to the United States in 1866-1867, are of especial interest and of some value historically. The letters of Ramirez, as Secretary of Foreign Affairs and as private citizen in Mexico City during 1845-1847, are of prime historical value, as well as of great interest, as showing the state of Mexican society and politics at the time, supplying data our historians should know in order to write fairly of Mexico during the American invasion. A frank letter addressed by this student rather than statesman to General Santa Anna in June, 1846, deprecates as hopeless in the state of Mexican society and the Mexican army an attempt either to reconquer Texas from the Texans or to resist its absorption by the United States.

Literary Notes.

THE prospectus and specimen pages of the new *Catholic Encyclopedia* are out, and in typography, maps and illustration present a handsome appearance. We have already discussed editorially the plans and promoters of the enterprise and shall await the first volume, promised in the spring, with especial interest. The Robert Appleton Company, of New York City, are the publishers.

....*The Washington Word List,* prepared by W. E. Chancellor, Superintendent of Public Instruction in the District of Columbia, is of interest because it not only contains the ten thousand standard words, including proper names, that every one should know how to spell, but gives the simplified spelling now being introduced and the principles on which any further reforms must be based. (Macmillan, 20 cents.)

....Japan has been moving so rapidly of late that a new and revised edition of her story in Putnam's Story of the Nations series is necessary. A chapter has been added to Murray's *Japan* on "The Struggle with Russia," and an article on "The Resources and Ideals of Modern Japan," by Baron Kaneko. The official correspondence relating to the negotiations between Japan and Russia before the war is given in full in an appendix.

....The publication of *The Journal of Arthur Stirling,* in 1902, was a literary hoax that was not a joke. In an article of remarkable candor and boldness, published in THE INDEPENDENT for May 14, 1903, Upton Sinclair explained that his motive in contriving this ingenious deception was to secure a hearing from a world deaf and heedless to the sufferings of aspiring genius. Since then he has found that a more effective way of getting attention of the public is to criticise the quality of its meat. But the *Journal* is a much better piece of literary art than "The Jungle," and the author has some grounds for the confidence he expresses in its future.

Pebbles

NEWS EDITOR—Here's a cable from Constantinople saying the Sultan's principal amusement is scaring his wives into fits.

Managing Editor—Well, head it, "A Harem-Scarem Fellow," and run it in the joke column. —*Philadelphia Record.*

MISS CUTTING—I saw you in the car on your way from the office last night.

Mr. Hogg—Strange, I didn't see you.

Miss Cutting—Not at all. I was standing just in front of where you were sitting.—*Philadelphia Press.*

MY TASTES.

I LIKE to stroll upon a sea
Of foaming Standard Oil,
And hear the fish sing merrily
As round my legs they coil;
And when the darkness catches me,
Far out at sea, I yearn
To light a match, then climb a tree
And watch the ocean burn.

I love to dine on railway trains,
And lunch on balconies,
A motor fiend, I sing sweet strains
Beneath the axle-trees;
In tropic lands I like to roam,
And shoot the polar bear,
And when the whale's away from home
I track him to his lair.

I like to walk a shaky rope
Above a precipice,
To look down through a telescope
And see the rapids hiss,
Then as with happy, careless stride,
My risky path I take,
I *love* to calmly stand aside
And watch the darn rope break.

In Arctic realms, 'neath heaven's blue,
Each afternoon I stroll,
I drink the North Pole cocktail to
Wash down the ocean's roll.
On glaciers ten miles square I sit,
And sometimes, to my glee,
The blame thing melts a little bit
And slips from under me.

My tastes look strange when jotted down,
They're funny, I'll admit—
I've never left my native town,
So that accounts for it.

—*Harvard Lampoon.*

Editorials

BEGINNING with the next issue, THE INDEPENDENT will go to press twenty-four hours earlier than usual. This plan has been under consideration for some time, and our recent increase in circulation, due largely to the addition of *The Searchlight* subscribers to our list, has rendered the change imperative. The first copies off the press are mailed to our foreign subscribers, including Cuba, Panama, the Philippines and Alaska. Next the copies for Canada and Mexico are sent off, and then for the United States, working eastward from California. The last copies are mailed to the subscribers in New England and New York. The readers in the last named sections have been bearing the brunt of the delay in mailing. Occasionally copies of one week would not be delivered until the next, an occurrence which will be rendered impossible by the new mailing date. Some few have complained, while others have borne the delay patiently. We are glad now to be able to announce that all subscribers east of the Rockies will receive their copies the week of publication, and many by Thursday or Friday. It should be remembered that THE INDEPENDENT is not printed days ahead, under some future date, as so many magazines are, but that the interval of time between going to press and the date on the cover has been reduced to a minimum. The new mailing system will not begin to work smoothly for a week or two, but by that time we hope our subscribers will notice a decided improvement.

The Falling of the Leaves
